Course Information
Further information about all courses offered by the Faculty of Health Sciences may be obtained by contacting Student Administration (Cumberland), by telephone (02) 9 351 9161, fax (02) 9351 9412 or the address below. For other courses offered by the University, refer to the University of Sydney, Student Centre (02) 9351 3013.

Alterations to Courses
Subject, units, courses and any arrangements for courses including staff, as stated in the Postgraduate Handbook or other publication, announcement or advice of the University, are an expression of intent only and are not to be taken as a firm offer or undertaking. The University reserves the right to discontinue or vary such subjects, units, courses, arrangements or staffing at any time without notice.

The information contained in this Postgraduate Handbook was current as at November 1997. Its contents are as accurate and detailed as possible at that time.

Introduction

This Postgraduate Handbook is the official guide to the postgraduate courses offered in Faculty of Health Sciences located at the Cumberland campus of the University of Sydney. The Handbook was prepared in advance of the 1998 academic year to maximise its usefulness as a reference to students, staff, and to the many associates of the Faculty, particularly those who contribute to the clinical education of students. The charter of the Faculty is to provide competent practitioners in the health professions. The aims are for excellence in clinical and academic teaching and in research.

The fields encompassed by the Faculty are:

- Aboriginal Health and Community Development
- Behavioural Sciences
- Biomedical Sciences
- Casemix
- Child and Adolescent Health
- Clinical Data Management
- Community Health
- Diagnostic Radiography
- Exercise and Sport Science
- Gerontology
- Health Information Management
- Health Science Education
- Leisure and Health (previously Diversional Therapy)
- Nuclear Medicine Technology
- Occupational Therapy
- Orthoptics
- Physiotherapy
- Radiation Therapy
- Rehabilitation Counselling
- Speech Pathology
- Ultrasonography
- Vision Impairment
Welcome to the 1998 academic year in the Faculty of Health Sciences. To our new postgraduate students, I am particularly delighted that you have chosen to join us during an exciting phase of our postgraduate development. To those returning, congratulations on your previous success. For all of you, I hope that 1998 will be an important milestone in your postgraduate development.

The Faculty of Health Sciences seeks to provide a stimulating and progressive postgraduate environment including access to excellent library resources such as the relevant on-line databases around the world. Students engaged in coursework programs will have the opportunity to enhance professional expertise which may lead to greater satisfaction and advancement in the workplace. Research postgraduates will be assisted to devise and make a worthwhile contribution to the knowledge-base of their field with the support of dedicated researchers at the forefront of research activity in the health sciences. We have invested significantly in research infrastructure in recent years and are delighted that a dedicated research building is a recent enhancement to this infrastructure.

As a complement to your academic focus, I hope you will also take advantage of the opportunity to make lifelong friendships with the people you meet along the way. Schools and Departments and the Student Guild arrange social, cultural and sporting activities and your time in the Faculty will be much richer if you are able to fit some of these things into your busy schedule.

Faculty of Health Sciences staff are committed to assisting you progress through your academic program. If you are facing a particular difficulty that is affecting your progress, we would encourage you to take advantage of the wealth of support available to all beginning and established students in this faculty including the professional advice of academic staff in your School, the Student Welfare Division, Student Administration Division and the Student Guild. Additionally, for Aboriginal and Torres Strait Islander students, there is a range of dedicated support services provided by the staff of Yooroang Garang, our Centre for Indigenous Health Studies.

Best wishes in your academic, professional and personal journey through 1998.

Professor Elaine Cornell
Acting Dean
1998 Academic Year and Important Dates

The academic year is divided into two semesters, each containing thirteen teaching weeks, one student study week and two weeks for assessments. There is a recess of six weeks between the two semesters, as well as a one week recess in each of the semesters.

__Unless otherwise specified, the qualifications listed are from the University of Sydney.__
2 Faculty of Health Sciences

History
In 1970, a report of the then New South Wales Advanced Education Board recommended that a corporate College of Advanced Education be established specifically to:

- foster the development of paramedical education in New South Wales having regard to the needs of the community;
- provide courses and to grant awards to students reaching the standards set by the College;
- encourage the effective teaching and provide opportunities for the professional development of the teaching staff; and
- provide and maintain physical facilities for this teaching and research.

On 1st July, 1973, the College formally commenced operation when its establishment was gazetted by the State Government. Incorporation within the Higher Education Act was constituted on and from 1st October, 1974.

The College assumed the responsibility for three-year full time courses in physiotherapy, occupational therapy, and speech therapy and a two-year full time course in orthoptics. Post-registration nursing courses previously conducted by the N.S.W. College of Nursing were included from 1975.

The College was initially named "New South Wales College of Paramedical Studies" however, early in 1974, the Interim Council recommended that the name be changed. When the Colleges of Advanced Education Act was passed in 1975, the name was changed to "Cumberland College of Health Sciences".

From its earliest days, Cumberland College aimed for excellence and adopted a leadership role. The College pioneered the development of basic nursing studies in an academic setting and it convened the first National Health Sciences Education Conference.

After the beginning years of operation in five inner city campuses with rented premises, a site at East Street, Lidcombe was ready for occupancy from 1st July, 1978.

It was on 26 October, 1979, that His Excellency Sir Zelman Cowen, A.K., G.C.M.G., K.St.J., Q.C., the then Governor-General of the Commonwealth of Australia, officially opened the College.

Since that time, Cumberland College has grown rapidly. Course development and course reviews have enhanced the College's academic profile. The first Master's degrees have been awarded, and additional specialty courses commenced in Diversional Therapy, Medical Radiation Technology and Community Health. In 1984, the College commenced teaching the Aboriginal Health and Community Development course, and in 1985, it introduced the first interdisciplinary graduate diploma program.

In many respects the attainment of institutional accreditation status at the end of 1986 was the culmination of the College's first decade of endeavour for academic excellence. This is now recognised internationally. The fifteenth anniversary of the establishment of the College was commemorated by hosting an International Conference on Health Sciences Education.

In 1989, State government legislation, in response to the Federal Government's introduction of a Unified National System of Higher Education, dissolved the corporate college and re-established it as an Academic College of the University of Sydney with effect from 1 January, 1990. On 28 October, 1991, the academic activities and staff of the College were established as the Faculty of Health Sciences in the University of Sydney, with the associated appointment of a Dean.

The involvement in PhD programs from 1990 is a highlight of the amalgamation with the University of Sydney.

As from the 1st January 1994, the School of Nursing, Faculty of Health Sciences was integrated into the Faculty of Nursing.

Objectives
The primary objectives of the Faculty are:

- Teaching in the clinical and academic aspects of the health sciences at both undergraduate and graduate levels; and
- Research in the clinical and related aspects of the health sciences.

The supporting objectives are:

- Facilitation of interdisciplinary study, research and discussion with academic and clinical colleagues through continuing education programs, symposia, workshops, conferences and staff and student exchange activity.
- Provision of specialised services and advice to disabled and disadvantaged people and agencies (both voluntary and government) within the context of the Faculty's academic, teaching and research expertise and purpose.
- Provision of advice, consultancies and applied research programs to government, commercial and business organisations which share the Faculty's common interest in health and health sciences.
- Development of relationships with international agencies and governments which seek to utilise the expert service and advice of the Faculty, within the context of the Faculty's teaching mission and purpose.
Academic Governance
On 2nd September 1991 Senate resolved to approve the establishment of the Faculty of Health Sciences and approve the title of Dean and College Principal, to take effect from 28th October 1991.

Constitution of the Faculty of Health Sciences
1. The Faculty of Health Sciences shall comprise the following persons:
   a) the Professors, Associate Professors, Heads of Schools/Departments, Readers, Principal Lecturers, Senior Lecturers, Lecturers, Senior Tutors and Tutors who are full-time or fractional (50% or greater) permanent or temporary (contract) members of the teaching staff of the schools and departments placed under the supervision of the Faculty of Health Sciences;
   b) the Deans of the Faculties of Arts, Medicine, Nursing and Science or their nominees and the Head of the Department of Social Work and Social Policy or nominee;
   c) five students enrolled as candidates for undergraduate degrees or diplomas offered by the Faculty, and one student enrolled as a candidate for a postgraduate degree or diploma offered by the Faculty;
   d) full-time and fractional (50% or greater) permanent or temporary (contract) members of the research staff of the Departments, Schools and Centres of the Faculty who are appointed as Research Fellow and above;
   e) not more than three persons who are distinguished in a field of Health Science appointed by the Faculty on the nomination of the Chair of the Faculty;
   f) the Health Sciences Librarian and the Head of Student Administration;
   g) four members of the staff of the Cumberland College, who have a close and appropriate association with its work of teaching and research.
2. The Faculty shall encourage teaching, scholarship and research in the Departments, Schools and Centres that the Vice-Chancellor has determined shall be placed under the supervision of the Faculty of Health Sciences and shall have the same powers and functions as are specified for faculties by resolution of the Senate.

Structure
The Faculty's academic structure comprises of two Departments (Biomedical Sciences and Behavioural Sciences) and eight professional Schools:
- Communication Disorders
- Community Health
- Exercise and Sport Science
- Health Information Management
- Medical Radiation Technology
- Occupational Therapy
- Orthoptics
- Physiotherapy

The College's administrative structure comprises of eight divisions:
- Building and Grounds
- Faculty Office
- Financial Services
- Information Technology Services
- Personnel Services
- Property Services
- Student Administration
- Student Welfare Services

The Health Sciences Library provides facilities and information services to support all academic programs run on this campus and is networked to other research libraries.

Centres
The Cumberland Health and Research Centre
The Cumberland Health and Research Centre is the commercial arm of the Faculty of Health Sciences, bringing together the Faculty's resources and research facilities to provide a comprehensive range of quality health services.
Cumberland Health and Research Centre is the place where research, theory and practical experience combine. Knowledge and expertise developed within the University are coordinated by professionals with many years of practical experience in health care. A multidisciplinary team provides a variety of programs for business, sports people and the general community including:
- Corporate Health
- Driver Rehabilitation
- Hearing Rehabilitation
- Occupational Health and Rehabilitation
- Sports Clinic
- Sports Science

The team includes occupational therapists, physiotherapists, exercise physiologists, psychologists, driving instructors, health promotion specialists, audiologists, doctors, radiologists, orthoptists, dietitians, masseurs, specialist physicians, orthopaedic surgeons and rehabilitation counsellors.
Cumberland Health and Research Centre is administered by a Board of academic members of the University of Sydney. The Board includes the Head of each School/Department within the Faculty of Health Sciences plus invited specialists. Individual programs are coordinated by health professionals regarded as leaders in their fields.

Australian Stuttering Research Centre
This Centre of Faculty was established in January 1996, and is supported partly by Faculty funds and partly by external, Commonwealth Research Grants. Staff of the Centre work closely with speech pathologists in the Stuttering Unit, Lidcombe Health Service. The purposes of the Centre are to:
- Conduct world class stuttering research
- Establish national and international collaborative research links
- Provide mentorship for Australian stuttering treatment researchers
Disseminate to Australian and international speech pathologists information about how stuttering treatment research informs clinical practice
Provide professional continuing education to Australian and international speech pathologists
Provide postgraduate research programs in stuttering research
Disseminate to the Australian community information about stuttering treatment

Staff research interests draw on several disciplines that are applied to stuttering research, including acoustics, linguistics, physiology and psychology.

National Voice Centre
The National Voice Centre is an emerging University Centre involving principally the Faculty of Health Sciences and the Sydney Conservatorium of Music, with support from a number of other faculties of the University and community groups. It is dedicated to excellence in the art, care and science of voice.

Rehabilitation Research Centre
In March 1989, the Rehabilitation Research Centre was established with the charter to raise research productivity in the area of rehabilitation. Given that research in rehabilitation has an impact on the scientific, clinical and professional communities, it is appropriate that a Rehabilitation Research Centre should have clear and achievable research, educational and promotional functions.

The research objectives for the Centre are to:
• Increase research productivity, publication and scholarship in the area of rehabilitation;
• Stimulate and provide training programs for beginning researchers, and clinicians;
• Attract eminent rehabilitation researchers;
• Provide stimulating research environments for postgraduate students;
• Organise and conduct national and international symposia on rehabilitation;
• Provide limited, but high-quality rehabilitation service for patient assessment.

National Centre for Classification in Health (NCCH) Sydney
Established by the Faculty's School of Health Information Management in 1994, and funded by the Commonwealth Department of Health and Family Services, the NCCH (Sydney) is a centre of expertise in classifications of morbidity, mortality and health interventions. Formerly the National Coding Centre (NCC), a joint agreement between Queensland University of Technology and the University of Sydney in early 1997 resulted in the new NCCH, with sites in both Sydney and Brisbane. The NCCH is responsible for the publication of the WHO-based clinical classifications ICD-9-CM and ICD-10-AM (Australian Modification) within Australia.

The objectives of the Centre include:
• development and publication of classification systems
• recommending national standards for health classifications
• working with the Australian Institute of Health and Welfare to fulfill

WHO Collaborating Centre status
• development and promotion of coding standards
• preparation and presentation of coding education programs
• dissemination of information on national coding issues
• development of coding quality improvement processes

WHO Regional Collaborating Centre for Rehabilitation
The World Health Organization (WHO) designated the College as a Regional Collaborating Centre for Rehabilitation in 1983. The functions of the Centre for Rehabilitation are to:
• Develop or adapt curricula and training materials for various categories of personnel needed for community rehabilitation programs
• Assist in organising and conducting relevant teaching programs or courses in the Western Pacific Region
• Provide expert advice on rehabilitation training to WHO and countries as required
• Make available training resources for selected personnel
• Prepare appropriate materials and aids
• Conduct relevant studies of education methodology

Faculty staff contribute to activities for the WHO through the Centre and through other international programs. They also contribute to the work of other international agencies such as UNICEF.

Inter-Institutional Agreements
The Faculty has developed links with the following institutions:
• The Chinese Academy of Medical Sciences, Beijing, Peoples Republic of China
• Hong Kong Polytechnic University, Hong Kong
• Mahidol University, Thailand
• Southern Illinois University, Carbondale, U.S.A.
• Sun Yat-sen University of Medical Sciences, Guangzhou, Peoples Republic of China
• The Queens College, Glasgow, Scotland
• The University of Indonesia, Jakarta, Indonesia
• The University of Hawaii
• Chiangmai University, Thailand
• College of Higher Education, Solomon Islands

The inter-institutional links are designed to strengthen the bonds between academic communities and, in the process, contribute to greater understanding and communication between cultures.

Programs of cooperation involve exchange of information, faculty and where appropriate students, in a variety of educational development and research initiatives.
3 Graduate Courses

Resolutions of the Senate

Doctor of Philosophy (PhD)
(Extract from Calendar 1996, Volume I)

Admission to candidature
1. (1) An applicant for admission as a candidate for the degree shall, except as provided in subsections (2) and (3), hold or have fulfilled all the requirements for:
   (a) the degree of Master, or
   (b) the degree of Bachelor with First or Second Class Honours.
   (2) A faculty may admit as a candidate for the degree an applicant holding the degree of Bachelor without First or Second Class Honours, provided that a faculty may exempt an applicant from the qualifying examination if the applicant has obtained a High Distinction or Distinction in the highest course available in the subject or subjects relevant to the proposed course of advanced study and research.¹
   (3) The Academic Board may, in accordance with Chapter 10 of the by-laws, admit as a candidate for the degree an applicant holding qualifications which, in the opinion of the faculty concerned and of the Academic Board, are equivalent to those prescribed in subsection (1) or subsection (2), and such candidate shall proceed to the degree under such conditions as the Academic Board may prescribe.

2. (1) An applicant for admission to candidature shall submit to the faculty concerned:
   (a) a proposed course of advanced study and research, approved by the head of the department in which the work is to be carried out, to be undertaken by the applicant in a department of the University, and (b) satisfactory evidence of adequate training and ability to pursue the proposed course. (2) The faculty may require a candidate, as part of the evidence of the candidate's training and ability to pursue the proposed course, to pass a special examination.
   (3) A reference in subsection (1) to a department includes a reference to one or more departments, one or more schools, an inter-departmental committee and an interschool committee.

Probationary acceptance
3. (1) A candidate may be accepted by a faculty on a probationary basis for a period not exceeding one year and upon completion of this probationary period, the faculty shall review the candidate's work and shall either confirm the candidate's status or terminate the candidature.
   (2) In the case of a candidate accepted on a probationary period under subsection (1), the candidature shall be deemed to have commenced on the date of such acceptance.

Control of candidature
4. (1) Each candidate shall pursue his or her course of advanced study and research wholly under the control of the University.
   (2) Where a candidate is employed by an institution other than the University, the faculty or college board may require a statement by that employer acknowledging that the candidature will be under the control of the University.

Other studies during the candidature
5. A candidate may be required by the head of department or the supervisor to attend lectures, seminar courses or practical work courses subject to the approval of any other head of department concerned.

Earliest date for submission
6. (1) Except as provided in subsection (2), a candidate may not submit a thesis for examination earlier than the end of the sixth semester of candidature.
   (2) A faculty may permit a candidate holding any of the following qualifications of the University of Sydney or from such other institution as the faculty or college board may approve, to submit a thesis for examination not earlier than the end of the fourth semester of candidature:
   (a) a degree of Master completed primarily by research;
   (3) Notwithstanding the provisions of subsections (1) and (2) a Faculty may, on the recommendation of the head of department and supervisor concerned, permit a candidate to submit a thesis for examination up to one semester earlier than prescribed if, in the opinion of the faculty, evidence has been produced that the candidate has made exceptional progress in his or her candidature.

Latest date for submission
7. (1) Except as provided in subsections (2) to (4), a candidate shall submit the thesis for examination not later than the end of the tenth semester of candidature.
   (2) A candidate who is a full-time member of the academic staff of the University shall submit the thesis for examination not later than the end of the fourteenth semester of candidature.
   (3) A candidate whose candidature has been part-time throughout shall submit the thesis for examination not later than the end of the fourteenth semester of candidature.

¹ The Academic Board has endorsed an interpretation of the qualifying examination as including completion of a period of relevant full-time or part-time advanced study and research towards a Master's degree in the University of Sydney, at such a standard as would demonstrate to the satisfaction of the Faculty that the candidate is suitably prepared in the particular field of study to undertake candidature for the degree of Doctor of Philosophy.
(4) A faculty or college board may permit a candidate to submit the thesis for examination after a period of time greater than the maximum periods specified.

Progress
8. (1) At the end of each year each candidate shall provide evidence of progress to the satisfaction of the supervisor and head of department concerned and any Departmental or Faculty Postgraduate Review Committee.

(2) On the basis of evidence provided, the head of department shall recommend the conditions of candidature to apply for the following year and may require the candidate to provide further evidence of progress at the end of one semester or such other period as the head of department considers appropriate.

(3) If a candidate fails to submit evidence of progress or if the head of department concerned considers that the evidence submitted does not indicate satisfactory progress, the faculty or college board may, on the head’s recommendation, call upon that candidate to show cause why that candidature should not be terminated by reason of unsatisfactory progress towards completion of the degree and where, in the opinion of the faculty or college board, the candidate does not show good cause the faculty or college board may terminate that candidature or may impose conditions on the continuation of that candidature.

The thesis
9. (1) On completing the course of advanced study and research, a candidate shall present a thesis embodying the results of the work undertaken, which shall be a substantially original contribution to the subject concerned. The candidate shall state, generally in the preface and specifically in notes, the sources from which the information is derived, the animal and human ethical approvals obtained, the extent to which the work of others has been made use of, and the portion of the work the candidate claims as original.

(2) A candidate may also submit in support of the candidature any publication of which the candidate is the sole or joint author. In such a case the candidate must produce evidence to identify satisfactorily the sections of the work for which the candidate is responsible.

(3) A candidate may not present as the thesis any work which has been presented for a degree or diploma at this or another university, but the candidate will not be precluded from incorporating such in the thesis, provided that, in presenting the thesis, the candidate indicates the part of the work which has been so incorporated.

(4) A candidate shall submit to the Registrar four copies of the thesis in a form prescribed by resolution of the Academic Board and four copies of a summary of about 300 words in length.

(5) The thesis shall be accompanied by a certificate from the supervisor stating whether, in the supervisor's opinion, the form of presentation of the thesis is satisfactory.

Form of the thesis
10. The four copies of the thesis submitted for the degree shall normally be on International Standard A4 size paper sewn and bound in boards covered with bookcloth or buckram or other binding fabric. The title of the thesis, the candidate’s initials and surname, the title of the degree, the year of submission and the name of the University of Sydney should appear in lettering on the front cover or on the title page. The lettering on the spine, reading from top to bottom, should conform as far as possible to the above except that the name of the University of Sydney may be omitted and the thesis title abbreviated. Supporting material should be bound in the back of the thesis as an appendix or in a separate set of covers.

In accordance with section 9 of the resolutions of the Senate relating to the degree, a candidate may, with the approval of the faculty concerned, include in a thesis published papers of which the candidate is the sole author, provided that:

(a) the papers are based on work undertaken during the candidature for the degree;

(b) the papers are identified as published work; and

(c) the papers are compatible with the overall coherence and organisation of text of the thesis.

Any other papers of which the candidate is sole or joint author may, with the approval of the faculty concerned, be lodged in support of the thesis.

Examination
11. The procedures for examination shall be prescribed by the Academic Board.

Application and enrolment procedure
As for Master’s degree by research.

Please refer to the summary of graduate courses at the end of this chapter for course details.

The regulations governing the award of Doctor of Philosophy degree are printed in the Postgraduate Studies Handbook available from the Faculty Office and is also available on the web at:

Degree of Master by Research

The following information should be read in conjunction with the Senate Resolutions in the University of Sydney Calendar and the relevant entry in the chapter of the presenting School/Department/Centre (refer to Table of Contents).

Applications
1. An application for admission to a Master's degree program is accepted subject to the availability of facilities and supervision. Courses and arrangements as stated in the Handbook or any other publication, announcement or advice of the Faculty are expression of intent only and are not to be taken as a firm offer or undertaking. The Faculty reserves the right to
discontinue or vary such courses, or arrangement of staff allocations at any time without notice.

2. An application shall be made on the prescribed form and shall be lodged with the Head, Student Administration (Cumberland).

3. An application shall normally be made by the end of October immediately preceding the year in which the applicant wishes to register, except that, for a program being conducted for the first time, application for admission shall be made by the specified closing date, as determined by the Head, Student Administration (Cumberland), from time to time.

4. An applicant may seek admission to a Master's degree program as: either a full-time or part-time student.

Enrolment

1. The Faculty may either:
   a) Permit an applicant to enrol as a Master's degree candidate in one of the following Master of Applied Science areas:
      - Australian Stuttering Research Centre
      - Behavioural Health Science
      - Communication Sciences and Disorders
      - Exercise and Sport Science
      - Exercise Research Centre
      - Health Information Management
      - Biomedical Sciences
      - Medical Radiation Technology
      - National Voice Centre
      - Occupational Therapy
      - Orthoptics
      - Physiotherapy
      - Rehabilitation Research Centre
   OR
   b) Permit an applicant to enrol as a Master's qualifying student for the purpose of preparing for candidature in any of the above Master's degree courses. On successful completion of the Qualifying Program, a prospective Master's degree student is required to apply for admission to the Master's degree program.

2. An applicant enrolled as a Master's degree candidate or as a qualifying student will not be permitted to undertake concurrently other graduate studies in the University, or elsewhere, except with the approval of the Faculty.

3. An applicant will not be permitted to enrol as qualifying student or degree candidate unless the Head of School/Department/Centre has certified that the applicant is considered suited to undertake the program and that the current research interests of members of Faculty and the availability of resources for the proposed research have been discussed with the applicant.

4. The Faculty may permit an applicant to enrol as a Master's degree candidate if the applicant has:
   a) Qualified for admission in terms of the admission requirements (see Section on Admission Requirements under each academic unit), OR
   b) Been enrolled as a Master of Applied Science/Health Science Qualifying Student in the Faculty and has subsequently carried out such work, passed such examinations and reached such standards as prescribed by the Faculty.
   AND
   c) Satisfied the Faculty that the applicant can devote sufficient time to advanced study and research.
   AND
   d) An applicant may be required to submit additional information to satisfy Head of School/Department/Centre.

See Chapter 3 for additional administrative information.

Course Requirements

1. General
   a) A qualifying student shall be eligible for consideration for admission to a Master's degree program on completion of a program approved by the Faculty at a level of performance prescribed by the Faculty.
   b) A candidate shall be eligible for admission to the degree of Master of Applied Science/Health Science if the candidate:
      i) undertakes the prescribed course of study for the degree, and
      ii) completes the prescribed program of the research thesis which involves original investigation or review, and
      iii) submits and has accepted a thesis prepared under the supervision of an academic supervisor appointed by the Faculty.

2. Minimum Time
   a) A qualifying student shall not be eligible for consideration for enrolment as a Master's degree candidate until a period of at least one semester has elapsed from initial enrolment.
   b) A candidate shall not normally be eligible for admission to the degree:
      i) in the case of a full-time student, until a period of at least four semesters has elapsed from time of enrolment as a Master's degree candidate,
      OR
      ii) in the case of a part-time student, until a period of at least six semesters has elapsed from the time of enrolment as a Master's degree candidate.

3. Maximum Time
   a) A qualifying student shall complete the program within two years.
   b) A candidate shall present for examination:
      i) in the case of a full-time student, not later than six semesters from the date of enrolment as a Master's degree candidate,
      OR
      ii) in the case of a part-time student, not later than ten semesters from the date of enrolment as a Master's degree candidate, unless special
Notwithstanding the provision of section 3 above, the Faculty may discontinue the enrolment of a Master's degree candidate in less than the maximum time allowed, if it is dissatisfied with the candidate's progress.

4. Discontinuation of Enrolment
Notwithstanding the provision of section 3 above, the Faculty may discontinue the enrolment of a Master's degree candidate in less than the maximum time allowed, if it is dissatisfied with the candidate's progress.

5. Fieldwork and Supervision
a) the work other than field work should be carried out in the School/Department/Centre and such other areas as appropriate or under such conditions as the Faculty may determine.
b) the Faculty shall appoint a supervisor from the Academic staff of the Faculty/University.
c) where the Faculty considers it appropriate, it may appoint an academic associate or co-supervisors. In the case of part-time students, the Faculty may appoint associate or co-supervisors in the student's region or workplace.

6. Progress Reports
Every Master's degree candidate is required to complete an annual report on his/her work to the academic supervisor then through the Head of School/Department/Centre to the Graduate Studies Committee.

7. Research Subject
Not later than two semesters after enrolment as a full-time Master's degree candidate or three semesters after enrolment as a part-time Master's degree candidate, the candidate shall submit the subject of the research thesis for approval by the Faculty. After the subject has been approved it may not be changed except with the written permission of the Faculty.

8. Advisory Committee
Each Master's degree student may be provided with an advisory committee to supplement the supervisory assistance provided by the student's appointed supervisor.

The Committee would normally be composed of up to three University academic staff and where the supervisor is not from the respective School/Department/Centre, one member of that committee will be from the School/Department/Centre.

The Committee would be under the Chair of the student's appointed supervisor. The Committee may co-opt persons who are not members of the University academic staff. At no time would the Committee consist of more than four persons.

Following Faculty approval of the student's research thesis subject, the selection of members of the Master's Advisory Committee would be made by the student's supervisor in conjunction with the Head of School/Department/Centre. This membership would be submitted to the Graduate Studies Committee for approval on behalf of Faculty.

The Advisory Committee would normally meet at least once each semester to consider the student's progress report. With approval of the student's supervisor, the Committee may meet more frequently. It is expected that each member of the Committee should be available for consultation with the student at mutually convenient times. The arrangement will be negotiated by the student's supervisor and approved finally by the Heads of Schools/Department/Centres involved. The student's supervisor may also require the Committee to assist in matters concerned with the final presentation of the student's research thesis.

The membership of the Advisory Committee may be varied by application to the Graduate Studies Committee. Approval will be granted if the new Advisory Committee is appropriate and arrangements for membership have been made with the Heads of School/Department/Centre involved.

Research Thesis
1. On completion of studies, a Master's degree candidate will submit a thesis which complies with the following requirements:
   a) The greater proportion of the work described must have been completed subsequent to initial enrolment, and
   b) It must be a distinct contribution to the knowledge of the subject whether by original investigation or by review, and
   c) It must be written in English or in a language approved by the Faculty and reach a satisfactory standard of literary presentation.

2. The thesis shall consist of the candidate's own account of his/her work. In special cases work done jointly with other persons may be accepted provided the Faculty is satisfied with the candidate's part in the joint work.

3. Every candidate shall submit with the thesis a short abstract of the thesis comprising of not more than 300 words.

4. A candidate may not submit as the main content of the thesis any work or material which has been previously submitted for a degree or other similar award, but shall not be precluded from incorporating such in the thesis, provided that he/she indicates generally in the preface and specifically in the notes of the work, material which has been so incorporated.

5. The candidate shall give in writing two months' notice of the intention to submit the thesis.

6. Two copies of the thesis shall be prepared by the candidate.
   a) The thesis shall be submitted to the Head, Student Administration (Cumberland) by the Head of School/Department/Centre with a certificate signed by the supervisor(s) certifying that the candidate's thesis is ready for examination.
   b) If the Head of School/Department/Centre declines to accept the thesis, the supervisor may appeal in writing to the Graduate Studies Committee.
   c) If the supervisor or supervisor(s) decline(s) to certify the thesis is ready for examination and the Head of School/Department/Centre declines to accept the thesis, a candidate may appeal to the Graduate Studies Committee.

7. The following guidelines shall be followed in the preparation of the thesis:
   a) A thesis should be typed on one side of the paper only with double spacing and medium-weight A4 paper. In exceptional circumstances and with the approval of the Head of School/Department/Centre other forms of presentation may be permitted.
b) Margins should not be less than 3.5 cm on the left-hand side, 1.5 cm on the right-hand side and 2 cm at the top and bottom to allow for binding and trimming.

c) A thesis should incorporate in the following order:
   i) a title page giving the title of the thesis in full, the full name and academic qualifications of the candidate, the name of the organisation, institute or laboratory in which the research was carried out (if applicable), the name of the School/Department/Centre of the tertiary institution associated with the work and the date when submitted for the degree;
   ii) a table of contents;
   iii) an abstract of approximately 300 words;
   iv) a certificate signed by the candidate to the effect that the work has not been submitted for a higher degree to any other university or institution. The candidate shall also indicate in the thesis the sources of information and the extent to which the candidate has involved the work of others.
   v) the supervisor’s certificate, which is required to fulfil requirement 7 a, shall be attached to the first page of the thesis.

d) Sheets shall be numbered consecutively.

e) Diagrams and figures:
   The following are general suggestions for normal practice but they may be varied in special cases with the approval of the Head of School/Department/Centre:
   i) diagrams and figures, etc., should preferably be drawn or photographed on medium weight A4 (rather than being affixed to A4 paper) and bound in the appropriate place in the text;
   ii) all figures should form a right-hand page with the legend at either the bottom or, if necessary, on the page facing the figures;
   iii) tables should be inserted in the appropriate place in the text, except that lengthy or bulky tables should appear as an appendix;
   iv) diagrams, maps, tables, etc., exceeding A4 size, should be folded so as to read as a right-hand page when open.

8. Two copies of the thesis shall be distributed after examination as follows:
   1st copy - the School/Department/Centre
   2nd copy - Library (this copy of the thesis must be on acid-free paper).

a) The copy of the thesis deposited with the Library will be available for consultation, loan, or copying at the discretion of the Senior Librarian, unless the Faculty on the application of the candidate determines that it shall not be available until after the expiry of a stated period, which shall not normally exceed two years.

b) The Senior Librarian shall require each user and recipient of a copy of a thesis to undertake in writing to respect the author’s rights under the law relating to copyright.

c) A candidate for a higher degree may, when lodging a thesis, state that the thesis contains restricted or confidential information which the candidate does not desire to be disclosed freely and which may be released to other persons only on the authorisation of the Head, Student Administration (Cumberland), after consultation with the Head of School/Department/Centre, but otherwise by lodging a thesis, a candidate consents to its release under Rule 8 (a).

d) Where the thesis contains materials which the candidate considers should have restricted distribution, the supervisor, the Head of School/Department/Centre and the examiners shall be informed which parts are classified. If further precautions are required, for example, more secure transmission than registered post, costs are to be borne by the candidate.

e) Where a candidate states that a thesis contains confidential information which the candidate does not desire to be disclosed freely, the candidate may to the extent that is possible, place the information in an Appendix to the thesis.

f) The Senior Librarian shall not disclose to any persons the Appendix to a thesis where the candidate states that the Appendix contains restricted or confidential information, unless the Head, Student Administration (Cumberland), after consultation with the Head of School/Department/Centre, has authorised such disclosure.

g) The candidate may submit as supporting documents any work he/she has published, only if it bears on the subject of the thesis.

### Examination of Thesis

1. The Faculty shall appoint at least two examiners, at least one of whom shall be internal to the University. The student's supervisor(s) shall not be an examiner.

2. All examiners shall be furnished with a copy of the course description and course requirements as published in the Faculty Postgraduate Handbook, and be required to award marks/grades of Fail, Pass, Credit, Distinction and High Distinction according to the criteria determined by the Faculty, which is available from Student Administration (Cumberland).

3. The candidate may be required to attend the College or such other place as the Faculty shall determine for an oral examination of his/her thesis.

4. The report of examiners shall be forwarded to the Head of School/Department/Centre for recommendation to Graduate Studies Committee*, to award one of the above grades as a thesis final result.

* However, if there is any disagreement among the examiners, the Head, shall consult the supervisor and the annual progress report before making a recommendation.

5. Following a resolution regarding the thesis by the Graduate Studies Committee, the examiners’ reports, anonymously, may be released to the candidate by the relevant Head of School/Department/Centre.
Degree of Master by Coursework
Please refer to the relevant entry in the chapter of the presenting School or Department (see Table of Contents).

Graduate Diploma
Please refer to the relevant entry in the chapter of the presenting School or Department (see Table of Contents).

Graduate Certificate
Please refer to the relevant entry in the chapter of the presenting School or Department (see Table of Contents).

Awards, Prizes and Scholarships

Postgraduate Awards
A limited number of competitive Australian Postgraduate Awards are made available to assist students undertaking full-time PhD or Master's by research courses at Australian universities.

Applicants are expected to have an undergraduate record at honours level or to have outstanding results in a pass degree, or in preliminary studies or in the first year of a Master's degree.

The Awards are available to Australian citizens and permanent residents. Selection is based primarily on academic merit and relevant experience, and is highly competitive.

The closing date for applications is 31 October of each year. Application forms are available from the Faculty Office (Cumberland). For additional information contact:

The Research and Scholarships Office
Main Quadrangle, A14
The University of Sydney NSW 2006
Telephone: (02) 9 351 3250 Fax: (02) 9 3513256

The Butterworth-Heinemann Treatise Prize
Donated by Butterworth-Heinemann Publishers. Awarded to the postgraduate physiotherapy student submitting the best coursework treatise.

The Butterworth-Heinemann Thesis Prize
Donated by Butterworth-Heinemann Publishers. Awarded to the postgraduate physiotherapy student submitting the best Master's or PhD thesis.

The Private Speech Pathologists' Association of New South Wales Master's Thesis Prize
Awarded for a Master's thesis which has been successfully examined and is considered to be of outstanding merit.

Scholarships
For other scholarships in the University of Sydney, see the Calendar, Volume II.

Clinical Supervisory Positions for Post-graduate Students
Qualified Speech Pathologists are regularly employed by the School of Communication Disorders on a full or part-time basis to provide supervision to the School's undergraduate students in clinical practice.

Post-graduate students who are qualified Speech Pathologists may be offered employment in some of these supervisory positions. Preference will be given to full-time students but part-time students are not precluded from these opportunities. For further information, contact the Director of Clinical Education in the School of Communication Disorders on (02) 9 351 9450.

Research Assistantship
From time to time, financial assistance in the form of research assistantships are made available in which students work with staff members on funded research projects. Students are encouraged to seek advice and information on a regular basis from School/Department/Centre staff.

Explanation of Subject/Units of Study

Numbering System
In 1998, the Faculty of Health Sciences is moving to a new Student Information System and a new subject numbering system. From 1998 what were previously known as 'subjects' are to be referred to as 'units of study'. The units of study numbering system is comprised of four letters of the alphabet and four digits. The letters of the alphabet identify the School/Department/Centre responsible for the unit of study. The first of the four digits corresponds as far as possible to the level of the unit, and the remaining three digits are sequentially allocated as required.

The identifying alphabet codes of the Faculty's Schools/Department/Centres are as follows:

<table>
<thead>
<tr>
<th>Code</th>
<th>School/Department/Centre</th>
</tr>
</thead>
<tbody>
<tr>
<td>STUT</td>
<td>Australian Stuttering Research Centre</td>
</tr>
<tr>
<td>BEHS</td>
<td>Department of Behavioural Sciences</td>
</tr>
<tr>
<td>BIOS</td>
<td>Department of Biomedical Sciences</td>
</tr>
<tr>
<td>CSCD</td>
<td>School of Communication Sciences and Disorders</td>
</tr>
<tr>
<td>COMH</td>
<td>School of Community Health</td>
</tr>
<tr>
<td>EXSS</td>
<td>School of Exercise and Sport Science</td>
</tr>
<tr>
<td>HIMS</td>
<td>School of Health Information Management</td>
</tr>
<tr>
<td>MRTY</td>
<td>School of Medical Radiation Technology</td>
</tr>
<tr>
<td>VOIC</td>
<td>National Voice Centre</td>
</tr>
<tr>
<td>OCCC</td>
<td>School of Occupational Therapy</td>
</tr>
<tr>
<td>ORTH</td>
<td>School of Orthoptics</td>
</tr>
<tr>
<td>PHTY</td>
<td>School of Physiotherapy</td>
</tr>
<tr>
<td>REHB</td>
<td>Rehabilitation Research Centre</td>
</tr>
<tr>
<td>SING</td>
<td>Singapore Institute of Management</td>
</tr>
<tr>
<td>AHCD</td>
<td>Yooroong Garang</td>
</tr>
</tbody>
</table>

As part of the transition to the new Student Information System, this Handbook also contains the old subject codes which are placed in parentheses next to the new units of study codes.

Subject Unit Values
The subjects in all postgraduate courses have been defined in terms of units. A unit is based on total student workload (incorporating both formal classwork and private study).
**SUMMARY OF GRADUATE DEGREES, DIPLOMAS AND CERTIFICATES OFFERED**

**Doctor of Philosophy (PhD)**

- **Australian Stuttering Research Centre**
  - F/T: 3 years - max 5 years
  - P/T: 3 years - max 7 years

- **Behavioural Sciences**
  - F/T: 1003 (10601A)
  - P/T: 1002 (10601B)

- **Biomedical Sciences**
  - F/T: 1109 (11601A)
  - P/T: 1108 (11601B)

- **Communication Sciences and Disorders**
  - F/T: 1211 (12601A)
  - P/T: 1210 (12601B)

- **Community Health**
  - F/T: 0850 (08601A)
  - P/T: 0841 (08601B)

- **Exercise and Sport Science**
  - F/T: 2202 (22601A)
  - P/T: 2201 (22601B)

- **Health Information Management**
  - F/T: 0916 (09601A)
  - P/T: 0912 (09601B)

- **Medical Radiation Technology**
  - F/T: 1825 (18601A)
  - P/T: 1820 (18601B)

- **Occupational Therapy**
  - F/T: 1524 (15601A)
  - P/T: 1521 (15601B)

- **Orthoptics**
  - P/T: 1412 (14601A)

- **Physiotherapy**
  - F/T: 1618 (16601A)
  - P/T: 1623 (16601B)

- **National Voice Centre**
  - F/T: 2101 (21601A)
  - P/T: 2105 (21601B)

- **Rehabilitation Research Centre**
  - F/T: 2301 (23601A)
  - P/T: 2302 (23601B)

**Master of Applied Science (MAppSc)**

- **Australian Stuttering Research Centre (by research)**
  - F/T: 2403
  - P/T: 2404

- **Behavioural Health Science (by research)**
  - F/T: 1005
  - P/T: 1006

- **Communication Sciences and Disorders (by research)**
  - F/T: 1213
  - P/T: 1214
  - off-campus: 1218

- **Exercise and Sport Science (by research)**
  - F/T: 2203
  - P/T: 2204

- **Health Information Management (by research)**
  - F/T: 0909
  - P/T: 0910

- **Biomedical Sciences (by research)**
  - F/T: 1116
  - P/T: 1117

- **Manipulative Physiotherapy (by coursework)**
  - F/T: 1632
  - P/T: 1633

* Only Offered Off-Shore in Singapore in conjunction with the Singapore Institute of Management
** Last offered in 1997
4 Administrative Information

Course Enquiries and Applications

Student Administration (Cumberland)
Student Administration (Cumberland) located in the Jeffrey Miller Administration Building (A Block), provides intending applicants and enrolled students, both local and overseas, with information and advice on the various courses offered by the Faculty, as well as associated matters of admission and enrolment. Enquiries can be made Monday - Friday between 9 a.m. and 4.30 p.m.

The postal address is:
Student Administration (Cumberland)
The University of Sydney
P.O. Box 170
Lidcombe, NSW 2141
Ph: (02) 9351 9355
Fax: (02) 9351 9412

Postgraduate Course Applications

Information and application forms for the Faculty's postgraduate courses are available from Student Administration (Cumberland) in July each year.

The closing date for graduate coursework programs offered by the School of Physiotherapy is 31 July.

The closing date for all other graduate coursework programs is 30 September. Late applications are accepted and will be considered if vacancies remain.

Applications for graduate research programs may be lodged at any time but commencing students may only enrol before the HECS census date of any semester.

All Other Course Applications

Information and application forms for all other courses (UAC undergraduate, non-UAC undergraduate, conversion) are available from Student Administration (Cumberland).

Non-Award Enrolment

Non-award students are students who are enrolled in a unit or units but are not proceeding to a degree or diploma of the University. The Faculty may permit enrolment in a particular unit or units provided that the student has an appropriate academic background and that the Head of the School/Department/Centre offering the unit considers that the student will benefit from the unit, that accommodation is available and that the enrolment does not prevent a place in that unit being available to a student proceeding to a degree or diploma.

A student who is subsequently admitted to a course of the University for which units completed as a non-award student form a part, may receive credit for those units.

Enquiries concerning eligibility for enrolment and the availability of units should be made at the relevant School/Department/Centre. Applications for non-award enrolment should be submitted to Student Administration (Cumberland).

Miscellaneous Enrolment

Provision is made in the Faculty for students to undertake study in units which form part of award courses. Miscellaneous students’ results will not be formally presented but a certificate of successful completion will be given on completion of units.

Study as a miscellaneous student will not be taken into account on subsequent enrolment in an award course in the University of Sydney.

Miscellaneous students will be required to pay the prescribed fees (minimum $9.00 per hour in 1997) for this mode of study.

Application forms are available from the Continuing Professional Education and Conference Unit in A Block and should be lodged prior to commencement.

Cross-Institutional Enrolment

Students enrolled in a recognised tertiary course at another institution will be permitted to enrol in any unit in degree and diploma courses in the Faculty of Health Sciences, providing the unit is approved by the home institution, the applicant satisfies the pre-requisite knowledge to study the unit and resources are available to support the enrolment in the unit.

Cross-institutional students will incur either a HECS liability or a tuition fee, depending on whether the subject belongs to a fee paying or HECS liable course.

Enquiries concerning application procedures and eligibility should be directed to Student Administration (Cumberland).

Registration and Enrolment

Status of Students

A student shall be deemed to be a registered student of the University from the time of first enrolment, until the student:

a) has completed the course; or
b) has discontinued studies; or
c) has been excluded from the course and/or the University; or
d) is deemed to have abandoned the course.

Completion of enrolment will include submission and subsequent acceptance of matters outstanding at the time of receipt of a signed enrolment form. Such matters may include orthoptic eye tests, evidence of meeting course admission prerequisites and any other items.

Registered students are required to enrol at the start of each year or semester as determined by the Head, Student Administration (Cumberland).

Students who do not formally discontinue may be deemed to have abandoned their course if they fail to complete enrolment by 31 March of the following year.
Deferment of Enrolment
Deferment of enrolment will not normally be granted for a postgraduate student unless there have been extreme and unpredictable changes in circumstances since applying for the course.

Applications for deferment must be lodged in writing by the specified closing date with the Head, Student Administration (Cumberland).

Full-fee paying overseas students may be permitted to defer enrolment upon written application to the University of Sydney International Office.

Enrolment of New Students
Enrolment of new students in a course entails:

a) completion of an Enrolment form attesting the units in which the student will be enrolled in the first year of study;
b) completion of such forms for statistical purposes as required by the Department of Employment, Education, Training and Youth Affairs (DEETYA), and any other government agency;
c) completion of a form to indicate mode of payment of the Higher Education Contribution (if applicable);
d) completion of such other forms as required by the Faculty or University;
e) payment of compulsory and other fees in relation to study at the University including Student Guild fees;
f) payment of tuition fees for March Semester if enrolled in a fee paying course;
g) payment of the estimated Higher Education Contribution for March Semester for HECS liable courses if the "up-front" mode of payment is adopted.

New graduate students accepting places in the faculty's courses will be required to enrol at the Cumberland Campus on Thursday, 29 January, 1998. Failure to enrol at the appointed time may result in loss of the place.

The payment of all fees will be by bank deposit through any branch of the National Australia Bank. Compulsory subscriptions and other fees must be paid by Friday, 13 February, 1998 or the enrolment may be cancelled (financial assistance in the form of a short term, interest-free loan is available to support the payment of compulsory subscriptions). A fees/charges deposit notice for this purpose will be issued at enrolment.

For HECS liable courses, if the "up-front" mode of payment is adopted, the estimated Higher Education Contribution for March Semester, must be paid by Friday, 13 March, 1998. A statement of enrolment and another fees/charges deposit notice for this purpose will be issued at enrolment.

Re-enrolment of Continuing Students
Re-enrolment of continuing students in a course entails:

a) completion of an Enrolment form attesting the units in which the student will be enrolled;
b) completion of such forms for statistical purposes as required by the Department of Employment, Education, Training and Youth Affairs (DEETYA), any other government agency;
c) if applicable, completion of a form to indicate mode of payment of the Higher Education Contribution (only if the student is changing mode from that adopted in the immediately preceding semester);
d) completion of such other forms as required by the Faculty or University;
e) payment of compulsory and other fees in relation to study at the University, including Student Guild fees.
f) payment of course fees or the estimated Higher Education Contribution for March Semester, if "up-front" mode of payment is adopted.

Re-enrolment of continuing postgraduate students will be carried out by mail. Dates for payment of fees are the same as those specified for new students in the section above.

The last day to finalise re-enrolment is Tuesday, 31 March, 1998. Failure to complete enrolment by the above date will be deemed to indicate an intention on the part of students to abandon their course and removal of the enrolment record will ensue.

Student Identity Card
All enrolled students are issued with a University identity card which must be carried during attendance at the University and shown on official request. The student number appearing on the identity card is the identifier used in the University's records and should be quoted in all correspondence. The card must be presented when borrowing from the University Libraries and when applying for and using travel concessions.

Any student seeking leave from or discontinuing a course must return the identity card to Student Administration (Cumberland) as part of the Exit Procedures of the University.

In the event of loss, a replacement identity card may be issued by Student Administration (Cumberland), on payment of a $10.00 fee to the Cashier.

Statement of Enrolment - August Semester
At the beginning of August Semester, a statement of the expected enrolment and associated course fee or estimated HECS will be sent by mail to the semester address of each currently enrolled student.

Payments for course fees or "up-front" HECS must be made by Friday, 21 August, 1998. Failure to pay by this date may result in the enrolment being cancelled.

Students who do not intend to continue their studies in August Semester must formally withdraw from their course before 31 August, 1998, or they will be liable for course fees or HECS for August Semester.
Confirmation of Enrolment - March and August Semester

In late April (March Semester) and late September (August Semester), all enrolled students will receive a notice confirming the details of their enrolment and providing a record of their course fees or Higher Education Contribution for the current semester. The notice should be kept by the student as a record in relation to the Higher Education Contribution for that semester. If amendment to this notice is required it should be returned to Student Administration (Cumberland) with an explanatory letter. The completion of a "Variation of Enrolment" form may be required.

Fees and Charges

Compulsory Student Guild Fees

All students on the Cumberland campus are required, as a condition of their enrolment, to become members of the Cumberland Student Guild. Postgraduate students are also required to be a member of and pay subscriptions to the Sydney University Postgraduate Representative Association (SUPRA).

Note

a) Exemptions from being a member or paying subscriptions may be granted on certain grounds specified in the University of Sydney Calendar. Students granted exemption on grounds of conscience will have their membership fee transferred to the Jean D. Foley Bursary Fund.

b) Students enrolling for one semester only are to pay a reduced fee.

Extension of Time for Payment of Student Guild Fees

Any student who is unable to pay Student Guild fees may apply before the due date to the Head, Student Welfare Services (Cumberland), for an interest free loan. This loan is repayable by 30 April.

Refund of Student Guild Fees

a) If written notice of discontinuation of a course is received by 31 March, all Student Guild Fees paid will be refunded.

b) After 31 March in a year, students who formally discontinue or vary their course of study and consider themselves eligible for a refund of all or part of fees paid to the student organisations, may write to the Secretary of the Cumberland Student Guild detailing their case.

c) If following some variation of enrolment, a student becomes eligible for a refund of all or part of an "up-front" Higher Education Contribution, the amount of the refund will be notified in the "Confirmation of Enrolment" notice and the refund made a short time after receipt of the notice.

d) Requests for refund of any other fees or contributions should be directed in writing to the Head, Student Administration (Cumberland) and should detail fully the grounds upon which the request is based.

Refund of Course Tuition Fees

If a student discontinues or takes leave of absence before the start of semester, 90% of the course tuition fee paid for the semester will be reimbursed.

If a student discontinues or takes leave of absence after the start of semester but before the census date (31 March or 31 August), 50% of the course tuition fee paid for the semester will be reimbursed.

Beyond these dates, no refund will be made.

Course Tuition Fees for Postgraduate Programs

All postgraduate coursework programs in the Faculty except Rehabilitation Counselling have become fee-paying programs. Students who enrol in these programs are exempt from payment of the Higher Education Contribution. The fee associated with these programs is determined annually and will be levied by semester of enrolment. Non-payment of course fees by the specified date may result in the student's enrolment being cancelled.

Higher Education Contribution Scheme (HECS)

The Australian Government requires students to contribute to the cost of their higher education. Students enrolled in courses for which tuition fees are charged are exempt from paying HECS as are all students who have received an Australian Postgraduate Award (without stipend) and some other categories of students.

HECS is calculated each semester and represents the proportion of the normal full-time equivalent load for the year of the course in which the student is enrolled. Students have the option of paying "up-front" in which case a discount of 25% is given or may "defer" payment, in which case their liability is discharged through the taxation system when their taxable income reaches a certain minimum level. Students may also opt to make a partial payment of at least $500 up-front, in which case the discount of 25% is given on the partial payment. Students who elect to defer payment or who make a partial payment are required to provide details of their Tax File Number.

Further information about HECS is given in the "HECS - Your Questions Answered 1998" booklet issued at enrolment and available all year round from the Student Enquiry Counter.

Notes

The Department of Biomedical Sciences publishes manuals for most of its units, ranging in cost between $4.00 and $69.00 (1997). Purchase of manuals is optional, but strongly recommended. Copies of manuals are available in the Library's Closed Reserve.

Continuing International Students

Students who are financially indebted to the University and have not made acceptable arrangements for settlement of their obligations are not entitled to use the University's facilities and their enrolment may be cancelled. They will not be permitted to register for a further semester, to attend classes or examinations, or to be granted any official credentials. Cancellation of enrolment applies if any portion of fees or the supply of a required tax file number is outstanding at the census date in the relevant semester, that is, 31 March in March Semester and 31 August in August Semester. Reinstatement of enrolment, if approved, may require payment of a $100 fee.

Credit Transfer

Please consult Student Administration or refer to the Undergraduate Handbook for full details of policies and procedures relating to Credit Transfer.

Discontinuation of Studies, Variation of Enrolment and Leave of Absence

General

In making a decision to vary a course of study or apply for Leave of Absence or Discontinuation of Studies, it is often advisable for a student to discuss the situation with the Head, Student Welfare Services (Cumberland) or the Student Counsellor. While educational issues will be discussed within the School/Department, personal and family issues may also be involved and be equally important. Staff in Student Welfare are available to assist students in clarifying the reasons why changes in their academic programs may be necessary, especially where these are related to illness or misadventure, and in effective planning to overcome such difficulties.

Discontinuation of Studies

Discontinuation of studies refers to the formal abandonment of a course of study after enrolment/re-enrolment has been completed. Students applying to discontinue their studies must complete an "Application for Discontinuation of Studies" form (available from the Student Enquiries Counter) and forward it, together with the completed "Exit Authority" to Student Administration (Cumberland). Forms will not be accepted unless they contain the recommendation(s)/endorsement(s) of the appropriate Heads of Schools/Departments (or their delegates) and other Cumberland Campus staff. Incomplete application forms will be returned to the student.

Unless forms are lodged before 31 March (in March Semester) or 31 August (in August Semester), the student will incur a Higher Education Contribution or course fees liability for the semester.

To discontinue studies without failure being recorded against enrolled units, the application form must be accepted by the following dates:

a) For March Semester only units, 31 March, 1998;
b) For full-year units and August Semester only units by 31 August, 1998.

If a student discontinues after the above dates and produces appropriate evidence with the application that discontinuation was due to serious illness or misadventure, the Faculty may deem all units to be "discontinued without failure".

Upon discontinuation of studies, some refund of fees may be possible (refer to the section on Fees and Charges - Refund of Fees).

Students who abandon their course after enrolment/re-enrolment and neglect to formally discontinue (that is, "dropping-out") will be deemed to have failed all units in which they are enrolled and be ineligible for any refund of fees.

Re-Admission after Discontinuation or Abandonment of Course

Students who discontinue or abandon a course lose their status as registered students of the University. Any subsequent application for re-admission to the course from which they discontinued must be lodged by the advertised closing date. Such an application will be considered with all other applications received that year for that course. Applications for all undergraduate and postgraduate courses are processed directly by the Faculty and have a closing date of 1 December. For more information contact Student Administration (Cumberland).

Variation of Enrolment

Variation of enrolment refers to the addition and/or discontinuation of units of study and requires the approval of the Faculty.

Students must complete the "Variation of Enrolment" form (available from the Student Enquiries Counter) and forward it to the Head, Student Administration (Cumberland). The form will not be accepted unless it contains the recommendation(s)/endorsement(s) of the appropriate Heads of School/Department (or their delegates). An incomplete application form will be returned to the student originating it.

To discontinue a unit without failure being recorded, the application form must be accepted by the following dates:

a) For March Semester only units, by 31 March, 1998;
b) For full-year units and August Semester only units, by 31 August, 1998.

If a student discontinues a unit after the above dates and produces appropriate evidence with the application that discontinuation was due to serious illness or misadventure, the Faculty may deem the unit to be "discontinued without failure".

Students should re-enrol in discontinued units or their equivalent at the next available opportunity.
Leave of Absence

Leave of absence for a specific period may be granted by the Faculty to students in special circumstances. Leave of absence shall not normally exceed one year but, in exceptional circumstances, up to two years may be granted. Leave is normally granted to the commencement of a semester.

Students returning from a leave of absence will re-enroll in all incomplete required units, or their nearest equivalent.

Students applying for leave of absence must complete an "Application for Leave of Absence" form (available from the Student Enquiries Counter) and forward it to Student Administration (Cumberland). The form will not be accepted unless it contains the recommendation(s) of the appropriate Heads of Schools/Departments (or their delegates) and the completed "Exit Authority". The application must detail the reasons why such leave is sought and documentary evidence in support of the application must be attached to it. An incomplete application form will be returned to the student originating it.

If a student has an application for leave of absence approved to the commencement of March Semester of the subsequent year, the student retains the status of a registered student, must enrol in the same or nearest equivalent unit in March Semester of the subsequent year, and will have their record endorsed "discontinued without failure" for each incomplete enrolled unit.

If a student has an application for leave of absence approved to the commencement of August Semester of a subsequent year, the student retains the status of a registered student, must enrol in the same or nearest equivalent units in August Semester of the subsequent year, and will have their record endorsed "discontinued without failure" for each incomplete enrolled unit.

Special Leave

Special leave may be granted by the Head of School/Department for a period of time (usually not exceeding two months) during the current year of a student’s course. Such leave will be granted only if all studies/assessments can be completed in the current year to the satisfaction of the appropriate School/Departments, otherwise the student should apply for Leave of Absence (see above).

Students seeking Special Leave must apply in writing to their Head of School. Students who are granted Special Leave will be regarded as continuing in their currently enrolled units.

Examinations and Assessments

General

The term "assessment" shall include any assessment or examination conducted by the Faculty. Assessments may take the form of written assignments or examinations, as well as practical and oral assessments.

Assessments are conducted throughout the semester, as well as during approved assessment periods.

Attendance at Assessments

It is the individual student’s responsibility to be available for all assessments, including Post and Deferred Assessments. Students who intend travelling away from Sydney should ensure that they are able to return in time to undertake an assessment at the time and place set down.
In general, the form, together with appropriate original documentation, should be lodged within one week of the assessment/examination period, unless circumstances beyond the student's control prevent it. For examinations run by Student Administration (Cumberland), four copies of the form and supporting documentation must be submitted at the Student Enquiries Counter. For examinations and assessments run by a School/Department/Centre during semester, applications relating to late submission of assignments or inability to attend class tests should be lodged with the Head of School/Department/Centre concerned.

**Disability**
Candidates suffering from a disability which puts them at a disadvantage in assessments may apply to Student Administration (Cumberland) prior to the assessment period for special provisions when the assessments are taken. Students may be required to support their request with medical evidence.

**Recording of Results**
Students' results will be recorded using the following grades:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>HD</td>
<td>High Distinction</td>
<td>indicates an outstanding level of achievement</td>
</tr>
<tr>
<td>D</td>
<td>Distinction</td>
<td>indicates an excellent level of achievement</td>
</tr>
<tr>
<td>CR</td>
<td>Credit</td>
<td>indicates an above average level of achievement</td>
</tr>
<tr>
<td>P</td>
<td>Pass</td>
<td>indicates an acceptable level of achievement</td>
</tr>
<tr>
<td>TP</td>
<td>Terminating Pass</td>
<td>indicates an acceptable level of achievement in an Honours unit when the student is transferring to the associated Pass program</td>
</tr>
<tr>
<td>I</td>
<td>Assessment Incomplete</td>
<td>indicates assessment in the unit is yet to be completed</td>
</tr>
<tr>
<td>AS</td>
<td>Pass with Advanced Standing</td>
<td>indicates a pass with advanced standing in the unit</td>
</tr>
<tr>
<td>X</td>
<td>Fail with Post granted</td>
<td>indicates the student's performance did not reach the acceptable level of achievement but was deemed to be of sufficient merit to warrant further assessment</td>
</tr>
<tr>
<td>XP</td>
<td>Pass</td>
<td>indicates a pass following Post Assessment</td>
</tr>
<tr>
<td>F</td>
<td>Fail</td>
<td>indicates failure to achieve the required standard of achievement</td>
</tr>
<tr>
<td>DA</td>
<td>Deferred Assessment</td>
<td>final assessment has been deferred because of misadventure or illness</td>
</tr>
<tr>
<td>WO</td>
<td>Discontinued without failure</td>
<td>permitted to discontinue unit without failure</td>
</tr>
<tr>
<td>WF</td>
<td>Discontinued with failure</td>
<td>discontinued unit with failure</td>
</tr>
<tr>
<td>SC</td>
<td>Subject Carried</td>
<td>Unit carried into a later year of the course (applicable only to research projects and treatises in postgraduate programs)</td>
</tr>
<tr>
<td>ZP</td>
<td>Pass on Pass/Fail Basis</td>
<td>Pass granted on a Pass/Fail Basis</td>
</tr>
<tr>
<td>CP</td>
<td>Conceded Pass</td>
<td>Indicates the student's performance did not reach the required level of achievement in the subject but was deemed acceptable given the student's overall performance</td>
</tr>
<tr>
<td>V</td>
<td>Interim Result</td>
<td>Student has submitted a thesis/treatise and it is under assessment</td>
</tr>
</tbody>
</table>

**Notification of Results**
Results for terminating units will be formally released by the Examinations Branch as follows:

**End of March Semester**
Units that, according to the Faculty Handbooks, are presented only in March Semester.

**End of August Semester**
Units that, according to the Faculty Handbooks, are presented either in August Semester only or are presented over both March and August Semesters.

**Availability of Results for Terminating Units**
Results will be made available to students as follows:

1. **Public Display of Results**
   Results will be displayed on the day and at the places as notified on the Official Notice Boards. Results will be displayed using the student identity number only.

   Students may exercise the option not to have their results displayed in this fashion by completing the appropriate form available from the Student Enquiries Counter.

2. **Individual Result Notices**
   Individual result notices will be mailed to the student's last advised home address on the date notified on the Official Notice Boards.

   The result notice will show the final mark and grade for each relevant unit. Details of the assessment procedures used to determine the final result are available from the School/Department/Centre presenting the unit.

   The relationship of grades to percentage marks is as follows:
Under the following circumstances:

Supplementary assessment may be granted to students who gain a Pass or better in the particular unit.

The proportions of merit grades may vary from unit to unit and from year to year, reflecting different capabilities of different groups.

Special Notes
- No results will be given by telephone.
- It is the student's responsibility to ascertain assessment results.
- Advice of a change of address will not be accepted unless in writing and with the student's signature. Preferably, the Change of Address/Name form should be used.
- Only students with an overseas home address who are not returning to their country of origin between semesters, will be permitted to change to their semester address for receipt of result notices.
- Failure to advise the Examinations Branch of the address to which the results are to be sent, and/or absence overseas, on holidays, or because of work or course commitments, will not be accepted as an excuse for non-receipt of assessment results.

Further, the University will presume that each and every result notice lodged with Australia Post has been delivered no later than seven (7) days following the date of posting, as notified on Official Notice Boards.

- Students who have not received their results within seven (7) days of posting therefore, are responsible for contacting Student Administration (Cumberland) and arranging for a copy of the result notice to be posted or personally collected.

Supplementary Assessments
With regard to supplementary assessments, the Senate of the University has resolved as follows:

Supplementary examinations should be regarded by both teacher and taught as distinct privileges granted to worthy students and not as rights.

Supplementary examinations should not in general be granted to students who fail in more than two units. Examiners or Boards of Examiners should be asked to report which students should be allowed to take supplementary examinations.

Supplementary assessment may be granted to students under the following circumstances:

- Due to duly certified illness, misadventure or circumstances beyond their control, the student has been unable to undertake an assessment at the appointed time, or takes an assessment under prejudicial conditions; or
- The student has failed a unit, but the Examiner deems there is doubt about the result; or
- The student has failed in one or more compulsory sections of a unit even though the composite mark may be greater than 49.9. Students in such a unit must have been advised at the start of the unit of any special requirements, e.g. the need to pass all sections or particular sections of the unit.

Assessments granted under circumstances (a) are deferred Assessments. Applications for Special Consideration which may result in a deferred assessment must be lodged by the student, together with medical certificates or documentary evidence, with Student Administration (Cumberland), no later than seven (7) days following the date of assessment. A deferred assessment may be awarded by the course examiner without an application by a student.

Assessments granted under circumstances (b) and (c) are post assessments. Followings post assessments the grades awarded are XP or F, unless otherwise determined by the Board of Examiners.

Supplementary assessments (a), (b) and (c) may be granted by the Examiner (ie Head of School/Department) and held prior to the Board of Examiners meeting, or may be granted by the Board of Examiners. Should the Examiner grant a supplementary assessment following the completion of all assessments in a unit but prior to the Board of Examiners, notification of the supplementary assessment must be sent to Student Administration (Cumberland). Where there are sections of a unit (academic or clinical) which must be completed satisfactorily in order to pass the unit, the Examiner may grant a post assessment in some or all of these sections prior to the Board of Examiners. Notification of such a post assessment must be sent to Student Administration (Cumberland).

When determining marks following a post assessment the following guidelines are used:

- Where the post assessment is in the whole unit then the mark achieved in that assessment becomes the mark for the unit. Where the post assessment is in a part of a unit, then the mark achieved in that assessment will be aggregated with the mark previously achieved in the other part of the unit.
- The passing grade awarded following a post assessment is XP (no mark or a mark of 50 or more).

Finalisation of Assessment Requirements
All deferred and post assessment requirements (with the exception of clinical placements), must be completed by the end of Week 3 of the following semester.

Review of Results in a Completed Unit
Final results in a completed unit may be reviewed on request by students. Such a review will consist primarily in ensuring that all submissions in relation to a grade have been accounted for and that the total of all marks awarded is correct.

Applications for the review must be submitted in writing to Student Administration (Cumberland), within fourteen
days of the date on which the results in question have been released.

Students dissatisfied with the outcome of a review of their result may choose to appeal the result by using the procedures approved in the Faculty for an Appeal against an Academic Decision.

**Appeals Against an Academic Decision**

The Faculty of Health Sciences has established procedures whereby a student may appeal against an academic decision. In the first instance students should seek a response from the staff member concerned, or the Subject/Course Coordinator. If not satisfied, the student should seek an interview with the Head of School/Department to discuss the matter. If not satisfied with the response from the School/Department, the student may appeal to the Dean. Information on these procedures can be obtained from the Head, Student Administration (Cumberland). While the application of these procedures usually relates to assessment matters, particularly following a Review of Results, this is not the only area in which an appeal may be initiated. If a student wishes to formally initiate an appeal against an academic decision, advice may be sought from the Resource Officer of the Cumberland Student Guild, the Head, Student Welfare Services (Cumberland), or the Student Counsellor.

**Progression and Exclusion**

**Progression**

To satisfy the academic requirements for a University award, students must obtain a passing grade in all units in their courses.

Students must repeat failed units or their equivalent at the first opportunity and will be permitted to progress to the next semester carrying failed units, providing course requirements, including any co-requisites, pre-requisites and attendance requirements can be met. School Academic Advisors may prescribe the program of study for students repeating failed units.

Students who do not follow normal progression in clinical education units may be required to undertake additional clinical education components to demonstrate skill maintenance at a level which satisfies the Head of School/Department. Successful completion of such additional components will be a pre-requisite to enrolment in the subsequent level of clinical education study.

**Exclusion**

1. Under the Resolutions of the Senate, the Faculty is authorised to require a student to show good cause why he or she should be allowed to repeat (a) a year of candidature in which the student failed or discontinued (with failure) more than once, or (b) any unit in which he or she has failed or discontinued (with failure) more than once.

2. Moreover, a student may be required to show good cause why he or she should be allowed to re-enrol in a course in the Faculty if, in the opinion of the Faculty, he or she has not made satisfactory progress towards fulfilling the requirements for that course.

3. While satisfactory progress cannot be defined in all cases in advance, a student who has not successfully completed all first year course requirements within two years (except for students with permission to enrol in the course on less than a full-time basis when the requirement refers to those units in the approved first year enrolment) shall be deemed not to have made satisfactory progress.

**Notification of Pending Exclusion**

Students who are found in a condition in which the Faculty may require them to 'show good cause' why they should be allowed to re-enrol in their course and/or failed unit(s), shall be initially prompted, but not necessarily be placed on 'show cause', by a message on their Assessment Notice. Students who are to be placed on 'show cause' will receive written notification from the Faculty. Students are permitted to re-enrol and/or continue enrolment until the final decision has been taken.

**Showing Cause**

Students so notified of pending exclusion may exercise the right to show good cause why they should be permitted to re-enrol. While it is not possible to define in advance all the reasons relevant to showing 'good cause' against exclusion, serious ill health or misadventure (properly attested) will be considered. In addition, the general record of a student, for example in other units, would be taken into account. In particular, where a student has transferred from elsewhere in the University, regard will be given to their previous record. Such matters as the demands of employers, pressure of employment, time devoted to non-university activities, personal and financial problems, and so on, may be considered if relevant to any serious illness or misadventure. Apart from demonstrating the reasons for not making satisfactory progress, students are advised to indicate why they would be successful if permitted to re-enrol and what steps have been taken to resolve the preceding issues.

**Appeal Against Exclusion by Faculty**

A student notified of a decision by the Faculty to exclude them from re-enrolling in a course and/or unit(s) may appeal to the Senate's Appeals Committee (Exclusion and Re-admissions) by following the procedures set down in the University's Calendar.

The effect of the Faculty's exclusion decision will commence either (a) when the period in which an appeal to the Senate's has expired and the student has not lodged an appeal, or (b), in the event that the student appeals to the Senate within the prescribed period, the date on which the Senate's Appeals Committee rejects the appeal. Until the effect of the exclusion decision applies, the student is permitted to continue in all units in which the student is eligible to be enrolled.

**Re-admission After Exclusion**

An excluded student may apply for re-admission after two academic years. Students who are excluded from a course lose their status as registered students of the Faculty. Any subsequent application of re-admission to a course must be lodged with Student Administration (Cumberland) by 1 December of the year preceding the year of proposed re-admission. The application must include information indicating a readiness to return to tertiary study and will be considered in the light of all other applications received that year for that course.
Other Administrative Information

Conduct
Acceptance as a student in the Faculty implies an undertaking on the part of the student to observe the resolutions and rules of the Faculty and Statutes of the University of Sydney. Students are expected to conduct themselves in an acceptable manner. Smoking and eating are not permitted during lectures, tutorials, clinical sessions, examinations or in the Health Sciences Library.

Members of the staff on the Cumberland Campus, both academic and non-teaching, have a responsibility to maintain orderly and acceptable conduct and to report any breach of regulations occurring on the campus.

Misconduct on the Cumberland Campus will be dealt with under the rules of the Faculty and the statutes of the University of Sydney.

Attendance at Classes
It is expected that students will attend classes as required by the unit co-ordinator. A student who has not satisfied the attendance requirements for a unit laid down by the School or Department in which the unit is offered may be refused permission to be considered for assessment or to sit for an assessment in that unit.

In the case of protracted illness or of absence arising from some other unavoidable cause, a student on presentation of appropriate documentation may be excused from attendance at classes by the Head of School or Department for a period not exceeding two months in any one year. In the case of absences in excess of two months, students must apply for Leave of Absence.

Insurance
Please refer to the Chapter on Clinical Education for information on insurance.

Change of Address
Students are required to notify Student Administration (Cumberland), of any changes in their addresses as soon as possible. Notice of a change of address will not be accepted unless in writing and over the student’s signature. Preferably, the Change of Address/Name form should be used. The University cannot accept responsibility if official correspondence fails to reach a student who has not notified the Head, Student Administration (Cumberland), of a change of address.

Official Notices
Official notices (such as examination timetables) are displayed on the Official Notice Boards on the Cumberland campus. Students are expected to be acquainted with the contents of those announcements which concern them.

The Official Notice Boards are located in the following buildings:
- A Block - northern entrance
- R Block - outside main entrance

Student Records
Student records are issued with the authority of the Registrar by Student Administration (Cumberland). Student records shall include:
- end-of-semester Assessment Result Notices;
- transcripts of Academic Records;
- any other student records approved by the Head, Student Administration (Cumberland).

Transcripts of academic records are available to:
- individual students, upon written request;
- third parties, upon receipt of a written authority of the student; institutions or organisations approved by the Head, Student Administration (Cumberland) from time to time.

At graduation two transcripts will be issued free of charge. On other occasions, the issue of two transcripts costs $10.00.

Course Work
Assignments, class exercises, practical work and other set work regarded as course requirements, will be assessed and will be included in the overall assessment of students at the conclusion of each assessment period. The relative weighting of components of the overall assessment will be the responsibility of the teaching School or Department.

Failure to complete assignments, class exercises or other set work will mean that the student may not be eligible for a passing grade in the unit concerned.

The Faculty reserves the right to retain at its own discretion a copy of any essay, thesis, or other work executed by students as part of their courses, or submitted for any award or competition conducted by the University.

Access to Buildings by Students After Hours
Approval for after hours access to buildings must be obtained from relevant Heads of Schools/Departments.
5 Department of Behavioural Sciences

The Department of Behavioural Sciences provides psychology, sociology and research methods units for students in all undergraduate courses in the Faculty. The staff bring specialised knowledge and experience to the teaching of these disciplines. Students are given a thorough grounding in those aspects of psychology and sociology relevant to client care. In addition there is a focus on the applications of psychological and sociological principles relevant to a range of situations including the psychosocial aspects of sport and recreation, and mental and physical illness.

Other units are designed to enable graduates to understand issues related to policy making and to organisations involved in health delivery systems. Ageing, ethnicity and concerns relating to special interest groups are considered. The research methods strand enables graduates to read the professional literature critically and to conduct research in their chosen profession.

Postgraduate programs are offered by the Department leading to doctoral and masters degrees. These degrees are undertaken both by health professionals and by graduates with a major in either psychology or sociology. The staff of the Department have been extensively involved in research, including being the recipients of competitive grants; publishing research in international refereed journals and books; and organising national and international conferences on various aspects of behavioural medicine.

Notes

1 Articulating Students from Graduate Diploma to Master and who have completed Introduction to Graduate Studies, will not be required to take BEHS6018 (105B1) Developing a Research Project.

Elective Studies (4 credit points):

- BEHS049 (10517) Abnormal Psychology & Mental Health
- BEHS050 (10518) Behaviour Modification & Cognitive Behavioural Therapy (semester 1 and 2)
- BEHS051 (10519) Biofeedback
- BEHS053 (10520) Cognitive Function in Neurological Disorders
- BEHS054 (10521) Counseling (semester 1 and 2)
- BEHS056 (10522) Cultural Approaches to Disease and Healing & Ethnographic Analysis (semester 2)
- BEHS057 (10524) Health Policy and Social Theory (semester 2)
- BEHS058 (10525) HTV/AIDS: Health and Social Services (semester 1)
- BEHS059 (10526) Introduction to Medical Anthropology (semester 2)
- BEHS060 (10527) Occupational Health and Stress (semester 1 and 2)
- BEHS061 (10528) Post Trauma Stress (semester 1 and 2)
- BEHS062 (10529) Psychoanalysis, Health, Gender and the Family (semester 2)
- BEHS063 (10530) Qualitative Research Analysis
- BEHS064 (10531) Research Methods for Medical Anthropologists (semester 2)
- BEHS065 (10532) Social Change and Health Services
- BEHS067 (10534) Social Theory and Special groups
- BEHS068 (10535) Sociology of Gender Relations
- BEHS069 (10536) Stress and Coping: Social Context and Individual Differences (semester 2)
- BEHS070 (10537) Stress and Disability (semester 1 and 2)
- BEHS071 (10538) Stress and Illness: Management Issues
- BEHS073 (10540) Visualisation and Imagery (semester 1 and 2)
- BEHS084 (10553) Computing for Health Practitioners (semester 1 and 2)

Research Electives (8 credit points):

- EXSS025 (22526) Biological Measurement and Analysis
- BEHS6018 (105B1) Developing a Research Project
- COMH5167 (085A8) Epidemiological Research
- COMH5164 (085A5) Evaluation Research
- BEHS5139 (105B2) Group and Single Case Experimental Research in Clinical Settings
- COMH516Ei (085A6) History and Philosophy of Scientific Methodology
- BEHS5135 (105A6) Intermediate Statistics
- BEHS5137 (105A8) Multivariate Statistics
- BEHS5136 (105A7) Qualitative Research Methods
- BEHS5138 (105A9) Survey Research Methods
- BEHS5130 (105A1) Introduction to Graduate Studies

Information Technology Electives (4 credit points) (see Appendix 1)
Graduate Certificate in Behavioural Health Science, Graduate Diploma in Behavioural Health Science, Master of Behavioural Health Science (by Coursework)

The Graduate Certificate in Behavioural Health Science, Graduate Diploma in Behavioural Health Science, and Master of Behavioural Health Science by coursework will allow students to gain considerable contemporary knowledge in the disciplines of psychology, sociology, and anthropology and their application to health behaviour and health issues. The courses aim to produce health professionals who are aware of and can critically evaluate and integrate into their work practice culturally relevant, scientific, and methodologically sound research evidence. It is aimed at those who have some background in the health professions and/or relevant disciplines who wish to further their studies in an interdisciplinary manner. The electives give the student the opportunity to develop discipline-based knowledge and research skills (including qualitative and quantitative data analysis) in the context of teachers who are conversant with the relevance of the behavioural sciences to issues of health care, illness and stress, the importance of counselling skills for health professionals, and the historical and changing role of health professions in the context of our culture, adjacent nations, Europe, and the U.S.A. There are no core units specified; electives are chosen in consultation with the supervisor of their research treatise. Where a student can demonstrate mastery, credit transfer for portions of the coursework may be possible on application from the student and with the support of the supervisor.

Admission Requirements
Applicants may enter the research master's program with any of the following requirements:

i) Bachelor's degree with a major in anthropology, sociology or psychology; OR

ii) Bachelor's degree in social work; OR

iii) an approved Bachelor degree in a health profession with satisfactory performance in Behavioural Sciences OR

iv) Evidence of general and/or professional qualifications where the prospective candidate can satisfy the Faculty that she or he possesses expertise equivalent to (i), (ii), or (iii).

Applicants in the above categories may be required to complete any additional qualifying units prescribed by the Faculty of Health Sciences.

Course Outlines
The course outline for the Graduate Certificate of Behavioural Health Science is presented in Table 5.1, the course outline for the Graduate Diploma of Behavioural Health Science is presented in Table 5.2, and the course outline for the Master of Behavioural Health Science is presented in Table 5.3.

Credit Transfer
Students who have completed the Graduate Certificate of Behavioural Health Science will receive full credit (50%) towards the Graduate Diploma of Behavioural Health Science. Students who have completed the Graduate Diploma of Behavioural Health Science will receive full credit (67%) toward the Master of Behavioural Health Science. Transfer to a research master's degree must occur via advanced standing mechanisms. Consideration of credit transfer follows existing Faculty policy as outlined in this Handbook.

Unit Descriptions
Unit descriptions for the research electives and elective studies are the same as those described in this Handbook under the Master of Applied Science (Behavioural Health Science) by Research. Research electives are 8 units each and students are entitled to choose one or more of these if they wish.

Information Technology Electives (see Appendix 1)

Graduate Certificate in Child and Adolescent Health, Graduate Diploma in Child and Adolescent Health, Master of Child and Adolescent Health (by Coursework)

The Graduate Certificate in Child and Adolescent Health, Graduate Diploma in Child and Adolescent Health, and Master of Child and Adolescent Health by coursework will allow students to gain considerable contemporary knowledge in the disciplines of psychology, sociology, and anthropology and their application to child and adolescent health issues. The courses aim to produce health professionals who are aware of and can critically evaluate and integrate into their work practice culturally relevant, scientific, and methodologically sound research evidence. The courses are aimed at students who have some background in the health professions and/or relevant disciplines who wish to further their studies in an interdisciplinary manner. The electives give the student the opportunity to develop discipline-based knowledge and research skills (including qualitative and quantitative data analysis); skills relevant to working with survivors of sexual and other violence; skills pertaining to the gathering of information about development, achievements, and difficulties in a social and cultural context. There are no core units specified; electives are chosen by the student. Master's students choose their electives in consultation with the supervisor of their research treatise. Where a student can demonstrate mastery, credit transfer for portions of the coursework may be possible on an application form and with the support of the supervisor.

Admission Requirements

Applicants may enter the research master's program with any of the following requirements:

i) Bachelor degree with a major in anthropology, sociology or psychology;

OR

ii) Bachelor degree in social work;

OR

iii) an approved Bachelor degree in a health profession with satisfactory performance in Behavioural Sciences

OR

iv) Evidence of general and/or professional qualifications where the prospective candidate can satisfy the Faculty that she or he possesses expertise equivalent to (i), (ii), or (iii).

Applicants in the above categories may be required to complete any additional qualifying units prescribed by the Faculty of Health Sciences.

Course Outlines

The course outline for the Graduate Certificate in Child and Adolescent Health is presented in Table 5.4, the course outline for the Graduate Diploma in Child and Adolescent Health is presented in Table 5.5, and the course outline for the Master of Child and Adolescent Health is presented in Table 5.6.

Credit Transfer

Students who have completed the Graduate Certificate in Child and Adolescent Health will receive full credit (50%) towards the Graduate Diploma in Child and Adolescent Health. Students who have completed the Graduate Diploma in Child and Adolescent Health will receive full credit (67%) toward the Master of Child and Adolescent Health. Transfer to a research master's degree must occur via advanced standing mechanisms. Consideration of credit transfer follows existing Faculty policy as outlined in this Handbook.

Unit Descriptions

Students are entitled to take any research electives offered in the Master of Applied Science (Behavioural Health Science) by Research outlined in this Handbook. The research electives are 8 units each.
Effective intervention into violence against children and adolescents requires an awareness and understanding of the nature and extent of this crime, together with a knowledge of the impact of such violence on all involved: victims/survivors, families, perpetrators and professionals working in the area. Course content will include discussion of the nature and extent of abuse (physical, neglect, sexual, external and systems abuse), theoretical approaches and models which attempt to explain such abuse and a critical examination of attitudes and beliefs about victimisation of children and adolescents. The unit will also examine the Criminal Justice Response to child abuse, including police involvement and related legal issues such as reliability and credibility of children's evidence. Characteristics of perpetrators, child pornography, and prostitution will also be discussed, as will child protection programs and the burden of care falling to the professionals working in the area. This unit will adopt an interdisciplinary approach with an applied focus and will involve input from various agencies such as the police, Director of Public Prosecutions and other community agencies and service providers.

**BEHS5090 (10557) Violence Against Children and Adolescents**

This unit will enable students to study in depth an area of special interest related to child and adolescent health and adjustment, including such topics as; SIDS, homelessness, the effects of divorce on children, adolescent suicide, eating disorders, bullying, delinquency, sexuality and juvenile offenders. The course will be seminar-based, where particular topics will be discussed from a theoretical and applied perspective with particular emphasis on possible intervention programs and treatment. Students will be required to submit an individual report (which can take the form of a critical synthesis of the literature or a small piece of original research). Topics and project style will be decided in consultation with the lecturer.

**BEHS5092 (10559) Therapy with Children, Adolescents and Their Families**

Theoretical models addressing concerns specific to children and adolescents will be considered covering a variety of theoretical perspectives; including behavioural, psychoanalytic and systemic. These models will provide a background for developing interviewing techniques. Students will gain practical skills in interviewing the client within the context relevant to the presenting problem; for example the student will learn when to interview an individual and when to interview the entire family. The unit will conclude with a consideration of the role of the therapist during the process and termination of therapy.

**BEHS5095 (10562) The Sociology of Deviance**

This unit will use the paradigms developed by the theoretical approach to the sociology of deviance to examine adolescent behaviour in relation to substance abuse, homelessness and other non-traditional lifestyles. This unit will incorporate an historical approach to community breakdown, social control, the effects of media imagery and the changing approaches of social control agents such as governments, the legal system, law enforcement officers and medical personnel. An analysis of legalisation and of royal commission findings will be made using structural and interactional theories.

**BEHS5096 (10563) Sociology of Community and Family**

This unit develops an understanding of urbanisation and of the concept of community in relation to young adults. It examines recent Australian community studies analysing the characteristics of neighbouring and friendship ties. It investigates the nature of networks in terms of size, intensity and homophily, and the support likely to be offered by networks in times of dependency occasioned by chronic ill-health, disability or sudden health crises in youth and adolescence. The interplay between assistance offered by formal health-care and community organisations with informal support is discussed from a sociological perspective. The debate about the predominance of the extended family versus the various types of nuclear families is considered and the effects of life-cycle stage and culture are examined. In particular it investigates dependency and support within the family context. The structure and functions of the Australian family in an historical context, together with the significance of changes, are important foci of the unit.

**BEHS5097 (10564) Psychology of Child Development and Adjustment**

Biological factors, sociocultural expectations, life experiences, personal choices and chance events all contribute to the process of human development. This unit addresses theoretical and applied perspectives related to the study of child development and adjustment. The period of pregnancy (genetic and biological influences) and prenatal development are discussed together with psychosocial factors associated with pregnancy and the birth process. The period of infancy and childhood is examined and topics such as sensory, motor, cognitive and moral development are explored with reference to the effects of variation in attachment, class and culture. The development and function of play and its importance are highlighted together with social and emotional development including; sex role development, friendship patterns and self-esteem and one's self-concept.
BEHS5098 (10565) Psychology of Adolescent Development and Adjustment
This unit provides an overview and critical evaluation of theoretical approaches which attempt to explain adolescent development and adjustment. Aspects of physical growth and psychological changes will be examined together with factors affecting development and the impact of those changes. Discussion of cognitive and psychosocial development during adolescence will highlight interaction between the adolescent, self and society. Topics will include identity formation, relations with peers and family, sexuality and intimacy, body image and personality; the 'youth culture' and role of the media. Adolescent health concerns will also be discussed including alcohol and drug use and abuse, STDs, and adolescent suicide.

BEHS5099 (10566) Subcultural and Cross Cultural Issues: The Costs of Marginality
Much work has been done illustrating the different courses taken in the development of self-concept and self-esteem in minority group children and adolescents. This unit will consider the child and adolescent in cultural context, revealing the relative nature of the concept of 'adjustment' and exploring the particular challenges faced by migrant and refugee children and adolescents as well as those of indigenous minority groups. Possible interventions will be discussed in easing adjustment required by cultural transitions. The different social effects of similar behaviours evidenced by different cultures will be discussed with special emphasis on the criminalisation of self-destructive behaviours in some cultural groups. Avenues of social change and service provision will be explored.

BEHS5100 (10567) Health and Cultural Pluralism
This unit examines the health values and experiences of young people and their families in a multicultural society. The Australian government and people have embraced the concept of multiculturalism yet health care delivery is rooted in a monocultural paradigm in which cultural difference in treatment and sickness behaviour are of peripheral importance. Sociological analysis will be used to examine demographic issues, cultural values, sickness behaviour, family structures and community attitudes in preventative and remedial health care. Government policies and provisions will also be examined and the way in which these have responded to Australia’s changing populations will be analysed.

BEHS5101 (10568) HIV/AIDS Health and Social Services for Children and Adolescents
This unit is designed to give students a comprehensive introduction to the medical, health and social aspects of HIV disease. It considers epidemiology, prevention, support services, relevant political and legal issues, occupational health and safety procedures. This unit also investigates how specialist health workers can assist children and adolescents living with AIDS.

BEHS5114 (10583) Juvenile Crime in Australia
Juvenile delinquency accounts for almost 60% of all "traditional" crime in Australia. Most of this is "petty crime", nonetheless the perception fuelled by media is of a crime wave of unparalleled proportions with dire consequences for the future. In fact, juvenile crime is rather different. Whilst figures are hard to find, maybe only 5% of teenagers are likely to be in trouble for delinquent behaviour (although this represents an under-estimate of true, delinquent behaviour). A number of sociological theories exist to explain crime, chief among them Strain and Control theory. There is a paucity of good psychological models of juvenile crime. Investigations of this topic requires a multi-disciplinary focus, borrowing from Criminology, Sociology, Developmental Psychology and Forensic Psychology. Investigation of this topic can focus on assessment, treatment, theories of causation and life-span perspectives.

BEHS5115 (10584) Substance Abuse in Young People
Substance abuse is endemic to Western populations. Whilst for adult groups the major substances abused are legal (alcohol and tobacco), in young people substance abuse often involves the use of illegal drugs. Almost 1 in 3 young people use marijuana, and about 80% of those below the legal age for alcohol drink, at least occasionally. Young females represent the largest "growth" group for tobacco use. Substance abuse appears strongly related to criminal behaviour in both young and adult samples. The causes of youth substance use are associated with a variety of cognitive variables (expectancies), behavioural effects (modelling) and social factors (peer pressure, family factors) etcetera. This elective allows students to explore issues within the field of youth substance use including epidemiology, causation, assessment, and treatment.

BEHS5116(10585) Youth Suicide
In the past fifteen years considerable anxiety has been expressed in the literature regarding the increase of rates of completed and attempted suicide by young people. Rates of youth suicide in the Western world have doubled or even tripled in some parts. Australia has the second worst record in this regard. Factors associated with the increase rate in youth suicide are currently unknown. Issues regarding how one classifies an act as suicidal, or parasuicidal, how to assess and treat such people, and the development of school or community based prevention programs are most controversial. Even though there is some hope that the current rate of increase is stabilising, the level of youth suicide now means more than one child a day will kill him/herself in this country. This elective provides an opportunity to explore aspects of this community mental health problem.

BEHS5131 (105A2) Children's Health and Welfare Policy
Using data to assist identification of risks to children's health and welfare, and through an assessment of existing legislation and/or services related to risk control, students will design a program for the delivery of a health or social welfare service for children which aims to improve upon current service delivery structures and their outcome.
BEHS5132 (105A3) Psychological Assessment of Children and Adolescents
The assessment of children and adolescents requires an understanding of the course and impact that developmental factors play in cognition, personality and behaviour. It requires a capacity to utilise questionnaire as well as text-based assessment schedules. This course expects a student to be aware of assessment issues such as psychometric values of testing (reliability and validity), the nature of various tests, and a capacity to interview (children, adolescents, and families).

BEHS5140 (10425) Ageing and Australian Society
A sociological analysis of ageing in Australia will lead the student to an understanding of the multiple relationships between social structures and processes, the individual experience of ageing and the position of elderly people in Australian society.

BEHS5125 (10594) Art Therapy
Art Therapy offers principles, processes and practice in art-imagery therapy at an introductory level. Art Therapy is seen as an integration of nonverbal and verbal processes; and an integration of psychological therapies with creative expressive processes. The orientation presented is eclectic and is based on theories of imagery, perception, and non-interpretive therapy. The focus is on practice and skills attainment and an understanding of why and how these art therapy processes are used within the overall client plan. Counselling experience is preferred.

BEHS5122 (10591) Disability and the Community
This unit examines definitions of disability and handicap. Of particular importance will be how ways of viewing disability and handicap affect how people with disabilities are treated in the community and in health care settings. Students will be encouraged to focus their study on a particular segment of the community (ie health professionals, different ethnic groups or media) and examine that group’s attitudes towards people with disabilities. Alternatively, students could examine how a particular group in the community is viewed (ie women, children or people with a specific condition). The underlying aim will be for students to develop strategies for improving attitudes in their chosen area. Some of the topics covered will be definitions of disability and handicap, models of disability (medical, social, psychological, psychosocial), origins of attitudes toward disability, attitudes of particular groups in the community and strategies for improving community attitudes toward disability.

BEHS5121 (10590) Disability and the New Genetics
This unit examines the influence of current research into the genetic basis of disability and disease on how the community and health professions view health, disability and disease. This unit will look at the role of genetic counselling in health care. Students will also examine how the increasing availability of genetic testing for many genetic disorders will affect individuals and their families. Some of the topics covered will be definitions of genetic counselling, application of genetic counselling to different groups (ie pre-symptomatic testing, diagnostic testing, pre-natal testing), goals of genetic counselling and testing. The course will examine the different perspectives of health professions in genetic counselling and testing ie clinical geneticists, science trained counsellors, social workers, psychologists and nurses. The course will also examine how the presence of genetic disease or disorder affects the individual and family (will cover various types of condition and patterns of inheritance). The dilemmas individuals and their families face in deciding whether or not to seek genetic counselling will also be discussed.

BEHS5119 (10588) Ethnic Minorities and Health Care in Australia
This unit will examine multicultural health policy and the general health status of ethnic minorities in Australia, as well as issues of access to health services and equity in the provision of health care. Students will then select a particular aspect of ethnicity and health care for examination in detail.

BEHS5129 (10598) Health Risk Management and the (APEC) Agreement
This course aims to provide students with an understanding of the requirements of basic health risk management in the context of the principles adopted by the Asia/Pacific Economic Co-operation (APEC) Agreement and other relevant international standards and agreements. The course addresses the background to the Asia/Pacific Economic Co-operation (APEC) Agreement; key principles, and ramifications for parties to the agreement. Basic principles of health risk management as required by relevant International Labour Organisation (ILO) Conventions and Australian legislation related to health, work and rehabilitation are also addressed. Students also examine the problems of implementing APEC principles and effective health risk management, and suggest the means by which some of these problems might be overcome.

BEHS5120 (10589) Lesbian and Gay Studies
This unit will examine the participation by lesbians and gay men in the major social institutions, with special emphasis on equity, culture and lesbian and gay community structures. Students will then select a particular aspect of gay and lesbian studies for examination in detail.

BEHS5124 (10593) Occupational Rehabilitation
This course will examine current issues in the provision of occupational rehabilitation to persons injured in the workplace. Recent initiatives will be examined, together with the roles of key stakeholders in the management of workers in the post-injury phase. Students will be encouraged to explore the issues from a policy, an organisational/structural, an interpersonal and an individual perspective.
BEHS5123 (10592) Organisational Psychology
The course covers recent topics of interest to students who wish to further their understanding of organisational behaviour. Topics will include: dimensions of personality, occupational choice and personnel selection; work motivation and work satisfaction and their relationship with performance, absenteeism and turnover; organisational change and effective implementation; downsizing and its impact on organisational behaviour and organisational climate; managerial focus in rapidly changing work environments; working conditions, for example, shift work and their effects on work performance; and, women and work.

BEHS5117 (10586) Organisational Structures in Health Contexts
This unit focuses on the rational structuring of organisations and relates it to administrative problem solving. It examines the effects of societal context on organisational growth and the interdependence between layers or sectors of organisations. It contrasts the characteristics of private, public sector and voluntary organisations and uses power and interests as analytic concepts to elucidate process.

BEHS5007 (10424) Psychology of Ageing
The effects of age related changes on the individual will be studied in depth. The areas of behaviour covered will include information processing, problem solving, personality and social relationships.

B EHS5128 (10597) Risk Management and Rehabilitation Policy
At the end of this unit students will know about the main health related responsibilities and entitlements of employers, workers, the self employed, and suppliers of goods and services. They will also be aware of how the interaction between insurance, rehabilitation and the court process operate and of some major problems in current management systems and how they can be overcome by workplace and industry based strategies to control risk, disputation and cost.

C. Research Electives (8 credit points) (see Appendix 1)

D. Information Technology Electives (4 credit points) (see Appendix 1)

Full-time Mode

Year 1

Year 2 (and subsequent years)

Part-time Mode

Year 1

Year 2 (and subsequent years)
The Master of Applied Science research program allows students to gain extensive research knowledge in the disciplines of psychology, sociology, and anthropology and their application to health behaviour, and health issues. The program aims to produce health professionals who can conduct culturally relevant, scientific, and methodologically sound research. It is aimed at those who have some research experience, and who wish to further their studies by independent research. There may be a coursework component required which develops vital research skills including qualitative and quantitative data analysis, and electives chosen by the student in consultation with the supervisor to provide an interdisciplinary focus for the research thesis.

**Admission Requirements**

Applicants may enter the research master's program with any of the following requirements:

i) Bachelor degree with a major in anthropology, sociology or psychology;

OR

ii) Bachelor degree in social work;

OR

iii) an approved Bachelor degree in a health profession with satisfactory performance in Behavioural Sciences

OR

iv) Evidence of general and/or professional qualifications where the prospective candidate can satisfy the Faculty that she or he possesses expertise equivalent to (i), (ii), or (iii).

Applicants in the above categories may be required to complete any additional qualifying units prescribed by the Faculty of Health Sciences.

**Course Outline**

The course outline for the Master of Applied Science (Behavioural Health Science) by Research is presented in Table 5.7.

**Unit Descriptions**

**BEHS9034 (10900)** Special Program for Qualifying Students

The Special Programs are not units in the normal sense and do not necessarily involve a common syllabus and should not be compared between individual cases.

**A Research Electives** (see Appendix 1)

**B: Research Thesis A/Research Thesis B**

(For unit numbers please refer to Table 5.7)

A supervisor will be appointed to assist the student in the conduct of the research project if approval is given for the research to be conducted. Supervision will normally involve one-hour per week meeting with the student supervisor. Facilities and equipment necessary to conduct the thesis will be arranged within the Department, unit to the approval of the research design and equipment necessary to conduct the project. This entails writing a major thesis documenting an original research endeavour in the area of behavioural health science. Students will be expected to attend the weekly post-graduate seminars and to present their research proposals and their ongoing work to peer review.

**C: Contract Based Elective Studies:**

**Areas of Supervisory Expertise (4 credit points)**

Students may be required to undertake elective studies in consultation with their supervisor. The semester in which these units are likely to be offered is indicated in Appendix 1.

**BEHS5049 (10517)** Abnormal Psychology and Mental Health

This elective addresses major psychological disorders and the current classificatory and diagnostic systems available. Critiques of nosologies and taxonomies will be provided and alternative individualised systems of assessment useful for research will be discussed. Detailed consideration of the major philosophical questions underpinning current approaches to psychotherapy will be encouraged, including such concepts as person, personality, mental illness, theories of the origin of mental illness and treatment approaches. A critical review of ethical and legal dilemmas in the practices of psychotherapy will be highlighted.

**BEHS5050 (10518)** Behaviour Modification and Cognitive Behavioural Therapy

This elective will cover the basic principles of learning theory and their applications to research in health care settings in conjunction with a theoretical introduction to the use of cognitive behavioural therapy. Students will learn to develop programs based on reinforcement principles, such as operant and classical conditioning, extinction, shaping, maintenance and generalisation of the behaviour, stimulus discrimination training and fading, cognitive behaviour modification and assertiveness training, a behavioural model of somatic disorders and behavioural intervention in rehabilitation.
BEHS5051 (10519) Biofeedback
This elective covers the history of the development of biofeedback research and considers the range of biofeedback modalities used in therapy to alleviate physical health problems. The main modalities examined are those related to the electromyograph, skin temperature, GSR, and the electroencephalograph. Other areas also considered include blood pressure, heart and respiration rate, blood sugar levels, and incontinence. Recent research, exploring other areas, is critically examined.

BEHS5053 (10520) Cognitive Function in Neurological Disorders
This elective will consider the principles of cognitive function applied to a range of neurological disorders (e.g. Alzheimer's disease, amnesic disorders, developmental disability). The emphasis will be on understanding cognitive impairments and considering strategies for managing these impairments.

BEHS5054 (10521) Counselling
This elective will cover the major theories of counselling and their applications to health professional practice. Issues related to the role of counselling in the delivery of health care and the ethical and legal implications of a counselling relationship will be addressed. This elective also promotes student self-awareness and exploration of their life histories and interpersonal styles, focusing on the implications of these for relating to and doing research with various client groups.

BEHS5056 (10523) Cultural Approaches to Disease and Healing and Ethnographic Analysis
This elective promotes cross-cultural analysis of the relationship between culture, social structure and beliefs and practices relating to the management of illness and disease. Systematic analysis is encouraged of a wide range of empirical material addressing cultural approaches to disease and health from both pre-industrial and contemporary western settings. Possible research issues are covered addressing anthropology's early concern with indigenous belief systems and current post-modern concern with the representation of these beliefs, the ecological and epidemiological aspects of disease, and a broad spectrum of theories of disease etiology, diagnosis and therapy. A transcultural perspective analyses the philosophical underpinnings of both traditional and contemporary healing systems, and emphasises similarities and differences from the biomedical perspective, and considers the impact of Western medicine on Third World societies. A political economy approach examines health status and level of health care experienced by different populations, and the potential for research into the social, cultural, economic and political conditions of particular regions to understand their relationship with the world capitalist system.

BEHS5057 (10524) Health Policy and Social Theory
Contemporary social theorists have noted an increase in the rate of policy change in health services. Students will examine possible research topics concerning the determinants and implications of past and present policy changes in health services.

BEHS5058 (10525) HIV/AIDS Health and Social Services
This unit is designed to give students a comprehensive introduction to the medical, health and social aspects of HIV disease. It considers epidemiology, prevention, support services, relevant political and legal issues, occupational health and safety procedures. The unit also investigates how specialist health workers can assist people living with HIV/AIDS.

BEHS5130 (105A1) Introduction to Graduate Studies
This unit will provide information and practical exercises to assist students to achieve the basic knowledge of university policies, writing requirements, library, information technology resources, and project development skills necessary for effective understanding and dissemination of health research at a postgraduate level. This unit is compulsory for students undertaking a Graduate Diploma.

BEHS5059 (10526) Introduction to Medical Anthropology
This elective provides an overview of the concepts used in medical anthropology in terms of its current understandings and perspectives as a new sub-discipline. Particular emphasis is given to the analysis that has accompanied the development in medical anthropology of the cultural categories that mediate and sustain western medicine.

BEHS5060 (10527) Occupational Health and Stress
This elective examines Occupational Health and Safety (OHS) issues within the context of social, economic and political processes and structures. Particular emphasis will be placed on OHS as an industrial relations issue, state intervention in OHS policies and the role of the medical and legal professions. Factors which affect occupational performance, experience and satisfaction, health and well-being will be considered, and reference made to studies attempting to explore and modify stress in various organisations, with a view to original research. A range of research topics concerning work performance are encompassed in this elective: work motivation and satisfaction, occupational stress, and work conditions and practices such as shift work, workspace, layout and design, noise, temperature and air pollution.

BEHS5061 (10528) Post Trauma Stress
This elective traces the history of reactions to traumatic events, including the acceptance of a syndrome known as post traumatic stress syndrome in recent years. Various disorders with similar characteristics are compared and contrasted and the research and clinical literature presented. Current views on the treatment and evaluation of post traumatic disorders are presented and appraised.

BEHS5063 (10530) Qualitative Research Analysis
Pre-requisite Qualitative Research Methods (10572)
In this unit students will execute a qualitative research project and write a report of the findings. The unit will focus on conceptualization, social context, proposition testing and theory construction. Use of computer programs for the analysis of data will be discussed.
BEHS5064 (10531)  Research Methods for Medical Anthropologists
This elective provides knowledge of various methods of fieldwork and the consequences and problems of pursuing them. By analysing examples of published research, attention will be drawn to the problems and difficulties in undertaking a research project in the field of medical anthropology. In particular, specific research strategies will be covered which are relevant to potential thesis topics.

BEHS5065 (10532)  Social Change and Health Services
This elective will assist students to develop an understanding of the processes of social change in health care systems, and will develop an ability to evaluate the efficiency of proposed structural and role changes within the health care system, and the implications of those changes for the quality of health care provided.

BEHS5067 (10534)  Social Theory and Special Groups
This elective gives students a basic understanding of social theory. As an example of a special group which might be studied, it examines women's health in the context of social class and gender divisions in Australian Society. Students will be encouraged to consider as research issues patterns and concerns regarding the status of women's health using socialist, feminist and psychoanalytic perspectives. Research into particular ethnic groups and multicultural issues are also within the scope of this elective.

BEHS5068 (10535)  Sociology of Gender Relations
This elective examines research perspectives concerning gender relations within the structure of industrial capitalism, with particular focus on relations of power, the sexual division of labour, sexuality, the social construction of gender, production and reproduction and family.

BEHS5069 (10536)  Stress and Coping: Social Context and Individual Differences
This elective considers how social context and external factors influence 'stress'. Arguments that the term 'stress' is misleading and that emphasis should be placed on changing external factors or social conditions will be considered. The effects of interpersonal and social relations on health and well-being and factors such as friendship, love and attraction will be considered. Cases of stressors impinging differentially across varying ages, gender, and socioeconomic factors and different religious groups are emphasised. In looking at the nature of coping and its effect on stress, the concept of stress mastery is addressed, models of coping compared and contrasted and their relationship to the construction of stress management programs critically evaluated. Individual differences in personality and their effect on coping will be considered, especially with respect to generating research. The research potential of procedures which focus on the modification of stress-related behaviours such as Type A Behaviour, exercise and smoking, particularly behavioural 'contracting' will also be considered.

BEHS5070 (10537)  Stress and Disability
This elective examines the incidence of various disabilities. Community perceptions will be examined, including the reasons behind the existence of 'high profile', 'stigma' and 'cultural acceptability' differences across disabilities. Factors associated with living with a disability will be examined, and the relationship of research to individual accounts critically examined.

BEHS5071 (10538)  Stress and Illness Management Issues
The nature of the relationship of the psychophysiological stress response and the development of illness will be explored and critically evaluated in this elective. A range of disorders will be considered, for example headaches, coronary heart disease and diabetes. Current research literature across a variety of relevant disciplines will be evaluated as a background to original research. An introduction to the theoretical and practical aspects of a range of stress management techniques is provided. Emphasis will be placed on the research utility of those techniques commonly included in stress-management 'packages', such as relaxation, biofeedback, cognitive restructuring and time management.

BEHS5073 (10540)  Visualization and Imagery
Semester 1 and 2 - 5 units
This elective examines the role of visualization, and of imagery generally, in the healing context from both a psychological and sociological/anthropological perspective. Students can choose one or more of the following topics, or they can choose a related topic. (1) The techniques used to enhance imagery skills. (2) The factors controlling imagery as a predictor of wellbeing, illness and treatment outcomes. (3) Altered states of consciousness and health.

BEHS5084 (10553)  Computing for Health Practitioners
In this unit students will be introduced to computer systems in general with special emphasis on personal computers, including operating systems and concepts for computing. The basic principles for programming will be introduced. Popular applications of relevance to health practitioners and individual clinicians will be covered including spread sheets for preparation of budgets and reports; word processing for billing and correspondence; and data base managers for maintaining patient or client records. Methods of using data stored by these means for research purposes will be considered. Students will also be introduced to the world of the Internet and encouraged to communicate with colleagues elsewhere in Australia and overseas. The host of resources available on Internet will be covered as will techniques for accessing these. Resources of particular interest for students' professional practice will be emphasized.
The Department of Biomedical Sciences incorporates biophysics, biochemistry, basic biology, human anatomy and physiology, pathophysiology, microbiology. Since its inception in 1973, the Department has provided training in these basic and applied sciences relevant to undergraduate students in the different professions studying on this campus. Unit material in many of the Faculty's Diploma, Graduate Diploma and Masters courses is taught by the Department.

Postgraduate students may enrol in the Department's own program, Master of Applied Science (Biomedical Sciences) by Research. In addition, PhD supervision is available in various areas of staff research expertise.

Master of Applied Science
(Biomedical Sciences) by Research

This graduate program is designed primarily to provide an opportunity for those interested in pursuing one of the health sciences as a career to carry out research in any of the specialised areas of anatomy, physiology, microbiology, applied physics, applied chemistry, biochemistry or in human sexuality.

It will enable and encourage such graduate students to engage in multidisciplinary collaborative research within the Department of Biomedical Sciences as well as with other Schools/Departments of the Faculty of Health Sciences. Such research may be in a basic scientific and/or clinical setting.

The degree comprises a minimal coursework component which will be necessary to facilitate the research projects.

Admission Requirements
i) A Bachelor of Applied Science degree from the Faculty of Health Sciences, at a credit level or higher

OR

ii) A Bachelor of Applied Science degree from the Faculty of Health Sciences at an Honours level

OR

iii) A Baccalaureate degree preferably with a Biological background from an Australian university, at credit level or higher

OR

iv) A Bachelor of Medical Sciences degree

OR

v) A degree* deemed to be equivalent to any of the above from a foreign university.

OR

vi) A Master's degree by coursework in a relevant/related area.

OR

vii) Submit evidence of general and/or professional qualifications* as well as satisfy the Head of the Department and Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies.

Advanced Standing may be given to candidates of high calibre to enter the second year of the program.

Unit Descriptions

BIOS6016/BIOS6017 (11510A/11510B) Research Thesis A/Research Thesis B

Each candidate will be required to submit a research proposal at the end of the first semester of the full-time pass entry course. Students may be required to undertake and satisfactorily complete coursework or special programs as part of this unit. During subsequent semesters students will be required to carry out their research under approved supervision and student seminars will be held concurrently as the research thesis develops.

The procedures for supervision, presentation and assessment of the research thesis will be in accordance with the Faculty rules for a Master of Applied Science degree.

For details of the requirements, supervision and assessment of research thesis, Chapter 4 should be consulted.
School of Communication Sciences and Disorders

The School of Communication Sciences and Disorders was among the first group of professional schools to be established when, what was then a college, was formed in 1973. At that time the School offered a three-year Diploma course in Speech Pathology. Within three years the School had developed and implemented a three-year degree course that led to the award of the Bachelor of Applied Science in Speech Pathology. In 1979, the Master of Applied Science course in Speech Pathology was initiated, followed two years later by the expansion of the Bachelor's course to a 3M year, full-time course of study. As of 1993 the Bachelor level course, both pass and honours stream, is of four years duration. The School's commitment to the professional preparation of speech pathologists and to the development of the academic discipline that underpins professional practice has prompted the School to advocate continually for the offering of further advanced educational opportunities in the communication sciences and disorders. In 1990 the School admitted its first students studying at the Doctor of Philosophy (PhD) level. As a result of these developments, opportunities to study at the Bachelor's, Master's, and PhD levels are now available, as well as opportunities to pursue a Bachelor Honours degree.

The degree designed to prepare individuals to practise as Speech Pathologists (formerly known as Speech Therapists) is the Bachelor of Applied Science (Speech Pathology) course. The field of Speech Pathology involves the study and treatment of communication disorders in both children and adults. Speech Pathologists assess and treat in medical, educational, and private settings a wide variety of disorders resulting from varied aetiologies. Within the Bachelor of Applied Science course in Speech Pathology, the School offers an Honours Program. This program provides opportunities for talented undergraduate students interested in research and/or pursuing graduate studies to obtain early experiences in the design and conduct of research in communication sciences and disorders.

In contrast to the undergraduate course, at the postgraduate level the Master of Communication Disorders course provides speech pathologists with the opportunity to develop specialisation in a clinical area via research. The Master of Applied Science course in Communication Sciences and Disorders is a research program designed to prepare individuals to pursue their career objectives as specialist clinicians, administrators, academics, or researchers in the field of communication sciences and disorders. In both programs topics are individualised for students in order for them to meet their specific career objectives.

At the PhD level, study is directed to focussed research on an area of communication sciences and disorders. Individuals with PhDs in this area find rewarding careers in academic, research and clinical settings.

The School of Communication Sciences and Disorders has a variety of facilities and resources that support its teaching, student clinical practice, research and community service activities. Its on-campus specialist area houses the Communication Disorders Treatment and Research Clinic which is a centre of excellence that serves communicatively impaired children and adults. The Audiology Clinic and the Cumberland Stuttering Research and Treatment Clinic are part of this Clinic. Other unique facilities are student units located in various hospitals and centres in the Sydney metropolitan and country NSW areas.

The School's Speech Science Laboratory is also housed in the on-campus specialist area. The Laboratory is designed to support research activities of academic staff, postgraduate and Honours students, and undergraduate teaching. It also provides services for the on-campus clinic with facilities for clinical speech measurement. Programs in the Laboratory are focused on measurement of disordered speech using the Laboratory's modern technology: a powerful digital speech analysis system, laryngograph, visipitch and nasometer, all supported by computers. Access to a variety of speech databases on CD ROM is available. High quality speech recordings can be made in the Laboratory's sound-treated studio, using either analog or digital technology. Other desktop computing facilities are available in the School.

Information about the School and its courses of study can be obtained from Student Administration (Cumberland), 9 351 9536, or from the Admissions Co-ordinator in the School of Communication Sciences and Disorders, 9 351 9450.

Master of Applied Science (Communication Sciences and Disorders) by Research

The Master of Applied Science course in Communication Sciences and Disorders is a research program designed to prepare individuals to pursue their career objectives as specialist clinicians, administrators, academics or researchers in the field of communication sciences and disorders. Completion of the course requires submission of an acceptable thesis.

Admission Requirements

In order to qualify for admission to the degree, applicants shall possess:

i) A bachelor degree in an area of relevance such as speech pathology, psychology, linguistics, education, computer studies, audiology, from an Australian tertiary institution OR

ii) A bachelor's degree in an area of relevance from an overseas institution equivalent to an Australian bachelor degree OR

iii) Evidence of general and academic qualifications and experience as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue independent research, and satisfy such additional requirements for admission to the program, if any, as may be prescribed by the Faculty.

Unit Descriptions

CSCD6014 (12507A) Research Thesis A/
CSCD6015 (12507B) Research Thesis B

Supervisors will be appointed to assist the student in the conduct of the research project if approval is given for the project to be carried out. Supervision will normally involve regular meetings with the supervisor(s). Facilities and equipment necessary to conduct the thesis project will be arranged with the School, subject to approval of the project design and equipment necessary to conduct the project.

Unit Descriptions

CSCD6019 (12508A) Clinical Research Thesis A/
CSCD6020 (12508B) Clinical Research Thesis B

Supervisors will be appointed to assist the student in the conduct of a clinically relevant research project if approval is given for the project to be carried out. Supervision will normally involve regular meetings with the supervisors. To assist the student in developing an acceptable clinical research project, the student will participate in supporting activities with the supervisors involving mentored clinical experience in the student's chosen specialist area and clinical speciality knowledge dissemination. Clinical facilities and equipment necessary to conduct the research will be arranged with the School, subject to approval of the project design.

Master of Communication Disorders (by Research)

The Master of Communication Disorders is a research program designed for qualified speech pathologists who wish to develop specialisation in a particular clinical area. The course may be taken on a full-time or part-time basis. Completion of the course requires submission of an acceptable thesis on a clinically relevant topic.

Admission Requirements

In order to qualify for admission to the degree, applicants shall possess:

i) A bachelor degree in speech pathology from an Australian tertiary institution
   OR
   A bachelor's degree from an overseas institution equivalent to an Australian bachelor degree in speech pathology
   AND
ii) A minimum of twelve months professionally relevant post-graduation experience

School of Communication Sciences and Disorders
8 School of Community Health

The School of Community Health was established in 1987. A major role of the School is to conduct courses which prepare a wide range of health and health-related practitioners to work at the community level and in the workplace in programs which promote better health, support community development and assist clients to participate effectively in the management of their own disabilities and illnesses.

To this end, the School adopts a multidisciplinary approach to teaching and research in the health sciences and has actively sought to foster the professional development of practitioners oriented to the World Health Organisation's "Health For All" policy. Central to the School's philosophy and curriculum is a focus on the health and social needs of Aboriginal people, women, older people, immigrants and refugees from non-English speaking backgrounds, people with disabilities and other disadvantaged groups.

In 1991, the School introduced a new undergraduate course aimed at further meeting specialised needs in health science education. The Bachelor of Health Science is designed for students who aspire to work in areas such as community development, education, counselling and health promotion, or with special groups such as Aboriginal people or people with disabilities. The degree structure is comprised of a multidisciplinary core group of units and a specialist stream. The first of these specialist streams in Rehabilitation Counselling commenced in 1991. Professional training in rehabilitation counselling however had taken place at the associate diploma and postgraduate level at Cumberland College of Health Sciences since the mid 1970s.

In 1993 the Bachelor of Health Science (Aboriginal Health and Community Development) was offered for the first time. This course adopts a holistic approach to Aboriginal health to equip both Aboriginal and non-Aboriginal people with skills and knowledge to develop programs which meet the health and community needs of Aboriginal people.

The Diploma of Health Science (Aboriginal Health and Community Development) provides Aboriginal students with the opportunity to develop skills and knowledge in areas such as health, counselling, community care and community development so that they may effectively deliver needed services in their communities. Both the BHSc (Aboriginal Health and Community Development) and the Diploma (Aboriginal Health and Community Development) are offered in block-study mode to facilitate access to these courses for the broadest range of students.

At the graduate level the School offers PhD and Master by research programs in Community Health, Rehabilitation Counselling, Gerontology and Health Science Education. Graduate Diploma and Master by coursework programs are also offered in each of these areas. A Graduate Certificate in Health Science Education was introduced in 1992. In 1994 Distance Education studies in Rehabilitation Counselling at the Graduate Diploma and Masters levels were introduced. Further information about the School's programs may be obtained from the School on 9 351 9565.

Stage Total 24
Notes
1 Adult Learning must be undertaken in the first semester of entry to the program.
2 Instructional Design must be undertaken by students who enter the program in Semester 2.
3 Participants undertake to study two (2) electives of 6 credit points from List A or List B in the first semester of entry to the program. These electives are normally taken within the School (subject to staff and student availability). See List A and B on page 8-6. For unit descriptions see Appendix 1.
4 Semester 1 entry students must undertake a third elective from List A.

Graduate Certificate in Health Science Education

The Graduate Certificate is designed to provide professional development for teachers across the health sciences who wish to enhance their knowledge and skills in planning and implementing effective face-to-face teaching with students, peers, patients, clients, carers or community groups. Knowledge and skill development offered through this program suits health professionals working in roles such as lecturer, tutor, clinical educator, demonstrator, mentor, preceptor, health educator, community educator, patient educator or in-service trainer. Participants can choose to specialise in studies relevant to either teaching, academic and clinical settings, or facilitating health education in community settings. Studies with a health education focus are only available to part-time students. The course is offered in the evenings full-time for semester 1 only in any year or part-time over one year.

On successful completion of the Graduate Certificate program, students may apply to articulate into the Graduate Diploma with advanced standing for stage 1 of that award.

Course Outline

The course outline for the Graduate Certificate in Health Science Education is presented in Table 8.1.

Unit Descriptions

Participants complete a total of four (4) units, including one (1) or two (2) core units and two (2) or three (3) electives, depending on mode and semester of entry.

COMH5082 (08504) Adult Learning
Semester 1 or 2 - 6 credit points
In this unit participants will develop their knowledge about theories of learning, the process of learning, the role of the teacher and learner in health science education, trends in higher education and the context of health science education.

COMH5083 (08505) Instructional Design
Semester 2 - 6 credit points
Emphasis in this unit is on the development of basic skills in planning for effective teaching and learning. Participants learn planning skills by undertaking instructional design.

Admission Requirements

In order to qualify for admission to the degree, applicants shall:

i) hold a three year diploma in a relevant health science; OR

ii) have other professional qualifications and or experience as will satisfy the Faculty that the applicant possesses the educational capacity to pursue graduate studies, and satisfy such additional requirements for admission to the program, as may be prescribed by the Faculty; AND

iii) have completed a minimum of one year full-time experience as a health professional.

Current or recent experience in teaching is considered desirable.

### Notes

Adult Learning must be undertaken in the first semester of entry to the program. Participants undertake to study six (6) elective of 6 credit points from List A or List B. These electives are normally taken within the School (subject to staff and student availability) See List A and B on page 8-6. For unit descriptions see Appendix 1.
The Graduate Diploma in Health Science Education is designed to meet the professional development needs of lecturers, clinical educators, in-service co-ordinators, patient and health educators who have a substantial teaching role including responsibility for the planning and implementation of academic units, clinical experience, continuing education seminars and workshops and other types of small and large group educational experiences.

Coursework develops theory and practice in effective face-to-face facilitation of learning and the planning, management and evaluation of more complex learning events and overall curriculum or health education programs. The elective program offers participants the opportunity to focus their studies on any of the following: student education, including clinical education, continuing education or health education.

Principles of adult learning in the context of health, influence the structure of the course and the selection of learning strategies such as group discussion, experiential learning, problem-based learning and independent learning by personal contract.

The course is offered in the evenings on a full-time or part-time basis, and can be completed in a minimum of one-year full-time or two years part-time. Studies with a health education focus are only available to part-time students.

The Graduate Diploma is equivalent to Years 1 and 2 of the Masters in Health Science Education. On successful completion of the Graduate Diploma program students may apply to articulate into the Masters with advanced standing for stage 1 and stage 2 of that award.

Admission Requirements
In order to qualify for admission to the degree, applicants shall:

i) Bachelor degree in a relevant area of the health sciences; OR

ii) have such professional qualifications and/or experience that will satisfy the Faculty or have completed all requirements for the Graduate Certificate in Health Science Education with a credit or above average; AND

iii) have a minimum, of one year's full-time professional experience. Current or recent experience in teaching will be considered desirable.

Note: Participants wishing to transfer (or articulate) from the Graduate Certificate into the Graduate Diploma should complete a Course Application form and submit this to Head of School by 30 September. Admission of non-Bachelor students will be contingent on achieving a credit grade average. Admission for all students will be contingent on availability of student places.

Course Outline
The course outline for the Graduate Diploma in Health Science Education is presented in Table 8.2.

Unit Descriptions
Units are similar to the Graduate Certificate in Health Science Education. Participants must complete a total of eight (8) units including two (2) core units, six (6) electives. Please refer to unit descriptions on page 8-2.

**Notes**

1. Adult Learning must be undertaken in the first semester of entry to the program.
2. Participants undertake to study at least six (6) electives of 6 credit points from List A or List B, depending on Option choice for Year 3. For unit descriptions see Appendix 1. These electives are normally taken within the School (subject to staff and student availability) such as:

**List A (normally offered in Semester 1)**

- COMH5078 (084A0) Distance Learning
- COMH5027 (08426) Learning in Groups
- COMH5032 (08431) Teaching with Technology
- COMH5033 (08432) Independent Investigation I
- COMH5169 (08434) Assessment of Learning
- COMH5065 (08482) Large Group Teaching
- COMH5119 (08520) Clinical Teaching and Supervision
- COMH5091 (08512A) Treatise A
- COMH5092 (08512B) Treatise B

**List B (normally offered in Semester 2)**

- COMH5144 (08584) Implementing Distance Learning
- COMH5143 (08583) Teaching Clinical Reasoning
- COMH5057 (08466) Independent Investigation E
- COMH5064 (08481) Introduction to Health Education
- COMH5084 (08506) Facilitating Learning
- COMH5085 (08507) Educational Practice
- COMH5086 (08508) Curriculum Leadership
- COMH5087 (08509) Health Promotion, Planning and Evaluation
- COMH5094 (08514) Introduction to Educational Computing
- COMH5095 (08515) Teaching with Reduced Resources
- COMH5133 (08567) Inservice & Continuing Education in the Health Services
- COMH5134 (08568) Patient Education
Master of Health Science Education (by Coursework)

This course offers professional development for managers of learning in the health sciences, including health education. The course structure reflects the need for educators to first understand the processes of teaching and learning from both a theoretical and practical perspective, in order to positively influence and manage curricular practice in the many settings for education in health. Year 1 develops knowledge and skills in effective class and clinical teaching; Year 2 extends competence to planning, processing and evaluating more complex educational experiences and curriculum and Year 3 enables participants to apply their knowledge of education to a problem or issue in curriculum design, innovation or evaluation. Participants with a health education focus use an extensive elective program to extend their knowledge of the many settings, populations, health issues and approaches to change that are relevant to this field.

The course is offered on a full-time or part-time basis. Studies with a health education focus are only available on apart-time basis. Particpants in the full-time program need to begin work on their Treatise before commencing their final year. Participants with either a health education or academic focus should discuss their program of study with the Course Co-ordinator.

Admission Requirements
i) Bachelors degree in a health science field or other relevant area;
OR
ii) submit other evidence of general and professional qualifications and/or experience, as well as satisfy the Faculty that the applicant possesses the educational capacity to pursue graduate studies, and satisfy such additional requirements for admission to the program, if any, as may be prescribed by the Faculty;
AND
iii) have completed at least one year full-time practice as a health science professional.

Current or recent experience in teaching is considered desirable.

Note: Participants wishing to transfer or articulate from the Graduate Diploma in Health Science Education into the Master of Health Science Education should complete a Course Application form by 30 September and submit this, to the Head of School. Admission of non-Bachelor entry students to the Master of Health Science will be contingent upon achieving a credit grade average. Admission for all students will be contingent on availability of student places.

Course Outline
The course outline for the Master of Health Science Education by Coursework is presented in the Table 8.3.

Unit Descriptions
Units are similar to the Graduate Certificate in Health Science Education and Graduate Diploma in Health Science Education. Participants must complete a total of the equivalent of twelve (12) units including two (2) core units, six (6) electives, option choices of treatise and/or elective combinations equivalent to 4 units. Please refer to unit descriptions on pages 8-2.

COMH5090 (08512) Treatise A
Semester 1 or 2-12 credit points
This treatise provides participants with an opportunity to undertake an exploration of the literature in relation to a significant educational topic or issue.

COMH5091 (08512A) Treatise A
Semester 1 - 6 credit points
This treatise provides participants with an opportunity to undertake an exploration of the literature in relation to a significant educational topic or issue. This unit forms half of the treatise undertaken for the whole year by part-time students.

COMH5092 (08512B) Treatise A
Semester 2 - 6 credit points
This treatise provides participants with an opportunity to undertake an exploration of the literature in relation to a significant educational topic or issue. This unit forms half of the treatise undertaken for the whole year by part-time students.

COMH5121 (08554) Treatise B
Semester 1 or 2-24 credit points
This treatise provides participants with an opportunity to undertake either a major investigation of a significant educational topic or issue, or complete a plan for a needs assessment, curriculum development or evaluation.

COMH5122 (08554A) Treatise B
Semester 1-12 credit points
This treatise provides participants with an opportunity to undertake either a major investigation of a significant educational topic or issue, or complete a plan for a needs assessment, curriculum development or evaluation. This unit forms half of the treatise undertaken for the whole year by part-time students.

COMH5123 (08554B) Treatise B
Semester 2-12 credit points
This treatise provides participants with an opportunity to undertake either a major investigation of a significant educational topic or issue, or complete a plan for a needs assessment, curriculum development or evaluation. This unit forms half of the treatise undertaken for the whole year by part-time students.

Master of Health Science (Education) by Research

This course is designed to provide participants with the opportunity to undertake research into the process of teaching and learning in their professions. Graduates from this course will be able to undertake research in education and also contribute to research activities in their professional field.

Admission Requirements

i) Bachelor degree at Honours level in a health science field or other relevant area;
OR

ii) Bachelor degree in a health science field or other related area;
OR

iii) submit such other evidence of general and professional qualifications and experience as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue independent research, and satisfy such additional requirements for admission to the program, if any, as may be prescribed by the Faculty; AND

iv) have completed at least two years full-time work in their professional field; AND

v) have completed a minimum of one year's full-time experience in an educational role. Students with Honours level entry can apply for advanced standing in relevant research units. All qualifying requirements must be completed before enrolment in this Masters course.

Note: Applicants with a bachelor degree at pass level must demonstrate the necessary preparation in education and research including completion of studies in education normally to the level of graduate diploma. Applicants with a bachelor degree at honours level may be required to complete studies in education normally to the level of graduate diploma.

Course Outline

The course outline for the Master of Health Science Education by Research is presented in Table 8.4.

COMH6013/COMH6014 (08519A/08519B)

Research Thesis A/Research Thesis B

Supervisors are appointed to assist in carrying out the research project following approval of the research proposal. Regular meetings are held with the supervisor. Students may be required by the supervisor and/or Head of School to undertake graduate coursework study where this is considered necessary to the student's research thesis.

Graduate Diploma in Community Health

This course provides general and specialist community health practitioners with a core of knowledge and skills appropriate to the effective practice of primary health care in a multi-disciplinary team setting. The course focuses on the health needs of disadvantaged groups in society and provides training in community health theory and practice, program planning and evaluation, health promotion, research methods and elective units with special relevance to the occupational roles of participants.

Admission Requirements
i) have completed a bachelor degree in a relevant area of health sciences;
OR
ii) submit such other evidence of professional qualifications and/or experience as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies, and satisfy such additional requirements for admission to the program, as may be prescribed by the Faculty;
AND
iii) a minimum of 2 years work experience.

Course Outline
The course outlines for the Graduate Diploma in Community Health full-time and part-time modes are presented in Table 8.5.

Unit Descriptions

BEHS5038 (10486) Methodological Issues in Community Health
Semester 1 - 6 credit points
This unit aims to develop a critical approach to methodological issues involved in the study of community health, to enable students to critically appraise the design of published research reports (involving both qualitative and quantitative approaches to data collection) and to provide a knowledge base upon which to develop an appropriate project for the unit Integrative Paper.

COMH5040 (08444) Integrative Paper
Semester 2 - 10 credit points
This unit aims to give students the opportunity to develop the skills required for an independent investigation in an area of relevance to their professional interests. This may take any one of several forms, depending on the nature of the investigation and of the students candidature. In all cases, the main component of the final report will be an extended literature analysis and critical review. Master students, however, would normally be expected to develop their investigation as preparation for their treatise.

COMH5172 (08440) Health Promotion
Semester 2 - 6 units
This unit provides an introduction to the principles and processes of major approaches to health promotion.

COMH5037 (08441) Program Planning and Evaluation
Semester 1 - 6 credit points
The aim of this unit is to examine factors and elements involved in the process of planning and evaluating community health programs.

COMH5137 (08577) Introduction to Community Health
Semester 1 - 6 credit points
This unit introduces students to the conceptual underpinnings of community health as a field of academic study and professional practice. It examines the unique matrix of disciplines which seek to document and explain the relationship between the health of individuals and communities and provides an overview of perspectives and approaches in the application of knowledge through community-based service development.

COMH5103 (08523) Australian Society and Health
Semester 1 - 6 credit points
This unit examines the relationship between social inequality and the distribution of health in Australian society. It explores the relevance of an analysis of socio-political relations and processes for understanding these patterns.

School of Community Health
Notes

1 Electives: The following units maybe offered subject to sufficient student numbers and staff availability. Each elective is 4 credit points. Electives from other courses in the University may be taken by students after consultation with the Community Health Co-ordinator and the appropriate School or Department.

COMH5173 (08445) Women's Health
COMH5168 (08446) Aboriginal Health
COMH5041 (08447) Migrant and Refugee Health
COMH5042 (08449) Issues in Community Mental Health
COMH5043 (08450) Occupational Health and Safety
COMH5045 (08452) Drug and Alcohol Studies
COMH5171 (08453) Health in the Developing World
COMH5048 (08456) Legal & Ethical Issues in Community Health
COMH5049 (08457) Community Nutrition
COMH5101 (08521) Community Health Policy and Services
COMH5102 (08522) Introduction to Epidemiology and Biostatistics
COMH5104 (08524) Critical Appraisal
COMH5174 (08483) Introduction to Gerontology (6 credit points)
COMH5170 (08490) Community Development
COMH5145 (08585) Indigenous Community Action (Semester 2)
COMH5146 (08586) Indigenous Family Health (Semester 2)
COMH5147 (08587) Indigenous Mental Health (Semester 2)
COMH5148 (08588) Organisational Management (Semester 1)
COMH5149 (08589) Project Development (Semester 1)
COMH5150 (08590) Project Management (Semester 2)
COMH5151 (08591) School Health (Semester 2)
COMH5152 (08592) Computer in Health (Semester 2)
COMH5153 (08593) Ecological Health (Semester 2)
COMH5154 (08594) Housing and Health (Semester 2)
COMH5155 (08595) Strategic Planning (Semester 1 or 2)
COMH5156 (08596) Cultural Awareness for Migrant Health (Semester 2)
COMH5157 (08597) Cultural Awareness for Indigenous Health (Semester 2)
COMH5158 (08598) Social Justice in Health (Semester 2)
COMH5159 (08599) Injury Prevention (Semester 2)
COMH5160 (085A1) Independent Learning (Semester 1)
COMH5161 (085A2) Independent Learning (Semester 2)

2 Research Electives: Students will select with the aid of their supervisor appropriate Research Electives from the Faculty wide Masters Research Electives. See Appendix 1.

Master of Community Health

This course aims to provide advanced training in Community Health theory and practice as well as further training in research. It is designed to equip graduates to occupy senior professional positions in the field. The first stage of the program has the same content as the Graduate Diploma in Community Health. Master students undertake research electives and prepare a treatise.

Admission Requirements
In order to qualify for admission to the degree, applicants shall:

i) have completed a bachelor degree in a relevant area of health sciences,
   OR

ii) submit such other evidence of general and professional qualifications and/or experience as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies, and satisfy such additional requirements for admission to the program, if any, as may be prescribed by the Faculty;

iii) have completed a minimum of two years work experience.

Course Outline
The course outline for the Master of Community Health is presented in Table 8.6.

Unit Descriptions
For descriptions of units common to the Graduate Diploma in Community Health see pages 8-10.

COMH5108(08528) Treatise
12 credit points
The general aim of this unit is to synthesise post-graduate learning into a final project relevant to some aspect of community health. Students conduct and write up their project under the supervision of one or more members of the academic staff.

</table>

**Admission Requirements**

To qualify for admission to the Master degree by research in Community Health applicants must:

i) Have completed a bachelor degree in an area of relevance such as health, welfare, social, behavioural or biological sciences;  
OR

ii) Submit such other evidence of general and professional qualifications and experience as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue independent research, AND

iii) In addition, meet any other requirements for admission to the program as may be prescribed.

**Course Outline**

The course outline for the Master of Health Science (Community Health) by Research is presented in Table 8.7.

---

**Master of Health Science (Community Health) by Research**

This course provides the opportunity for research in community health.

**COMH6016/COMH6017 (08530A/08530B) Research Thesis A/Research Thesis B**

A supervisor is appointed to assist the student in carrying out the research project following approval of the research proposal. Regular meetings are held with the supervisor. Students maybe required by the supervisor and/or Head of School to undertake graduate coursework where this is considered necessary to the student’s research thesis.

#### Notes

1. Students study a total of two electives. Each elective is 6 credit points. The electives offered may vary according to staff availability and student demand. With the approval of the Head of School, students may also choose appropriate electives from units within other graduate courses. See page 8-16 for list of electives.

#### Graduate Diploma in Gerontology

This course provides for the development of knowledge and skills relevant to professional practice in the area of gerontology. Graduates will be equipped for employment in a wide range of work settings which require an understanding of the ageing process and of age related issues and services.

#### Admission Requirements

Applicants must have completed a professional diploma or degree course or satisfy the Faculty that they possess some other form of relevant qualification or work experience.

#### Course Outline

The course outline for the Graduate Diploma in Gerontology is presented in Table 8.8.

#### Unit Descriptions

**COMH5058 (08469) Special Investigation**

_Semester 2- 6 credit points_

This unit aims to give students the opportunity to develop the skills required for an independent investigation in an area of relevance to their professional interests. This may take any one of several forms, depending on the nature of the investigation and of the student's candidature. In all cases, the main component of the final report will be an extended literature analysis and critical review. Master's students, however, would normally be expected to develop their investigation as preparation for their treatise.
COMH5135 (08474) Program Planning and Evaluation
Semester 1-6 credit points
The aim of this unit is to examine the process of planning, evaluating and improving programs for older people. The content will focus on consumer participation and teamwork in all stages of this process. Students will gain experience in using a variety of planning and evaluation strategies (e.g., problem solving).

COMH5143 (08483) Introduction to Gerontology
Semester 1 - 6 credit points
This unit aims to provide students with an understanding of gerontology as a unique matrix of disciplines and perspectives focused on the interaction of individual and social processes of ageing and on the dynamics of ageing populations. It demonstrates the need for integration of various academic disciplines and professional applications in the study of ageing and older people.

COMH5039 (10487) Methodological Issues in Gerontology
Semester 1-6 credit points
This unit aims to develop a critical approach to methodological issues involved in the study of ageing and older people and to provide a knowledge base for the unit Special Investigation.

COMH5143 (10454) Behavioural Aspects of Ageing
Semester 1 ■ 6 credit points
Cognitive, perceptual, sensory, motor and personality development in later life will be studied in relation to social theories of ageing and typical life events of older people.

BIOS5041 (11502) Biological Aspects of Ageing
Semester 2 - 6 credit points
This unit studies human ageing from biological perspectives. The emphasis is on understanding the main features of 'normal' ageing or senescence as distinct from disease processes and the contribution of environmental factors to ageing.

School of Community Health
Electives: Students study a total of two elective units. Each unit is 6 credit points. The electives offered may vary according to staff availability and student demand. With the approval of the School, students may also choose appropriate electives from units within other graduate courses. Electives include:

- COMH5059 (08470) Mental Health in Later Life
- COMH5061 (08476) Law, Ethics and the Rights of Older People
- COMH5069 (08488) Counselling Theory and Practice
- COMH5138 (08578) The Residential Care Setting and Older People
- COMH5139 (08579) Residential Care Policies and Services
- COMH5140 (08580) Community Health Policies and Services
- COMH5141 (08581) The Community Setting and Older People
- COMH5142 (08582) Independent Project
- BEHS5027 (10452) Multicultural Issues in Gerontology
- BIOS5018 (11433) Health, Dysfunction and Ageing

Research Elective: Students select two research units (subject to sufficient student numbers and staff availability) in consultation with the Course Co-ordinator. For a list of Research Electives see Appendix 1.

Notes
1 Electives: Students study a total of two elective units. Each unit is 6 credit points. The electives offered may vary according to staff availability and student demand. With the approval of the School, students may also choose appropriate electives from units within other graduate courses. Electives include:

- COMH5072 (08494A) Treatise
- COMH5073 (08494B) Treatise
- 2 Research Electives

Master of Gerontology
This course provides advanced training in gerontological theory and practice. It is designed to equip graduates with an in-depth understanding of ageing and age-related issues. Graduates will be equipped to occupy senior positions in a variety of planning, service delivery, educational and other settings.

The course is offered as a part-time program, normally over three years, or full-time over eighteen months.

Admission Requirements
In order to qualify for admission to the degree, applicants shall have:

i) A bachelor's degree in an area of occupational relevance such as the health, welfare, social or biological sciences, OR

ii) Overseas qualifications acceptable to the Faculty, OR

iii) Other general and professional qualifications and/or experience as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies, and satisfy such additional requirements for admission to the program, as maybe prescribed by Faculty.
Course Outline
The course outline for the Master of Gerontology is presented in Table 8.9.

Unit Descriptions
Some units are common to the Graduate Diploma in Gerontology. Please refer to unit descriptions on page 8-14, 8-15.

COMH5071 (08494) Treatise
12 credit points
The general aim of this unit is to synthesise post-graduate learning into a final project relevant to some aspect of gerontology. The topic and approach having been refined through participation in Special Investigation, students now conduct and write up their project under the supervision of one or more members of the academic staff.

Master of Health Science (Gerontology) by Research

This course provides the opportunity for research in gerontology.

Admission Requirements
To qualify for admission to the Master degree by research in gerontology applicants must:

i) have completed a bachelor degree in an area of relevance such as health, welfare, social, behavioural or biological sciences;

OR

ii) submit such other evidence of general and professional qualifications and experience as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue independent research.

iii) Satisfy such additional requirements for admission to the program, if any, as may be prescribed.

Notes:
Applicants who have completed an approved Bachelor degree at Honours level may apply for admission to Year 2 of the program.

Course Outline
The course outline for the Master of Health Science (Gerontology) by Research is presented in Table 8.10.

COMH6023/COMH6024 (08541 A/08541 B) Research Thesis A/Research Thesis B

A supervisor is appointed to assist the student in carrying out the research project following approval of the research proposal. Regular meetings are held with the supervisor. Students may be required by the supervisor and/or Head of School to undertake graduate coursework study where this is considered necessary to the student's research thesis.

**Notes**

1. Includes two five (5) week (175 hour) block placements at separate agencies, complemented by pre-placement tutorials. The first placement will be undertaken in the inter-semester recess.
2. For students enrolled in second year only.
3. May be completed in either semester or during inter-semester break.
Graduate Diploma in Rehabilitation Counselling

This course can be completed on a one-year full-time basis or over two years via the off-campus (distance education) mode.

Admission Requirements
In order to qualify for admission to the degree, applicants shall have:

i) a bachelor degree or a diploma including three years cumulative study in psychology or equivalent, OR

ii) Appropriate training and experience in one of the applied health professions. (Students entering on the basis of their qualifications in an allied health profession may be required to undertake some preliminary supplementary studies).

AND

iii) It is desirable that applicants have had experience of at least one year in some aspect of rehabilitation, either in work or on a voluntary basis.

Course Outline
The course outline for the Graduate Diploma in Rehabilitation Counselling is presented in Table 8.11.

Unit Descriptions

COMH5007 (08407A) Counselling A
Semester 1 - 4 credit points
This intensive unit introduces theories and procedures utilised within the assessment process as it relates to rehabilitation counselling, provides practice covering the basic microskills involved in the initial assessment interview. The aim is the development of the understanding necessary to conceptualise a client's needs and to formulate appropriate goals for counselling.

COMH5008 (08407B) Counselling B
Semester 1 - 4 credit points
Students are introduced to the theory and practice of the interpersonal process approach to counselling. The aim is the development of both theoretical and applied understandings of this most basic of counselling skills

COMH5010 (08409A) Rehabilitation A
Semester 1 - 4 credit points
Introduction to Rehabilitation Theory and Practice; Legal Aspects of Rehabilitation; Psychosocial Aspects of Disability.

COMH5011 (08409B) Rehabilitation B
Semester 2 - 4 credit points
Rehabilitation Administration and Evaluation; Case and Caseload Management.

COMH5014 (08411A) Independent Study fi

COMH5015 (08411B) Independent Study B
Semester 1 - 3 credit points
Semester 2 - 3 credit points
In Semester 2, students undertake an independent study devoted to a specific area of handicap or disadvantage. Alternatively, they may elect a study devoted to the administration and/or evaluation of an agency program, or investigate a current rehabilitation issue.

COMH5018 (08415A) Vocational Rehabilitation A
Semester 1 - 4 credit points
The psychosocial foundations of work are studied. Students also look at the vocational development process, the effect disability has on this process and the way in which counsellors and other rehabilitation professions go about assessing the degree of handicap and the vocational/avocational options available.

COMH5019 (08415B) Vocational Rehabilitation B
Semester 2 - 4 credit points
This module looks in detail at the placement and resettlement aspects of rehabilitation and the methods/techniques used to work with clients and employers to secure a return to the workforce.

COMH5020 (08416A) Rehabilitation of Special Groups A
Semester 1 - 4 credit points
Students study the rehabilitation needs and services provided for a special client group selected from the Elective list below. Not all Electives are offered in any one year.

COMH5021 (08416B) Rehabilitation of Special Groups B
Semester 2 - 3 credit points
Students study the rehabilitation needs and services for a second special client group selected from the Elective list below. Not all electives are offered in any one year.

COMH5022 (08417A) Field Experience I/
COMH5023 (08417B) Field Experience II
11 credit points
385 hours
Students are assigned selected cases in rehabilitation agencies and are required to carry out a range of tasks appropriate to a rehabilitation counsellor, with supervision from a qualified professional. Students are required to complete a total of 385 hours of placement under supervision.

COMH5024 (08418) Field Experience A
5 credit points
193 hours

COMH5025 (08419) Field Experience B
6 credit points
192 hours

COMH5077 (084A3) Residential School B
2 credit points

COMH5176 (084A4) Residential School A
2 credit points
Attendance at two residential Schools is compulsory. The School is held for 5 days in June of each year.

**Notes**

1. Includes two 5-week (175 hours) block placements, at separate agencies, complemented by pre-placement tutorials. The first placement will be undertaken in the inter-semester recess.
2. Research Elective: Students undertone of the units consultancy and can be taken in either semester 1 or semester 2. For the list of Research Electives see Appendix 1.
3. May be completed in either semester or during inter-semester break.
4. For students enrolled in second year only.
Master of Rehabilitation Counselling
(by Coursework)

This course can be completed on a 3 semester full-time basis or over 6 semesters off-campus (distance education) mode.

Admission Requirements
To qualify for admission to the Master degree by coursework in rehabilitation counselling, applicants must:

i) have completed a bachelor degree in an appropriate area other than rehabilitation counselling;

OR

ii) submit such other evidence of general and professional qualifications and experience as will satisfy the Academic Board that the applicant possesses the educational preparation and capacity to undertake the coursework and treatise requirements, and satisfy such additional requirements for admission to the program, if any, as may be prescribed by the Academic Board.

Master of Health Science
(Rehabilitation Counselling) by Research

This course provides the opportunity for research in the areas of rehabilitation, rehabilitation counselling, rehabilitation administration, and the management of rehabilitation resources.

Admission Requirements
In order to qualify for admission to the degree, applicants shall have completed:

i) a Graduate Diploma of Health Science (Rehabilitation Counselling);

OR

ii) an Associate Diploma of Health Science (Rehabilitation Counselling) plus a bachelor's degree with a major in psychology or other behavioural science unit;

OR

iii) General and professional qualifications as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies.

In addition, the applicant shall satisfy such additional requirements for admission to the program, if any, as may be prescribed by the Faculty. The applicant shall normally have had a minimum of one year of full-time relevant work experience in a rehabilitation setting.

Course Outline
The course outline for the Master of Rehabilitation Counselling is presented in Table 8.12.

C0MH5110/C0MH5111/C0MH5112 (08540/08540A/08540B) Treatise/Treatise A/Treatise B
Semester 1-12 credit points
Semester 2-12 credit points
The treatise requires the completion of a paper which aims to synthesise post-graduate knowledge and skills through an original investigation of an area of professional relevance.

Research Elective
Semesters 1 - 6 credit points

Admission Requirements
In order to qualify for admission to the degree, applicants shall have completed:

i) a Graduate Diploma of Health Science (Rehabilitation Counselling);

OR

ii) an Associate Diploma of Health Science (Rehabilitation Counselling) plus a bachelor's degree with a major in psychology or other behavioural science unit;

OR

iii) General and professional qualifications as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies.

In addition, the applicant shall satisfy such additional requirements for admission to the program, if any, as may be prescribed by the Faculty. The applicant shall normally have had a minimum of one year of full-time relevant work experience in a rehabilitation setting.

Course Outline
The course outline for the Master of Health Science (Rehabilitation Counselling) by Research is presented in Table 8.13.

COMH6004/COMH6005 (08422A/08422B)
Research Thesis A/Research Thesis B
Supervisors are appointed to assist in carrying out the research project following approval of the research proposal. Regular meetings are held with the supervisor. Students may be required by the supervisor and/or Head of School to undertake graduate coursework study where this is considered necessary to the students research thesis.
Field Experience/Professional Practice

Rehabilitation Counselling
Field Experience is an essential component in the overall process of developing professional competence and identity as a Rehabilitation Counsellor. It not only provides students with an opportunity to apply, integrate, reinforce and assess theoretical learning, but also allows them to appreciate the way in which rehabilitation counsellors and other allied professionals contribute to the effectiveness of the rehabilitation process.

Field placements are provided in a wide variety of rehabilitation and related health, welfare, vocational and independent living services in both the public and private sectors.

The objectives of field experience are that the students be provided with opportunities to:

• develop competence and professional identity as rehabilitation counsellors
• integrate theory taught at the University with practice learnt in the field. Field experience provides the context where all segments of the coursework merge and gain meaning
• develop an understanding of the values and principles of rehabilitation counselling practice as applied in different fields/levels of application
• develop knowledge and skills in various rehabilitation counselling methods and related activities under the guidance, supervision and support of experienced practitioners in the service delivery environment
• develop confidence, independence and autonomy as practitioners.

These objectives are fulfilled by placement blocks of supervised field practice complemented by supporting seminars, tutorials and agency visits. At least one placement is to be supervised by a practising/qualified rehabilitation counsellor.

Graduate Diploma (Rehabilitation Counselling) and Masters (Rehabilitation Counselling) students are required to complete 385 hours. This includes two field placements at separate agencies, as per dates below.

1998 Field Placement Dates

Graduate Diploma and Master in Rehabilitation Counselling
Semester 1
29 June to 31 July
Semester 2
26 October to 27 November.
The School of Exercise and Sport Science is a new school established to promote excellence in the development of knowledge and skills related to human physical performance in the context of sport, recreation, work, leisure and rehabilitation. It is responsible for the undergraduate Bachelor of Applied Science (Exercise and Sport Science), Bachelor of Applied Science (Exercise and Sport Science)(Honours), the Graduate Diploma in Exercise and Sport Science, Master of Exercise and Sport Science by Coursework, Master of Applied Science (Exercise and Sport Science) by Research and PhD supervision in the area of Exercise and Sport Science. The School is also responsible for teaching related units in other Schools within the Faculty.

Graduates of the undergraduate and postgraduate programs in Exercise and Sport Science will be prepared for a range of careers including sport science, exercise programming in rehabilitation and specific groups such as the aged, children and spinally injured, and workplace and personal fitness promotion. Examples of professional occupations in this area are sport, exercise or rehabilitation scientist, corporate fitness manager in public and private sector industries, coach and trainer.

Information about the School and its courses of study can be obtained from the Faculty of Health Sciences Student Administration Services, 9 351 9535 or from the School of Exercise and Sport Science, 9 351 9612.

Notes
1. Students undertaking the Exercise Rehabilitation Science Strand are required to select an additional unit (or group of units) of 6 credit points from the Sport Science Strand.
2. Students completing the Graduate Diploma in Exercise and Sport Science with a credit grade average, may apply to proceed to the Master of Exercise and Sport Science.
3. The availability of elective units will be dependent upon student demand and availability of academic staff and resources.

Graduate Diploma in Exercise and Sport Science

This course is designed to provide an opportunity for advanced study in exercise and sport science with a focus on the areas of applied physiology, biomechanics and motor learning. It is anticipated that this study will be an extension of the student’s prior training and professional role. The course will be presented with the assumption that the student has a background knowledge of anatomy or biomechanics and physiology or is prepared to acquire it, prior to commencing the course. The two year part-time course may be completed in one year full-time.

Admission Requirements

A. Pass Entry Level
To qualify for admission, applicants shall possess an undergraduate degree in medicine, physiotherapy, occupational therapy, nursing, physical education or other related fields. A background in anatomy or biomechanics and physiology is essential.

B. Honours Entry Level
Applicants who have completed an approved Bachelors degree at honours level in medicine, physiotherapy, occupational therapy, nursing, physical education or other related fields may also be admitted.

C. Special Circumstances
In special circumstances a person may be admitted as a candidate on the submission of an academic transcript and professional attainment that is approved by the Faculty.

D. Qualifying Statement
Notwithstanding the above requirements for admission, the Faculty may require the applicants to demonstrate, by examination or appropriate work that they are suitable candidates, before being admitted to the program.

Course Outline
The course outline for the Graduate Diploma in Exercise and Sport Science is presented in Table 9.1.

Notes
1 The availability of elective units will be dependent upon student demand and availability of academic staff and resources.
2 Students undertaking the Exercise Rehabilitation Science strand are required to select an additional unit (or group of units) of 8 units duration from the Sport Science strand.
3 Full-time students must complete year 1 with a credit grade average before proceeding to year 2.
   Part-time students must complete year 1 and 2 with a credit grade average before proceeding to year 3.

Master of Exercise and Sport Science
(by Coursework)

This course aims to provide advanced study in the broad discipline of exercise and sport science. It is designed to equip graduates with an in-depth understanding of applied physiology, biomechanics, motor learning and applied research together with the knowledge and skills to conduct exercise testing of symptomatic and asymptomatic population groups and prescribe appropriate exercise programs. Sport specific studies related to nutrition and the psychosocial aspects of sport are also undertaken.

The course is divided into two stages: Stage I comprises coursework (lectures, tutorials, seminars, laboratory practicals) while Stage II includes further coursework directed towards the completion of a research project.

Admission Requirements

A Pass Entry Level
To qualify for admission to the Master of Exercise and Sport Science program, applicants shall possess an undergraduate degree in medicine, physiotherapy, occupational therapy, nursing, physical education or other related fields. A background in anatomy or biomechanics and physiology is essential.

B Honours Entry Level
Applicants who have completed an approved Bachelors degree at honours level in medicine, physiotherapy, occupational therapy, nursing, physical education or other related fields may also be admitted into the Master’s of Exercise and Sport Science.

C Special Circumstances
In special circumstances a person may be admitted as a candidate on the submission of an academic transcript and professional attainment that is approved by the Faculty.

D Holders of the Graduate Diploma
Holders of the Graduate Diploma in Sport Science, Graduate Diploma in Exercise and Sport Science or Graduate Diploma in Applied Science (Exercise and Sport Science) from Cumberland College of Health Sciences OR holders of an equivalent qualification maybe granted Advanced Standing in the Master of Exercise and Sport Science by coursework. Such applicants will be considered on an individual merit basis by the Faculty.

E Qualifying Statement
Notwithstanding the above requirements for admission, the Faculty may require the applicants to demonstrate, by examination or appropriate work that they are suitable candidates, before being admitted to the program.

Note: Progression to year 3 for students admitted to the Master of Exercise and Sport Science is contingent upon achieving a credit grade average in years 1 and 2. Where a credit grade average is not achieved, students who complete years 1 and 2 successfully can graduate with a Graduate Diploma in Exercise and Sport Science.

Course Outline
The course outline for the Master of Exercise and Sport Science (by Coursework) is presented in Table 9.2.
Table 9.3 Master of Applied Science (Exercise and Sport Science) by Research

The table below refers to the standard program for pass entry students. This program may alter depending on the entry level of the student (see Note).

**Notes**

Students may enter the program directly into year 2 if proceeding from an Honours degree, Graduate Diploma in Applied Science (Exercise and Sport Science), Master of Applied Science by coursework (Exercise and Sport Science), or a course of an equivalent standard, as deemed by the Faculty.

---

**Master of Applied Science (Exercise and Sport Science) by Research**

The Master of Applied Science (Exercise and Sport Science) by Research provides the opportunity for research into specific areas of exercise and sport sciences. This research degree comprises a minimal coursework component, designed specifically to facilitate the student's research progress.

**Admission Requirements**

**A  Pass Entry Level**

To qualify for admission to the Master of Applied Science (Exercise and Sport Science) by Research program, applicants shall possess an undergraduate degree in science, medicine, physiotherapy, occupational therapy, nursing, human movement sciences, physical education or other related fields. A background in anatomy and biomechanics or physiology is essential. Students may be directed to undertake a qualifying program based on coursework offered in the Master of Applied Science (Exercise and Sport Science) by Coursework program.

**B  Honours Entry Level**

Applicants who have completed an approved Bachelors degree at Honours level in science, medicine, physiotherapy, occupational therapy, nursing, human movement sciences, physical education or other related fields may be admitted into the Master of Applied Science (Exercise and Sport Science). These students will usually be admitted into the second year of the full-time research to be taken at the postgraduate level.

**C  Graduate Diploma in Applied Science (Exercise and Sport Science)**

Applicants who have completed a Graduate Diploma in Applied Science (Exercise and Sport Science) may be permitted entry into the second year of the Master of Applied Science (Exercise and Sport Science) by Research program.

**D  Master of Applied Science (Exercise and Sport Science) by Coursework**

Students having successfully completed the Master of Applied Science (Exercise and Sport Science) by Coursework degree may be permitted entry into the Master of Applied Science (Exercise and Sport Science) by Research degree.

**E  Special Circumstances**

In special circumstances a person may be admitted as a candidate on the submission of an academic transcript and professional attainment that is approved by the Faculty. Advanced Standing may be granted for the coursework component of the Master of Applied Sport Science (Exercise and Sport Science) by Research degree, by the Faculty.

**F  Qualifying Statement**

Notwithstanding the above requirements for admission, the Faculty may require the applicants to demonstrate by examination or appropriate work that they are suitable candidates before being admitted to the program.

**Course Outline**

The course outline for the Master of Applied Science (Exercise and Sport Science) by Research is presented in Table 9.3.
Unit Descriptions

EXSS5002 (22503)  Applied Physiology I
Semester 1 - 6 credit points
This unit will provide the student with a developing infrastructure for Applied Physiology II. Initially, this unit will involve a systems approach with emphasis on applied physiological situations. Only when the basic physiological systems have been reviewed and expanded, will the more integrative aspects of the exercise response be attempted. While the unit content is broad, it nevertheless assumes a sound physiology background. Particular attention will be given to the cardiovascular, respiratory, and metabolic systems.

EXSS5004 (22505)  Applied Physiology II
Semester 2 - 4 credit points
Pre-requisite Applied Physiology I (22503)
This unit will build upon the principles and information provided in Applied Physiology I, and will focus upon the regulation of the exercise response. While the changes that occur during exercise are important, this unit will aim primarily at providing the student with the necessary understanding of the mechanisms behind these changes. Particular attention will be given to cardiovascular control, adaptation to dynamic and static exercise, metabolic regulation, respiratory control and thermoregulation. It is expected that while the content of this unit will remain fixed, the level and emphasis of each section will vary according to current staff background and research interest.

EXSS5012 (22513)  Applied Physiology III
Semester 1 or 2 - 4 credit points
This unit will enable the student to investigate in-depth selected topics in Applied Physiology. These topics will be carefully selected to ensure that the student has a strong understanding of the proposed area of research. Teaching will comprise a mix of didactic lectures and a strong component of directed learning. During this unit, students will comprehensively review and critically analyse literature in the selected topic, with associated seminar presentations.

EXSS5001 (22502)  Biomechanics I
Semester 1 - 6 credit points
This unit will provide basic biomechanical concepts and skills required for the analysis of human movement. Principles of kinematics, kinetics and electromyography will be studied with reference to selected motor activities. Laboratory sessions will be used to provide illustrations of the above principles and to give students experience with biomechanical laboratory techniques.

EXSS5003 (22504)  Biomechanics II
Semester 2 - 5 credit points
Pre-requisite Biomechanics I (22502)
This unit extends the foundation concepts and skills developed in Biomechanics I. Specific topics such as electromyography in dynamic muscle movements, fluid mechanics, projectile motion, mechanical energy distribution; and mechanics of implements will be studied in the context of specific motor activities.

EXSS5013 (22514)  Biomechanics III
Semester 1 or 2 - 4 credit points
For unit description refer to Biomechanics III in the Master of Applied Science (Exercise and Sport Science) by research program.

EXSS5010(22511) Clinical Biomechanics
Semester 2 - 3 credit points
Pre-requisite Biomechanics II (22504)
The purpose of this unit is to improve the student’s capacity to predict the mechanical effects of training regimes, trauma, movement styles and their repetition on tissues and regions of the body, and to differentiate this response in different age groups. This will be achieved by the study of sources and characteristics of forces and the ways in which they are transmitted through the body via tissues and regions of the body. High and low technology biomechanical measurement methods which assist in the development of clinical biomechanical measurement protocols will be examined.

EXSS5006 (22507)  Clinical Exercise Testing and Athlete Assessment
Semester 1 - 6 credit points
Pre-requisite Biomechanics II (22504)
This unit will cover the basic principles of exercise testing applied to healthy, asymptomatic individuals, clinical and disabled patients and athletic populations. Topics covered include: graded exercise testing for healthy, asymptomatic adults; laboratory and field fitness testing for sports participants and elite athletes; cardiopulmonary stress testing for symptomatic patients with cardiac disease, respiratory and central or peripheral neuropathic dysfunction; laboratory and field testing of asymptomatic, disabled individuals; interpretation of exercise electrocardiograms and advanced techniques of cardiovascular assessment; assessment of muscular strength, muscular endurance and anaerobic power in clinical, healthy or athletic populations. Common to all testing methodologies for healthy or patient populations will be the importance of specificity, reliability, validity and sensitivity.

EXSS5005 (22506) Exercise and Rehabilitation I
Semester 1 - 3 credit points
Pre or Co-requisites Applied Physiology II (22505), Biomechanics II (22504)
This unit will provide a foundation upon which students will be able to critically evaluate methods of management of the person who has sustained injury during physical activity. The emphasis will be on the response of body tissues to injury, immobilisation and rehabilitation, and the influence of these factors upon tissue repair and restoration of function.

EXSS5009 (22510) Exercise and Rehabilitation II
Semester 2 - 3 credit points
Pre or Co-requisites Applied Physiology II (22505), Biomechanics II (22504), Exercise and Rehabilitation I (22506)
Students in this unit will be exposed to current trends in selected areas of rehabilitation. This approach will include an examination of the physiological and psychological basis of rehabilitation including appropriate clinical management. The areas of rehabilitation selected for presentation will depend on the available expertise of the staff, and could include rehabilitation of the deconditioned person, coronary and respiratory rehabilitation, as well as rehabilitation of the sports person.
This unit develops the concept of exercise training as potentially beneficial to cardiovascular fitness and muscular strength in healthy individuals, symptomatic patients or disabled populations. Topics covered include: principles of exercise prescription in healthy, asymptomatic adults; exercise training for sports participants and elite athletes; modifications of exercise prescription for clinically symptomatic individuals including cardiac patients, pulmonary disease patients and persons with central or peripheral neuropathic dysfunction; modifications of exercise prescription for disabled individuals; special considerations for exercise training in women, elderly adults and children.

In addition this unit will focus upon the physiological outcomes of exercise training upon the cardiovascular, respiratory and musculoskeletal systems.

### BIOS5046 (11513) Functional Anatomy

#### Semester 2 - 6 credit points

**Pre-requisite** An appropriate accredited course in Anatomy

This unit aims to investigate the relationship between anatomical structure and function, particularly as it relates to the body during exercise.

This unit has two sections. The first section involves revision of the musculoskeletal anatomy of the limbs and trunk in the anatomy laboratory. Students who have completed Musculoskeletal anatomy units equivalent to Functional Anatomy A (11172) and Functional Anatomy B (11173) of the Bachelor of Applied Science (Physiotherapy) program in the Faculty of Health Sciences are exempt from this component of the unit. The second section involves advanced musculoskeletal anatomy of the limbs and trunk.

### BEHS5141 (10459) Motor Learning

#### Semester 2 - 3 credit points

This unit develops the model of information processing in the human sensory-motor system as the basis of the acquisition and execution of motor behaviour. Topics covered include: the stages of skill acquisition; automatic versus conscious motor control; expert-novice skill differences in pattern recognition and movement production; simultaneous multi-task performance; attention, effort and resources; planning and controlling movements; hemispheric specialisation; memory for movements; imagery and mental rehearsal; practice and automatization; stress, arousal and performance; disorders of movement; ecological and motor program approaches to motor learning.

### EXSS5007 (22508) Exercise Prescription and Practice

#### Semester 2 - 6 credit points

**Pre or Co-requisite** Applied Physiology II (22505)

This unit develops the concept of exercise training as potentially beneficial to cardiovascular fitness and muscular strength in healthy individuals, symptomatic patients or disabled populations. Topics covered include: principles of exercise prescription in healthy, asymptomatic adults; exercise training for sports participants and elite athletes; modifications of exercise prescription for clinically symptomatic individuals including cardiac patients, pulmonary disease patients and persons with central or peripheral neuropathic dysfunction; modifications of exercise prescription for disabled individuals; special considerations for exercise training in women, elderly adults and children.

In addition this unit will focus upon the physiological outcomes of exercise training upon the cardiovascular, respiratory and musculoskeletal systems.

### BEHS5142 (10460) Psychosocial Aspects of Sport

#### Semester 2 - 3 credit points

The first part of this unit considers psychological factors in sports performance. Topics covered include: managing motivation, anxiety and aggression; arousal-performance relationships; psychosocial characteristics of peak performance; personality and sport performance; relaxation and energising techniques; cognitive techniques; attention control-training; goal-setting; leadership; team cohesion; athlete staleness and burnout; stress, injury and psychological rehabilitation. The second part of the unit is concerned with the historical development of leisure and its relationship to work; sport as a dominant aspect of Australian culture; sources of tensions and conflicts in sport and leisure which are related to power, race, class, gender, age, ideology in sporting and leisure contexts.

### BEHS5031 (10461) Research Methods

#### Semester 1-3 credit points

Familiarity is assumed with basic descriptive and inferential methods. These basic methods are expanded upon with the major focus being on problem solving with a view to extracting meaning from data. The emphasis is on practical application of methodologies with extensive use made of modern statistical software. The nexus between design and analysis is stressed using a linear model approach to demonstrate the partitioning of variance and the behaviour of random error. Single and multiple variable models are discussed with particular reference to clinical trials. Both categorical and measured data models are considered. The specific research designs and strategies used to illustrate concepts will be tailored to the needs and expectations of the students.

### EXSS5011 (22512) Research Project

#### Semester 1 or 2 - 10 credit points

**Pre-requisite** Project Proposal (22515)

In this unit students will work individually or in small groups to conduct an investigative project related to exercise physiology, biomechanics or motor learning. This project may take one of several formats including: a quality assurance project, study of acute responses to exercise in a small sample of healthy or disabled individuals, a sports/exercise epidemiological study, extensive literature review, or a minor research project related to exercise and sport science.

### EXSS5023 (22524) Project Development

#### Semester 1-6 credit points

**Co-requisite** Research Project (11438/22512)

In this unit, students will further the implementation and evaluation of their research projects. The unit is designed to give structure to the process of undertaking a research project in exercise physiology, biomechanics or motor learning. It provides a forum in which to exchange ideas, formulate and test concepts, report on progress (including possible pilot work), defend developments and generally develop critical faculties in relation to the requirements of the research project.
EXSS5008 (22509) Sports Nutrition

*Semester 2 - 3 credit points*

This unit provides students with background knowledge on nutrition as applied to sports performance. Special emphasis will be given to the involvement of trace elements, amino acids as a fuel, dietary fibre, use of simple versus complex carbohydrates, etc. Practices such as bicarbonate loading, excessive intake of proteins/amino acids, ingestion of glucose polymers and "carbohydrate loading" will also be considered.
10 School of Health Information Management

At the postgraduate level the School of Health Information Management offers Graduate Certificate courses in Casemix and Clinical Data Management, a Graduate Diploma in Clinical Data Management, a Graduate Diploma of Applied Science (Health Information Management), a Master of Applied Science (Health Information Management), and a Doctor of Philosophy (PhD).

The Graduate Certificate and Diploma courses are open to graduates from a variety of backgrounds. The Graduate courses in casemix and clinical data management are designed to enable a wide range of health professionals, including health information managers, and others to acquire specific knowledge, and skills in these specialised areas. People undertaking these part-time courses may be employed, or seeking employment, as casemix coordinators, data managers or managers of clinical trials.

The Graduate Diploma of Applied Science (Health Information Management) is designed to provide graduates with a professional qualification in health information management. Health information managers are key members of the health care team responsible for the management of patient-related health information systems. These systems, both manual and automated, are designed for the capture, storage, analysis, retrieval and the appropriate release of information about patients and health services. Successful completion of the Graduate Diploma of Applied Science (Health Information Management) course qualifies the holder for full membership of the Health Information Management Association of Australia. The Health Information Management Association of Australia represents the profession and promotes the continuing education of its members through regular seminars, workshops and conferences. Students undertaking the Graduate Diploma are eligible for student membership of the Association.

The Master of Applied Science (Health Information Management) course is designed to further develop health information managers by providing an opportunity for advanced study through research.

Graduate Certificate in Casemix

This course is designed to enable graduates to obtain knowledge of the design, uses and evaluation of casemix systems. The Graduate Certificate is suitable for both managers and health professionals working with casemix information systems as well as senior managers who need to keep abreast of current casemix issues and their implications for health services management and planning.

Admission Requirements
In order to qualify for admission to the degree, applicants shall hold:

i) A bachelor degree from an Australian tertiary institution

ii) A bachelor degree from an overseas institute equivalent to an Australian bachelor degree

iii) Experience and/or qualifications as deemed appropriate by the Head of School.

Course Outline
The course outline for the Graduate Certificate in Casemix is presented in Table 10.1.

Graduate Certificate in Clinical Data Management

This course is designed to provide health professionals with a working knowledge of the management of clinical data used in clinical trials and other projects. The course is suitable for health information managers, data managers and other health professionals working with, or planning to work with, clinical data and other health databases.

On successful completion of the Graduate Certificate program, students may apply to articulate into the Graduate Diploma with credit transfer for stage 1 of that award.

Admission Requirements
In order to qualify for admission to the degree, applicants shall hold:

i) A bachelor degree in an appropriate discipline from an Australian tertiary institution

ii) A bachelor degree in an appropriate discipline from an overseas institute equivalent to an Australian bachelor degree

iii) Experience and/or a qualification as deemed appropriate by the Head of School.

Applicants must be able to demonstrate familiarity with major microcomputing software such as DOS, WINDOWs, wordprocessing, a database package and a spreadsheet package.

Course Outline
The course outline for the Graduate Certificate in Clinical Data Management is presented in Table 10.2.

Graduate Diploma in Clinical Data Management

The Graduate Diploma in Clinical Data Management offers advanced study in the area of the design and management of clinical trials and related projects. The first year (common with the Graduate Certificate) provides health professionals with a working knowledge of clinical data management, whilst the second year provides advanced study in clinical data management and related topics.

Admission Requirements
As for the Graduate Certificate.

Course Outline
The course outline for the Graduate Diploma in Clinical Data Management is presented in Table 10.3.
Graduate Diploma of Applied Science (Health Information Management)

The Graduate Diploma of Applied Science (Health Information Management) offers a specialised program in the professional area of health information/medical record management.

The course is designed to prepare specialists in the management of health information systems. It provides participants with a core of knowledge and skills appropriate to the effective practice of health information management. The course focuses on the information needs of health care professionals and facilities and provides a sound education in information systems management, microcomputing, programming, database design, medical terminology, medical science, medico-legal principles, management principles including human resource management, research methods and epidemiology, disease classification and casemix measurement systems, financial management in health care facilities and evaluation in health care.

Full-time and Part-time Study

The Graduate Diploma of Applied Science (Health Information Management) is structured as a full-time degree course offered over one year. However, the School recognises that some students cannot attend full-time and wish to complete their degrees in a longer time. The University offers an enrolment distinction between full-time and part-time students. Students enrolling part-time are those enrolled in a minimum of 6 and a maximum of 17 credit points per semester. Part-time students in Health Information Management are expected to meet "satisfactory progress" requirements. These include:

- Enrolment in the equivalent of at least 9 full units of study per academic year, except when a student has fewer than 9 units remaining to complete requirements for graduation.
- Passing the equivalent of 7 units of study over any 2 academic year periods.

Only a limited number of places are available for part-time enrolment and students must seek approval to enrol part-time from the Head of School prior to enrolment at the beginning of the academic year. Any variation in approved enrolment status is not automatically granted and must be applied for. Students requesting to enrol part-time should note that daytime attendance at lectures and practical placements is required for completion of the GradDipAppSc (HTM) course. At this time, the option of part-time enrolment is only available to a few commencing students. Students enrolling part-time should also note the following:

- Part-time students must adjust their load so that they can complete the course within the maximum time. No extensions of maximum time will be granted.
- Minimum time: 2 years from the initial academic year of enrolment
- Maximum time: 3 years from the initial academic year of enrolment
- Because the course is structured as a full-time course, students must be cognisant of the possibility of clashes in timetables in different years, and plan sufficiently well so that they do not exceed the maximum time for course completion or they fail to meet "unsatisfactory progress" requirements, as set out above.

Students must meet pre-requisite requirements as specified for enrolment in specific units of study:

- Where a unit of study is a pre-requisite, this pre-requisite unit must be passed prior to enrolment in any other units for which it is a pre-requisite.
- Part-time students are completing their degree over a longer period of time and it is possible, and in fact likely, that there will be curriculum changes while they are undertaking their degree. Part-time students have the responsibility of monitoring changes in curriculum which may affect their progression and for discussing these with the Course Co-ordinator.

Admission Requirements

In order to qualify for admission to the degree, applicants shall hold:

i) A bachelor degree in a related area from an Australian or overseas tertiary institution and such relevant work experience as satisfies the Head of School, OR
ii) Some other form of relevant qualification as satisfies the Head of School.

Course Outline

The course outline for the Graduate Diploma of Applied Science (Health Information Management) is presented in Table 10.4.

Master of Applied Science (Health Information Management) by Research

The School of Health Information Management has a firm commitment to the development of knowledge and skills appropriate to the needs of health information managers. The postgraduate programs offered by the School are therefore designed to give graduates an opportunity to pursue advanced study in areas of professional interest including information systems, organisational management and evaluation methodology.

The Master of Applied Science (Health Information Management) is largely by research thesis with minimal supplementary course work. This program gives graduates an opportunity to further develop their skills by undertaking research in a specialised area of study.

Admission Requirements

In order to qualify for admission to the degree, applicants shall hold:

i) A bachelor degree in Medical Record Administration/Health Information Management from an Australian tertiary institution, OR
ii) An Associate Diploma in Medical Record Administration plus an approved bachelor degree, AND
iii) Such qualifications as are deemed to be equivalent to (1) or (2).

Course Outline

The course outline for the Master of Applied Science (Health Information Management) is presented in Table 10.5.
**Unit Descriptions**

**HIMT5039 (09521) Advanced Clinical Data Management**  
**Semester 2 - 6 credit points**  
This unit introduces the students to aspects of quality assurance in data collection, new information technologies, to implementing database design, and to non-randomised clinical research. It also contains regulatory and legal issues in clinical research: GCRP, FDA requirements, NHMRC Guidelines for human research and AHEC guidelines are discussed. In the section on medico-legal issues topics like privacy and confidentiality and the release of patient data are discussed.

**HIMT5021 (09503) Casemix Funding and Financial Management**  
**Semester 2 - 6 credit points**  
This unit is concerned with one of the main applications of casemix data, paying hospitals on the basis of their output. The various models used for casemix based payment systems in Victoria, Queensland and South Australia are explored. The unit explains the methods used to cost the activities of hospitals and set the prices of the AN-DRGs. Differences in the population and casemix based funding approaches are examined with special reference to experiences with integrating the two in NSW and Queensland. In addition, the potential role of casemix in a provider-purchaser split funding model is also considered. A casemix management game is used to provide insight into the potential impact of casemix based funding at the hospital level. The unit also examines the issues surrounding the use of casemix based budgeting within hospitals.

**HIMT5044 (09438) Casemix Measurement Systems**  
**Semester 2 - 2 credit points**  
This unit is designed to cover a variety of casemix classification systems for acute and non-acute inpatients and ambulatory patients.

The major emphasis will be on Diagnosis Related Groups (DRGs) with specific reference to the Australian National Diagnosis Related Groups (AN-DRGs). Casemix applications and current casemix initiatives will also be explored.

**HIMT5025 (09507) Clinical Data Management and Clinical Trials**  
**Semester 2 - 6 credit points**  
This unit will discuss in detail the processes involved in conducting clinical research and the role of the data manager in these processes. Areas covered include the stages in the development of a clinical trial, various design issues including randomization and stratification, organisation and planning of trial research, forms design, data collection issues, methods of ensuring data quality including monitoring and auditing, ethical and regulatory issues, and reporting of results.

**HIMT5026 (09508) Database Systems**  
**Semester 2 - 6 credit points**  
This unit covers the study of relational database design, using SQL, dBase ACCESS and the Clinical Report System (CRS). This includes data structures, logic database design, the relational model and the functions of a database management system. It also introduces the student to Systems Analysis and Design, which includes the system life cycle, data flow diagrams, data dictionaries, cost/benefit analysis, scheduling (PERT and CPM) techniques, system testing and conversion, and data security.

**HIMT5045 (09439) Epidemiology**  
**Semester 2 - 2 credit points**  
This unit introduces the student to epidemiology through the study of historical aspects and design strategies in epidemiological research. This introduction also includes measures of disease frequency and association, types of epidemiological studies - descriptive, case-control, cohort studies - and quantitative measures for epidemiological research. This unit also includes data management for clinical trials including stages in the development of a clinical trial, organisational structure of a collaborative trial, protocol design and interpretation, methods of data collection and forms design, quality control and maintaining the integrity of the trial, and presentation in data management.

**HIMT5033 (09515) Financial Management in Health Care Facilities**  
**Semester 1 - 2 credit points**  
In this unit students are introduced to the financial management of hospitals and health care institutions. Topics covered include the accounting function embracing basic accounting procedures, financial and budgetary control methods, the budgetary process, types of budgets and auditing. In addition, the unit covers hospital accounting systems and methods of funding, performance and productivity, hospital cost analysis and control and clinical costing systems.

**HIMT5023 (09505) Fundamentals of Medicine and Medical Terminology**  
**Semester 1 - 6 credit points**  
This unit is designed to provide the student with the knowledge necessary to understand the information contained in health records, to function within a medical environment through an understanding of the fundamentals of medicine, and to effectively use disease classification systems. Within each body system, the student will study anatomy and physiology, disease processes and their treatment, and medical terminology disease titles, symptomatic terms, surgical terms and investigations. The unit also includes diagnostic tests, diagnostic procedures, radiology, nuclear medicine, radiation therapy and an introduction to pharmacology, pathology and cancer research.
HIMT5013 (09446)  Fundamentals of Medicine and Medical Terminology I
Semester 1 - 4 credit points
This unit is designed to provide the student with the knowledge necessary to understand the information contained in the health record, to function within a medical environment through an understanding of the fundamentals of medicine, and to effectively use disease classification systems. Within each body system, the student will study anatomy and physiology, disease processes and their treatment, and medical terminology (disease titles, symptomatic terms, surgical terms and investigations).

HIMT5014 (09447)  Fundamentals of Medicine and Medical Terminology II
Semester 2 - 4 credit points
This unit continues the study of anatomy and physiology, disease processes and interventions, and medical terminology, organised around body systems. Specialist areas such as psychiatry and medical imaging will also be addressed.

HIMT5020 (09502)  Generating and Using Casemix Information
Semester 1 - 6 credit points
This unit is designed to give students practical experience in the production and analysis of casemix information. The unit functions as a companion to the unit Introduction to Casemix by giving students practical illustrations of the casemix concepts as they are introduced. The major emphasis will be on the AN-DRG system because suitable software is currently limited to that system. Software for other casemix systems will be introduced into the course as it becomes available.

HIMT5018 (09470)  Health Care Evaluation
Semester 2 - 2 credit points
In this unit students are introduced to the concepts of quality health care. Approaches to the evaluation of health care at a national level are discussed along with the assessment of health care at an organisational and individual level. Topics covered include evidenced based health care, health outcomes, variations research, consumer satisfaction, and clinical indicators. Approaches to improve quality of care such as practice guidelines are discussed. Program evaluation principles will be addressed. Techniques and methodologies for assessing care, along with elements of an effective evaluation program and sources of information for use in evaluation are discussed.

HIMT5040 (09522)  Health Care Evaluation
Semester 2 - 6 credit points
In this unit students are introduced to the concepts of quality health care. Approaches to evaluation of quality of care at a national level are discussed along with the assessment of health care quality at an organisational and individual level. Topics covered include evidence based health care, health outcomes, variations research, consumer satisfaction, and clinical indicators. Approaches to improve quality of care such as best practice guidelines are discussed. Program evaluation principles will be addressed. It also deals with Total Quality management. Techniques and methodologies for assessing quality of care along with elements of an effective evaluation program and sources of information for use in evaluation are discussed.

HIMT5035 (09517)  Health Care Systems
Semester 1 - 2 credit points
In this unit students are given an overview of the Australian Health Care System. Topics covered include: Commonwealth and state responsibilities for health, health care expenditure, health insurance, health care facilities and the health workforce. Trends in the provision of health care services are discussed along with an introduction to approaches to measuring the effectiveness of the health care system.

HIMT5028 (09510)  Health Informatics
Semester 1 - 2 credit points
This unit is designed to examine hospital information systems in the wider context of computers in information management and in clinical management. This unit covers new developments in computer and communication technology and their application in health care systems.

HIMT5032 (09514)  Human Resource Management
Semester 1 - 2 credit points
This unit is designed to introduce the student to the human resource management functions relevant to the work of the Health Information Manager. Areas covered include recruitment and selection, staff appraisal, training and development and human resource planning. The implications of equal employment and affirmative action legislation to human resource management are also covered.

The industrial relations framework in Australia with particular emphasis on the current workplace focus and conflict resolution are covered and students are also taught to prepare their own curriculum vitae.

HIMT5022 (09504)  Implementing Casemix Systems
Semester 2 - 6 credit points
The purpose of this unit is to give students the skills to implement casemix based systems and apply casemix concepts to common management problems. The practical problems of implementing casemix are addressed. These include: incorporating casemix information into the existing management information system; integrating casemix approaches with the existing utilisation review and quality assurance programs; educating staff about casemix issues; using casemix data to plan healthcare services; and analysing the current organisational structure to identify barriers to the use of casemix data to better manage the facility. The unit builds on the skills developed during the unit Generating and Using Casemix Information by using the same practical information based approaches.

HIMT5034 (09516)  Information Systems Management I
Semester 1 - 3 credit points
This unit introduces the student to the concepts of health information systems management by means of an integrated study of the nature of information, health record management, including patient identification, filing and retrieval systems, record control, forms design, record structures and computerised health record systems such as HOSPAS and MPAS.
HIMT5036 (09518) Information Systems
Management II
Semester 2 - 2 credit points
In this unit students extend their study of health information systems to health records used outside hospitals - both in ambulatory and other institutional care settings. Records used in community health, primary care, general practice, domiciliary care, nursing homes and mental health care are among the systems examined. Students also complete modules dealing with data forms and screen design; the collection and computation of health care statistics; concepts and practices used in quality assessment and control in medical record and health information systems. Tutorials concentrate on professional issues through discussion of current literature in the field of health information management.

BEHS5103 (10571) Intermediate Statistics
Semester 1-6 credit points
Pre-requisite Research Methods I and II or equivalent
In this unit, students will extend and consolidate the research methods and statistical skills acquired in Research Methods I and II. Students will gain experience in data screening techniques, analysis of variance, multiple regression and non-parametric statistics. Students will learn how to use SPSS to conduct these statistical tests.

HIMT5029 (09511) International Disease Classification Systems A
Semester 1-2 credit points
This unit is designed to enable the student to classify diseases using ICD-10-AM and procedures using MBS-Extended. It includes the historical development of clinical classification systems and students will be able to make practical comparisons between ICD-9-CM and ICD-10-AM.

HIMT5030 (09512) International Disease Classification Systems B
Semester 2 - 2 credit points
This unit builds on unit studied in HIMT5021 (09511) and also gives students the opportunity to code from medical records in hospitals and to become familiar with computer-assisted coding and indexing systems.

HIMT5019 (09501) Introduction to Casemix
Semester 1-6 credit points
The purpose of this unit is to introduce the concepts which underpin the design and use of casemix systems. The major emphasis is on the Australian National Diagnosis Related Groups (AN-DRGs) used in acute hospitals. However, the issues surrounding the use of casemix systems for non-acute inpatients and ambulatory patients are also analysed. The unit includes an introduction to the concepts of several applications of casemix information, but the details related to paying for care based on casemix are explored in the unit Casemix Funding and Financial Management. The current casemix initiatives of the Commonwealth, States and at the hospital level are explored along with likely future developments.

HIMT5005 (09425) Introduction to Data Processing and Microcomputers
Semester 1-2 credit points
This unit introduces the student to microcomputers and mainframe computers and also deals with the history of computer technology, introduction to computer hardware and concepts, use of microcomputers and applications software. Areas studied include MS-DOS, WINDOWS, a spreadsheet package, and a database package.

HIMT5027 (09509) Introduction to Epidemiology
Semester 1-6 credit points
This unit introduces the student to epidemiology. The unit includes measures of disease frequency and association, study design (descriptive and analytic) and sources of measurement error. There is a focus on issues of specific relevance to randomised clinical trials, for example intention to treat analysis, and test specificity and sensitivity. Students are introduced to the critical appraisal of epidemiological studies.

HIMT5041 (09523) Introduction to Management Principles
Semester 2 - 2 credit points
This unit is designed to introduce post graduate students to the concept of management and the application of management knowledge to the practice of health information management. Topics focus on both traditional and contemporary management theories and the management functions of planning, organising, leading and controlling. Other areas include total quality management, motivation, organisational communication and the change process. The unit content of Introduction to Management also supports the professional experience component of the course.

HIMT5012 (09445) Introduction to Programming and Database Design
Semester 2 - 4 credit points
This unit introduces students to the third generation programming language PASCAL, Nassi-shneiderman diagrams as program design aids, to data types, data structures, functions and procedures. In the second half of the semester they learn to use the database language SQL and to design a new database in CRS (Clinical Report System).

HIMT5031 (09513) Law and Health
Semester 2 - 3 credit points
In this unit students study legal principles relating to health care. Topics covered include the origin and development of the structure of the court system, legal personnel and litigation, subpoena of witnesses and records, the law of torts, rules of evidence, criminal law, law of contract and the Coroner's Court. The unit also addresses institutional legal responsibilities and covers Commonwealth and NSW legislation relating to health care systems; and policies incorporated within the NSW Department of Health Patient Matters Manual.
HIMT5037 (09519) Management
Semester 1 - 6 credit points
This unit introduces the students to the concepts of management and the application of management knowledge to the practice of clinical research. Topics focus on both traditional and contemporary management theories, project management, time management, information control systems, and budgeting and costing.

HIMT5015 (09448) Professional Experience
Inter-semester - 2 credit points
Post-semester 2 - 2 credit points
This unit is designed to extend the student's knowledge of health information management, to give them an opportunity to apply the theoretical knowledge they have gained and to develop competency and proficiency in the workplace. It also provides students with the opportunity to undertake a project which will develop their problem-solving skills while exploring special areas of interest in health information management.

BEHS5133 (105A4) Research Methods I: Design
Semester 1 - 2 credit points
This unit introduces students to the research process and focuses on developing informed consumers of research. The unit begins with brief consideration of the philosophy of science, then covers research ethics, qualitative and quantitative research, the development of research questions and the specification of hypotheses and variables, conceptualisation and operationalisation, sampling issues, validity and reliability. A broad range of research methods will be introduced, including experimental research, single case designs, surveys, interview and observational studies, secondary data analysis and content analysis. Data quantification techniques will be discussed and students will be introduced to research applications in health sciences including needs assessment, evaluation research, action research and epidemiology.

HIMT6007 (09467) Research Proposal
Semester 1 - 3 units
Semester 2 - 3 units
The aim of this unit is to allow the students to develop a formal research proposal for their intended research thesis. This will include the development of the research question, literature review, research design and proposed statistical analysis. Successful completion of this unit will be required before enrolment in the unit 09418 Research Thesis.

HIMT9001 (09900) Special Program-Health Information Management
The Special Programs are devised to meet individual needs. They are not units in the normal sense and do not necessarily involve a common syllabus and should not be compared between individual cases.

HIMT5038 (09520) Statistics for Clinical Research
Semester 1 - 6 credit points
This unit aims to introduce students to basic statistical principles relevant to the manipulation and analysis of clinical data. Students will be exposed to concepts of sampling, distributions of scores, summaries of data, and treatment of categorical and quantitative data. This last topic will include chi square analysis, calculation of confidence intervals, tests for differences in the locations of samples (including t-tests and tests for non-normally distributed data), correlation and regression, sample size estimation and an introduction to survival analysis. It is expected that at the conclusion of the unit students will be able to: appraise published statistical analyses; perform simple statistical tests with the assistance of a computer package; and present statistical data.

Professional Experience
In the Graduate Diploma of Applied Science (Health Information Management), professional experience provides students with a variety of learning experiences which relate both to the theoretical content of the classroom and to their future professional career goals. A range of field-based activities are organised in selected learning sites which include hospitals, community care centres, research units and the Department of Health (N.S.W.).

1998 Clinical Practice Dates
Graduate Diploma of Applied Science
June 29 - July 10 (2 weeks)
December 7 - December 18 (2 weeks)

Uniforms
Uniforms and identification badges must be worn by all students during practical placements.
11 School of Medical Radiation Technology

The School of Medical Radiation Technology was established at the Cumberland College of Health Sciences in 1988 when it offered a Diploma of Applied Science (Medical Radiation Technology). The Bachelor of Applied Science (Medical Radiation Technology) course commenced in 1992. There are three professional streams in the undergraduate course; Diagnostic Radiography, Radiation Therapy and Nuclear Medicine Technology. A Graduate Diploma of Applied Science (Medical Ultrasonography) commenced in 1991.

A diagnostic radiographer is responsible for the production of diagnostic images on a patient who has been referred for a specific series of investigations. Most of the investigations performed will use radiation beams (X-ray) to create the image. The investigations vary markedly in their complexity, extending from simple skeletal radiographs to sophisticated high technology investigations which use both radiation beams and computers to create sectional images or a map of other parts of the body. A rapidly emerging high technology investigation, Magnetic Resonance Imaging, uses high intensity magnetic fields, radio-frequency waves and computers to create images of any region of the patient's body.

A nuclear medicine technologist uses radioactive substances and sophisticated instrumentation such as gamma cameras and computers to gain diagnostic information about disease. Nuclear medicine procedures provide physiological as well as structural information about the human body. The technologist is responsible for preparing radiopharmaceuticals, working directly with patients, analysing computer data, and producing images and results for medical diagnosis.

A radiation therapist is responsible for the accurate and precise planning, calculation and delivery of radiation to cure or relieve the symptoms of malignant disease. A radiation therapist is involved in the localisation of the treatment area using CT scans and treatment simulators, the design and calculation of the treatment technique using sophisticated computerised planning systems, and the daily treatment of patients. Accurate positioning of the patient and the treatment machine is essential because of the high doses of radiation that are delivered to the diseased area. The profession combines close patient contact with the use of high technology equipment.

A medical sonographer is responsible for the production of diagnostic images and for obtaining other diagnostic information using ultrasound. Investigations are performed on most soft tissue regions of the body.

Note

1. The order of clinical practice units may vary, according to the individual student's requirements. The units shown here are for Faculty planning purposes only. A condition of the course is that each student is engaged in ultrasound investigation for at least 18 hours per week throughout the whole course.

**Notes**

¹ Research Elective: students select an appropriate unit (subject to sufficient student numbers) in consultation with their supervisors. For a list of suggested Research Electives see Appendix 1.

Graduate Diploma of Applied Science

(Medical Ultrasonography)

This course provides for the development of knowledge and skills relevant to the professional practice of medical ultrasonography. The course covers physical principles and instrumentation, professional issues encountered in the field of ultrasonography and a wide variety of the applications of general ultrasonography. The duration of the course is two years part-time.

**Admission Requirements**

In order to qualify for admission to this course, applicants should have:

i) A diploma or degree in medical radiation technology, OR

ii) A degree or diploma in a relevant area (eg. nursing). Such applicants may be advised to make up any deficiencies in identified areas of assumed knowledge (eg. physics, medical imaging modalities), OR

iii) An approved professional diploma, associate diploma or certificate in nuclear medicine technology, ultrasound or radiography plus completion of a designated qualifying program, OR

iv) Some other form of qualification and experience which is considered by the Head of School to be of sufficient merit to warrant their admission to the graduate diploma course. Such applicants may be required to complete a designated qualifying program prior to admission. AND

At least one year of relevant work experience, (in the field of their undergraduate studies); AND

Be working in the field of medical ultrasonography for the duration of the course.

**Course Outline**

The course outline for the Graduate Diploma of Applied Science (Medical Ultrasonography) is presented in Table 11.1.
Master of Applied Science
(Medical Radiation Technology) by Research

The Masters of Applied Science (Medical Radiation Technology) course is a research degree. The course is designed to provide an opportunity for research and scholarship in Medical Radiation Technology and aims to prepare individuals to pursue their career objectives as specialist practitioners, administrators, academics, or researchers.

Admission Requirements
Applicants may enter the research master's program with any of the following requirements:

i) A bachelor's degree in an appropriate discipline from an Australian tertiary institution
   OR
ii) A bachelor's degree in an appropriate discipline from an overseas institution equivalent to an Australian bachelor's degree.
   OR
iii) A Diploma of Applied Science and a Graduate Diploma of Ultrasound.

A student entering through either (i), (ii) or (iii) must also additionally be able to demonstrate a capacity to pursue graduate studies and would normally have completed a minimum of twelve months professionally relevant post graduate experience. Applicants in the above categories, particularly for students entering through sections (iii), may be required to complete a qualifying course program.

Time Limits
The standard course comprises a research electives and a research thesis. The minimum length of course for most students is two years full-time or three years part-time. Students who enter the course with adequate research preparation may be exempt from completing the Research elective. Usually these students would have completed an approved bachelor degree program at honours level. The minimum length of the course for such students is one year full-time or two years part-time.

Course Outline
The course outline for the Master of Applied Science (Medical Radiation Technology) by Research is presented in Table 11.2.

Unit Descriptions

BIOS5047 (11454) Biological Science
Semester 1-4 credit points
This unit examines the general principles and mechanisms of the pathology of diseases which may be encountered in the practice of general ultrasonography. It also covers basic embryological development.

MRTY5001 (18404) Clinical Practice I
Semester 1 or 2 - 6 credit points
This unit covers the application of ultrasonography in the clinical environment, in order for the student to develop skills as taught in Ultrasonography I. The order of Clinical Practice units may vary according to the individual student’s requirements.

MRTY5003 (18407) Clinical Practice II
Semester 1 - 6 credit points
This unit covers the application of ultrasonography in the clinical environment, in order for the student to develop skills as taught in Ultrasonography II. The order of Clinical Practice units may vary according to the individual student’s requirements.

MRTY5007 (18411) Clinical Practice II
Semester 2 - 6 credit points
This unit covers the application of ultrasonography in the clinical environment, in order for the student to develop skills as taught in Ultrasonography IE.

Elective Research Units
Total - 6 credit points
For elective unit descriptions see Appendix 1.

MRTY5021 (18401) Physics and Instrumentation I
Semester 1-4 credit points
This unit presents the basic physical principles and instrumentation of diagnostic ultrasound. It includes methods of image production, interpretation, recording techniques, the principles of grey scale echography and adjustment procedures for relevant operation controls. The unit also covers the recognition of artefacts within an image and the ability to separate these artefacts from anatomy or disease.

MRTY5019 (18514) Physics and Instrumentation II
Semester 1 - 4 credit points
This unit builds on the physical principles and instrumentation of diagnostic ultrasound presented in Physics and Instrumentation I. It covers areas such as Doppler, colour flow imaging quality assurance programs for instrumentation, the interaction of ultrasound and biological tissue and the possible biological effects which may occur, the principles of image formation and processing as applied in ultrasound instrumentation.

MRTY5006 (18410) Professional Issues
Semester 2 - 4 credit points
This unit introduces students to medico-legal and patient relationship issues which may be encountered in the field of ultrasonography. It also introduces students to the ethical principles in order to develop an understanding of professionally accepted behaviours and standards appropriate to the practice of medical ultrasonography within the broad context of the delivery of health care.

School of Medical Radiation Technology
The successful submission of a research thesis is the ultimate objective of the course. Students are given the opportunity to investigate in depth, an area of specialised interest in medical radiation technology of a closely related area. This process will necessitate a collaborative endeavour between the student and the supervisor(s).

MRTY5022 (18402) Ultrasonography I
*Semester 2-4 credit points*
This unit examines in detail ultrasonography of soft tissues in the upper abdomen.

MRTY5023 (18403) Ultrasonography II
*Semester 2-4 credit points*
This unit examines in detail ultrasonography of soft tissues in the male and female pelvis and in obstetrics.

MRTY5002 (18406) Ultrasonography III
*Semester 1-4 credit points*
This unit examines in detail ultrasonography applied to superficial organs and structures.

MRTY5005 (18409) Ultrasonography IV
*Semester 2-4 credit points*
This unit examines selected topics in general ultrasonography not previously studied. Areas include intracavity, interoperative and basic vascular applications.
The School of Occupational Therapy was a foundation school of Cumberland College of Health Sciences when it was established as the N.S.W. College of Paramedical Studies in 1973. Prior to that year the education of occupational therapists was the responsibility of the professional association. The first training program was commenced in 1941 under the auspices of the N.S.W. Branch of the Australian Physiotherapy Association. In 1947, the newly formed Australian Association of Occupational Therapists assumed responsibility for the education of occupational therapists in New South Wales and through the New South Wales Association of Occupational Therapists retained that responsibility until 1973.

One of the first undertakings of the School of Occupational Therapy was to raise the level of the occupational therapy course from diploma to degree in line with other occupational therapy courses in Australia. The Bachelor of Applied Science (Occupational Therapy) was introduced in 1976 with an Honours option becoming available from 1991. In 1985, the School introduced the Associate Diploma in Diversional Therapy, the first formal education program for diversional therapists in Australia. In 1995, a three year Bachelor of Applied Science (Diversional Therapy) was introduced. The program is now known as Bachelor of Applied Science (Leisure and Health) in 1997. The School has developed an articulated program of post graduate study. This includes PhD level studies, two Master's degree courses, one by research, the other by coursework and a Graduate Certificate which focuses on specialty areas of practice in Occupational Therapy.

Further information about the School's programs may be obtained from the School on 9 351 9386.

Graduate Certificate of Applied Science (Occupational Therapy)

The Graduate Certificate of Applied Science (Occupational Therapy) is a fee paying course which is designed to provide specific professional development for occupational therapists who wish to extend the knowledge, skills and attitude required by their professional roles of Practitioner and Learner/Teacher. It contains several clinical specialty track options as well as a no-specialty option. Work completed in any graduate certificate track may be credited against the requirements of the master’s by coursework offered by the School. The School will decide which tracks are available in any one year.

Admission Requirements

To qualify for admission to this Graduate Certificate course conducted by the School of Occupational Therapy, applicants shall:

(a) Possess an award of Bachelor of Applied Science (Occupational Therapy) from the University of Sydney; OR
(b) Possess such qualifications as are deemed equivalent to (a) and/or (b); OR
(c) Possess an award of Diploma of Occupational Therapy from a recognised educational body and other evidence of general and/or professional qualifications as will satisfy the Graduate Studies Committee of the Faculty of Health Sciences that the applicant possesses the educational preparation and capacity to pursue postgraduate studies; and
(d) Have the equivalent of a minimum of six months recent, full-time experience in occupational therapy management of clients. For admission to a specialty track, this recent experience must be in an area which is consistent with the specialist track.
Table 11.3 Graduate Certificate of Applied Science (Occupational Therapy)

**Course Code** Mode of Offer
1525 Part-time - 1 year
Credit Points 24

**Specialty Track : No Specialty**

The graduate certificate course will enhance the student's knowledge, skills and attitudes in planning, implementing and evaluating contemporary occupational therapy service provision to clients of any age whose occupational role and task performance has been compromised. The content of the Graduate Certificate of Applied Science (Occupational Therapy), no specialty, consists of those units of study from the specialty tracks which are available at the time of enrolment and selected by the student.

Notes
1 One elective only required to satisfy the requirements of the course. This elective can be taken in either Semester 1 or Semester 2. Electives include:
- OCCP5025 (15451) Occupational Therapy Clinical Specialty
- OCCP5048 (15485) Occupational Performance and People with High Support Needs
- OCCP5046 (15478) Prescription, Evaluation and Modification of Seating for Occupational Performance
- OCCP5042 (15474) Systematic Instruction: Physical Guidance
- OCCP5043 (15475) Upper Limb Orthotic Systems
OCCP5040 (15472) Occupational Therapy Assessment
Semester 2 - 6 credit points
This unit of study examines formal occupational therapy assessments that have been developed for use with people with a developmental disability and also assessment tools which have been developed for use with children whose occupational performance has been compromised. These assessments include both norm-referenced tests and criterion referenced tests in current use as well as those being developed. Students will choose one mode of assessment and study its theoretical base, assumptions, development, strengths, limitations and suitability for use in assessing the occupational performance and component performance of people who have a developmental disability and also children whose development of occupational roles has been compromised. Students will develop skill in test mechanics and interpretation of results of the chosen assessment mode through practice during tutorial sessions as well as making a critical evaluation of the use of the tool in their clinical practice. Learning experiences include seminars, tutorials, and videotaped analysis of students assessing people with the selected assessment tool.

OCCP5041 (15473) Systematic Instruction
Semester 2 - 6 credit points
This unit of study will extend systematic instruction techniques covered in the occupational therapy undergraduate course. Students will examine the use of systematic instruction to promote performance in self-maintenance, productivity, school, play and leisure areas. Students will examine the use of instructional techniques and learn to apply various strategies such as using cues and prompt systems; deciding how to choose reinforcement to promote the learning of occupational tasks; training for complex tasks; discrimination in real-world environments; and managing contingencies to reduce artificial reinforcement in favour of naturally occurring reinforcement. Students will identify procedures for promoting maintenance and generalisation. Students will have the opportunity to develop instructional strategies to support people for whom they are currently providing occupational therapy services. Learning experiences include seminars, problem solving around specific case studies and videotaped analysis of the student's skill in applying instructional strategies within their workplace.

OCCP5047 (15484) Occupational Performance and the Inclusive Community
Semester 1 - 6 credit points
In this unit of study students have the opportunity to examine and critically analyse a range of models and philosophies of service provision in the areas of developmental disability and paediatrics from the point of view of their impact on occupational performance. This will include the examination of concepts such as social role valorisation, integration, inclusion, the least restrictive alternative, client-centred and family-centred approaches to intervention, categorical and non-categorical models of service provision, supported and sheltered employment, transdisciplinary and multidisciplinary models of service delivery, legislative and standards based models of service reform and implementation. Learning experiences include seminars, case study presentations and problem solving tutorials.
**OCCP5042 (15474) Systematic Instruction Physical Guidance**  
*Semester 1 or 2 - 6 credit points*

This unit of study examines the use of various physical guidance models to improve performance of occupational tasks by people with a developmental disability. Each model will be examined relative to its theoretical base, assumptions and application to the management of developmental disability. Students will select one specific model and develop skill in using the model to enable people to initiate steps in performing occupational tasks, improve the quality of performance of occupational tasks, improve the timing of performance of occupational tasks and to appropriately terminate task performance. Learning experiences include seminars, problem solving around case studies and videotape analysis of student's skill in physically guiding performance of occupational tasks.

**OCCP5043 (15475) Upper Limb Orthotic Systems**  
*Semester 1 - 6 credit points*

This unit of study explores the use of upper limb orthotic systems to improve the performance of occupational tasks by people whose occupational performance has been compromised during the developmental period. Students will examine the biomechanics of the upper limb and the pathomechanics that occur as a result of developmental disability. Principles of orthotic design and fabrication will be examined relative to upper limb problems found in people with a developmental disability. Students will learn to design, fabricate and evaluate orthotic systems which promote the occupational performance of people for whom they are currently providing occupational therapy services. Learning experiences include seminars, problem solving around case studies, videotape analysis of occupational performance problems and analysis of orthotic systems designed by students.

**Specialty Track  Environmental Modification and Technology**

This specialty track within the graduate certificate course will enhance the student's knowledge, skills and attitudes in planning, implementing and evaluating contemporary occupational therapy service provision to clients of any age whose occupational role and task performance has been compromised by the physical environment they operate within.

24

**Notes**

¹ One elective only required to satisfy the requirements of the course. This elective can be taken in either Semester 1 or Semester 2. Electives include:

- OCCP5025 (15451) Occupational Therapy Clinical Specialty
- OCCP5052 (15489) Environmental Theory
- OCCP5046 (15478) Prescription, Evaluation and Equipment Modification for Occupational Performance
- OCCP5055 (15492) Occupational Therapy Drafting Using CAD Packages
- OCCP5056 (15493) Establishing and Contributing to Community Access Policies

**OCCP5051 (15488) Environmental Measurement**  
*Semester 2 - 6 credit points*

This unit of study examines formal and informal tools that have been developed to evaluate the impact of the built environment for persons with disabilities. These tools include checklists and post occupancy evaluation protocols. In addition students will develop skill in correct use and practice with retractable measures, builders levels, stud finders, lightmeters and load measures. This will be achieved through practice utilising tools during tutorial sessions as well as practice utilising tools to evaluate buildings within their community. Students will examine the theoretical base, underlying assumptions, strengths, limitations and suitability for use in assessing the built environment. Learning experiences include tutorials, seminars, and videotaped analysis of students using tools.

**OCCP5052 (15489) Environmental Theory**  
*Semester 1 or 2 - 6 credit points*

This unit of study will examine pertinent theories of person environmental interaction. These theories relate to design, psychology, sociology, anthropology and occupational therapy. Some theories to be examined will be environmental press, personal space, design prototype theory and human factors research. Students will select a specific theory and then relate it to occupational therapy practice and environmental modification options. Learning experiences include tutorials and seminars. Students are required to select one theory and show how it can be applied to name and frame environmental data, and thus the identification and resolution of barriers in the built environment for persons with special needs.
OCCP5053 (15490) Foundations for modifications in public and private buildings
Semester 2 - 6 credit points
This unit of study examines the expertise that can be acquired via application and interpretation of regulatory standards. Material to be covered will include general principles for design of buildings to enhance access and mobility. Design standards will be examined in relation to their history, assumptions, applicability and researchbase. Material from America and England will be compared to the Australians Standards 1428 parts 1, 2, 3 and 4. Students will critically evaluate the appropriate application of standards in eliminating access barriers. Learning experiences include seminars, and will include problem solving around client cases.

OCCP5054 (15491) Communication with clients, builders, architects and tradesmen
Semester 1 - 6 credit points
This unit of study explores uniform building terminology and how to decode and package information to facilitate the understanding of the various stakeholders involved. Various models of communication will be explored with emphasis on how to work with others and how to put together building specifications in terms of timing and level of detail. Students will learn what is necessary in terms of informed consent, product liability and legal report writing. Students will explore types of documentation and then audit environmental modification reports within their workplace in terms of best practice. Learning experiences include seminars, problem solving around client cases, videotape analysis of communication sessions and audits of environmental modification reports.

Elective Unit Description

OCCP5025 (15451) Occupational Therapy Clinical Specialty
Semester 1 or 2-6 credit points
This unit of study is designed to provide the student with the knowledge and skills necessary to upgrade or expand their clinical expertise in an identified area of practice. The unit of study permits students to undertake approved courses of study off campus to meet (in part) the requirements of this Graduate Certificate of Applied Science. Enrolment in this unit of study will be contingent on the student being accepted for the course of study and meeting all costs, providing documentation on the course of study prior to enrolment so that the School can determine whether or not to approve such an enrolment and on the students documented completion of the course. This unit of study is coordinated by the graduate adviser who will consider enrolment in this unit of study on a case-by-case basis.

OCCP5052 (15489) Environmental Theory
Semester 1-6 credit points
This unit of study will examine pertinent theories of person environmental interaction. These theories relate to design, psychology, sociology, anthropology and occupational therapy. Some theories to be examined will be environmental press, personal space, design prototype theory and human factors research. Students will select a specific theory and then relate it to occupational therapy practice and environmental modification options. Learning experiences include tutorials and seminars. Students are required to select one theory and show how it can be applied to name and frame environmental data, and thus the identification and resolution of barriers in the built environment for persons with special needs.

OCCP5046 (15478) Prescription, Evaluation and Equipment Modification for Occupational Performance
Semester 1 or 2-6 credit points
This unit of study examines the range of large equipment available to temporarily modify the built environment. Examples include portable ramps, hoists, furniture surrounds, and bathing aids. Students will extend their skill and knowledge in the prescription, evaluation and modification of equipment that promotes performance of occupational tasks in a home environment. Students will integrate principles of optimisation, biomechanics, ergonomics, and design with principles of occupational performance to determine appropriate options for clients where structural modification is not desirable. Learning experiences will include seminars, case presentations and videotaped assessments of client equipment evaluation.

OCCP5055 (15492) Occupational Therapy drafting using CAD packages
Semester 1 or 2-6 credit points
This unit of study focuses on occupational therapy skills in representing changes to the built environment using drawing techniques. Students will examine various computer aided drafting (CAD) packages which can be used to simplify and facilitate representation of problems and potential solutions in building design. Students will learn how to critically select and operate CAD software to produce appropriate plan drawings and front and side elevations. Learning experiences include tutorials, case presentations and problem solving tutorials using CAD software.

OCCP5056 (15493) Establishing and Contributing to Community Access Policies
Semester 1 or 2-6 credit points
This unit of study explores strategies which can be used by occupational therapists to establish and contribute to community policies on environmental access. Students will examine the role, history, function and impact of local council access committees on environmental access policy. Students will also examine the disability discrimination act and determine how it is being used to promote access and determine its relevance to the needs and rights of disabled persons at the local community level. Learning experiences include seminars, case presentations, and problem solving exercises.
**SpeciSty Track  
Mental Health**

This specialty track within the graduate certificate course will enhance the student's knowledge, skills and attitudes in planning, implementing and evaluating contemporary occupational therapy service provision to clients of any age whose occupational role and task performance has been compromised by threatened or impaired mental health.

¹ One elective only required to satisfy the requirements of the course. This elective can be taken in either Semester 1 or Semester 2. Electives include:

- OCCP5038 (15470) Advanced Counselling for Occupational Therapy
- OCCP5039 (15471) Creative Communication in Groups

### Elective Units

- **OCCP5038 (15470)**  
  **Advanced Counselling for Occupational Therapy Practice**  
  **Semester 1 or 2: 6 credit points**

  This unit of study will employ an experiential approach to introduce students to various models of counselling and to enhance skills in counselling of clients with special needs or in special clinical settings which are applicable to the current occupational therapy practice. The content of this unit of study will cover counselling in areas which include marriage, family, drug and alcohol abuse, crisis, and grief and bereavement. Student will also learn to assess client's needs in the helping process and select appropriate counselling model to address those needs.

- **OCCP5039 (15471)**  
  **Creative Communication in Groups**  
  **Semester 1 or 2: 6 credit points**

  This unit aims to provide the opportunity for occupational therapists who are working with consumer groups or have access to consumer groups to advance their knowledge and leadership skills of applying creative communication in groups using expressive activities such as drama, art, dance, creative writing and clay work. The focus of this unit will be on skills development and participants will be expected to use examples from their practice.
Specialty Track Neurology

This specialty track within the graduate certificate course will enhance the student's knowledge, skills and attitudes in planning, implementing and evaluating contemporary occupational therapy service provision to clients of any age whose occupational role and task performance has been compromised by the physical and cognitive manifestations of impaired brain function.

---

**OCCP5040 (15472) Occupational Therapy Assessment**

*Semester 2 - 6 credit points*

This unit of study examines formal occupational therapy assessments that have been developed for use with persons with impaired brain function. These assessments include both norm referenced tests and criterion referenced tests in current use as well as those being developed (A-ONE OT-ADL Neurobehavioural Evaluation, Assessment of Motor and Process Skills (AMPS), Community Adaptive Patterns Assessment, PRPP System). Students will choose one mode of assessment and study its theoretical base, assumptions development, strengths, limitations and suitability for use with persons with impaired brain function. Students will develop skill in test mechanics and interpretation of results of the chosen assessment mode through practice during tutorial sessions as well as practice on clients within their workplace. Learning experiences include seminars, tutorials, and videotaped analysis of students testing clients.

**OCCP5041 (15473) Systematic Instruction**

*Semester 2 - 6 credit points*

This unit of study will extend systematic instruction techniques covered in the occupational therapy undergraduate course. Students will examine the use of systematic instruction to structure self-care and community programs specifically for clients with impaired brain function. Students will examine the use of instructional techniques and learn to apply various strategies such as using cues and prompt systems; deciding how to choose reinforcement to promote the learning of occupational tasks; training for complex stimulus discrimination in real world environments; and managing contingencies to reduce artificial reinforcement in favour of naturally occurring cues. Students will identify procedures for promoting maintenance and generalisation and apply these to the development of client programs in both acute and tertiary rehabilitation programs. Students will have the opportunity to develop instructional strategies that apply to specific clients in their workplace. Learning experiences include seminars, problem solving around client cases and videotaped analysis of the student’s skill in applying instructional strategies to specific clients within their workplace.
OCCP5042 (15474) Systematic Instruction Physical Guidance
Semester 1-6 credit points
This unit of study examines the use of various physical guidance models to improve performance of occupational tasks of persons with impaired brain function. Each model will be examined relative to its theoretical base, assumptions and application to management of impaired brain function. Students will select one specific model and develop skill in using the model to help clients initiate steps in performing occupational tasks, improve the quality of performance of occupational tasks, improve the timing of performance of occupational tasks and to appropriately terminate task performance. Learning experiences include seminars, problem solving around client cases and videotape analysis of student's skill in physically guiding performance of occupational tasks.

OCCP5043 (15475) Upper Limb Orthotic Systems
Semester 1 - 6 credit points
This unit of study explores the use of upper limb orthotic systems to improve performance of occupational tasks of persons with impaired brain function. Students will examine the biomechanics of the upper limb and the pathomechanics that occur as a result of impaired brain function. Principles of orthotic design and fabrication will be examined relative to upper limb problems found in persons with impaired brain function. Students will learn to design, fabricate and evaluate orthotic systems fitted to clients within their workplace. Learning experiences include seminars, problem solving around client cases, videotape analysis of client problems and analysis of orthotic systems designed by students.

Elective Unit Descriptions
OCCP5025 (15451) Occupational Therapy Clinical Specialty
Semester 1 or 2-6 credit points
This unit of study is designed to provide the student with the knowledge and skills necessary to upgrade or expand their clinical expertise in an identified area of practice. The unit of study permits students to undertake approved courses of study off campus to meet (in part) the requirements of this Graduate Certificate of Applied Science. Enrolment in this unit of study will be contingent on the student being accepted for the course of study and meeting all costs, providing documentation on the course of study prior to enrolment so that the School can determine whether or not to approve such an enrolment and on the students documented completion of the course. This unit of study is coordinated by the graduate adviser who will consider enrolment in this unit of study on a case-by-case basis.

OCCP5044 (15476) Programming for Community and Living Skills
Semester 1 or 2-6 credit points
This unit of study focuses on occupational therapy management of clients with impaired brain function who are in tertiary rehabilitation programs, students will examine various strategies which can be used to facilitate clients making a meaningful transition from rehabilitation programs to community living. Students will learn how to identify client skills required for community living; become familiar with the services provided by service agencies with the community and will learn how to plan systematically for the transfer to programming responsibilities to other community agencies and families before targeted discharge from tertiary rehabilitation programs. Learning experiences include seminars, case presentations and problem solving tutorials.

OCCP5045 (15477) Systematic Instruction Behaviour Management
Semester 1 or 2 - 6 credit points
This unit of study explores strategies which can be used by occupational therapists to manage maladaptive or challenging behaviours that occur in persons with impaired brain function and interfere with performance of occupational tasks. Students will learn to use a functional analysis of behaviour during task performance and combine findings with environmental and discrepancy analyses as well as social validation procedures to determine appropriate intervention strategies. Students will examine how various behaviour change intervention models can be used to promote performance in occupational tasks and determine their relevance to management of clients with impaired brain function. Learning experiences include seminars, case presentations, problem solving exercises and videotaped analysis of students interactions with clients.

OCCP5046 (15478) Prescription, Evaluation and Modification of Seating for Occupational Performance
Semester 1 or 2-6 credit points
This unit of study examines the range of seating equipment available. Students will extend their skill and knowledge in the prescription, evaluation and modification of equipment that promotes performance of occupational tasks in a sitting position. Students will integrate principles of ergonomics, biomechanics and design with principles of occupational performance to determine appropriate seating options for clients whose physical function is compromised by impaired brain function. Learning experiences will include seminars, case presentations and videotaped assessments of client seating.
OCCP5047 (15484) Occupational Performance and the Inclusive Community

Semester 1 - 6 credit points

In this unit of study students have the opportunity to examine and critically analyse a range of models and philosophies of service provision in the areas of developmental disability and pediatrics from the point of view of their impact on occupational performance. This will include the examination of concepts such as social role valorisation, integration, inclusion, the least restrictive alternative, client centred and family centred approaches to intervention, categorical and non-categorical models of service provision, supported and sheltered employment, transdisciplinary and multidisciplinary models of service delivery, legislative and standards based models of service reform and implementation. Learning experiences include seminars, case study presentations and problem solving tutorials.

OCCP5048 (15485) Occupational Performance and People with High Support Needs

Semester 1 - 6 credit points

This unit of study explores strategies which can be used by occupational therapists to identify and affirm the occupational roles of people with high support needs and strategies to promote and fully support their fulfillment of those roles and their performance of human occupations. This unit of study will also examine assessment and intervention strategies to promote a person’s occupational performance where that is affected by the presence of challenging behaviours. Learning experiences include seminars, case presentations, problem solving exercises and videotaped analysis of students interactions with people for whom they are currently providing occupational therapy services.

Specialty Track Occupational Rehabilitation

This specialty track within the graduate certificate course will enhance the student’s knowledge, skills and attitudes in planning, implementing and evaluating contemporary occupational therapy service provision to clients of any age whose occupational performance has been compromised by the physical, cognitive and psychosocial manifestations of work-related injury or disease.

Notes

¹ One elective only required to satisfy the requirements of the course. This elective can be taken in either Semester 1 or Semester 2. Electives include:
- OCCP5061 (15498) Marketing for Occupational Therapists
- OCCP5062 (15499) Health Promotion - Theories and Application
- OCCP5063 (154A1) Health Promotion - Program Design and Development
- OCCP5025 (15451) Occupational Therapy Clinical Specialty
- OCCP5060 (15497) Environmental Intervention Strategies
This unit of study examines assessments used by occupational therapists that have been developed for use with individuals who experience difficulty fulfilling their roles as workers. The range of assessments and approaches which will be examined include norm-referenced and criterion-referenced assessments, commercially available systems (e.g. Valpar, WEST, Isernhagen, WorkAbility 3), and non-standardised assessments. Assessments which address performance component deficits in the biomechanical, sensory-motor, cognitive and psychosocial areas relevant to occupational performance in productivity will also be examined. Students will study these assessments in terms of their theoretical base, assumptions, development, strengths, limitations and suitability for use for individuals who are unable to fulfil their productivity roles.

Following the identification of specific deficits in occupational performance relevant to productivity, the development of appropriate intervention strategies occurs. This unit of study will examine various approaches to intervention with individuals. The issue of case management and knowledge of the principles and practice of occupational rehabilitation will be addressed. Approaches to work hardening and conditioning in various settings will be considered. The development of intervention programs for individuals with physical, cognitive and psychosocial deficits affecting productivity will be addressed.

This unit of study examines the assessment of the overall work environment. Many aspects of an organisation, the work environment and various other systems can impact on the performance of individuals and therefore must be examined. Determining which aspects of the environment to assess as well as the selection of appropriate assessment strategies will be addressed. Assessment of the technical and hardware systems, formal structures and informal structures will be presented. Students will develop skills in the assessment of environments from these various perspectives.

This unit of study is designed to provide the student with the knowledge and skills necessary to upgrade or expand their clinical expertise in an identified area of practice. The unit of study permits students to undertake approved courses of study off campus to meet the requirements of this Graduate Certificate of Applied Science. Enrolment in this unit of study will be contingent on the student being accepted for the course of study and meeting all costs, providing documentation on the course of study prior to enrolment so that the School can determine whether or not to approve such an enrolment and on the students documented completion of the course. This unit of study is coordinated by the graduate adviser who will consider enrolment in this unit of study on a case-by-case basis.

Having assessed an organisation, its environment and the contexts and systems in which it operates, it is necessary to then develop appropriate intervention strategies addressing these problems. This unit of study examines this broad range of interventions. Areas such as designing, adapting and modifying the technical and hardware systems will be addressed, as will interventions relevant to the formal and informal structures. Implications for intervention related to legislative requirements and the broader political environment will be considered.

This unit of study examines marketing concepts and techniques used in the promotion of occupational therapy services through the marketing of services and marketing management. It provides students with the opportunity to develop marketing plans for the provision of professional services relevant to their work environment.

The aims of this unit of study are to introduce students to the concept of health promotion, provide an introduction to the conceptual bases which influence health promotion and consider how the application of these theories may influence health promotion programs. Content includes theories which influence health promotion and differing approaches to health promotion varying from individual to populations.

This unit of study provides opportunities for the student to develop skills in the design, development, implementation and evaluation of health promotion programs and strategies. Needs assessment, program design and process, impact and outcomes evaluation will be covered. Students will develop programs relevant to their own work settings.

The School of Occupational Therapy offers two graduate courses for occupational therapists. The Master of Applied Science in Occupational Therapy by Research which commenced in 1988 and the Master of Applied Science by Coursework which commenced in 1990.

Admission Requirements

By Research

1. Possess an award of Bachelor of Applied Science (Occupational Therapy) from Cumberland College of Health Sciences or The University of Sydney;
OR
2. Possess an award of Bachelor of applied Science (Hon) in Occupational Therapy from The University of Sydney;
OR
3. Possess an award of Bachelor of Science with a major in Anatomy from The University of New South Wales, and a Graduate Diploma in Occupational Therapy from Cumberland College of Health Sciences;
OR
4. Possess such qualifications as are deemed equivalent to (1), (2) or (3);
OR
5. Submit such other evidence of general and/or professional qualifications as will satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies;

6. Have the equivalent of a minimum of one year full-time professional experience since graduation as an occupational therapist.

Occupational therapists without these qualifications may be admitted to candidature for the MAppSc (OT) by Research degree by first enrolling in the MAppSc (OT) by Coursework degree. Following completion of the equivalent of one semester of part-time enrolment, students may apply to transfer to candidature for the MAppSc (OT) by Research degree.

By Coursework

1. Possess those qualifications described in (1), (2), (3) and (4) of the requirements for admission to the MAppSc (OT) by Research degree
OR
2. Possess an award of Diploma in Occupational Therapy from a recognised educational body and submit such other evidence of general and/or professional qualifications as will satisfy the Faculty that the applicant possess the educational preparation and capacity to pursue graduate studies;

AND
3. Have the equivalent of a minimum of one year full-time professional experience since graduation as an occupational therapist.
For occupational therapists without these qualifications entry may be possible through successful completion of a qualifying program designed specifically for individual applicants.

Course Outline
The Course Outlines for the Master of Applied Science (Occupational Therapy) by Research and Coursework are presented in Table 11.3.

By Research
The Master of Applied Science in Occupational Therapy by research has an applied research thesis format supplemented with a set of enabling components. The course is designed to provide opportunity for advanced study, critical evaluation, and research in specific areas of occupational therapy. The course may be completed full-time or part-time.

Unit Descriptions
OCCP6004/OCCP6005 (15433A/15433B) Research Thesis A/Research Thesis B
Semester 1 and 2
In this unit of study, students will investigate a specialised area of interest in occupational therapy under approved supervision. This unit involves regular supervision sessions and students are normally required to undertake a program of advanced study in the following topic areas as enabling components of the research thesis.

a) Theoretical Issues in Occupational Therapy (15435)
b) Research and Inquiry Issues in Occupational Therapy (15449).
c) Research electives. Elective units must include at least one research methodology elective and one or more research electives or units relevant to the content area of the thesis to a total of at least 12 credit points (see Appendix 1).

OCCP5099 (15435) Theoretical Issues in Occupational Therapy
Semester 1 - 6 credit points
The purpose of this unit is for students to investigate theoretical issues that impact on knowledge development and practice in occupational therapy. Epistemological orientation to practice, conceptual and theoretical structures of knowledge in occupational therapy, and framework for theory description, analysis and critique will be explored. The student will develop an enhanced understanding of theory as a framework for practice and research and will develop an ability to critically appraise theoretical frameworks and models of practice in occupational therapy.

OCCP5100 (15449) Research and Inquiry Issues in Occupational Therapy
Semester 2 - 6 credit points
The purpose of this unit is for students to investigate issues in applied research and evaluation in occupational therapy professional practice. The unit addresses historical and contemporary perspectives on research in occupational therapy; common problems for research, inquiry, and evaluation in clinical settings; and knowledge and procedures appropriate for the applied context.

OCCP5064 (15501) Single System Research Design and Evaluation Methods
Semester 1 - 6 credit points
The purpose of this unit is to explore the application of systematic research and evaluation methods through single system design. Students will have the opportunity to design a single system project which is appropriate to their work setting. In doing this, the following will be covered: comparison of traditional and single system research methods; measurement and recording procedures associated with single system designs; basic and advanced designs for single systems evaluation and research; and visual and statistical analysis of single system data.

OCCP6008 (15502) Research Designs and Methods for Therapists
Semester 1 - 6 credit points
The purpose of this unit is to explore a variety of research designs, research methods, and related issues appropriate to applied research. The exploration will be accomplished through student led seminar discussions of selected readings and each student will develop a research proposal on a topic of their choice. The content will include such topics as: an overview of appropriate research designs, strengths and weaknesses of a broad selection of designs and methods, reliability and validity, selection of a study population, research ethics, development of research statements and questions, proposal writing, and the use of computers and other technology in research.

By Coursework
The Master of Applied Science in Occupational Therapy by Coursework has a coursework, project and/or treatise components. The course is designed to provide study in occupational therapy and related topics appropriate for leadership roles in areas of clinical specialisation. The course can be completed full-time or part-time.

Unit Descriptions
OCCP5099 (15435) Theoretical Issues in Occupational Therapy
Semester 1 - 6 credit points
The purpose of this unit is for students to investigate theoretical issues that impact on knowledge development and practice in occupational therapy. Epistemological orientation to practice, conceptual and theoretical structures of knowledge in occupational therapy, and framework for theory description, analysis and critique will be explored. The student will develop an enhanced understanding of theory as a framework for practice and research and will develop an ability to critically appraise theoretical frameworks and models of practice in occupational therapy.

OCCP5100 (15449) Research and Inquiry Issues in Occupational Therapy
Semester 2 - 6 credit points
The purpose of this unit is for students to investigate issues in applied research and evaluation in occupational therapy professional practice. The unit addresses historical and contemporary perspectives on research in occupational therapy; common problems for research, inquiry, and evaluation in clinical settings; and knowledge and procedures appropriate for the applied context.
Electives
A program of elective study may be designed by the student in consultation with the graduate adviser. Electives may include a combination of 15444A Project A/15444B Project B, 15504 Treatise A and 15505 Treatise B, and specific units. These specific units may be chosen from any of the following:

1) Elective units offered by the School of Occupational Therapy including any units listed in the specialty tracks of the Graduate Certificate of Applied Science (Occupational Therapy) See handbook entry.
2) Elective units offered by other schools and departments within the Faculty of Health Sciences (see Appendix 1)
3) Elective units offered by other schools and departments within the University, or from other Universities.

A total of 60 credit points of electives are required for completion of the Master of Applied Science in Occupational Therapy by Coursework. Enrolment in these units will be contingent on the student satisfying necessary entry requirements, on places being available, and the approval of the relevant Head of School or Department from which the course is offered.

OCCP5021 (15444) Project
Semester 1 & 2 - 24 credit points
The purpose of this unit is to synthesise postgraduate learning into a final project. Students conduct and write up their project under the supervision of one or more members of the School and if appropriate in conjunction with staff from the Departments or other Schools. The project may involve program evaluation, application of theory to program design, developing a clinical tool, or any other applied research or evaluation project relevant to an aspect of occupational therapy.

OCCP5066/OCCP5067 (15504/15505) Treatise A/ Treatise B
Semester 1 and/or 2-12 credit points
A treatise is a substantial work that makes a largely original contribution to the knowledge of a particular unit in occupational therapy theory and/or practice. It requires an independent investigation of an area relevant to theory, practice, and professional interests under supervision of staff of the Occupational Therapy School in conjunction with other staff from the Faculty if necessary. The outcome of the treatise is a comprehensive paper that may involve an extended literature analysis and critical review and exposition of a range of knowledge and practice issues. The aim of the treatise is to synthesise graduate knowledge and skills and integrate background and related materials with a view of providing cohesive and well argued suggestions or frameworks for knowledge and practice development in occupational therapy.

OCCP5069 (15507) Family and Community Care
Semester 2 - 6 credit points
This unit of study examines family and community care within the context of social, economic and political processes and structures. Particular emphasis is placed on five related questions: why family caring and why now? How is such care distributed? What is policy doing to support carers? How can useful questions be framed about carers' needs and circumstances? And how can health professionals support families in ways which are conducive to the provision of reliable and effective family and community care? Systematic analysis of empirical evidence from the international literature is encouraged to discern varying socio-cultural approaches to family and community care and their application in the Australian context. Research issues covered will include the differing nature of formal and informal care; care giving burdens; the neglected dimension of satisfactions of caring; the temporal aspect of care giving; assessing family carers' needs for support and services. Students are encouraged to pursue issues of family and community care in fields of interest encompassing the elderly, families with children with a disability, disabled adolescents and in the mental health arena.

OCCP5068 (15506) Program Evaluation
Semester 1 - 6 credit points
This unit is designed to introduce participants to many of the issues and practices in evaluation of occupational therapy programs. The context will focus on exploration of issues in occupational therapy program evaluation; developing evaluation questions and design that are realistic within an occupational therapy work environment; examining and critiquing program evaluations that have been completed; application of program evaluation principles to various occupational therapy work environments and development of an evaluation proposal that is based on the evaluation needs of participants.

OCCP5033 (15459) Managerial Issues in Occupational Therapy
Semester 1 or 2-6 credit points
This unit provides students with the opportunity to analyse theories of organisational decision-making and to review current managerial theories and techniques which could be applied to the planning, organising, staffing, leading and assuring quality of services of their respective unit and/or department.

OCCP5025 (15451) Occupational Therapy Clinical Specialty
Semester 1 or 2-4 credit points
This unit is designed to provide the student with the knowledge and skills necessary to upgrade or expand their clinical expertise in an identified area of practice. The unit permits students to undertake approved courses of study off-campus. Enrolment in this unit will be contingent on the student being accepted for the course of study and meeting all costs, providing documentation on the course of study prior to enrolment so that the School can determine whether or not to approve such an enrolment and on the student's documented completion of the course. This unit is coordinated by the graduate adviser who will consider enrolment in this unit on a case-by-case basis.
OCCP5070 (15508) Selected Topics in Occupational Therapy
Semester 1 or 2-1 credit points

OCCP5071 (15509) Special Topics in Occupational Therapy
Semester 1 or 2-3 credit points

These units are designed to provide the student the opportunity to expand in depth or breadth a topic that complements previous or current studies and experiences in clinical areas or explore a topic that is relevant to current practice and research interest. This unit permits students to undertake approved studies off-campus and contingent on the student being accepted for the course, meeting all costs, and relevant documentation presented and approved. The difference between a one credit and a three credit unit is in the number of hours involved and the length and weighting of the assessment.

I Topics in Clinical Research
COMH5037 (08441) Program Planning and Evaluation (6 credit points)
COMH5130 (08564) Epidemiological Research (6 credit points)
COMH5127 (08561) Evaluation Research (6 credit points)
COMH5128 (08562) History and Philosophy of Scientific Methodology (6 credit points)
COMH5129 (08563) Action Research (6 credit points)
COMH5102 (08522) Introduction to Epidemiology and Biostatistics (6 credit points)
BEHS5105 (10573) Multivariate Statistics (6 credit points)
BEHS5104 (10572) Qualitative Research Methods (6 credit points)
BEHS5103 (10571) Intermediate Statistics (6 credit points)
EXSS5017 (22518) Biological Measurement and Analysis (6 credit points)
OCCP5064 (15501) Single System Research Design and Evaluation Methods (6 credit points)
OCCP6008 (15502) Research Designs and Methods for Therapists (6 credit points)
OCCP5068 (15506) Evaluation of Therapy Programs (6 credit points)

II Topics in Health Science Education
COMH5084 (08506) Planning, implementing and evaluating education experiences (6 credit points)
COMH5032 (08431) Teaching with Technology (6 credit points)
COMH5169 (08434) Student Assessment, Evaluation and Development (6 credit points)
COMH5064 (08481) Introduction to Health Education (6 credit points)
COMH5065 (08482) Large Group Teaching (6 credit points)
COMH5095 (08515) Teaching with Reduced Resources (6 credit points)
COMH5100 (08520) Clinical Teaching and Supervision (6 credit points)
COMH5082 (08504) Adult Learning (6 credit points)

III Topics in Health Care and Promotion
COMH5173 (08445) Women's Health (4 credit points)
COMH5168 (08446) Aboriginal Health (4 credit points)
COMH5041 (08447) Migrant and Refugee Health (4 credit points)
COMH5048 (08456) Legal and Ethical Issues in Community Health (4 credit points)
COMH5069 (08488) Counselling Theory and Practice (4 credit points)
COMH5170 (08490) Community Development (4 credit points)
COMH5101 (08521) Introduction to Community Health Policy and Services (4 credit points)
COMH5103 (08523) Australian Society and Health (6 credit points)
COMH5109 (08529) Management and Problem Solving (4 credit points)
OCCP5020 (15441) Lifestyle Management (6 credit points)
OCCP5026 (15452) Communication and Conflict in Health Care Environments (6 credit points)

IV Topics in Clinical Practice
OCCP5016 (15437) Occupational Therapy Theory and Practice in Gerontology (6 credit points)
OCCP5025 (15451) Occupational Therapy Clinical Specialty (6 credit points)
OCCP5030 (15456) Occupational Therapy Theory and Practice in Community (6 credit points)
OCCP5031 (15457) Occupational Therapy Theory and Practice in Palliative Care (6 credit points)

OCCP9001 (15900) Special Program - Occupational Therapy Master's Qualifying
The Special Programs are devised to meet individual needs. They are not units in the normal sense and do not necessarily involve a common syllabus and should not be compared between individual cases.
Table 11.3  Master of Occupational Therapy*

* subject to final approval

Notes

* Electives taken may vary from 2-6 credit points each. The total for electives taken across both years is 12 credit points

Master of Occupational Therapy

The Master of Occupational Therapy is an entry level or professional master's degree offered to applicants who have completed a relevant undergraduate degree. The course is designed to prepare graduates to work as occupational therapists with specific emphasis on the theoretical underpinnings of occupational therapy practice, management theory and practice, knowledge of the health system and health professional roles, and some evaluation/research skill development.

Admission Requirements

To qualify for admission applicants shall:

i) Possess a relevant undergraduate degree (except a degree in occupational therapy) from an institution recognised by the University of Sydney. Relevance implies that at least 40% of the content of the applicant’s undergraduate degree shall be relevant to the field of occupational therapy.

AND

ii) Have achieved at least a credit grade average in their undergraduate degree.

For applicants whose undergraduate degree has less than 40% relevant content, entry may be possible through successful completion of undergraduate units in areas of relevance.
Unit Descriptions

The course is offered primarily using a problem based learning approach. All units with the exception of electives will use this approach.

OCCP5074/OCCP5075 (15512/15513) Problem Identification 1/Problem Identification 2
Semester 1 - 4 credit points/Semester 2 - 4 credit points
Students will learn to identify client problems as the clients see them and from different theoretical perspectives. Students will acquire the skills necessary to interview clients, assess their abilities and limitations in performing the daily activities which are appropriate to client roles, determine the extent of the mismatch between what clients would like to do and what they can do. Students will learn to identify problems with a range of clients including individuals, families, small groups, organisations and communities, with the focus being the consumer (client) perspectives of problems. Students will learn to determine the appropriateness of, and select from a variety of assessment methods including interviews, clinical observation, standardised and non-standardised assessments, and environmental evaluations. They will learn to clearly articulate the conceptual foundation and rationale for their choices.

OCCP5076/OCCP5077 (15514/15515) Activity Analysis and Adaption 1/Activity Analysis and Adaption 2
Semester 1 - 3 credit points/Semester 2 - 3 credit points
Students will learn to analyse and adapt daily activities from different theoretical perspectives appropriate to client roles, including the biocognitive and psycho-socio-cultural factors which underpin the ability to perform the activities. The students will also consider the client contexts and the impact these have on their roles and activity performance.

OCCP5078/OCCP5079 (15516/15517) Occupational Therapy Intervention 1/Occupational Therapy Intervention 2
Semester 1 - 4 credit points/Semester 2 - 4 credit points
Students will learn to implement occupational therapy interventions from different theoretical perspectives and clearly articulate the rationale for their choices. This will include the processes of goal setting with clients, considering a range of interventions drawing on their ability to analyse and adapt activities, selecting an intervention based on client priorities, and implementing the intervention. A wide range of possible intervention strategies will be considered throughout the course including individual activities, group work, prescription of assistive devices and use of technology, modification of the environment and work practices, education and counselling.

OCCP5080/OCCP5081 (15518/15519) Evaluation and Research 1/Evaluation and Research 2
Semester 1 - 3 credit points/Semester 2 - 3 credit points
Students will learn to evaluate their practice critically and reflectively. They will learn to evaluate and select appropriately from a range of program evaluation methods. They will also learn to be critical consumers of research. Students will develop a preliminary evaluation/research project proposal.

OCCP5082/OCCP5083 (15520/15521) Professional Management 1/Professional Management 2
Semester 1 - 3 credit points/Semester 2 - 3 credit points
Students will learn to use a range of strategies to maximise their ability to manage and work competently within a variety of work contexts. Among other things, students will critically explore the issues of ethical occupational therapy practice, self-management and management of an occupational therapy department, the broader political and social contexts in which they work including the team, the organisation and the health/welfare system. They will also build on their abilities related to university genetic attributes in this unit.

OCCP5084/OCCP5085 (15522/15523) Professional Presentation 1/Professional Presentation 2
Semester 1 - 3 credit points/Semester 2 - 3 credit points
Students will explore many aspects of presenting both themselves and their ideas as members of the occupational therapy and broader professional community. Areas covered will include appropriate documentation of client outcomes, verbal and written presentation skills appropriate for presenting their ideas and work to their colleagues, clients, other health professionals and students. Emphasis will be placed on the ability to critically articulate the theoretical and practice rationale that underpins occupational therapy practice.

OCCP5086/OCCP5087 (15524/15525) Problem Identification in Practice 1/Problem Identification in Practice 2
Semester 1 - 4 credit points/Semester 2 - 4 credit points
Students will continue to develop their skills in problem identification. Students will continue this development largely in fieldwork settings. Their case-based learning will continue using problems and issues reflected in the fieldwork setting. Emphasis will be placed on exploring conceptual issues which underpin problem identification in practice.

OCCP5088/OCCP5089 (15526/15527) Activity Analysis and Adaption in the Field 1/Activity Analysis and Adaption in the Field 2
Semester 1 - 2 credit points/Semester 2 - 2 credit points
Students will apply their theoretical and practical knowledge of activity analysis and adaption in the fieldwork setting. Students will be applying what they have learnt during the first year of this unit in to other units and in to their occupational therapy assessment tasks used in the fieldwork setting. Emphasis will be placed on exploring conceptual issues which underpin practice in activity analysis and adaption.

OCCP5090/OCCP5091 (15528/15529) Occupational Therapy Intervention in Practice 1/Occupational Therapy Intervention in Practice 2
Semester 1 - 4 credit points/Semester 2 - 4 credit points
Students will continue to develop their theory base and skills in occupational therapy intervention. They will continue this development largely in fieldwork settings using case-based learning, problems and issues which arise in the fieldwork setting. The emphasis for this unit will be the conceptual issues which underpin occupational therapy practice as well as implementation of practice.
OCCP5092/OCCP5093 (15530/15531) Evaluation Research in the Field 1/Evaluation Research in the Field 2
Semester 1 - 4 credit points/Semester 2 - 4 credit points
All students will conduct and document an evaluation project under the supervision of an academic and clinical adviser, using knowledge from the first year of this unit to underpin their work. For most students this project will be conducted in a fieldwork setting.

OCCP5094/OCCP5095 (15532/15533) Professional Management in Practice 1/Professional Management in Practice 2
Semester 1 - 3 credit points/Semester 2 - 3 credit points
Students will continue to develop their theory base and skills in professional management, with fieldwork providing practice opportunities to build on first year in this unit. Their case based learning will continue using theoretical analysis of problems which arise in the fieldwork setting, with a focus on the caseload, the health care team and the organisational context:

OCCP5096/OCCP5097 (15534/15535) Professional Presentation in Practice 1/Professional Presentation in Practice 2
Semester 1 - 3 credit points/Semester 2 - 3 credit points
Students will continue to develop their professional presentation skills and apply them in fieldwork settings. They will be supported to prepare and present the results of their evaluation project in professional forums.

Electives
In consultation with an academic adviser students will select an elective in each semester of the course. The elective may be selected from graduate units offered across the Faculty for which the applicant meets entry requirements.

OCCP5098 (15536) Elective Topic
For some students an elective topic will be developed specifically for them in consultation with an academic adviser. This will take the form of individual learning contract.
The training of orthoptists in Australia commenced in 1935 and until 1973 was carried out under the auspices of the Royal Australian College of Ophthalmologists (RACO), originally the Ophthalmological Society of Australia.

In 1973 the training of orthoptists was taken over by the New South Wales College of Paramedical Studies (subsequently Cumberland College and now the Faculty of Health Sciences). A four year program leading to a Bachelor of Applied Science (Orthoptics) or a Bachelor of Applied Science (Orthoptics)(Honours) is now offered as well as a research based Master of Applied Science (Orthoptics), which commenced in 1993.

Orthoptists are therapists whose expertise includes investigation and management of ocular muscle dysfunction, the performance of special procedures for investigating ocular and neurological pathology, consultancy (particularly in the multi-disciplinary care of patients) and effective screening of vision problems before secondary complications occur. Orthoptic education places special emphasis on the management of the very young and the elderly, as these are groups in which visual screening is of particular importance.

The current employment of orthoptists is primarily within the major hospitals and in private practices throughout the State. The scope of professional practice is increasing as more graduates find employment in the wider community where expertise in visual health is required e.g. in rehabilitation settings, baby health centres and with the aged.

The technological component of visual health assessment is increasing rapidly. This has been addressed through strengthening of the basic and applied sciences within the bachelor degree program.

Enquiries regarding the academic program should be addressed to the Head of the School of Orthoptics, Mrs Neryla Jolly (Phone: 02 9 351 9250, Fax: 02 9 351 9359).

Graduate Certificate in Vision Impairment

This graduate certificate is designed to provide professional education for graduates in the health sciences, teaching or related areas who are working, or wish to work in the area of vision impairment. The course consists of four core units and two elective units. It is only available in a part time mode.

On successful completion of the Graduate Certificate program, students may apply to articulate into the Graduate Diploma with advanced standing for stage one of that award.

Admission requirements
To qualify for admission applicants shall:

i) Possess a undergraduate degree from an institution recognised by the University of Sydney.

OR

ii) Possess an undergraduate diploma in a related area and show evidence of additional professional training and/or experience to indicate that the applicant has sufficient educational preparation and capacity to pursue post graduate studies.

OR

iii) Possess such qualifications as are deemed to be equivalent to (i) and/or (ii)

Course Outline
The Graduate Certificate in Vision Impairment consists of two core units and one elective in each semester. An outline is presented in Table 13;1.

Unit Descriptions
Participants complete four core units and two electives. Electives may be special electives offered by this course or selected from the list of those offered elsewhere within the Faculty of Health Sciences.

Graduate Diploma in Vision Impairment

The Graduate Diploma in Vision Impairment is designed to provide specialist study within a wide range of skills for professionals working with the vision impaired. The first module (common with the Graduate Certificate) provides a basis for this education, whilst the second module (in the second year) allows for individual programs to be developed from a range of electives and the provision for individual special study. The course is offered on either a full or part time basis and can be completed in a minimum of one year.

Admission requirements
To qualify for admission applicants shall:

i) Possess a undergraduate degree from an institution recognised by the University of Sydney.

OR

ii) Possess an undergraduate diploma in a related area and show evidence of additional professional training and/or experience to indicate that the applicant has sufficient educational preparation and capacity to pursue post graduate studies.

OR

iii) Possess such qualifications as are deemed to be equivalent to (i) and/or (ii)

Note: Participants wishing to transfer (or articulate) from the Graduate Certificate Vision Impairment into the Graduate Diploma should complete a Course Application form and submit this to the Head of School. Admission for all students will be contingent on availability of places.

Course outline.
The course outline for the Graduate Diploma is presented in Table 13.2. The first year of the course is identical to that of the Graduate Certificate. In the second year students complete in each semester, either three electives or two electives plus a program of special study.
Unit Descriptions

ORTH5002 (14505) Impact of Vision Impairment
Semester 1 - 4 credit points
Causes of vision impairment are introduced, with particular emphasis on the type and impact of the vision loss. Residual function, and the educational implications of specific eye conditions and the psychosocial impact of vision impairment are studied, along with the epidemiology of vision impairment in developed and developing countries.

ORTH5003 (14506) Introduction to Orientation and Mobility Skills
Semester 1 - 4 credit points
In this unit students will be introduced to the principles of orientation and mobility instruction. Special emphasis will be on how to train a vision impaired person in the correct use and selection of the full range of sighted guide skills, strategies for safe indoor travel and self protection techniques.

ORTH5004 (14507) Assessment of Vision Impairment
Semester 2 - 4 credit points
Practical skills in the assessment of vision impairment and residual vision function are developed, along with the functional assessment of the client's abilities and needs, and the effects of the vision impairment on activities of daily living. Assessment of the client with additional impairments is also introduced.

ORTH5005 (14508) Management of the Client with Vision Impairment
Semester 2 - 4 credit points
Basic counselling skills are introduced. Case management and the choice of appropriate techniques are introduced, including vision enhancement techniques, vision efficiency training and environmental modification.

ORTH5007 (14510) Orientation and Mobility Skills 2
Semester 2 - 4 credit points
Skills introduced in the core orientation and mobility unit are further developed to include orientation to outdoor routes, development of the full range of cane skills required for safe outdoor travel and utilisation of public transport. (This unit may be delivered in a block mode).

ORTH5008 (14511) Assessment of Vision Impairment
Semester 2 - 4 credit points
The skills introduced in the core unit are further developed to enable skillful assessment and reporting on a wide range of conditions. Modification of these procedures for different age groups and abilities are also developed.

ORTH5009 (14512) Functional Implications of Vision Impairment
Semester 2 - 4 credit points
This elective allows for further development of the skills of analysing the client's vision impairment in relation to their environment and personal needs, and identifying resulting significant functional implications.

ORTH5010 (14513) Vision Enhancement
Semester 2 - 4 credit points
The techniques of eccentric viewing training, hemianopia strategies and null point training are studied in detail, along with identification of appropriate clients who would benefit from such skills. Emphasis is placed on the techniques of client instruction in these techniques.

ORTH5011 (14514) Vision Efficiency Training
Semester 2 - 4 credit points
Techniques for modifying the environment for the needs of particular clients are studied in detail. Existing standards and their applications to public areas and work place are discussed.

ORTH5012 (14515) Environmental Modification
Semester 2 - 4 credit points
Techniques for modifying the environment for the needs of particular clients are studied in detail. Existing standards and their applications to public areas and work place are discussed.

ORTH5013 (14516) Vision Impaired Children and Their Families
Semester 2 - 4 credit points
The impact on families of children with vision impairment are discussed. Strategies to overcome problems, including special techniques and the use of existing resources are studied in detail. The special needs of the children from birth to the completion of schooling are covered in this module.

Electives

Special course electives:
(Note: most of these electives will include a clinical/fieldwork practicum)

ORTH5007 (14510) Orientation and Mobility Skills 2
4 credit points

ORTH5008 (14511) Assessment of Vision Impairment
4 credit points

ORTH5009 (14512) Functional Implications of Vision Impairment
4 credit points

ORTH5010 (14513) Vision Enhancement
4 credit points

ORTH5011 (14514) Vision Efficiency Training
4 credit points

ORTH5012 (14515) Environmental Modification
4 credit points

ORTH5013 (14516) Vision Impaired Children and Their Families
4 credit points

ORTH5017 (14520) Orientation and Mobility Skills 3
Prerequisite: Orientation and Mobility Skills 2
Semester 2 - 4 credit points
These electives are designed for the student who wishes to become proficient in advanced orientation and mobility skills. They encompass advanced skills for assisting the multi-impaired, utilising telescopic aids in the dynamic environment and issues related to the client with cortical vision impairment. A significant component of supervised practice will be included in each unit.

ORTH5018 (14521) Orientation and Mobility Skills 4
Prerequisite: Orientation and Mobility Skills 3
Semester 2 - 4 credit points
See above description for Orientation and Mobility Skills 3.

ORTH5019 (14522) Special Study A/ORTH5020
(14523) Special Study B
Semester 1 or 2 - 4 credit points
Special studies will be structured to meet students' needs if appropriate units are not available elsewhere within this program. Appropriate outside resources may be accessed to enable study at a sufficient level and proficiency to satisfy the Head of School that the study is appropriate within this program.
ORTH5014 (14517) Vision Impairment in the Elderly
4 credit points
The special needs and problems facing the elderly client with vision impairment are covered. Special techniques of assessment and management of the elderly client with additional problems (e.g., limited mobility, dementia) are studied in detail. Existing resources for the elderly client with vision impairment are discussed.

ORTH5015 (14518) Assessment and Management of Clients with Additional Impairments
4 credit points
Particular techniques for the assessment of the client with additional impairments are studied, along with special techniques, and modification of existing techniques for the management of vision impairment. Client groups would include those with hearing loss, cortical blindness, and intellectual and physical impairments.

ORTH5016 (14519) Community Based Rehabilitation
4 credit points
The principles of community based rehabilitation are introduced, and compared with other models of health delivery. The application of these principles, particularly in communities with limited resources are studied.

Existing electives within the Faculty of Health Sciences
Students may also select from the following electives which have been identified as being of particular relevance to the aims of this program. However, other post graduate electives within the Faculty of Health Sciences may be approved if they are shown to be relevant to a particular student's needs, and carry appropriate units. Details of these electives are presented in the Appendix 1.

BEHS5111 (10580) Computer Literacy for the Health Professional
COMH5037 (08441) Program Planning and Evaluation
COMH5168 (08446) Aboriginal Health

#### Notes

1. Students with an Honours level may apply for advanced standing in the units Intermediate Statistics and Research Elective, enabling them to enrol in the unit Research Thesis in the first year of the program.
2. Students may elect to enrol in Research Elective in Years 1 or 2, subject to availability and timetabling constraints. (See Appendix 1 for list of available Research Electives).
Master of Applied Science (Orthoptics) by Research

The Master of Applied Science (Orthoptics) is a research degree designed to provide opportunities for research and scholarship in specific areas of applied visual sciences.

Admission Requirements

Pass Level Entry
Applicants should possess either:
i) A Bachelor of Applied Science in Orthoptics from the Faculty of Health Sciences, the University of Sydney
OR
ii) A Bachelor of Applied Science deemed to be equivalent to the above
OR
iii) A Diploma of Applied Science in Orthoptics from Cumberland College of Health Sciences PLUS other evidence of professional development or qualifications which will satisfy the Graduate Studies Committee that the applicant possesses the educational preparation and capacity to pursue graduate studies
OR
iv) Possess such qualifications as are deemed to be equivalent to (i) and/or (ii) and (iii).

Applicants with a Diploma of Applied Science will normally be required to complete a qualifying program as prescribed by the Graduate Studies Committee.

Honours Level Entry
Applicants who have completed an approved bachelor degree at Honours level can be admitted to the program. They will not be required to complete a qualifying program.

Time Limits
The minimum length for a pass level will be four semesters full-time or six semesters part-time, exclusive of any qualifying program. The maximum length would normally be six semesters full-time and seven semesters part-time.

The minimum length for an honours level entry will be two semesters full-time or four semesters part-time, with the maximum length six semesters full-time and eight semesters part-time.

Course Outline
The course outline for the Master of Applied Science (Orthoptics) is presented in Table 13.3.

Unit Descriptions

ORTH9017 (14900) Special Program - Orthoptics
The Special Programs are devised to meet individual needs. They are not units in the normal sense and do not necessarily involve a common syllabus and should not be compared between individual cases.

BEHS5103 (10571) Intermediate Statistics
Semester 1 - 6 credit points
Pre-requisite Research Methods I and II, or equivalent
In this unit, students will extend and consolidate the research methods and statistical skills acquired in Research Methods I and II. Students will gain experience in data screening techniques, analysis of variance, multiple regression and non-parametric statistics. Students will learn how to use SPSS to conduct these statistical tests.

ORTH6006/ORTH6007/ORTH6008/ORTH6009 (14602/14603/14604/14605) Research Thesis A/B
The research thesis forms the major component of the program. Students are given the opportunity to investigate in depth an area of specialised interest in orthoptics or a closely related unit. Each student will work with a supervisor or supervisors who will guide them through each stage of the study and the preparation of the thesis.

Thesis seminars will form an integral part of the program. They will provide a forum for the students to present progress reports on their research and will encourage the free exchange of critical comment on theoretical constructs, methodologies and analysis of results. These seminars will be developed both within the School of Orthoptics and the wider context of postgraduate seminars of the Faculty of Health Sciences.

Research Elective
This elective enables students to study a specific research method which is appropriate to their area of interest. For Research Elective unit descriptions, see Appendix 1.

ORTH5021 (14524) Orthoptics Research Elective
This elective is designed to develop particular research skills and explore a topic that is relevant to current practice and research interest. The structure of this program will be designed in consultation with the students’ supervisor and the Schools’ Postgraduate Committee.
14 School of Physiotherapy

Physiotherapy is a health profession which deals with the prevention, assessment and treatment of human movement disorders. Physiotherapy services are used in a wide variety of areas such as health care organisations, schools, private practices, community and workplace settings. The physiotherapy profession is committed to continued research into its fundamental concepts and activities and the evaluation of physiotherapy services to ensure the optimum quality of care for the community it serves. The profession is also committed to effective communication with members of the health team, the community at large and the continuing education of its graduates. Staff and students of the School are actively involved in a number of research projects. These range over several areas including the investigation of human motor performance, musculoskeletal physiotherapy, neurological physiotherapy, occupational health issues, clinical reasoning and cardiopulmonary physiotherapy.

As one of the foundation schools of the Faculty of Health Sciences (formerly Cumberland College of Health Sciences) at the College’s inception in 1975, the School of Physiotherapy has played an important role in the development of the Faculty and its academic programs.

The School has a strong commitment to achieving quality in all areas of endeavour. To achieve this goal the School has utilised findings from evaluation of our academic programs and research projects to refine the programs offered. This evaluation has involved seeking and receiving critical appraisal from various sources including student, teacher, peer and external evaluation, from External Advisory Committees and members of the physiotherapy profession, from national and international colleagues and from members of this and other faculties of the University.

Nine graduate programs are conducted by the School. These include research programs at masters and doctoral levels and articulated coursework programs in manipulative physiotherapy and sports physiotherapy. In addition a combined program addresses a number of other professional sub-disciplines. These programs provide a flexible and accessible mode of graduate education for physiotherapists with a wide variety of clinical specialty interests. It is be possible to focus studies in such sub-disciplines as paediatric, cardiopulmonary and neurological physiotherapy, or to complete general physiotherapy studies.

In relation to School of Physiotherapy units, enrolment in a unit is normally dependent upon the student meeting the entry requirements for the program in which the unit is offered. For miscellaneous (or non-award) students, the School may agree to enrol an applicant in a unit offered by the School, provided that the applicant has the required prerequisite knowledge to study the unit and there is sufficient space in the class room and tutorial group to accommodate the applicant without prejudicing other students' performance. For students enrolled in a recognised tertiary program at another institution, a cross-institutional enrolment may be permitted in a School of Physiotherapy unit, providing the unit is approved by the home institution, the applicant satisfies the prerequisite unit and/or can demonstrate the prerequisite knowledge to study the unit, and resources are available to support the enrolment in the unit.

Enquiries regarding academic programs should be directed to the following: Academic Program Administrator, Ayanthi Salgado (9 351 9378); The Postgraduate Coursework Programs Coordinator: Dr Raymond Lee (93519548); Research Masters Program Coordinator: Associate Professor Nick O’Dwyer (9 351 9272); Ph.D. Program Coordinator: Associate Professor Jack Crosbie (9 351 9549)

#### Note

1. Clinical Manipulative Physiotherapy will be conducted as three afternoon sessions for ten weeks in semesters 1 & 2.
Graduate Diploma of Applied Science
(Manipulative Physiotherapy)

Enquiries
Graduate Diploma Course Coordinator: Kathryn Refshauge (9351 9180)
Master's Course Coordinator: Martin Mackey (9351 9374)
Manipulative Physiotherapy is a physically demanding course of study which requires for its practice the development of a range of precise physical skills. Prospective students should be aware that they will be expected to carry out and have carried out upon themselves as simulated patients, the examination and treatment procedures used by manipulative physiotherapists. Partial disrobing will be required in these classes. All students are required to provide the School of Physiotherapy with recent X-rays of their cervical, thoracic and lumbar spines prior to the commencement of the spinal manipulation classes. Any prospective students who think they may have a condition or disability which may interfere with the development or practise of manipulative physiotherapy skills should consult the Course Co-ordinator, Kathryn Refshauge (9351 9180) before commencing the course.

Admission Requirements
The Faculty may, on the recommendation of the Head of School concerned, admit to candidature for a graduate diploma or graduate certificate within the Faculty an applicant:

i) who is a graduate of the University of Sydney and has completed courses appropriate to the area of study in which the applicant seeks to proceed, provided that the applicant's work is of sufficient merit, or who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies.

ii) who, in addition, meets any other requirements for admission to a particular program that has been prescribed by Faculty.

In the case of the Graduate Diploma of Applied Science (Manipulative Physiotherapy) applicants should normally have completed at least two years recent clinical experience in the management of musculoskeletal disorders, and be presently engaged in related clinical practice.

Selection
Selection, will take into account employment history, qualifications, continuing education and other professional development.

Unit Enrolment
Enrolment in all physiotherapy (PHTYxxxx/16***) units is dependent upon the applicant being eligible to enrol in this course.

Progression
Progression from the graduate diploma to the master's program, whether the student originally enrolled in the graduate diploma or the master's program, will be dependent upon satisfactory performance in the graduate diploma units.

Course Outline
The course outline for the Graduate Diploma of Applied Science (Manipulative Physiotherapy) is presented in Table 14.1.

Unit Descriptions
Refer to pages 14-20 to 14-25 for unit descriptions.

Graduate Diploma of Applied Science
(Sports Physiotherapy)

Enquiries
Graduate Diploma Course Coordinator: Elizabeth Henley
(9351 9268)

Admission Requirements
The Faculty may, on the recommendation of the Head of School concerned admit to candidature for a graduate diploma or graduate certificate within the Faculty an applicant:

i) who is a graduate of the University of Sydney and has completed courses appropriate to the area of study in which the applicant seeks to proceed, provided that the applicant's work is of sufficient merit, or who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies.

ii) who, in addition, meets any other requirements for admission to a particular program that has been prescribed by Faculty.

In the case of the Graduate Diploma of Applied Science (Sports Physiotherapy) applicants should also have at least two years recent graduate clinical experience relevant to sports physiotherapy and should be currently employed in a sports physiotherapy context.

'Appropriate courses are those deemed equivalent to the Bachelor degree in Physiotherapy from Cumberland College of Health Sciences or the University of Sydney.

Selection
Selection, will take into account employment history, qualifications, continuing education and other professional development.

Unit Enrolment
Enrolment in all physiotherapy (PHTYxxxx/16***) units is dependent upon the applicant being eligible to enrol in this course.

Progression
Progression from the graduate diploma to the master's program, whether the student originally enrolled in the graduate diploma or the master's program, will be dependent upon satisfactory performance in the graduate diploma units.

Course Outline
The course outline for the Graduate Diploma of Applied Science (Sports Physiotherapy) is presented in Table 14.3.

Unit Descriptions
Refer to pages 14-20 to 14-25 for unit descriptions.

1. Approved elective
Admission Requirements
The Faculty may, on the recommendation of the Head School concerned, admit to candidature for a degree of Master within the Faculty an applicant:

i) who is a graduate of the University of Sydney and has completed courses appropriate to the area of study in which the applicant seeks to proceed, provided that the applicant's work is of sufficient merit, or who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies.

ii) who, in addition, meets any other requirements for admission to a particular program that has been prescribed by Faculty.

In the case of the Master of Applied Science (Sports Physiotherapy) applicants should also have at least two years recent graduate clinical experience relevant to sports physiotherapy and should be currently employed in a sports physiotherapy context.

'Appropriate courses are those deemed equivalent to the Bachelor degree in Physiotherapy from Cumberland College of Health Sciences or the University of Sydney.

Selection
Selection, will take into account employment history, qualifications, continuing education and other professional development.

Unit Enrolment
Enrolment in all physiotherapy (PHTYxxxx/16***) units is dependent upon the applicant being eligible to enrol in this course.

Credit Transfer
Applicants holding an approved graduate diploma in manipulative physiotherapy may apply for credit transfer in the master's program. Decisions will be made on an individual basis.

Progression
Progression from the graduate diploma to the master's program, whether the student originally enrolled in the graduate diploma or the master's program, will depend upon satisfactory performance in the graduate diploma units.

Course Outline
The course outline for the Master of Applied Science (Sports Physiotherapy) is presented in Table 14.4.

Unit Descriptions
Refer to pages 14-20 to 14-25 for unit descriptions.

</tr>
</tbody>
</table>

Course Structure
This award will be granted upon completion of minimum of 24 credit points as outlined below.

A minimum of 12 credit points must be completed from approved Physiotherapy units (PHTYxxxx/16***)) including List A below. The remaining credit points maybe completed from List B (Biomedical Sciences), C (Behavioural Sciences) and/or D (Other).

Note: Units in this course will be offered depending on sufficient enrolments. Physiotherapy units may be offered on alternate years.

# The semester in which the unit will be conducted may vary depending on enrolments.

List D Electives (graduate units) may be taken in other universities, other Faculties within the University of Sydney and within other Schools of the Faculty of Health Sciences. (See Appendix 1 - Electives)
Notes
1 Part-time mode may take up to a maximum of four times full-time mode. Program choice must be made in consultation with Course Coordinator
2 At the discretion of the Course Coordinator, some List A units may be offered in flexible learning modes including distance (external) and/or block mode
3 Graduate Certificate students must enrol in Scientific Investigations I or II (as required) and may also be required to undertake a clinical practice unit
4 See schedule of Special Stream Electives below
5 May not be offered until 1999
6 Permission to enrol in these units will be dependent upon approval from the Course Coordinator and/or the Head of School/Department conducting the units and minimum/maximum numbers for these units. Approved electives may be taken in a variety or combination of modes of offer including 'on campus' mode, distance (external) mode and block mode.
7 Will not be offered in 1998/1999
* For Elective unit descriptions, see Appendix I

Graduate Certificate of Applied Science (Physiotherapy)

The principal aims of this course are to:
* produce a body of graduates with academic and clinical skills to foster and develop the role of physiotherapy in multiple areas of physiotherapy practice, both specialised and general, and
* encourage, develop and promote a scientific approach to the evaluation of current therapeutic interventions.

Admission Requirements
The Faculty may, on the recommendation of the Head of School concerned, admit to candidature for a graduate diploma or graduate certificate within the Faculty an applicant:

i) who is a graduate of the University of Sydney and has completed courses appropriate to the area of study in which the applicant seeks to proceed, provided that the applicant's work is of sufficient merit, or who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies.

ii) who, in addition, meets any other requirements for admission to a particular program that has been prescribed by Faculty.

In the case of the Graduate Certificate of Applied Science (Physiotherapy) applicants should normally have completed at least two years recent clinical experience.

Appropriate courses are those deemed equivalent to the Bachelor Degree in Physiotherapy from Cumberland College of Health Sciences or the University of Sydney.

Selection
Selection will take into account employment history, qualifications, continuing education and other professional development.

Unit Enrolment
Enrolment in all physiotherapy (PHTYxxxx/16***) units is dependent upon the applicant being eligible to enrol in this course.

Progression
Progression from the graduate certificate to the graduate diploma and master's programs, regardless of which program the student originally enrolled in, will be dependent upon satisfactory performance in current units.

Course Outline
The course outline for the Graduate Certificate of Applied Science (Physiotherapy) is presented in Table 13.5.

Unit Descriptions
Refer to pages 14-20 to 14-25 for unit descriptions.
Specialist Streams
If a student wishes to pursue a specialist stream of physiotherapy study, the following sections outline the proposed content and order of completion of specialised units in the sub-disciplines of Cardiopulmonary Physiotherapy, Neurological Physiotherapy, and Paediatric Physiotherapy.

Plus other available electives

\# The semester in which the unit will be conducted may vary depending on enrolments

### List D\(^7\)

Electives (graduate units) may be taken in other universities, other Faculties within the University of Sydney and within other Schools of the Faculty of Health Sciences. (See Electives Appendix 1)
Notes

1. Part-time mode may take up to a maximum of four times full-time mode. Program choice must be made in consultation with Course Coordinator.

2. Students must choose two clinical units.

3. At the discretion of the Course Coordinator, some List A units may be offered in flexible learning modes including distance (external) and/or block mode.

4. Graduate Diploma students must enrol in Scientific Investigations I and II.

5. See Schedule of Special Stream Electives below.

7. Permission to enrol in these units will be dependent upon approval from the Course Coordinator and/or the Head of School/Department conducting the Units and minimum/maximum numbers for these units. Approved electives may be taken in a variety or combination of modes of offer including 'on campus' mode, distance (external) mode and block mode.

Graduate Diploma of Applied Science (Physiotherapy)

The principal aims of this course are to:

* produce a body of graduates with academic and clinical skills to foster and develop the role of physiotherapy in multiple areas of physiotherapy practice, both specialised and general, and

* encourage, develop and promote a scientific approach to the evaluation of current therapeutic interventions.

The Graduate Diploma course will also prepare physiotherapists for entry into the clinical specialisation process of the Australian College of Physiotherapists and the master's degree will enable physiotherapists to apply for exemption in Stage two of the clinical specialisation process.

Enquiries
Graduate Diploma/Certificate Course Coordinator: Dr Raymond Lee (9351 9548)

* Approved Electives in each semester may be chosen from the following examples:

- COMH5034 (08450) Occupational Health and Safety
- HIMS5174 (09468) Epidemiology
- COMH5174 (08483) Introduction to Gerontology
- BEHS5141 (10459) Motor Learning
- EXSS5024 (22502) Biomechanics I
- EXSS5046 (22506) Exercise and Rehabilitation I
- BIOS4015 (11433) Health, Dysfunction and Aging
- EXSS5009 (22510) Exercise and Rehabilitation II

* Will not be offered in 1998

For a full list see Appendix 1 Electives. In addition, units from other universities, other Faculties within the University of Sydney and within other Schools, may be considered suitable as electives, subject to the approval of the Course Coordinator. Students may be permitted to apply for credit transfer in such units. Approved electives may be offered on campus, by distance (external mode), by block mode and/or a combination of modes of offer.

Credit Points 72 (minimum)

**Course Structure**

This award will be granted upon completion of a minimum of 72 credit points as outlined below.

a) 24 credit points must be completed from approved Physiotherapy units. (PHTYxxxx/16***$^2$ including List A below. The remaining 24 credit points in the graduate diploma stage may be completed from Lists B (Biomedical Sciences), C (Behavioural Sciences), and/or D (Other).

b) 24 credit points must be completed from List E (Master units). These will be taken after completion of the first 48 credit points.

### List A

- **PHTY5034** (16479) Occupational Health I
- **PHTY5035** (16480) Occupational Health II
- **PHTY5096** (16481) Introduction to Ergonomics

---

School of Physiotherapy 14 - 17
Notes
Units in this course will be offered depending on sufficient enrolments. Physiotherapy units may be offered in alternate years.

1 Part-time mode may take up to a maximum of four times full-time mode. Program choice must be made in consultation with the Course Coordinator
2 Must take two clinical units
3 At the discretion of the course coordinator, some List A units may be offered in flexible learning modes including distance (external) and/or block mode
4 Master's students must enrol in Scientific Investigations I and II
5 See schedule of Special Stream Electives below
6 Will not be offered until: 1999
7 Permission to enrol in these units will be dependent upon approval from the Course Coordinator and the Head of School/Department conducting the units and minimum/maximum numbers for these units. Approved electives maybe taken in a variety or combination of modes of offer including 'on campus' mode, distance (external) mode and block mode.
8 Students enrolled in Full-time mode, must undertake Treatise in semester one only i.e. 18 credit point
9 Will not be offered in 1998 and 1999

Master of Applied Science (Physiotherapy)
by Coursework

Enquiries
Masters Course Coordinator: Martin Mackey (9351 9374)

Admission Requirements
The Faculty may, on the recommendation of the Head School concerned, admit to candidacy for a degree of Master within the Faculty an applicant:

i) who is a graduate of the University of Sydney and has completed courses appropriate to the area of study1 in which the applicant seeks to proceed, provided that the applicant's work is of sufficient merit, or who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies;

ii) who, in addition, meets any other requirements for admission to a particular program that has been prescribed by Faculty.

In the case of the Master of Applied Science (Physiotherapy) applicants should normally have completed at least two years recent clinical experience.

Appropriate courses are those deemed equivalent to the Bachelor degree in Physiotherapy from Cumberland College of Health Sciences or the University of Sydney.

Selection
Selection, will take into account employment history, qualifications, continuing education and other professional development.

Unit Enrolment
Enrolment in all physiotherapy (PHTYxxxx/16***) units is dependent upon the applicant being eligible to enrol in this course.

Credit Transfer
Applicants holding an approved graduate diploma may apply for credit transfer in the master's program. Decisions will be made on an individual basis.

Progression
Progression from the graduate diploma to the master's program, whether the student originally enrolled in the graduate diploma or the masters program, will be dependent upon satisfactory performance in the graduate diploma units.

Course Outline
The course outline for the Master of Applied Science (Physiotherapy) is presented in Table 14.7.

Unit Descriptions
Refer to pages 14-20 to 14-25 for unit descriptions.

Note: Research Thesis - Students may be required (in consultation with the Head of School, Course Co-ordinator and/or research supervisors), to undertake one or two enabling research elective units (listed in Appendix 1) and/or participate in thesis workshop discussion sessions to support the development of their research project proposal and thesis.

Master of Applied Science (Physiotherapy)

by Research

The Master of Applied Science (Physiotherapy) course is a research degree. The course is designed to provide an opportunity for research and scholarship in specific areas of physiotherapy.

Enquiries

Course Coordinator:  Associate Professor Nick O'Dwyer
(9351 9385)

Admission Requirements

The Faculty may, on the recommendation of the Head School concerned, admit to candidature for a degree of Master within the Faculty an applicant:

i) who is a graduate of the University of Sydney and has completed courses appropriate to the area of study in which the applicant seeks to proceed, provided that the applicant's work is of sufficient merit, or who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies.

ii) who, in addition, meets any other requirements for admission to a particular program that has been prescribed by Faculty.

'Appropriate courses are those deemed equivalent to the Bachelor degree in Physiotherapy from Cumberland College of Health Sciences or the University of Sydney.

Time Limits

The standard course comprises of both enabling preparatory work to support the research and research thesis. Students who enter the course with adequate research preparation may be exempt from completing some or all of the enabling components in preparation for their Master's Research Thesis, eg. research elective units and/or thesis workshops. Usually these students would have completed an approved bachelor degree program at honours level I or II. The minimum length of the course for such students is one year full-time or two years part-time.

Course Outline

The course outline for the Master of Applied Science (Physiotherapy) is presented in Table 14.8.

Unit Descriptions

Refer to pages 14-20 to 14-25 for unit descriptions.
Unit Descriptions

EXSS5024 (22525)  Advanced Cardiovascular Physiology
Semesters 1 or 2-3 credit points
This unit will provide the student with knowledge of alterations in cardiovascular physiology caused by disease. An aspect of this unit will be practical experience in physiological measurements of the respiratory system. The unit will also include the interpretation of physiological measurements and the implications of these for exercise prescription. This unit will not be offered until 1999.

BIOS5035 (11480)  Advanced Respiratory Physiology
Semester 1 - 3 credit points
This unit will provide students with in-depth knowledge of respiratory physiology in adults and children and alterations caused by disease. An aspect of this course will be practical experience in physiological measurements of the respiratory system.

BIOS5026 (11455)  Anatomy and Biomechanics A
Semester 1 - 2 credit points
This unit will further students' understanding of the anatomy and biomechanics of the thoracic and lumbar vertebral column and the lower limb. The focus is on critical evaluation of existing manipulative physiotherapy procedures and on recent scientific developments of relevance to disorders of the musculoskeletal system.

EXSS5022 (22523)  Anatomy and Biomechanics B
Semester 2 - 2 credit points
This unit will further students' understanding of the anatomy and biomechanics of the cervical and thoracic vertebral column and the upper limb. The focus is on critical evaluation of existing manipulative physiotherapy procedures and on recent scientific developments of relevance to disorders of the upper body.

EXSS5002 (22503)  Applied Physiology I
Semester 1-5 credit points
This unit will provide students with a developing infrastructure for Applied Physiology II. Initially, this will involve a systems approach with emphasis on applied physiological situations. Only when the basic physiological systems have been reviewed and expanded will the more integrative aspects of the exercise response be attempted. While the unit content is broad, it nevertheless assumes a sound physiology background. Particular attention will be given to the cardiovascular, respiratory and metabolic systems.

EXSS5004 (22505)  Applied Physiology II
Semester 2- 4 credit points
Pre-requisite Applied Physiology I (11429)
This unit will build upon the principles and information provided in Applied Physiology I, and will focus upon the regulation of the exercise response. While the changes that occur during exercise are important, this unit will aim primarily at providing the student with the necessary understanding of the mechanisms behind these changes. Particular attention will be given to cardiovascular control, adaptation to dynamic and static exercise, metabolic regulation, respiratory control and thermoregulation. It is expected that while the content of this unit will remain fixed, the level and emphasis of each section will vary according to current staff background and research interest.

BIOS5036 (11481)  Cardiopulmonary Anatomy
Semester 2 - 2 credit points
This unit aims to investigate the relationship between the anatomical structure and functions of both the respiratory and cardiovascular systems. The unit contains coursework covering the musculoskeletal anatomy of the head, neck, trunk, shoulder girdle and the histology and gross anatomy of the respiratory and cardiovascular systems. The unit emphasises the relationship between structure, function and dysfunction and is taught from a theoretical and practical approach in the anatomy laboratory, and by self-directed learning.

PHTY5056 (164D7)  Cardiopulmonary Physiotherapy A
Semester 2 - 4 credit points
This unit will require the student to thoroughly investigate various cardiopulmonary interventions and their application to clinical practice. Each student will present a seminar based on the theoretical investigation of a specific cardiopulmonary intervention.

PHTY5059 (164E3)  Cardiopulmonary Physiotherapy B
Semester 2 - 4 credit points
In this unit the knowledge gained in Applied Physiology I, Advanced Respiratory Physiology and/or Advanced Cardiac Physiology will be applied to specific case studies with the aim of forming a diagnosis for each case and identifying clinical problems and designing appropriate clinical intervention.

EXSS5010 (22511)  Clinical Biomechanics
Semester 2 - 2 credit points
Pre-requisite Mechanics of Human Movement (11468)
The purpose of this unit is to improve students' capacity to predict the mechanical effects of training regimens, trauma movement styles and their repetition on tissues and regions of the body, and to differentiate this response in different age groups. This will be achieved by the study of sources and characteristics of forces and the ways in which they are transmitted through the body via tissues and regions of the body. High and low technology biomechanical measurement methods which assist in the development of clinical biomechanical measurement protocols will be examined.
This unit focuses on promoting an understanding of biomechanical principles that govern effectiveness of skilled performance. The argument that biomechanics and biomechanical testing procedures improve performance in individuals with movement dysfunction and in prevention of injury is supported with clinical examples. The unit provides the opportunity for development of skill in data collection using biomechanical instrumentation. Enrolment in this unit is only open to graduates who have studied Biomechanics previously.

This unit will provide two weeks access to clinical experience in specialist areas enabling the student to apply knowledge gained during the course and develop clinical expertise. Clinical placement will be dependent upon the identified needs of the student and the availability of appropriate clinical areas. In addition, students will observe and report on two clinical investigations chosen from a prescribed list.

This unit will focus on assessment, diagnosis and management of injury as well as prevention of injury and screening of athletes. This will include a critical evaluation of current procedures and practices used in the management of the sports person, and the role of the sports professional in the prevention of injuries. The unit aims to integrate relevant knowledge from related sciences into sports physiotherapy practice, such as response of body tissue to injury, immobilisation and rehabilitation, the influence of these factors upon tissue repair and the restoration of function.

This unit involves both on- and off-campus clinical hours. It provides students with the opportunity to apply knowledge gained during the course within a clinical environment. Clinical placement will depend upon identified needs of the students and the availability of appropriate clinical areas.

This unit involves both on- and off-campus clinical hours. It provides students with the opportunity to apply knowledge gained during the course within a clinical environment. Clinical placement will depend upon identified needs of the students and the availability of appropriate clinical areas.

This unit involves both on- and off-campus clinical hours. It provides students with the opportunity to apply knowledge gained during the course within a clinical environment. Clinical placement will depend upon identified needs of the students and the availability of appropriate clinical areas.

This unit involves both on- and off-campus clinical hours. It provides students with the opportunity to apply knowledge gained during the course within a clinical environment. Clinical placement will depend upon identified needs of the students and the availability of appropriate clinical areas.

This unit involves both on- and off-campus clinical hours. It provides students with the opportunity to apply knowledge gained during the course within a clinical environment. Clinical placement will depend upon identified needs of the students and the availability of appropriate clinical areas.
with new approaches to the management of the person with chronic or recurrent injuries. Students further develop the cognitive skills of clinical reasoning and problem-solving applied to musculoskeletal disorders of the upper body, using the knowledge and experience gained in the co-requisite units. In this way, this unit provides a means for the integration of the other units studied.

PHTY5079 (16514A) Clinical Sports Physiotherapy A
Semester 1 - 5 credit points
Co-requisite Clinical Management of Sports Injuries A

PHTY5080 (16514B) Clinical Sports Physiotherapy B
Semester 2 - 5 credit points
Pre-requisite Clinical Sports Physiotherapy A
Co-requisite Clinical Management of Sports Injuries B

This unit will provide the opportunity for students to integrate their knowledge gained in other units in this course, and their previous clinical knowledge and skill, with new approaches to the management of the person with a sports injury. Clinical learning opportunities will be provided in a variety of spheres of sports physiotherapy practice including different age groups and different types of sport, and ranging from acute field management to procedures designed to prevent injury or effectively deal with chronic or recurrent injuries.

Note: Overseas physiotherapists can apply for registration or approval to practise during the course.

PHTY5048 (164B3) Distinguished Scientist Series
Semester 1 - 3 credit points

This unit involves the study of a researcher’s (or group of researchers’) work in detail. The researcher(s) will be invited to the campus to participate in seminars to enable the students to discuss and explore issues with them directly. The content will be decided on the basis of the individual interests of the students.

BIOS5034 (11470) Functional Anatomy
Semester 2 - 4 credit points

This unit aims to investigate the relationship between anatomical structure and function, particularly as it relates to the body during exercise. It will include advanced musculoskeletal anatomy of the limbs and trunk undertaken from a theoretical and practical approach in the anatomy laboratory.

COMH5136 (08576) History and Philosophy of Scientific Methodology
Semester 1 - 3 credit points

This unit is designed to provide students with a critical perspective on science as a specific form of knowledge. It introduces students to the major philosophies of the scientific enterprise taking into account the social versus natural science controversy.

PHTY5088 (16522) Independent Study in Physiotherapy A
Semester 1 or 2 - 2 - 2 credit points

In this elective unit, individual participants can pursue a specific area of study related to the development of knowledge and skills in an area of professional relevance. The participant will complete a personal learning contract under the supervision of a tutor.

PHTY5089 (16523) Independent Study in Physiotherapy B
Semester 1 or 2 - 2 - 3 credit points

In this elective unit, individual participants can pursue a specific area of study related to the development of knowledge and skills in an area of professional relevance. The participant will complete a personal learning contract under the supervision of a tutor.

PHTY5090 (16524) Independent Study in Physiotherapy C
Semester 1 or 2 - 4 credit points

In this elective unit, individual participants can pursue a specific area of study related to the development of knowledge and skills in an area of professional relevance. The participant will complete a personal learning contract under the supervision of a tutor.

EXSS5020 (22521) Mechanics of Human Movement
Semester 1 - 4 credit points

This unit will provide biomechanical concepts and skills required for the analysis of human movement. Principles of kinematics, kinetics and electromyography in dynamic muscle movements, and mechanical energy distribution will be studied with reference to selected motor activities. Laboratory sessions will be used to provide illustrations of the above principles and to give students experience with biomechanical laboratory techniques. This unit is only open to graduates who have studied biomechanics previously.

BEHS5144 (10472) Motor Performance and Learning
Semester 1 - 3 credit points

The aim of this unit is to study, in-depth, the factors influencing skill acquisition, skill relearning and skill performance and their role in modifying inappropriate, but automated motor behaviours. These may need to be changed in response to disease or continuing injury, in order to improve functional outcome and/or prevent further injury. Topics to be covered include: motivation/goal setting; operant behavioural approach; optimising the benefits of physical practice; attention, concentration and arousal; mental practice; awareness during performance; feedback and evaluating the effectiveness of strategies designed to modify inappropriate, but automated movement behaviours.
PHTY5085 (16519) Neurological Rehabilitation
Semester 2- 4 credit points
This unit provides the forum for students to examine the process of rehabilitation, the environment in which it takes place, factors which may influence outcome and the promotion of physical conditioning.

BIOS5028 (11457) Neurophysiology and Pharmacology
Semester 1-2 credit points
This unit focuses on the motor and sensory systems of neurophysiology and recent scientific developments in these areas. Special emphasis is given to the neurophysiological bases of pain and pain modulation.

PHTY5034 (16479) Occupational Health I
Semester 1-3 credit points
This unit looks at the discipline of occupational health within a social system. After considering significant steps in the evolution of the discipline in the western world, it considers the social, political and economic issues which have historically shaped the development of occupational health legislation and practice.

PHTY5035 (16480) Occupational Health II
Semester 2 -3 credit points
This unit aims to give the student specific knowledge and skills to apply in occupational health practice and the ability to identify which occupational health professional has the expertise to deal with an identified risk. The unit will encompass both academic and practical components.

PHTY5060 (164E5) Optimising Functional Motor Performance
Semester 1 - 5 credit points
In this unit, students examine normal motor behaviour in order to develop skill in analysing motor performance, planning and implementing motor training and preventing disabling adaptive processes. This unit involves both clinical and academic experiences.

PHTY5054 (164D3) Paediatric Physiotherapy A
Semester 1 - 4 credit points
This unit is designed to provide the student with an understanding of physiotherapy in the care of infants utilising recent relevant research findings. Students will study the analysis of infant dysfunction and the effect of environment. Unit content includes management of respiratory, musculoskeletal and nervous system disorders in neonates, infants. In addition, the unit includes management of applied biomechanics and human ecology as they relate to clinical practice in paediatrics.

PHTY5055 (164D5) Paediatric Physiotherapy B
Semester 2 - 4 credit points
This unit is designed to provide the student with an understanding of physiotherapy in the care of children and adolescents utilising recent relevant research findings. Unit content includes management of respiratory, musculoskeletal and nervous system disorders in children and adolescents plus care of children with special needs. Health promotion and well-being of children is also considered within the broader concepts of the community and health care systems. In addition, students will study applied biomechanics and human ecology.

PHTY5043 (164A7) Professional Skills in Manipulative Physiotherapy A
Semester 1- 7 credit points
Co-requisites Anatomy and Biomechanics A (11455), Neurophysiology & Pharmacology (11457)
Students advance their skills in manipulative physiotherapy which includes examination of patients with musculoskeletal disorders of the lower body and planning and implementing appropriate treatment programs for those disorders. Students also develop a greater understanding and skill in the process of communication between the patient and the physiotherapist.

PHTY5044 (164A8) Professional Skills in Manipulative Physiotherapy B
Semester 2 - 7 credit points
Pre-requisite Professional Skills in Manipulative Physiotherapy A (164A7)
Co-requisites Anatomy and Biomechanics B (11456), Psychology (10458)
Students advance their skills in examination of patients with musculoskeletal disorders of the upper body, in planning and implementing appropriate treatment courses for these disorders, and in evaluating the effectiveness of these treatment programs.

BEHS5030 (10458) Psychology
Semester 2-1 credit points
The aim of this unit is to further develop students' understanding of psychological aspects of pain and loss of function, and psychological approaches to the management of stress, illness and pain.

BEHS5080 (10548) Psychology of Adolescent Development
Semester 2-3 credit points
This unit provides an overview and critical evaluation of theoretical approaches which attempt to explain adolescent development and adjustment. Aspects of physical growth and psychological changes will be examined together with factors affecting development and the impact of those changes. Discussion of cognitive and psychosocial development during adolescence will highlight interaction between the adolescent, self and society. Topics will include identity formation, relations with peers and family, sexuality and intimacy, body image and personality; the 'youth culture' and the role of the media. Adolescent health concerns will also be discussed including alcohol and drug abuse, STDs adolescent suicide.

BEHS5079 (10547) Psychology of Child Development
Semester 1 - 3 credit points
Biological factors, sociocultural expectations, life experiences, personal choices and chance events all contribute to the process of human development. This unit addresses theoretical and applied perspectives related to the study of child development and adjustment. The period of pregnancy (genetic and biological influences) and prenatal development are discussed together with psychosocial factors associated with pregnancy and the birth process. The period of infancy and childhood is examined and topics such as sensory, motor, cognitive and moral development are explored with reference to the effects of variation in attachment, class and culture. The development and function of play and its importance are highlighted together with social and emotional development including: sex, role development, friendship patterns and self-esteem and one's self-concept.
BEHS5142 (10460)  Psychosocial Aspects of Sport
Semester 2 - 3 credit points
The first part of this unit considers psychological factors in sports performance. Topics covered include: managing motivation, anxiety and aggression; arousal-performance relationships; psychosocial characteristics of peak performance; personality and sport performance; relaxation and energising techniques; cognitive techniques; attention control-training; goal-setting; leadership; team cohesion; athlete staleness and burnout; stress, injury and psychological rehabilitation.

The second part of the unit is concerned with the historical development of leisure and its relationship to work; sport as a dominant aspect of Australian culture; sources of tensions and conflicts in sport and leisure which are related to power, race, class, gender, age, ideology in sporting and leisure context.

PHTY6014/PHTY6015 (16503A/16503B) Research Thesis A/Research Thesis B
The successful submission of a research thesis is the ultimate objective of the course. This process will necessitate a collaborative endeavour between the student and the supervisor and will involve the student's advisory committee. Students may be required (in consultation with the Head of School, Course Co-ordinator and/or research supervisors), to undertake one or two enabling research elective units and/or participate in thesis workshop discussion sessions to support the development of their research project proposal and thesis. This preparatory work would be designed to optimally prepare each student for the research thesis. It could consist of some or all of the following components:
1. Enabling research elective unit(s), which allow the student to pursue an area of study related to the development of knowledge and skills in specific area(s) of research methods and/or statistical analyses.
2. Thesis discussion workshops which are designed to orient students to study at master's level, support the development of a research proposal, to exchange and test ideas pertaining to the research proposal, to report on work in progress, to defend procedures to be used in the research project and to support specific sections of the research thesis.

PHTY5070 (16508) Scientific Investigation I
Semester 2 - 3 credit points
This unit develops students' skills in writing scientifically. It examines common statistical tests with the aim of enabling students to understand research papers as well as enabling them to choose appropriate statistical methods of analysing data. It also examines issues relating to measurement including reliability and validity. Students will have the opportunity to apply statistical tests to small data sets of measurement procedures that they will collect, or that have been previously collected.

PHTY5074 (16512) Scientific Investigation II
Semester 1 - 3 credit points
This unit develops students' skills in writing scientifically. The content for this unit covers developing research questions and writing them up as a grant submission. The issues of developing research questions by setting the inquiry in the context of the state of the profession, the state of scientific knowledge of the area and an evaluation of existing paradigms will be examined. Students' learning will involve preparing an annotated bibliography and writing a proposal as if applying for funding from the Physiotherapy Research Foundation.

PHTY9003 (16900) Special Program for Qualifying Students
The Special Programs are not units in the normal sense and do not necessarily involve a common syllabus and should not be compared between individual cases.

PHTY5097 (164E4) Topics in Neurological Physiotherapy
Semester 2 - 5 credit points
This unit covers a wide range of neurological topics specifically related to the dyscontrol characteristics associated with neurological lesions and the resultant adaptations of both motor and psychological behaviour. Students will also study the historical developments in neurological physiotherapy.

PHTY5051/PHTY5052 (164B4A/164B4B) Treatise A/Treatise B
Semester 1 and 2 - 18 credit points
The treatise involves the preparation of a non-research work in a specific area of interest under supervision. It is a substantial scholarly work that is an exposition of a range of knowledge and is expected to include original argument substantiated by reference to acknowledged authorities. It does not usually involve data collection but may take the form of developing a clinical tool. The aim of this work is for students to integrate background material and provide cohesive, structured suggestions for physiotherapy development or practice. It is carried out in partial fulfillment of the master's degree by coursework. A designated number of hours are set aside for treatise workshops for classes in scientific writing but the majority of the hours will be spent in consultation with the supervisor or in independent study.

Additional unit descriptions
Refer to Appendix 1 of the 1997 Postgraduate Handbook for descriptions of Research electives. Refer to Chapter 8 of the 1997 Postgraduate Handbook for descriptions of School of Community Health graduate electives. Refer to Chapter 10 of the 1997 Postgraduate Handbook for descriptions of School of Health Information Management graduate electives. Refer to Chapter 5 of the 1997 Postgraduate Handbook for descriptions of Department of Behavioural Sciences graduate electives. Refer to Chapter 6 of the 1997 Postgraduate Handbook for descriptions of Department of Biomedical Sciences graduate electives.
15 Research Centres

The Faculty has three Research Centres established to encourage research in specific areas of the health sciences. Students can enrol in a research degree (Master of Applied Science or PhD) in any of the Research Centres. Information on the degree of Doctor of Philosophy is contained in Chapter 4.

Master of Applied Science

Admission Requirements
In order to qualify for admission to this course:

i) The Faculty, may, on the recommendation of the Head of the Department/School/Centre concerned, admit to candidacy for a degree of Master within the Faculty an applicant:
   a) who is a graduate of the University of Sydney and has completed courses appropriate to the area of study in which the applicant seeks to proceed, provided that the applicant’s work is of sufficient merit, or who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies;
   b) who, in addition, meets any other requirements for admission to a particular program that has been prescribed by Faculty.

ii) Notwithstanding subsection (i), the Academic Board may admit a person to candidacy in accordance with the provisions of Chapter 10 of the By-laws.

Selection Process
Students wishing to enrol in a research degree in one of the Faculty Research Centres should apply for admission to candidacy within the Centre.

The Centre in which admission has been sought will select from among the applicants who meet the entry requirements.

Course Outline
The course outline for the Master of Applied Science is presented in Table 15.1.

Masters Research Thesis
The successful submission of a research thesis is the ultimate objective of the program. The process will necessitate a collaborative endeavour between a student and the supervisor and will involve a student's advisory committee.

Australian Stuttering Research Centre

This Centre of Faculty was established in January 1996, and is supported partly by Faculty funds and partly by external Commonwealth Research Grants. Staff of the Centre work closely with speech pathologists in the Stuttering Unit, Lidcombe Health Service. The purposes of the Centre are to:

- conduct world class stuttering research
- establish national and international collaborative research links
- provide mentorship for Australian stuttering treatment researchers
- disseminate to Australian and international speech pathologists information about how stuttering treatment research informs clinical practice
- provide professional continuing education to Australian and international speech pathologists
- provide postgraduate research programs in stuttering research
- disseminate to the Australian community information about stuttering treatment

Staff research interests draw on several disciplines that are applied to stuttering research, including acoustics, linguistics, physiology and psychology.

For enquirers contact the Director of the Centre, Associate Professor Mark Onslow.
Ph: 9 351 9061, Fax: 9 351 9392
Email: M.Onslow@cchs.usyd.edu.au
http://www.cchs.usyd.edu.au/Academic/ASRC
National Voice Centre

The National Voice Centre is an inter-faculty University Centre involving principally the Faculty of Health Sciences and the Sydney Conservatorium of Music, with support from a number of other faculties of the University and community groups. It is dedicated to excellence in the art, care and science of voice.

Voice Research Group - Faculty of Health Sciences

The Voice Research Group within the Faculty of Health Sciences is part of the National Voice Centre. Its mission is to perform state of the art research in all aspects of voice and wind instrument performance and to provide postgraduate supervision for students enrolled in the National Voice Centre.

Postgraduate research programs offered include Master of Applied Science and Doctor of Philosophy. Full-time academic staff include Associate Professor Pamela Davis and Dr William Thorpe. Dr Stephen Cala, Department of Respiratory Medicine, Westmead Hospital is a research associate and involved with several existing research programs. Artistic advisors for postgraduate projects in performance areas are arranged through the National Voice Centre.

Current research projects include a study of the physiology of breathing movements in classical singing and flute playing, investigations into the role of respiration in emotional expression, the development of physiological based models of singing voice production and neural mechanisms in vocal control.

For enquiries contact the Director of the Centre, Associate Professor Pamela Davis.

Rehabilitation Research Centre

In March 1989, the Cumberland College of Health Sciences established the Rehabilitation Research Centre with the charter to raise research productivity in the area of rehabilitation. In 1994, the Rehabilitation Research Centre became a research centre of the Faculty of Health Sciences.

Objectives of the Centre

The research objectives for the Rehabilitation Research Centre are to:

- increase research productivity, publication and scholarship in the area of rehabilitation
- stimulate and provide support for existing researchers in the Faculty of Health Sciences
- stimulate and provide training programs for beginning researchers, particularly staff and clinicians
- develop proposals for funding so as to support the continued activities of the Rehabilitation Research Centre

The educational and promotional objectives are to:

- attract eminent rehabilitation researchers to the Faculty to collaborate with staff at the Centre
- provide post doctoral fellowships
- provide stimulating research environments for postgraduate students
- strengthen relationships between the Rehabilitation Research Centre and other clinically and research orientated institutions
- organise and conduct national and international symposia on rehabilitation issues relevant to the Centre's research directions
- foster and promote the interchange of ideas between researchers and local clinicians using the workshop model
- provide a limited, but high quality rehabilitation service for patient assessment, prescription and follow-up through private funding arrangements

For enquiries contact the Director of the Centre, Associate Professor Glen Davis.

Note

<sup>1</sup> In the thesis preparation it may be deemed appropriate, by the principal supervisor, for a student to enrol in graduate elective units.
The chapter provides detailed course information for the Master of Health Science (Management) offered in Singapore, with the Faculty of Health Sciences. The off-shore (Singapore-based) program is conducted by the Faculty of Health Sciences in conjunction with the Singapore Institute of Management. Graduates from the program will graduate with a University of Sydney award, and the role of the Singapore Institute of Management is to provide a vehicle for implementing the course.

Stage Total: 24
Master of Health Science (Management)

The Faculty of Health Sciences offers the Master of Health Science (Management) to students in the health sector of Singapore. The program is designed to develop the health services management knowledge and skill of students.

Admission requirements

i) A Bachelor degree in health sciences from a recognised tertiary institution;
    AND

ii) A minimum of three years experience in the health services of a kind acceptable to the Dean of the Faculty of Health Sciences;
    OR

iii) Such qualifications as are deemed to be equivalent to (i) or (ii).

Course Outline

The course outline for the Master of Health Science (Management) is presented in Table 16.1.

Unit Descriptions

SING5001 (20501) Organisational and Managerial Behaviour
Semester 1 - 6 credit points
Historical development of management and organisations; perspectives on organisations; individual and group behaviour; theories of organisation; organisational politics, culture, structure; organisational communication.

SING5002 (20502) Health Economics
Semester 1 - 6 credit points
Introduction to health economics as a way of thinking about problems of resource allocation (priority setting) in health care. Introduction to microeconomics, health care markets, market failure, government intervention and the values that underly decision-making.

SING5003 (20503) Health Service Leadership and Change
Semester 2 - 6 credit points
Historical and current theories of leadership; leader-follower behaviour; the language, rhetoric and practice of leaders; the imperative for change; models of change; change management strategies and tactics; continuous quality improvement; application to the Singapore environment.

SING5004 (20504) Accounting and Financial Management for Health Service Managers
Semester 2 - 6 credit points
Accounting and information needs; accounting principles; financial statements; inventory, asset and financial reporting and management; management accounting; cost, budgeting and expenditure analysis; funding options and models in health care; investments; financing; dividends; risk management.

Year 2

SING5005 (20505) Health Service Marketing
Semester 1 - 6 credit points
The marketing concept; theory and practice; services marketing and its relationship to health care; analysing market needs in health care; marketing strategy, planning and development; marketing and competitor analysis; competitor behaviour; marketing program design; ethical marketing for health care; case studies in health services marketing; marketing program evaluation.

SING5006 (20506) Strategic Management and Planning
Semester 1 - 6 credit points
Environmental scanning; scenario planning; strategic behaviour; managing strategically; expressing strategic intent; competitive strategy; ideas, tools and techniques of the strategist; the learning organisation; strategic planning; evaluation; relationship to leadership.

SING5007 (20507) Health Sector Human Resource Management and Industrial Relations
Semester 2 - 6 credit points
HRM and ER theories; historical context; skills; the IR system in Singapore; role and application of various HRM and IR techniques; internal and external labour markets; motivation and productivity; OH&S; EEO; globalisation of HRM and IR.

SING5008 (20508) Information and Decision Analysis
Semester 2 - 6 credit points
Computing and information analysis; decision analysis and control; Information systems development, management; decision support systems and EIS; health information management - sources, limitations, issues, principles.

Year 3

SING5010 (20509A) Health Services Management Project A
Semester 1 - 12 credit points
Identify, develop, analyse and present a project on an approved health service management topic.

SING5011 (20509B) Health Services Management Project B
Semester 2 - 12 credit points
Identify, develop, analyse and present a project on an approved health service management topic.
Clinical Education is an integral part of the overall learning experience for students in all undergraduate and graduate courses offered in the Faculty of Health Sciences. In undergraduate courses, students can expect to spend between 25 - 40% of their total course hours in clinical education. The purpose of clinical education is to provide students with opportunities to integrate knowledge and skills at progressively higher levels of performance and responsibility during the course. Under the supervision of qualified practitioners, students seek to apply theories and scientific findings, learned in their academic study, and develop their skills through interaction with clients and practitioners.

Clinical education also provides students with situations in which to practise interpersonal skills and develop clinical reasoning skills, management skills and characteristics essential to productive working relationships. It also provides an opportunity for students to develop clinical reasoning skills, management skills and as well as to master techniques that develop competence at the level of a beginning practitioner.

Clinical education is provided in a variety of settings reflecting the current trends for the profession concerned. The facilities include hospitals, government agencies, schools, community health centres, private health agencies, private practice, and on-campus clinics. The settings may be located in metropolitan and rural areas of New South Wales and, occasionally, interstate and overseas.

The timing and structure of clinical education will vary according to School preferences. Patterns include day-release programs during the semester, clinical simulation in the classroom, and periodic block placements.

Students should be aware of the patterns of clinical education for their course as the timing and structure of clinical education affect the exact length of courses and vacation time.

Arrangement of Clinical Education
Clinical education is arranged by negotiation between staff of the respective School, acting as clinical co-ordinators, and the directors of the individual clinical settings. The School negotiates the standard, type of experience, and number of student places to be offered. In most cases, formal agreements are signed between the University and the placement facility. In some instances, the arrangements are informal, reflecting the mutual dependency of health and education in providing academically and clinically competent health professionals to meet the challenges confronting them in delivering quality health services in a complex society.

Assessment of Students
Students are expected to take an active responsibility for their own education by identifying their own learning needs, assisting the supervisor in planning and implementing the learning experiences, being familiar with and adhering to procedures and rules laid down by the University and the affiliating centre, and in evaluating their own performance. The clinical supervisor performs the role of teacher, facilitator, co-ordinator and professional role model. Supervision may be conducted by School staff, or by practitioners expert in their professional area. The nature of the assessment varies across Schools but usually includes a student evaluation by both the supervisor and the student, the satisfactory completion of a specified number of hours, as well as a variety of assignments including case studies, essays, verbal presentations, and practical examinations. The clinical education subject may be assessed on a graded scale or on a Pass/Fail basis.

Rules Applying to Clinical Education
In all clinical situations, the welfare of the client is paramount. The client's dignity and rights to privacy and confidentiality must be respected at all times. Students who do not comply with the rules governing ethical practice may be removed from the clinical placement.

During clinical affiliations, the student is expected to conform with the normal professional conduct required by the host institution. In some institutions, the wearing of uniforms and identification badges is demanded, while in other facilities a less formal attire is acceptable. Students should consult the section of the Handbook, relating to clinical education subject for their particular course, for information relating to uniforms and name badges.

There are a number of rules and conditions applying to students regarding the amount of clinical education, the timing of it, the selection of sites, and types of experiences required. These rules have implications for progression in the course and acceptance into the relevant profession after graduation.

Students should consult the relevant Handbooks of their Schools for such rules and details of the Clinical Education/Fieldwork/Professional Experience Program.

Students should note that the Faculty has resolved as follows: "Candidates for any (degree, diploma or certificate) whose conduct or work towards their award is unsatisfactory may, on the recommendation of the Head of School/Department concerned, be refused permission by the Faculty to undertake or continue the Clinical Educational Fieldwork/Professional Experience) component of their award."

Clinical Practice Dates
Please refer to Clinical Practice Dates listed under each course.
Insurance Coverage for Students on Fieldwork

The University has in place a public liability and professional indemnity policy which extends to protect students from claims made against them which arise out of any negligent act, error, or omission on the part of the student during such fieldwork. The territorial limit for this coverage is worldwide with the exception of U.S.A. and Canada where the coverage may be limited. The Properties Services Division should be advised if fieldwork is to be undertaken in U.S.A. or Canada.

Other Relevant Policies

The University has a personal accident policy covering postgraduate students against accidental bodily injury, providing death and capital benefits, as well as a weekly benefit whilst disabled. The Students’ Representative Council of the University maintains a similar policy for undergraduates.

Information on Infectious Diseases for Students and Clinical Teachers

Infectious diseases are of concern to all those working in clinical settings. Whilst an understanding of the transmission of diseases such as AIDS, hepatitis and tuberculosis is particularly important, all students and clinical teachers must acquaint themselves with information about the potential dangers of all communicable diseases likely to be experienced in Australia. They should be aware of sources of infectious micro-organisms, their modes of transmission and the ways of reducing the risk of infection to self, patients and others.

Detailed information on this subject is contained in the documents such as "Infectious Disease and You" published by the Faculty. A copy may be obtained from the Student Administration Services Division (Cumberland).

Further information about infectious diseases is available, in confidence, from the Faculty Adviser, Ms Neryla Jolly, Head, School of Orthoptics (9 351 9250).

Counselling Support for Students on Clinical Placements

Students who feel that they have any personal/family issues which may impact negatively on their performance on clinical placements should contact either their Clinical Coordinator for referral to the Counsellor or may approach the Counsellor at Cumberland directly. The Counselling service at Cumberland is both FREE and CONFIDENTIAL and students are encouraged to ask for help as early as possible before their placements begin. The Counsellor can also provide support for students already on placements who find they are having problems with after hours appointments or by telephone. Typical problems for students on clinical include balancing work and family, stress, interpersonal relationships, supervisor - student relations, anxiety about the workplace etc. The Counsellor is located at Room A005 in A Block and appointments can be made by using the booking sheet there or by calling the Counsellor on 9 351 9473.

School of Communication Sciences and Disorders

The School of Communication Sciences and Disorders wishes to acknowledge the contributions to the clinical education program December 1996 - December 1997 of the following agencies.

Public Hospitals

Metropolitan
- Auburn Hospital
- Balmain Hospital
- Bankstown/Lidcombe Hospital
- Blacktown Hospital
- Campbelltown Hospital
- Canterbury Hospital
- Concord Hospital
- Hornsby Kuringai Hospital
- Liverpool Hospital
- Mt Druitt Hospital
- Nepean Hospital
- New Childrens Hospital

18 Facilities and Services

Bookshop

The University Co-operative Bookshop operates a branch on the Cumberland campus. Situated at the ground level of the Student Guild, the Bookshop holds all prescribed texts and various stationery and software items.

Childcare

An on-campus child care centre for children aged between 0 - 5 years is available. For further information call 9 749 7575.

Counselling Service

A counselling service is provided through Student Welfare Services to assist students who wish to discuss concerns of a personal, academic or vocational nature. The service is free and confidential. The Counsellor, a counselling psychologist, is located in A005 in A Block. Students who wish to make an appointment with the Counsellor can telephone 9 351 9473, or book an appointment directly by writing in a time slot on the door. Appointments outside normal hours are available for students on clinical placements or who are studying part-time. Students can also arrange to see a counsellor at the Counselling Service on the Camperdown campus by calling 9 351 2228.

Credit Union Facilities

The Unicom Credit Union Ltd has an agency with an automatic teller machine on campus. The agency is open on Thursdays, between 12.00 noon and 2.00 pm.

Cumberland Student Guild

At enrolment all students pay for membership to the Student Guild, a student representative body. As Guild members, Cumberland students can access either SUPRA (postgraduates) or SRC (undergraduates) on Camperdown Campus and claim associate membership of the relevant sports association, either SUWSA (women) or MSU (men).

Guild Facilities

The following are available on campus:

• F Block: Guild Cafeteria
• S and T Blocks: food and drink vending machines
• U Block (Guild Building): Guild Coffee Shop, Guild Bar, Guild Shop (agent for Australia Post), Guild MacLab, and subsidised photocopier centre.

Guild Office

Advice on Guild programs and facilities is available at the Guild Service Centre, located in the Guild Shop, open daily during semesters from 8.30am to 6.00pm. Enquiries can be made on 9 351 9099, or fax 9 351 9971. The Guild is the authorised uniform supplier for the Schools of Occupational Therapy, Orthoptics and Physiotherapy, and the Faculty of Nursing (Cumberland).

Student Representation

The Guild supports student representatives on various Faculty committees, and also individuals and student groups on academic rights issues. The Guild's Management Committee represents the interests of all students on campus. Any student can nominate for election as a student representative.

Student Resources and Support Services

These include:

• The Resource Officer, (who is also a campus Discrimination Adviser), located in the Guild Office, who helps with AUSTUDY/ABSTUDY and HECS issues, Appeals and Show Cause processes, and welfare matters.
• The Activities/Sports and Recreation Officer, who manages the new Sports Centre, organises a wide range of lunchtime recreational events and also provides support for the Guild affiliated clubs and societies. Those interested in forming a special interest group should obtain the Clubs and Societies Manual from the Guild Office.
• Subsidies toward costs of students attending conferences directly related to courses of study and those selected as sports representatives at State or National level.
• Conduct of research projects related to academic issues affecting students.
• Publications such as the monthly student newspaper, Corpus Callosum, the Clubs and Societies Manual and the Student Guild Diary.

Further details of Guild facilities and services are in the Cumberland Student Guild Diary issued to students in Orientation Week and also available at the Guild Office.

Disability Services

Students with disabilities or other special needs are assisted by the Disabilities Officer, Student Welfare Services, D Block. The Faculty has numerous resources to assist students, and a professional interest and commitment to provide high quality services. Consultations are confidential.

Students with disabilities are strongly advised to inform University staff of their needs as early as possible each academic year. A disability might be apparent or invisible, and might range from very slight to severe. It could be a physical, sensory, psychological, medical, or learning disability, or a combination of these. Students can experience difficulty meeting their educational commitments because of the educational disadvantage created by a disability. A variety of support services are available includingnotetakers, scribes, special examination arrangements, library facilities including the Special Study Room, and equipment in D Block for use and loan. Such assistance can minimise the disadvantage that might otherwise occur.

In the first instance, students are invited to contact Student Welfare Services on 9 351 9638 or 9 351 9081 for a consultation on what support services they
need, for information on what assistance is available, and for guidance on University procedures. Students may wish to have a confidential discussion initially with the student counsellor by telephoning directly on 9 351 9473.

**English Language Tuition**

The tutors who work in the Language and Learning Unit of Student Welfare Services provide supplementary and concurrent tuition in English for Academic Purposes and English for Clinical Placements for any student enrolled on Cumberland campus. This service is in the form of weekly lunchtime workshops and one-to-one tutorials and is particularly valuable for both international and local students whose first language is not English. Preparatory courses are offered to students who have accepted a place in the Faculty in January-February prior to the start of the academic year. The Language and Learning Unit tutors are also trained in cross-cultural communication. This enables them to assist native speakers of English (staff or students) in communicating clearly with those who speak English as a second language. The above services are only for enrolled students. Applicants who require preparatory courses to raise their English language proficiency to a level high enough to enter the University will need to study elsewhere before applying. Enquiries are welcome. Telephone the Language and Learning Unit directly on 9 351 9631 or 9 351 9319, or reception on 9 351 9638 or fax 9 351 9635.

**Equal Employment Opportunity and Affirmative Action**

The University has an EEO Unit and an EEO and Affirmative Action Management Plan. EEO and Affirmative Action policies are designed to prevent discrimination, promote equity, and work in the interests of target groups who have suffered discrimination in the past. Such groups include Aborigines, women, people from non-English speaking backgrounds and people with mental or physical disabilities.

The campus has its own Cumberland Equity Advisory Committee (CACE) which provides a forum for discussion and promotion of these policies.

**Faculty Discrimination Advisers**

All staff and students within the University have the right to be treated fairly and with respect. The University, both as an employer and as a provider of educational services, seeks to promote an environment which supports the productivity, self-esteem and personal work goals of both staff members and students.

The University of Sydney is committed to the provision of equal opportunity for staff and students, which includes ensuring the absence of discrimination on the grounds of sex, pregnancy, race (including colour, ethnic background or national identity), marital status, physical or intellectual impairment, sexual preference, political or religious belief or age.

Further, the University of Sydney is committed to the elimination of all forms of harassment and to providing support to the victims of harassment.

**What is harassment?**

Harassment is any behaviour that is unsolicited and unwanted and as such is offensive. The distress caused by harassment may be intentional or unintentional. Harassment is one form of discrimination and generally occurs when power is improperly exercised to the detriment of a person or group of people.

**What can you do if you are harassed?**

If possible tell the person directly that their behaviour is unacceptable to you and ask them to stop. If this is not appropriate or leads to no improvement then seek advice from a University or Faculty Discrimination Adviser. You may also direct your concerns to senior staff within your School or Department.

**Financial Assistance**

The University’s loan scheme provides supplementary assistance, not full support, to students who demonstrate financial hardship. These interest-free loans may be short term for compulsory student fees at the beginning of semester, longer term loans for essential living and study expenses (called Financial Assistance loans), or a very short-term cash loan for an emergency that has arisen that day. All enquiries should be directed to Student Welfare Services in D Block, telephone 9 351 9638, where you can pick up an application form and make an appointment for an interview.

**Graduates Association and Alumni**

The Graduates Association was established in 1980. The general aims of the Association are to:

- support and advance the character, status and interests of the College/Faculty
- provide meeting opportunities for graduates to maintain or re-establish friendships
- act as a centre for liaison with industry, commerce and community
- assist the College/Faculty to communicate with graduates
- assist in the future development of the College/Faculty and of tertiary education in the health sciences

All graduates of the Faculty of Health Sciences (formerly Cumberland College of Health Sciences), and graduates of the professional schools which together formed Cumberland College, are eligible for membership of this Association and can therefore retain a vital, active and professional link with the College. Further information may be obtained from the Information and Scholarships Officer on 9 351 9154.

The Faculty’s Alumni include all its graduates, ex-staff, ex-students and community friends. Alumni are kept in touch through the Faculty Web site.

All alumni are able to become life members of the Graduate Association on payment of a once-only fee of $50. Members can:

- borrow from the Faculty Library
- make their voice heard on issues affecting the Faculty
- become eligible for a Graduates Association Grant for postgraduate study in the Faculty of Health Sciences.

The Graduates Association offers annually a grant of $1500 to provide financial assistance to a new or continuing student in any course of postgraduate study in the Faculty of Health Sciences. The grant is made over one year for full-time students and over two years for part-time students. Applicants must be members of the Association.
The University of Sydney's Cumberland campus maintains its own library to provide resources and support to students, staff and researchers. The Library collection, of approximately 82,000 books and videos and 1,000 journal titles, is particularly oriented towards the health sciences. The library aims to support undergraduate, graduate, and research programs, to provide service and assistance to users, as well as to provide certain general and recreational materials and a pleasant environment for study and research.

The Health Sciences Library is located centrally on campus, in R block, and is accessible to users with physical disabilities. Level 1 includes the Reference collection, current issues of journals, Closed Reserve, the Information desk, the Circulation desk, audio-visual, photocopying, CD ROM and Internet facilities, a study room for students with disabilities, Computer Training Room, study areas and the staff work area.

Level 2 contains the main collection of resources, study areas, additional photocopiers, and several group study rooms.

Access to the Library collection is via a user-friendly OP AC (online public access catalogue). Material may be located by author, title, subject or keyword approaches. OPACs are located on both levels of the Library. The holdings of other university libraries maybe accessed through AARNet.

CDROM facilities allow users to make their own literature searches on a variety of databases. Regular classes are conducted in use of CDROM and Internet facilities. Interlibrary loan services are available. Distance education students may be eligible for some special benefits which are outlined in a separate booklet.

**Information Desk (Phone: 9351 9437)**
Enquiries about any aspect of the Library's services are most welcome.

**Circulation Desk (Phone: 9351 9423)**
Renewals of loans may be made in person or by telephone during library hours. (Overdue items may not be renewed.)

---

**International Student Advisory Service**

Advisory services for international students and visiting scholars are provided by Student Welfare Services in D Block. They include the Study Preparation Program held every January-February for newly enrolled students, orientation to living and studying in Australia, arrival and accommodation assistance, family support, personal, intercultural and academic guidance, tutorial support, English language tuition, arrangements for social events and excursions, and returning home services. The International Student Adviser can be contacted on 9 351 9634 or fax 9 351 9635.

**Language and Learning Unit (LLU)**

The Language and Learning Unit is located in D115 and is part of Student Welfare Services. The tutors in the Unit provide academic and communication skills tuition for all students, as well as English language tuition for those who require it. There is a writing workshop equipped with computers for student use. These can be booked for 2 hour periods. The staff have postgraduate qualifications in education, applied linguistics, foreign languages, cross-cultural communication, and in teaching English as a second language. One-to-one tutorials, regular workshops and seminars on academic, clinical, and professional communication skills are available during semester and in vacations. Schedules are announced from time to time on noticeboards around the campus. Students and lecturers are invited to contact the Unit and consult with the tutors on any matter related to the above areas and services. Telephone 9 351 9631 or 9 351 9319 or call Student Welfare Services on 9 351 9638. The fax number is 9 351 9635.

**Lockers**

A limited number of lockers are available on campus on a first-come-first-served basis. All lockers must be cleared at the end of each semester. The University will not accept responsibility for any item lost from these lockers.

There are also a small number of lockers set aside for the use of students with disabilities located in S and T Blocks. Students wishing to use these lockers should contact Student Welfare Services in the first instance.

**Lost Property**

Property found on campus should be taken to Property Services Division. Lost property is held for a period of three months. If unclaimed after two months, it may be claimed by the finder (not including a member of staff). If it is still unclaimed after a three month period, the University reserves the right to dispose of these items.

**Parking**

Parking is available on campus for staff; however, places are limited for students and visitors. Parking fees apply and the conditions specified in the parking regulations must be observed. Parking permit applications, and details of the regulations and infringement procedures, are available from Property Services Division. Those requiring access to parking spaces for people with disabilities should contact Student Welfare Services.
Peer Tutoring Service

A register of senior students who have volunteered their services as subject tutors is available in Student Welfare Services in D Block. Students wishing to become tutors, or to obtain tutoring in subjects they are having difficulties with, should contact the office to check the register or seek advice. Payment is generally negotiable between parties involved. For information telephone 9 351 9638.

Sporting Facilities (Multi-purpose courts and oval)

Bookings for the multi-purpose tennis, netball and basketball courts must be made with the Student Guild Sports Centre. Bookings for the oval must be made with the Property Services Division.

Student Accommodation

The Student Guild produces an annual Accommodation Guide and Directory, allocates rented rooms to students at Auburn Hospital Nurses’ Home, and in first semester, maintains a housing register in the Guild Office. During the year, accommodation options are advertised on Guild Building noticeboards.

Jack Lang Building

It is anticipated that 85 rooms will be available for student accommodation in the Jack Lang Building on the Lidcombe Hospital site. This will be the future sit for accommodation of the media for the 2000 Olympics and will be available for University students until end Semester 1,2000.

Yannadah

The student residence on the Cumberland campus, Lidcombe, provides accommodation for up to thirty-nine students from outside the greater metropolitan area of Sydney. Application forms are included with course offers. Places are determined by ballot. For information contact the Residential Supervisor on 9 351 9405.

Student Welfare Services (SWS)

Student Welfare Services, located in D Block, is concerned with the general welfare of all students on Cumberland Campus. Students may seek advice and assistance on any issue related to or impacting on their academic study, clinical placements, or life on campus. Student Welfare Services mirrors the services provided by Student Services on the Camperdown Campus with the exception of accommodation and casual work which are managed at Cumberland by the Student Guild. Student Welfare Services provides a high level of academic and personal support services through the activities of advising, facilitating, teaching, counselling and mediating in order to assist students to succeed in their studies, and to benefit from and enjoy the University, campus and clinical placement experience. Lecturers are invited to contact Student Welfare Services for further information and to refer students for assistance. Specialised services within Student Welfare Services are the Language and Learning Unit, English language tuition, International Student Advisory Service, Peer Tutoring Service, Disability Services, Financial Assistance, and the Counselling Service (see details under separate headings). Contact numbers are telephone 9 351 9638 and fax 9 351 9635. Office hours are 9.00-5.00 during semester and vacations.

Travel Concessions

Details of travel concessions are available from the Student Enquiry Counter, Administration Building.
19 Senate Resolutions

As at 1 November, 1997

Degrees, Diplomas and Certificates in the Faculty of Health Sciences

1. The degrees in the Faculty of Health Sciences shall be:
   (a) Bachelor of Applied Science (BAppSc)
   (b) Bachelor of Health Science (BHlthSc)
   (c) Master of Applied Science (MAppSc)
   (d) Master of Health Science (MHlthSc)
   (e) Master of Behavioural Health Science (MBehHlthSc)
   (f) Master of Child and Adolescent Health (MChildAdolHlth)
   (g) Master of Communication Disorders (MComm.Dis)
   (h) Master of Community Health (MCommHlth)
   (i) Master of Exercise and Sport Science (MEx&SpSc)
   (j) Master of Gerontology (MGeront)
   (k) Master of Health Science Education (MHlthScEd)
   (l) Master of Health Science Management (MHlthScMgmt)
   (m) Master of Occupational Therapy (MOT)*
   (n) Master of Rehabilitation Counselling (MR RehabCling)
   (o) Doctor of Philosophy (PhD).

   * subject to final approval

2. The diplomas and certificates in the Faculty of Health Sciences shall be:
   (a) Diploma of Health Science (DipHlthSc)
   (b) Graduate Diploma of Applied Science (GradDipAppSc)
   (c) Graduate Diploma of Health Science (GradDipHlthSc)
   (d) Graduate Diploma in Behavioural Health Science (GradDipBehHlthSc)
   (e) Graduate Diploma in Child and Adolescent Health (GradDipChildAdolHlth)
   (f) Graduate Diploma in Clinical Data Management (GradDipClinDataMgt)
   (g) Graduate Diploma in Community Health (GradDipCommHlth)
   (h) Graduate Diploma in Exercise and Sport Science (GradDipEx&SpSc)
   (i) Graduate Diploma in Gerontology (GradDipGeront)
   (j) Graduate Diploma in Health Science Education (GradDipHlthScEd)
   (k) Graduate Diploma in Rehabilitation Counselling (GradDipRehabCling)
   (l) Graduate Diploma in Vision Impairment (GradDipVisImp)
   (m) Graduate Certificate of Applied Science (GradCertAppSc)
   (n) Graduate Certificate in Behavioural Health Science (GradCertBehHlthSc)

   (o) Graduate Certificate in Casemix (GradCertCasem)
   (p) Graduate Certificate in Child and Adolescent Health (GradCertChildAdolHlth)
   (q) Graduate Certificate in Clinical Data Management (GradCertCDM)
   (r) Graduate Certificate in Health Science Education (GradCertHlthScEd)
   (s) Graduate Certificate in Vision Impairment (GradCertVisImp)

3. The Faculty, acting on the recommendation of the Head of School/Department/Centre concerned, may refuse permission to a candidate for any of the above degrees, diplomas or certificates, to undertake or continue the clinical education (fieldwork/professional experience) component of the award, in the circumstances where the candidate has not demonstrated satisfactory progress toward fulfilling the clinical requirements of the award.

4. The Faculty delegates authority to the Associate Dean (Undergraduate Studies)/Associate Dean (Graduate Studies) to act on behalf of the Faculty in relation to section (3) above, and that the Dean be the first point of appeal for students in relation to actions taken in this matter.

Bachelor of Applied Science

1. The degree of Bachelor of Applied Science may be awarded in the grade of Pass degree in:
   (a) Diversional Therapy
   (b) Exercise and Sport Science
   (c) Health Information Management
   (d) Leisure and Health
   (e) Medical Radiation Technology
   (f) Occupational Therapy
   (g) Orthoptics
   (h) Physiotherapy
   (i) Speech Pathology.

2. The degree of Bachelor of Applied Science may be awarded in the grade of Honours degree in the following areas:
   (a) Exercise and Sport Science
   (b) Health Information Management
   (c) Leisure and Health
   (d) Medical Radiation Technology
   (e) Occupational Therapy
   (f) Orthoptics
   (g) Physiotherapy
   (h) Speech Pathology.

   (1) The degree of Bachelor of Applied Science may be awarded in the grade of Honours degree in the following areas:
   (a) Exercise and Sport Science
   (b) Health Information Management
   (c) Leisure and Health
   (d) Medical Radiation Technology
   (e) Occupational Therapy
   (f) Orthoptics
   (g) Physiotherapy
   (h) Speech Pathology.

   (2) There shall be three classes of honours, namely Class I, Class II, and Class III.

   (3) Within Class II there shall be two divisions namely Division 1 and Division 2.
(4) If a candidate qualifies for the award of Honours Class I and the Faculty is of the opinion that the candidate's work is of outstanding merit, that candidate shall receive a bronze medal.

3. (1) A unit shall consist of lectures together with such clinical, laboratory and tutorial instruction, practical work, exercises and essays as may be prescribed by the Faculty or the school or department concerned.

(2) The words 'to complete a unit' and derivative expressions mean:
(a) to attend the lectures and the meetings, if any, for clinical, laboratory or tutorial instruction; and
(b) to obtain a passing grade for that unit in accordance with the assessment criteria prescribed by the Faculty or the school or department concerned.

(3) A candidate permitted to re-enrol in a unit which has previously not been satisfactorily completed shall, unless exempted by the Faculty, again complete all the work of the unit.

4. Where in these resolutions a power is given to the Faculty or a head of school/department/centre, subject to any express indication to the contrary or resolution passed by the Faculty, the Faculty or a head of school/department/centre may, in their discretion, in any particular case:
(a) exercise the power,
(b) exercise the power conditionally, or
(c) decline to exercise the power.

5. (1) A candidate readmitted to candidature for the degree after an absence of more than one year shall complete the degree under such conditions as the Faculty shall determine.

(2) Except with the permission of the Faculty, on the recommendation of the head of the school or department concerned, a candidate shall not enter a subject unless entry requirements prescribed for that subject have been satisfied.

6. A candidate may be granted credit towards the degree on the basis of a unit or units regarded by the Faculty, on the recommendation of the head of school or department concerned, as equivalent in workload and academic standard, completed at another university or other tertiary institution, provided the maximum credit granted shall not exceed the equivalent of two-thirds of the degree requirements.

7. A candidate for the Pass degree shall complete the units as set out in the following tables in respect of the appropriate degree area.

8. A candidate for the Honours shall meet the requirements prescribed by the Faculty for admission to the honours program and shall complete the units as set out in the following tables.

- Research Project B
- Financial Management in Health Care
- Medical Science II
- Medical Science III
- Epidemiology
- Professional Experience IIIA
- Professional Experience IIIIB
- Clinical Classification IIIA
- Clinical Classification IIIIB
- Human Resource Management
- Health Care Evaluation
- Management Principles II
- Sociology of Work and Organisations
- Psychology of Work and Management
- Management Principles III
- Medico-Legal Principles II
C.2 - Honours Course (4 year full-time)

Year 1 - As for Pass Course

Year 2 - As for Pass Course

Year 3 - As for Pass Course plus:
- Intermediate Statistics

Year 4
- Research Thesis Part A
- Research Thesis Part B

Table D - Medical Radiation Technology

D.1 - Pass Course (3 year full-time)

Year 1
- Behavioural Science IA - Introduction to Computing
- Behavioural Science IB - Introduction to Psychology
- Radiation Physics A
- Radiation Physics B
- Anatomy of Body Systems A
- Anatomy of Body Systems B
- Introductory Human Biology
- Introduction to Medical Radiation
- Clinical Education I
- PLUS
- Introductory Radiography
- OR
- Introductory Nuclear Medicine
- OR
- Introductory Radiation Therapy

Year 2
- Behavioural Science IIA
- Behavioural Science IIB
- Pathophysiology A
- Pathophysiology B
- Radiation Protection
- Radiation Biology
- Sectional Anatomy A
- Sectional Anatomy B
- PLUS
- Imaging IA
- Imaging IB
- Radiography IA
- Radiography IB
- Radiographic Pathology IA
- Radiographic Pathology IB
- Clinical Education IIA
- OR
- Instrumentation IIA
- Instrumentation IIB
- Nuclear Medicine I A
- Nuclear Medicine I B
- Clinical Education IIB
- OR
- Radiation Therapy I A
- Radiation Therapy I B
- Radiotherapy Physics I A
- Radiotherapy Physics I B
- Principles of Oncology A
- Principles of Oncology B
- Clinical Education II C
- OR
- Radiation Therapy Project

D.2 - Honours Course (4 year full-time)

Years 1 and 2 - As for Pass Course

Year 3 - As for Pass Course
- Research in Medical Radiations IA
- Research in Medical Radiations I B

Year 4
- Research Methods and Statistics
- Honours Workshop A
- Honours Workshop B
- Honours Thesis
- Research in Medical Radiations II
- Elective

D.3 - Conversion Course
This program is for candidates who have completed the Diploma in Applied Science in Medical Radiation Technology.
- Radiation Biology and Protection
- Medical Radiations Project
- PLUS
- Advances in Radiography
- OR
- Sectional Anatomy
- OR
- Sonography
Table E - Occupational Therapy

E.1 - Pass Course (4 year full-time)

Year 1

- Introductory Psychology
- Cognitive Functioning
- Management of Behaviour
- Introductory Human Biology
- Musculoskeletal Anatomy
- Introductory Neurobiology
- Neurobiology I
- Human Occupations IA
- Human Occupations IB
- Components of Occupational Performance IA
- Components of Occupational Performance IB
- Occupational Therapy Theory and Process I
- Occupational Role Development I
- Fieldwork Education I

Year 2

- Introduction to Health Sociology
- Sociology of Health I
- Research Methods I: Design
- Research Methods II: Data Analysis
- Neurobiology II
- Body Systems I
- Biomechanics for Occupational Therapy
- Human Occupations IIA
- Human Occupations IIB
- Components of Occupational Performance IIA
- Components of Occupational Performance IIB
- Occupational Therapy Theory and Process IIA
- Occupational Therapy Theory and Process IIB
- Occupational Role Development II
- Fieldwork Education II

Year 3

- Sociology of Health II
- Health Psychology
- Body Systems II
- Human Occupations III
- Components of Occupational Performance III
- Occupational Therapy Theory and Process III
- Fieldwork Education IIIA
- Fieldwork Education IIIB

Year 4

- Psychology of Adulthood and Ageing
- Social Psychology
- Sociology Elective
- Applied Physiology
- Honours Research Seminar II
- Human Occupations IV (Hons)
- Honours Thesis
- Fieldwork Education IV

E.2 - Honours Course (4 year full-time)

Year 1 - As for Pass Course

Year 2 - As for Pass Course

Table F - Orthoptics

F.1 - Pass Course (4 year full-time)

Year 1

- Introduction to Health Sociology
- Introduction to Psychology
- Introductory Human Biology
- Introductory Neurobiology
- Neurobiology I
- Optics I
- Body Systems I
- Optics II
- Clinical Instrumentation IIA
- Clinical Instrumentation IIB
- Visual Processes
- Binocular Vision
- Disorders of the Visual System IIA
- Disorders of the Visual System IIB

Year 2

- Behavioural Science IIA
- Behavioural Science IIB
- Research Methods and Statistics
- Research Methods and Designs
- Introductory Pathology
- Ocular Biology
- Visual Neurobiology
- Concomitant Strabismus B
- Clinical Studies IIA

Table G - Physiotherapy

G.1 - Pass course (4 year full-time)

Year 1 (to be first offered in 1998)

Psychology of Motor Behaviour
Research Methods I: Design
Introductory Psychology
Introductory Human Biology
Body Systems I
Functional Anatomy A
Functional Anatomy B
Introductory Neurobiology
Neurobiology I
Electrophysical Agents I
Musculoskeletal Physiotherapy I
Physiotherapy Practice I
Kinesiology I

Year 2 (to be first offered in 1999)

Research Methods II: Analysis
Introduction to Health Sociology
Social and Health Psychology
Body Systems II
Neurobiology II
Cardiopulmonary Physiotherapy I
Electrophysical Agents II
Musculoskeletal Physiotherapy II
Physiotherapy Practice II
Clinical Education I
Clinical Education II
Biomechanics

Year 3 (to be first offered in 2000)

Sociology of Clients, Practitioners and Organisations
Body Systems III
Cardiopulmonary Physiotherapy II
Musculoskeletal Physiotherapy III
Physiotherapy in Neurology I
Paediatrics
Physiotherapy Practice III
Exercise and Health
Clinical Education III
Applied Physiology

Year 4 (to be first offered in 2001)

Psychopathology and Behaviour Change
Society, Policy and Health
Clinical Education IVA
Clinical Education IVB
Evidence Based Practice
Complex Cases
Elective
Advanced Manipulation Skills
Physiotherapy in Neurology II
Clinical Education IVC
Clinical Education IVD

G.2 - Honours Course (4 year full-time)

Years 1 and 2 - As for Pass course

Year 3

Research Statistics
Sociology of Clients, Practitioners and Organisations
Body Systems III
Cardiopulmonary Physiotherapy II
Musculoskeletal Physiotherapy III
Physiotherapy in Neurology I
Paediatrics
Physiotherapy Practice III
Exercise and Health
Clinical Education III
Research for Physiotherapists

Honours Research Seminar

Table H - Speech Pathology

H.1 - Pass Course (4 year full-time)

Year 1

- Introductory Psychology
- Cognitive and Developmental Psychology
- Research Methods I: Design
- Disorders and their Management
- Introductory Human Biology
- Introductory Neurobiology
- Neurobiology I
- Body Systems I
- Speech and Hearing Science I
- Speech and Hearing Science II
- Linguistics
- Professional Development I: Introduction to Clinical Learning
- Phonetics I
- Normal Communication Development
- Articulation and Phonology

Year 2

- Cognitive Neuropsychology I
- Research Methods II: Data Analysis
- Neurobiology II for Communication Disorders
- Voice Science and Disorders
- Language Impairments in Children I
- Language Impairments in Children II
- Stuttering
- Professional Development II: Clinical Skills
- Phonetics II
- Audiology
- Audiological Management I
- Speech and Language Impairments of Neurological Origin I
- Introductory Speech Pathology Clinical I
- Introductory Speech Pathology Clinical II
- Phonological Impairments

Year 3

- Cognitive Neuropsychology II
- Sociology I
- Sociology II
- Patient Management: Theories and Applications
- Social and Health Psychology
- Neurology for Communication Disorders
- Audiological Management
- Speech and Language Impairments of Neurological Origin II
- Communication Impairments in Special Populations
- Language Impairments in Children III
- Professional Development III: Management Skills
- Swallowing Impairments
- Craniofacial Anomalies
- Intermediate Speech Pathology Clinical I
- Intermediate Speech Pathology Clinical II

Year 4

Group A
- Advanced Topics A
- Professional Development IVA: Advanced Issues
- Advanced Speech Pathology Clinical LA
- Advanced Speech Pathology Clinical ILA

Group B
- Advanced Topics B
- Professional Development IVB: Advanced Issues
- Advanced Speech Pathology Clinical IB
- Advanced Speech Pathology Clinical LIB

H.2 - Honours Course (4 year full-time)

Year 1 - As for Pass Course

Year 2 - As for Pass Course

Year 3 - As for Pass course plus

- Honours Research Seminar I: Literature Review
- Honours Research Seminar II: Research Proposal
- Honours Research Methods: Individual Studies I

Year 4 - As for Pass course plus

- Honours Research Seminar III: Research Strategies
- Honours Thesis
- Honours Research Methods: Individual Studies LI

Bachelor of Health Science

1. The degree of Bachelor of Health Science may be awarded in the grade of Pass degree in:
   (a) Rehabilitation Counselling
   (b) Aboriginal Health and Community Development
   (c) Nursing *
   (d) Occupational Therapy *
   (e) Physiotherapy *
   (f) Medical Radiation Technology *
   * Singapore Conversion Courses.

2. (1) The degree of Bachelor of Health Science may be awarded in the grade of Honours degree in:
   (a) Rehabilitation Counselling
   (b) Aboriginal Health and Community Development
   (2) There shall be three classes of honours, namely Class I, Class II, and Class III.
   (3) Within Class II there shall be two divisions, namely Division 1 and Division 2.
   (4) If a candidate qualifies for the award of Honours Class I and the Faculty is of the opinion that the candidate’s work is of outstanding merit, that candidate shall receive a bronze medal.

3. (1) A unit shall consist of lectures together with such clinical, laboratory and tutorial instruction, practical work, exercises and essays as may be prescribed by the Faculty or the school or department concerned.
   (2) The words ‘to complete a unit’ and derivative expressions mean:
   (a) to attend the lectures and the meetings, if any, for clinical, laboratory or tutorial instruction; and
(b) to obtain a passing grade for that unit in accordance with the assessment criteria prescribed by the Faculty or the school or department concerned.

(3) A candidate permitted to re-enrol in a unit which has previously not been satisfactorily completed shall, unless exempted by the Faculty, again complete all the work of the unit.

4. Where in these resolutions a power is given to the Faculty or a Head of School, Department, or Centre subject to any express indication to the contrary or resolution passed by the Faculty, the Faculty or a Head of School, Department, or Centre may, in their discretion, in any particular case:
   (a) exercise the power,
   (b) exercise the power conditionally, or
   (c) decline to exercise the power.

5. (1) A candidate readmitted to candidature for the degree after an absence of more than one year shall complete the degree under such conditions as the Faculty shall determine.

(2) Except with the permission of the Faculty, on the recommendation of the head of the school or department concerned, a candidate shall not enter a unit unless entry requirements prescribed for that unit have been satisfied.

6. A candidate may be granted credit towards the degree on the basis of a unit or units regarded by the Faculty, on the recommendation of the Head of School, Department, or Centre concerned, as equivalent in workload and academic standard, completed at another university or other tertiary institution, provided the maximum credit granted shall not exceed the equivalent of two-thirds of the degree requirements.

7. A candidate for the Pass degree shall complete the units as set out in the following tables in respect of the appropriate degree area.

8. A candidate for the Honours degree shall meet the requirements prescribed by the Faculty for admission to the honours program and shall complete the units as set out in the following table.

Master Degrees
Subject areas
1- (i) The degree of Master of Applied Science may be taken in the following subject areas:
   (i) Behavioural Health Science
   (ii) Communication Sciences & Disorders
   (iii) Exercise and Sport Science
   (iv) Health Information Management
   (v) Biomedical Sciences
   (vi) Manipulative Physiotherapy
   (vii) Medical Radiation Technology
   (viii) Occupational Therapy
   (ix) Orthoptics
   (x) Physiotherapy
   (xi) Rehabilitation
   (xii) Sports Physiotherapy
   (xiii) Stuttering
   (xiv) Voice.

2- (1) The degree of Master of Health Science may be taken in the following subject areas:
   (i) Community Health
   (ii) Education
   (iii) Gerontology
   (iv) Rehabilitation Counselling.

3- (1) The degree of Master may be taken in the following subject areas:
   (i) Behavioural Health Science
   (ii) Child and Adolescent Health
   (iii) Communication Disorders
   (iv) Community Health
   (v) Exercise and Sport Science
   (vi) Health Science Education
   (vii) Gerontology
   (viii) Occupational Therapy*
   (ix) Rehabilitation Counselling.

*subject to final approval

Eligibility for admission
2. (1) The Faculty, may, on the recommendation of the Head of the Department, School, or Centre concerned, admit to candidature for a degree of Master within the Faculty an applicant:
   (a) who is a graduate of the University of Sydney and has completed courses appropriate to the area of study in which the applicant seeks
to proceed, provided that the applicant’s work is of sufficient merit, or who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies;

(b) who, in addition, meets any other requirements for admission to a particular program that has been prescribed by Faculty.

(2) Notwithstanding subsection (1), the Academic Board may admit a person to candidature accordance with the provisions of Chapter 10 of the By-laws.

Availability

3. Admission to candidature for any Master's degree or any program within a Master's degree may be limited by quota.

4. In determining any quota the University will take into account:

(a) availability of resources including space, library, equipment and computing facilities; and

(b) availability of adequate and appropriate supervision, including both the supervision of research candidatures and the coordination of coursework programs.

5. In considering an application for admission to candidature the Faculty shall take account of any quota and will select in preference applicants who are most meritorious in terms of section 2 above.

6. Before recommending the admission of any applicant the Head of the Department, School, or Centre concerned shall ensure that the extent of the resources and supervision available is known to and understood by the applicant and is appropriate to the applicant's proposed area of study and research.

Preliminary studies

7. (1) An applicant may be required to undertake preliminary or qualifying studies, and complete such preliminary examinations as the Faculty may prescribe, before admission to candidature.

(2) Such an applicant shall complete the preliminary studies in not less than one semester and in not greater time than the Faculty may prescribe but in any case in not longer than two years.

Probationary admission

8. A candidate may be accepted by the Faculty on a probationary basis for a period not exceeding twelve months and upon completion of this period the Faculty shall review the candidate's work and shall either confirm the candidate's status with effect from the date of the original acceptance or terminate the candidature.

Method of progression

9. A candidate shall proceed:

(a) primarily by research and thesis; or

(b) by coursework and thesis; or

(c) primarily by coursework.

Time limits

10. A candidate may be admitted to proceed on either a full-time basis or a part-time basis.

11. (1) Except with the permission of Faculty or as provided in section 11 (3) below:

(a) a full-time candidate proceeding primarily by research and thesis shall complete the requirements not earlier than the end of the fourth semester and not later than the end of the sixth semester of candidature;

(b) a full-time candidate proceeding primarily by coursework shall complete the requirements not earlier than the end of the second semester and not later than the end of the sixth semester of candidature, except in the case of candidates proceeding to the award of the degree of Master of Occupational Therapy, where the minimum candidature is four semesters and maximum candidature is eight semesters;

(c) a part-time candidate proceeding either primarily by research and thesis shall complete the requirements not earlier than the end of the sixth semester and not later than the end of the tenth semester of candidature;

(d) a part-time candidate proceeding by coursework shall complete the requirements not earlier than the end of the fourth semester, and not later than the end of the tenth semester of candidature.

(2) The Faculty may in special circumstances extend a candidate's maximum period of candidature and may prescribe special conditions to be fulfilled by the candidate;

(3) The Faculty, at the time of admission to candidature, may permit a candidate proceeding primarily by research and thesis who holds a bachelor degree with first or second class honours from the University of Sydney or an equivalent qualification to complete the requirements not earlier than the end of the first year of candidature if a full-time candidate and not earlier than the end of the second year of candidature if a part-time candidate.

Credit

12. (1) The Faculty may, in respect of a candidate who before admission to candidature has spent time in advanced study or research in the University of Sydney or in another university or institution:

(a) deem such time to have been time spent after admission to candidature; and

(b) grant credit towards the degree on the basis of a course or courses regarded as equivalent in workload and academic standard; provided that the time recognised or the credit granted represents no more than half of the total candidature and that any attendance requirements as may be prescribed by resolution of the Faculty are met.
13. (1) The Faculty shall appoint, on the recommendation of the Head of the Department, School or Centre concerned, a full-time member of the academic staff of the Faculty to act as supervisor of each candidate proceeding primarily by research and thesis or by coursework and thesis and may appoint, for each such candidate, an advisory committee.

(2) The Faculty shall appoint, on the recommendation of the Head of the Department, School or Centre concerned, a full-time member of the academic staff of the Faculty to act as supervisor or advisor, as thought most appropriate for each candidate proceeding primarily by coursework.

(3) The Faculty may appoint, on the recommendation of the Head of the Department, School, or Centre concerned, from amongst appropriately qualified persons, an associate supervisor to assist in the supervision of any candidature.

Supervision

Enrolment

14. (1) A candidate shall, unless otherwise permitted by the Faculty, enrol each year until the requirements for the degree are completed or the candidature terminated;

(2) A candidate readmitted to candidature after an absence of more than one year shall complete the degree under such conditions as the Faculty shall determine.

Requirements for the degree

15. A candidate for the degree proceeding primarily by coursework shall complete the courses for the degree as prescribed by the Faculty and set out in tables of courses.

16. (1) A candidate for the degree proceeding primarily by research and thesis or by coursework and thesis shall:

(a) complete the courses for the degree as prescribed by the Faculty and set out in tables of courses;

(b) carry out supervised research on a topic which has been approved by the Faculty on the recommendation of the head of the department, school, or centre concerned no later than the end of the second semester of the full-time candidature or the third semester of part-time candidature;

(c) write a thesis embodying the results of the research; and in completion of the requirements for degree lodge with the Registrar three copies of the thesis, typewritten and bound in either a temporary or permanent form.

(2) Theses submitted in a temporary form should be strong enough to withstand ordinary handling and postage and the preferred form of temporary binding is the 'Perfect Binding' system; ring-back or spiral binding is not acceptable. Theses submitted in a temporary form shall have fixed to the cover a label clearly identifying the name of the candidate, the title of the thesis, and the year of submission.

(3) Theses submitted in a bound form shall normally be on International Standard A4 size paper sewn and bound in boards covered with bookcloth or buckram or other binding fabric. The title of the thesis, the candidate's initials and surname, the title of the degree, the year of submission and the name of the University of Sydney should appear in lettering on the front cover or on the title page. The lettering on the spine, reading from top to bottom, should conform as far as possible to the above except that the name of the University of Sydney may be omitted and the thesis title abbreviated. Supporting material should be bound in the back of the thesis as an appendix or in a separate set of covers.

(4) The degree shall not be awarded until the candidate has caused at least two copies of the thesis (containing any corrections or amendments that may be required) to be bound in a permanent form.

(5) The candidate shall state in the thesis the sources from which the information was derived, the extent to which the work of others has been used and the portion of the work claimed as original.

(6) The thesis shall be accompanied by a statement from the supervisor stating whether, in the supervisor's opinion, the form of presentation of the thesis is satisfactory.

(7) A candidate may not present as the thesis a work which has been presented for a degree in this or another university, but will not be precluded from incorporating such in the thesis provided that in presenting the thesis the candidate indicates the part of the work which has been so incorporated.

On completion of the requirements for the degree by a candidate proceeding primarily by research and thesis or by coursework and thesis, the Faculty, on the recommendation of the head of the department, school, or centre concerned, shall appoint two examiners, of whom one shall not be a member of the academic staff of the Faculty, to examine and report on the thesis.

The reports of the examiners shall be made available to the head of the department, school, or centre concerned who shall consult with the supervisor. The head of the department, school, or centre concerned shall report the result of the examination of the candidature together with a recommendation concerning the award of the degree to the Faculty Board which shall determine the result.

In special cases the Faculty may, on the recommendation of the head of the department, school, or centre concerned, require the candidate to
take a further examination in the area of the thesis which may be an oral examination to be held at the Cumberland Campus or at such other location as may be determined by the Faculty.

21. The Faculty may permit an unsuccessful candidate to revise and resubmit the thesis for re-examination if, in the opinion of the head of the department, school, or centre concerned the candidate's work is of sufficient merit, and may prescribe special conditions to be fulfilled by the candidate.

22. On the completion of the requirements for the degree by a candidate proceeding primarily by coursework the head of the department, school, or centre concerned shall report the results of the examination of the coursework to the Faculty which shall determine the result of the candidature.

Progress

23. (1) A report on the progress towards completion of the requirements for the degree shall be prepared by the appointed supervisor at least annually in respect of each candidate proceeding primarily by research and thesis or by coursework and thesis.

(2) The report shall be shown to the candidate and the candidate shall sign the report as having sighted the contents.

(3) The report, after signature by the candidate, shall be forwarded to the Faculty through the head of the department, school, or centre concerned.

24. The Faculty may, on the recommendation of the head of the department, school, or centre concerned, call upon any candidate to show cause why that candidature should not be terminated by reason of unsatisfactory progress towards completion of the degree and where, in the opinion of the Faculty, the candidate does not show good cause, terminate the candidature.

Diploma of Health Science

1. (1) The Diploma of Health Science may be awarded in the areas of:
   (a) Aboriginal Health and Community Development.

2. (1) A unit shall consist of lectures together with such clinical, laboratory and tutorial instruction, practical work, exercises and essays as may be prescribed by the Faculty or the school, department, or centre concerned.

(2) The words 'to complete a unit' and derivative expressions mean:
   (a) to attend the lectures and the meetings, if any, for clinical, laboratory or tutorial instruction; and
   (b) to obtain a passing grade for that unit in accordance with the assessment criteria prescribed by the Faculty or the school or department concerned.

(3) A candidate permitted to re-enrol in a unit which has previously not been satisfactorily completed shall, unless exempted by the Faculty, again complete all the work of the unit.

3. Where in these resolutions a power is given to the Faculty or a head of school, department, or centre subject to any express indication to the contrary or resolution passed by the Faculty, or a head of school or department may, in their discretion, in any particular case:
   (a) exercise the power,
   (b) exercise the power conditionally, or
   (c) decline to exercise the power.

4. (1) A candidate readmitted to candidature for the diploma after an absence of more than one year shall complete the diploma under such conditions as the Faculty shall determine.

(2) Except with the permission of the Faculty, on the recommendation of the head of the school, department, or centre concerned, a candidate shall not enter a subject unless entry requirements prescribed for that subject have been satisfied.

5. A candidate may be granted credit towards the diploma on the basis of a subject or subjects regarded by the Faculty, on the recommendation of the head of school, department, or centre concerned, as equivalent in workload and academic standard, completed at another university or other tertiary institution, provided the maximum credit granted shall not exceed the equivalent of two-thirds of the diploma requirements.

6. A candidate for the diploma shall complete the units as set out in the following tables in respect of the appropriate diploma area.

Diploma of Health Science

A. Aboriginal Health and Community Development

(2 year full-time block attendance, plus off-campus)

Year 1

| Perspectives in Indigenous Health I |
| Communication Skills I |
| Primary Health Care I |
| Community Development I |
| Counselling I |
| Elective Studies IA |
| Elective Studies IB |
| Field Education I |

Year 2 (to be first offered in 1998)

| Perspectives in Indiginsul Health II |
| Communication Studies II |
| Primary Health Care II |
| Community Development II |
| Counselling II |
| Elective Studies IIA |
| Elective Studies IIB |
| Field Education II |

Graduate Diplomas and Graduate Certificates

Subject areas

1. The Graduate Diploma of Applied Science may be taken in the following subject areas:
   (i) Health Information Management
   (ii) Manipulative Physiotherapy
   (iii) Medical Ultrasonography
2. A Graduate Diploma may be taken in the following subject areas:
   (i) Behavioural Health Science
   (ii) Child and Adolescent Health
   (iii) Clinical Data Management
   (iv) Community Health
   (v) Exercise and Sport Science
   (vi) Gerontology
   (vii) Health Science Education
   (viii) Rehabilitation Counselling
   (ix) Vision Impairment.

3. The Graduate Certificate of Applied Science may be taken in the following subject areas:
   (i) Occupational Therapy
   (ii) Physiotherapy.

4. A Graduate Certificate may be taken in the following areas:
   (i) Behavioural Health Science
   (ii) Casemix
   (iii) Child and Adolescent Health
   (iv) Clinical Data Management
   (v) Health Science Education
   (vi) Vision Impairment

Eligibility for admission

2. (1) The Faculty, may, on the recommendation of the head of the department, school, or centre concerned, admit to candidacy for a graduate diploma or graduate certificate within the Faculty an applicant is:
   (a) who is a graduate of the University of Sydney and has completed courses appropriate to the area of study in which the applicant seeks to proceed, provided that the applicant's work is of sufficient merit, or who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies;
   (b) who, in addition, meets any other requirements for admission to a particular program that has been prescribed by Faculty;
   (c) who has submitted evidence of general and professional qualifications to satisfy the Faculty that the applicant possesses the educational preparation and capacity to pursue graduate studies;

2. (2) Notwithstanding subsection (1), the Academic Board may admit a person to candidacy for the graduate diploma or graduate certificate in accordance with the provision of Chapter 10 of the by-laws.

Preliminary studies

7. (1) An applicant may be required to undertake preliminary or qualifying studies, and complete such preliminary examinations as the Faculty may prescribe, before admission to candidacy.
   (2) Such an applicant shall complete the preliminary studies in not less than one semester and in not greater time than the Faculty may prescribe but in any case in not longer than two years.

Probationary admission

8. A candidate may be accepted by the Faculty on a probationary basis for a period not exceeding twelve months and upon completion of this period the Faculty shall review the candidate's work and shall either confirm the candidate's status with effect from the date of the original acceptance or terminate the candidature.

Time limits

9. A candidate may be admitted to proceed on either a full-time basis or a part-time basis.

Credit

10. (1) The Faculty may, in respect of a candidate who before admission to candidacy has spent time in advanced study or research in the University of Sydney or in another university or institution:
   (a) deem such time to have been time spent after admission to candidacy; and
   (b) grant credit towards the graduate diploma or graduate certificate on the basis of a course or courses regarded as equivalent in workload and academic standard; provided that the time recognised or the credit granted represents no more than half of the total candidature and that any attendance requirements as may be prescribed by resolution of the Faculty are met.

Enrolment

11. (1) A candidate shall, unless otherwise permitted by the Faculty, enrol each year until the requirements for the graduate diploma or graduate certificate are completed or the candidature terminated;
   (2) A candidate readmitted to candidacy after an absence of more than one year shall
complete the graduate diploma or graduate certificate under such conditions as the Faculty shall determine.

**Requirements of the Degree**

12. A candidate for the graduate diploma or graduate certificate shall complete the courses for the graduate diploma or graduate certificate as prescribed by the Faculty and set out in the table of courses.

13. On completion of the requirements for the graduate diploma or graduate certificate the head of the department or school concerned, shall report the results of the examination of the coursework to the Faculty which shall determine the results of the candidature.

**Progress**

14. The Faculty may, on the recommendation of the head of the department, school, or centre concerned, call upon any candidate to show cause why that candidature should not be terminated by reason of unsatisfactory progress towards completion of the graduate diploma or graduate certificate and where, in the opinion of the Faculty, the candidate does not show good cause, terminate the candidature.
Appendix 1
Schedule of Elective Descriptions

The information provided in this schedule includes an individual code for each unit of study, i.e., electives for postgraduate students. Not all electives are offered each semester. The mode of presentation varies between schools and departments. Students who require further information about the content or administration of electives and when they are offered should contact the school/department offering the specific elective. To obtain this information, a code has been used next to the unit title:

- First four letters represent the school/department in which the elective is taught.
- Followed by four digits, the first digit represents the level of that unit: 5xxx = PG Coursework, 6xxx = Masters Research, 7xxx = PhD.
- Followed by three further digits to distinguish the particular unit of study.
- Five digits in parentheses are the old unit number.

Key

* Class attendance is required
** Contract learning
# Independent learning package
X External/distance mode
N Night classes (starting after 4.00 pm)
D Day classes (starting before 4.00 pm)

The following table lists schools/departments and their contact telephone numbers.

BEHS5049 (10517) Abnormal Psychology and Mental Health

*Semester 1 and 2 - 4 credit points (**)*

This elective addresses major psychological disorders and the current classificatory and diagnostic systems available. Critiques of nosologies and taxonomies will be provided and alternative individualised systems of assessment useful for research will be discussed. Detailed consideration of the major philosophical questions underpinning current approaches to psychotherapy will be encouraged, including such concepts as person, personality, mental illness, theories of the origin of mental illness and treatment approaches. A critical review of ethical and legal dilemmas in the practices of psychotherapy will be highlighted.

COMHS5168 (08446) Aboriginal Health

*Semester 2 - 4 credit points (** N)*

This unit provides an introduction to Aboriginal health. It is designed to give students a critical understanding of the historical, social, political and economic factors which have impacted on Aboriginal health, along with an awareness of Aboriginal culture.

MRTY5014 (18509) Advanced Multiplanar Anatomy

*Semester 1 and 2 - 4 credit points (X)*

Detailed anatomy of the central nervous system, musculoskeletal system and vascular systems of the thorax and abdomen is presented. This unit is targeted at professionals working with CT and/or MRI. A basic knowledge of cross-sectional anatomy is assumed for this unit.

BEHS5140 (10425) Ageing and Australian Society

*Semester 1 and 2 - 4 credit points (**)*

A sociological analysis of ageing in Australia will lead the student to an understanding of the multiple relationships between social structures and processes, the individual experience of ageing and the position of elderly people in Australian society.
MRTY5017 (18512) Applied SPECT
Semester 1 or 2 - 4 credit points (X)
This unit is designed to optimise the single photon emission computer tomography (SPECT) expertise of practitioners. It focuses on SPECT acquisition, quality control and reconstruction. The unit will be offered in distance education mode, with full internet support, and optional intensive residential. It will run in semester one or two depending on demand.

BEHS5125 (10594) Art Therapy
(* weekend)
Art Therapy offers principles, processes and practice in art-imagery therapy at an introductory level. Art Therapy is seen as an integration of nonverbal and verbal processes; and an integration of psychological therapies with creative expressive processes. The orientation presented is eclectic and is based on theories of imagery, perception, and non-interpretive therapy. The focus is on practice and skills attainment and an understanding of why and how these art therapy processes are used within the overall client plan. Counselling experience is preferred.

COMH5169 (08434) Assessment of Learning
Semester 1 - 6 credit points (N\#X)
Pre-requisite Instructional Design and Teaching Skills (08505)
Various educationalists point to the impact of assessment on student approaches to learning. Combined with concern to promote deep approaches are pragmatic mandates to reduce amount of assessment while ensuring quality in accreditation of competence in professional practice. These issues are examined against a backdrop of ensuring validity and reliability in both assessment and evaluation of learner development in any context.

COMH5103 (08523) Australian Society and Health
Semester 1 - 6 credit points (* N)
This unit examines the relationship between social inequality and the distribution of health in Australian society. It explores the relevance of an analysis of socio-political relations and processes for understanding these patterns.

BEHS5050 (10518) Behaviour Modification and Cognitive Behavioural Therapy
Semester 1 and 2 - 4 credit points (**)
This unit will cover the basic principles of learning theory and their applications to research in health care settings in conjunction with a theoretical introduction to the use of cognitive behavioural therapy. Students will learn to develop programs based on reinforcement principles, such as operant and classical conditioning, extinction, shaping, maintenance and generalisation of the behaviour, stimulus discrimination training and fading, cognitive behaviour modification and assertiveness training, a behavioural model of somatic disorders and behavioural intervention in rehabilitation.

BEHS5143 (10454) Behavioural Aspects of Ageing
Semester 1 - 4 credit points (N *)
Cognitive, perceptual, sensory, motor and personality development in later life will be studied in relation to social theories of ageing and typical life events of older people.

BEHS5051 (10519) Biofeedback
4 credit points (**)
This elective covers the history of the development of biofeedback research, and considers the range of biofeedback modalities used in therapy to alleviate physical health problems. The main modalities examined are those related to the electromyograph, skin temperature, GSR, and the electroencephalograph. Other areas also considered include blood pressure, heart and respiration rate, blood sugar levels, and incontinence. Recent research, exploring other areas, is critically examined.

HIMT5044 (09438) Casemix Measurement Systems
Semester 2 - 2 credit points
This unit is designed to cover a variety of casemix classification systems for acute and non-acute inpatients and ambulatory patients.

The major emphasis will be on Diagnosis Related Groups (DRGs) with specific reference to the Australian National Diagnosis Related Groups (AN-DRGs). Casemix applications and current casemix initiatives will also be explored.

BEHS5131 (105A2) Children's Health and Welfare Policy
Semester 1 - 6 credit points (N#X)
Using data to assist identification of risks to children's health and welfare, and through an assessment of existing legislation and/or services related to risk control, students will design a program for the delivery of a health or social welfare service for children which aims to improve upon current service delivery structures and their outcome.

COMH5038 (08520) Clinical Teaching and Supervision
Semester 1 - 6 credit points (N#X)
In this unit participants explore aspects of clinical teaching and the way clinical teachers relate to students and patients/clients in the clinical learning environment. Participants develop knowledge and skills in such areas as clinical teaching strategies and assessment, the role of the supervisor and ways to promote effective student interaction.

BEHS5053 (10520) Cognitive Function in Neurological Disorders
4 credit points (**)
This unit will consider the principles of cognitive function applied to a range of neurological disorders (e.g. Alzheimer's disease, amnesic disorders, developmental disability). The emphasis will be on understanding cognitive impairments and considering strategies for managing these impairments.

COMH5170 (08490) Community Development
Semester 2 - 4 credit points (#)
This unit has been designed to give students the knowledge and skills to design, plan and evaluate community development projects. Methods of obtaining involvement for maximum benefit of communities are examined.

Appendix 1
COMH5101 (08521) Community Health Policy and Services
Semester 2 - 4 credit points
This unit introduces students to basic principles, concepts and policies which underpin the practice of community health. Major topics include the formal structure and organisation of the Australian health care system, approaches to health needs assessment, and the development of appropriate local level strategies.

COMH5140 (08580) Community Health Policy and Services
Semester 1 or 2 - 4 credit points
This unit provides an introduction to the practice of community health and to related policies and services. Within this context, particular attention is paid to the development and implementation of community-based services for frail and disabled older people.

COMH5049 (08457) Community Nutrition
Semester 2 - 4 credit points
This unit aims to increase knowledge and develop skills of allied health professionals concerning the theory and methods of community nutrition practice and service delivery. A major goal is to enable students to identify and utilise opportunities for appropriate development and integration of community nutrition services within the general health services in which they work.

MRTY5103 (18508) Computer Communications in Medical Radiation Technology
Semester 2 - 4 credit points
This unit provides students with an understanding of the design implications of digital image management and the communication systems needed to facilitate patient care procedures. Concepts including PACS, DICOM, RIS, teleradiology and record and verify systems will be discussed. The unit also provides students with the opportunity to examine computer based methods to efficiently utilise staff time and resources within a Medical Radiation Department.

COMH5152(08592) Computer in Health
Semester 2 - 4 credit points
This introductory unit looks at the use of computer in clinical setting, health education and professional education. In this unit students will become familiar with a number of softwares, using a structured software review guide and evaluation sheet.

COMH5119 (08552) Computers for Teacher Productivity
Semester 1 - 6 credit points
This unit provides opportunities for participants to explore and develop skills in the ways computers are used to enhance the productivity of health science educators. It focuses on the selection and use of the appropriate computer application software to create written and graphic teaching materials, create databases and spreadsheets for teaching administration purposes, search journal databases stored on CD-ROM, and explore the functions and implications of academic computer research networks. Class size will be limited by the number of computers available.

BEHS5064 (10553) Computing for Health Practitioners
Semester 1 and 2 - 4 credit points
In this unit students will be introduced to computer systems in general with special emphasis on personal computers, including operating systems and concepts for computing. The basic principles for programming will be introduced. Popular applications of relevance to health practitioners and individual clinicians will be covered including spreadsheets for preparation of budgets and reports; word processing for billing and correspondence; and data base managers for maintaining patient or client records. Methods of using data stored by these means for research purposes will be considered. Students will also be introduced to the world of the Internet and encouraged to communicate with colleagues elsewhere in Australia and overseas. The host of resources available on Internet will be covered as will techniques for accessing these. Resources of particular interest for students' professional practice will be emphasized.

BEHS5091 (10558) Contemporary Issues in Childhood and Adolescence
Semester 1 - 4 credit points
This unit will enable students to study in depth an area of special interest related to child and adolescent health and adjustment, including such topics as; SIDS, homelessness, the effects of divorce on children, adolescent suicide, eating disorders, bullying, delinquency, sexuality and juvenile offenders. The course will be seminar based, where particular topics will be discussed from a theoretical and applied perspective with particular emphasis on possible intervention programs and treatment. Students will be required to submit an individual report (which can take the form of a critical synthesis of the literature or a small piece of original research). Topic and project style will be decided in consultation with the lecturer.

BEHS5054 (10521) Counselling
Semester 1 and 2 - 4 credit points
This unit will cover the major theories of counselling and their applications to health professional practice. Issues related to the role of counselling in the delivery of health care and the ethical and legal implications of a counselling relationship will be addressed. This elective also promotes student self-awareness and exploration of their life histories and interpersonal styles, focusing on the implications of these for relating to and doing research with various client groups.

MRTY5016(18511) CT Practice I
Semester 1 - 4 credit points
The topics studied in this unit are CT protocols and associated image reconstructions, applications of helical scanning, contrast media and essential aspects of patient management. The basic principles of CT will be presented as they apply to CT protocols. A variety of delivery modes may be employed depending upon demand.
This elective promotes cross-cultural analysis of the relationship between culture, social structure and beliefs and practices relating to the management of illness and disease. Systematic analysis is encouraged of a wide range of empirical material addressing cultural approaches to disease and health from both pre-industrial and contemporary western settings. Possible research issues are covered addressing anthropology's early concern with indigenous belief systems and current post-modern concern with the representation of these beliefs, the ecological and epidemiological aspects of disease, and a broad spectrum of theories of disease etiology, diagnosis and therapy. A transcultural perspective analyses the philosophical underpinnings of both traditional and contemporary healing systems, and emphasises similarities and differences from the biomedical perspective, and considers the impact of Western medicine on Third World societies. A political economy approach examines health status and level of health care experienced by different populations, and the potential for research into the social, cultural, economic and political conditions of particular regions to understand their relationship with the world capitalist system.

**COMH5157 (08597) Cultural Awareness for Indigenous Health**

*Semester 2-4 credit points (**)*

Cultural sensitivity in health care system and development of programs and services can be realised only when we understand the cultural experience of those who have been marginalised in the production of knowledge and cultural identity. To be precise, it is counter-productive to target individuals and community for most health risk reduction efforts without considering the effects of those individuals' and community's culture, language and environment. The aim of this unit is to sensitise people of Aboriginal and non-Aboriginal communities with the cultural diversity in the Aboriginal society. This is a unit which aims to increase participants knowledge through defining their prior knowledge of Aboriginal culture. Students will be encouraged to use their learning skills in developing appropriate intervention programs and services.

**COMH5156 (08596) Cultural Awareness for Migrant Health**

*Semester 2-4 credit points (**)*

The aim of this unit is to make the students aware of other's culture in communication. Living in a multicultural society means having knowledge about different skills in understanding other's view points and being able to put forward one's own point of views and ideas without prejudice and biases. To some extent, such communication in health care system is more acute due to the nature of health and health care system which needs to be appropriate and relevant to the needs of the clients. The purpose of this unit is to familiarise the students with an overview of other cultures, their means of communicating and using appropriate signals to receive and forward messages in some specific culture groups. Students in this unit will be able to concentrate on a specific ethnic group for their final project.
COMH5045 (08452) Drug and Alcohol Studies
Semester 2 - 4 credit points (**)
This unit introduces students to the issues surrounding drug and substance abuse within the community. Students are expected to examine such issues as the social and psychological bases of drug abuse and social reactions to such use. Students will develop knowledge of the variety of approaches to drug use and abuse including rehabilitation strategies and police and court practices.

COMH5153 (08593) Ecological Health
Semester 2 - 4 credit points (**)
The aim of this unit is to provide the students with a theoretical and applicable background for better understanding of health (broad definition), as well as the role of the human kind within the eco system. It will help the students a multidimensional framework for intervention to promote healthy development in a fragile eco system.

COMH5085 (08507) Educational Practice
Semester 2-6 credit points (**)
Pre-requisite Instructional Design (08505)
Participants undertake an independent learning project in which they develop a teaching plan or product relevant to their professional setting.

HIIMT5045 (09439) Epidemiology
Semester 2-2 credit points
This unit introduces the student to epidemiology through the study of historical aspects and design strategies in epidemiological research. This introduction also includes measures of disease frequency and association, types of epidemiological studies - descriptive, case-control, cohort studies - and quantitative measures for epidemiological research. This unit also includes data management for clinical trials including stages in the development of a clinical trial, organisational structure of a collaborative trial, protocol design and interpretation, methods of data collection and forms design, quality control and maintaining the integrity of the trial, and presentation in data management.

BEHS5119 (10567) Ethnic Minorities and Health Care in Australia
Semester 1 and 2 - 4 credit points (**)
This unit will examine multicultural health policy and the general health status of ethnic minorities in Australia, as well as issues of access to health services and equity in the provision of health care. Students will then select a particular aspect of ethnicity and health care for examination in detail.

COMH5084 (08506) Facilitating Learning
Semester 2 - 6 credit points (N/#X)
Pre or Co-requisite Group Dynamics (08426)
The primary function of a teacher is the facilitation of effective learning. Micro skills of teaching and facilitation skills that enable learning from experience are both studied and practiced. The process of reflection is used to illuminate and develop personal style.

OCCP5069 (15507) Family and Community Care
Semester 2 - 6 credit points (N)
This unit of study examines family and community care within the context of social, economic and political processes and structures. Particular emphasis is placed on five related questions: why family caring and why now? How is such care distributed? What is policy doing to support carers? How can useful questions be framed about carers' needs and circumstances? And how can health professionals support families in ways which are conducive to the provision of reliable and effective family and community care? Systematic analysis of empirical evidence from the international literature is encouraged to discern varying socio-cultural approaches to family and community care and their application in the Australian context. Research issues covered will include the differing nature of formal and informal care; care giving "burden"; the neglected dimension of satisfactions of caring; the temporal aspect of care giving; assessing family carers' needs for support and services. Students are encouraged to pursue issues of family and community care in fields of interest encompassing the elderly, families with children with a disability, disabled adolescents and in the mental health arena.

HIIMT5033 (09515) Financial Management in Health Care Facilities
Semester 1 - 2 credit points (*D)
In this unit students are introduced to the financial management of hospitals and health care institutions. Topics covered include the accounting function embracing basic accounting procedures, financial and budgetary control methods, the budgetary process, types of budgets and auditing. In addition, the unit covers hospital accounting systems and methods of funding, performance and productivity, hospital cost analysis and control and clinical costing systems.

BEHS5100 (10567) Health and Cultural Pluralism
Semester 1 and 2 - 4 credit points (**)
This unit examines the health values and experiences of young people and their families in a multicultural society. The Australian government and people have embraced the concept of multiculturalism yet health care delivery is rooted in a monocultural paradigm in which cultural difference in treatment and sickness behaviour are of peripheral importance. Sociological analysis will be used to examine demographic issues, cultural values, sickness behaviour, family structures and community attitudes in preventative and remedial health care. Government policies and provisions will also be examined and the way in which these have responded to Australia's changing populations will be analysed.

Appendix 1
HIMT5018 (09470) Health Care Evaluation
Semester 2 - 2 credit points (* D)
In this unit students are introduced to the concept of quality health care. Approaches to evaluation of quality of care at a national level are discussed along with the assessment of health care quality at an organisational and individual level. Topics covered include evidenced based health care, health outcomes, variations research, consumer satisfaction, and clinical indicators. Approaches to improve quality of care such as practice guidelines are discussed. Program evaluation principles will be addressed. Techniques and methodologies for assessing quality of care along with elements of an effective evaluation program and sources of information for use in evaluation are discussed.

HIMT5035 (09517) Health Care Systems
Semester 1 - 2 credit points
In this unit students are given an overview of the Australian Health Care System. Topics covered include: Commonwealth and state responsibilities for health, health care expenditure, health insurance, health care facilities and the health workforce. Trends in the provision of health care services are discussed along with an introduction to approaches to measuring the effectiveness of the health care system.

COMHS171 (08453) Health in the Developing World
Semester 1 - 4 credit points
This unit is designed to provide students with an understanding of the major health issues and related socioeconomic characteristics of developing countries, in particular Australia's neighbours in the Pacific and Southeast Asian region. Topics include the historical and contemporary factors which have shaped the morbidity and mortality patterns of these countries, the relationship of health status and healthcare to development, the principles and processes of planning, implementing and evaluating primary health care programs at the village level, experience of, and the role of aid agencies in the Third World.

BEHS5057 (10524) Health Policy and Social Theory
Semester 2 - 4 credit points (**)
Contemporary social theorists have noted an increase in the rate of policy change in health services. Students will examine possible research topics concerning the determinants and implications of past and present policy changes in health services.

COMH5172 (08440) Health Promotion
Semester 1 - 6 credit points (* N)
This unit provides an introduction to the principles and processes of major approaches to health promotion.

COMHS5087 (08509) Health Promotion, Planning and Evaluation
Semester 2-6 credit points (*)
Pre or Co-requisite Introduction to Health Education (08481)
Models for planning and evaluation are examined. Application of these to the local context is a key strategy for learning.

BEHS5129 (10598) Health Risk Management and the (APEC) Agreement
Semester 1 and 2 - 4 credit points (**)
This unit aims to provide students with an understanding of the requirements of basic health risk management in the context of the principles adopted by the Asia/Pacific Economic Co-operation (APEC) Agreement and other relevant international standards and agreements. The course addresses the background to the Asia/Pacific Economic Co-operation (APEC) Agreement; key principles, and ramifications for parties to the agreement. Basic principles of health risk management as required by relevant International Labour Organisation (110) Conventions and Australian legislation related to health, work and rehabilitation are also addressed. Students also examine the problems of implementing APEC principles and effective health risk management, and suggest the means by which some of these problems might be overcome.

BIOS5018 (11433) Health, Dysfunction and Ageing
Semester 2 - 6 credit points
This unit aims to provide an understanding of the factors responsible for the increased prevalence with age of certain diseases and impairments, especially those with a tendency to become disabling and a handicap. Particular attention is paid to the contribution of environmental factors to the development of these conditions and to the ways in which such disorders may be prevented from leading to further disability. The unit also provides for in-depth study of a specific aspect of individual student interest.

BEHS5058 (10525) HIV/AIDS: Health and Social Services
Semester 1 and 2 - 4 credit points (**)
This unit is designed to give students a comprehensive introduction to the medical, health and social aspects of HIV disease. It considers epidemiology, prevention, support services, relevant political and legal issues, occupational health and safety procedures. The unit also investigates how specialist health workers can assist people living with HIV/AIDS.

BEHS5101 (10568) HIV/AIDS: Health and Social Services for Children and Adolescents
Semester 1 and 2 - 4 credit points (**)
This unit is designed to give students a comprehensive introduction to the medical, health and social aspects of HIV disease. It considers epidemiology, prevention, support services, relevant political and legal issues, occupational health and safety procedures. The unit also investigates how specialist health workers can assist children and adolescents living with AIDS.

COMH5154 (08594) Housing and Health
Semester 2-4 credit points (N)
The aim of this unit is to provide the students with skills in examining the health within the living environment. The aim is to equip the students with knowledge and skills for the examination, evaluation and surveying of present living condition, within the broad definition of health. The unit will ultimately prepare the students towards housing intervention strategies.
### COMH5057 (08466) Independent Investigation II

**Semester 2 - 4 credit points (**)**

Same as for Independent Investigation I.

### COMH5053 (08342) Independent Investigation I

**Semester 1 - 6 credit points (**)**

In this unit, individual participants can pursue an in-depth study of an educational issue of their choice. The participant will complete a personal learning contract under the supervision of a teacher.

### COMH5159 (08599) Injury Prevention

**Semester 2 - 4 credit points (*)**

This unit introduces students to the basic principles of injury control within a community health framework. Students will be provided with the skills and knowledge to understand injury as a preventable problem, identify data sources, and use data in a variety of ways. Issues surrounding personal and community responsibility for injury will be considered. Specific case studies will be critically examined to assess the way in which injury prevention strategies have been used in Indigenous and non-Indigenous contexts.

### COMH5140 (08585) Indigenous Community Action

**Semester 2 - 4 credit points (*)**

This critical and reflective approach to social change and community action includes a critique of development, examination of culturally appropriate strategies and methods, and case studies of indigenous organisation and action for change. (Minimum 5 students)

### COMH5146 (08586) Indigenous Family Health

**Semester 2 - 4 credit points (#)**

The purpose of this unit is to describe the Family Health within the context of Aboriginal culture and holistic approach to intervention, particularly in areas of family violence and sexual assault. This perspective is quite different from the conventional western approach of dealing with violence upon women and children. It uses a positive approach with cultural perspective to deal with the problem.

### COMH5147 (08587) Indigenous Mental Health

**Semester 2 - 4 credit points (#)**

Mental Health has only been recently acknowledged as a specific health issue for Aboriginal and Torres Strait Islander people. In the past Aboriginal Mental health was treated in the realm of drug and alcohol problems. Indigenous Mental Health does require an insiders perspective, and a framework for acknowledging the injustices forced upon Indigenous population. Any discussion and solution to the mental health problems needs to consider the healing process through appropriate strategies based on experience of those familiar and knowledgable about Aboriginal culture. The aim of this unit is to consider these frameworks.

### BEHS5110 (01073) Intermediate SPSS

**Semester 2 - 4 credit points (**)**

Topics covered in the introductory course will be treated in greater depth. In addition, special emphasis will be given to data transformation and selection procedures, importing and exporting data files. Statistical procedures covered include Multivariate Analysis of Variance including measures, Multiple Regression, Factor Analysis, Reliability and Non-parametric statistics.
This elective provides an overview of the concepts used in developing in medical anthropology of the cultural emphasis is given to the analysis that has accompanied the strategies for intervention are examined.

Students will learn what the internet is including basic concepts like transmission control protocol/internet protocol (TCP/IP), the domain name system (DNS), simple mail transfer protocol (SMP) etc. In addition students will have hands on experience accessing the internet and using its facilities such as telnet, ftp, email, archie, usenet, gopher, and world wide web (www). The focus of these experiences are to find the world wide resources available to health professionals in their special areas of interest.

This unit examines the conceptual and technological developments in educational computing and their use and impact on health science education. Participants will learn to apply concepts and skills of educational computing to their own educational settings, including selecting appropriate courseware and developing a small Computer-Assisted Learning package. (Some basic computer skills would be an advantage). Class size will be limited by the number of computers available.

This unit introduces students to the principles of epidemiology and their application to community health problems.

This unit aims to provide students with an understanding of gerontology as a unique matrix of disciplines and perspectives focused on the interaction of individual and social processes of ageing and on the dynamics of ageing populations. It demonstrates the need for integration of various academic disciplines and professional applications in the study of ageing and older people.

This unit is designed to give students an understanding of factors affecting mental health and the provision of community mental health services. It has two main foci: the complex factors involved in achieving integrated service networks, and those involved in providing rehabilitation for people with chronic mental health problems.

Juvenile delinquency accounts for almost 60% of all "traditional" crime in Australia. Most of this is "petty crime", nonetheless the perception fuelled by media is of a crime wave of unparalleled proportions with dire consequences for the future. In fact, juvenile crime is rather different. Whilst figures are hard to find, maybe only 5% of teenagers are likely to be in trouble for delinquent behaviour (although this represents an under-estimate of true delinquent behaviour). A number of sociological theories exist to explain crime, chief among them Strain and Control theory. There is a paucity of good psychological models of juvenile crime. Investigations of this topic requires a multi-disciplinary focus, borrowing from Criminology, Sociology, Developmental Psychology and Forensic Psychology. Investigation of this topic can focus on assessment, treatment, theories of causation and life-span perspectives.

Large group teaching is a common method of education. Doing it well is a challenge. In this unit participants will increase their knowledge and skills about ways to work with large groups more effectively.

The aim of this unit is to examine aspects of law and ethics which may affect the lives of older people and to identify the rights of older people in particular circumstances.

Effectively functioning in any organisational setting is greatly enhanced by a knowledge of group dynamics. Any group interaction for the purpose of learning is more productive if otherwise informed. Using the focus of the group and a series of task requirements participants gain both theoretical knowledge about the way in which group dynamics underpin small group learning and skills in facilitating the process, both as members and leaders of learning groups. Some knowledge of adult learning theory is an advantage (readings are suggested).
This unit examines legal and ethical issues which can arise in community health practice.

EXSS5020 (22521) Mechanics of Human Movement

This unit will provide biomechanical concepts and skills required for the analysis of human movement. Principles of kinematics, kinetics and electromyography in dynamic muscle movements, and mechanical energy distribution will be studied with reference to selected motor activities. Laboratory sessions will be used to provide illustrations of the above principles and to give students experience with biomechanical laboratory techniques. This unit is only open to graduates who have studied biomechanics previously, and is only available to students enrolled in the Graduate Diploma or Masters of Applied Science in Sports Physiotherapy, Occupational Health, or Paediatric Physiotherapy.

COMH5059 (08470) Mental Health in Later Life

The unit aims to provide a broad understanding of factors affecting mental health in later life and the opportunity for in-depth study of an area of professional relevance.

COMH5041 (08447) Migrant and Refugee Health

This unit seeks to analyse the pattern of migrant and refugee health and illness in Australia and to critically examine the sources of it. In addition, the course attempts to outline and evaluate the response of the Australian health care system to migrants and refugees.

MRTY5015(18510) MR Practice I

The unit addresses the principles and applications of magnetic resonance imaging including echoplanar sequencing. A variety of delivery modes may be employed depending upon demand.

BEHS5027 (10452) Multicultural Issues in Gerontology

This unit examines what it means to be old in a country whose language, expectations for aged behaviour and types of support available, differ from those of their country of origin. The impact of immigration policy and services provision will be analysed.

EXSS5021 (22522) Occupational Biomechanics

This unit aims to assess skills in assessment, implementation and evaluation of the physical interface of an occupational setting. The purpose of this unit is to develop skills and knowledge in a selected number of areas of specialisation in ergonomics.

BEHS5060 (10527) Occupational Health and Stress

This elective examines Occupational Health and Safety (OHS) issues within the context of social, economic and political processes and structures. Particular emphasis will be placed on OHS as an industrial relations issue, state intervention in OHS policies and the role of the medical and legal professions. Factors which affect occupational performance, experience and satisfaction, health and well-being will be considered, and reference made to studies attempting to explore and modify stress in various organisations, with a view to original research. A range of research topics concerning work performance are encompassed in this elective: work motivation and satisfaction, occupational stress, and work conditions and practices such as shift work, workspace, layout and design, noise, temperature and air pollution.

BEHS5124 (10593) Occupational Rehabilitation

This unit will examine current issues in the provision of occupational rehabilitation to persons injured in the workplace. Recent initiatives will be examined, together with the roles of key stakeholders in the management of workers in the post-injury phase. Students will be encouraged to explore the issues from a policy, an organisational/structural, and interpersonal and an individual perspective.

COMH5148 (08588) Organisational Management

This unit examines the current theories of management and relates these models to the management of health organisations to practical issues of managing health organisations.

BEHS5123 (10592) Organisational Psychology

This unit covers recent topics of interest to students who wish to further their understanding of organisational behaviour. Topics will include: dimensions of personality, occupational choice and personnel selection; work motivation and work satisfaction and their relationship with performance, absenteeism and turnover; organisational change and effective implementation; downsizing and its impact on organisational behaviour and organisational climate; managerial focus in rapidly changing work environments; working conditions, for example, shift work and their effects on work performance; and, women and work.

BEHS5117 (10586) Organisational Structures in Health Contexts

This unit focuses on rational structuring of organisations and relates it to administrative problem solving. It examines the effects of societal context on organisational growth and the interdependence between layers or sectors of organisations. It contrasts the characteristics of private, public sector and voluntary organisations and uses power and interests as analytic concepts to elucidate process.
The purpose of this unit is to develop skills and knowledge in a selected number of areas of specialisation in ergonomics. The purpose of this unit is to develop skills and knowledge in a selected number of areas of specialisation in ergonomics. The skills include specific analysis of the workplace environment, use of appropriate measurement techniques and problem solving based on recent developments in the pertinent knowledge base of specific topic areas such as industrial design and physical comfort.

BEHS5061 (10528) Post Trauma Stress
Semester 1 and 2 - 4 credit points (**)
This elective traces the history of reactions to traumatic events, including the acceptance of a syndrome known as post traumatic stress syndrome in recent years. Various disorders with similar characteristics are compared and contrasted and the research and clinical literature presented. Current views on the treatment and evaluation of post traumatic disorders are presented and appraised.

COMH5149 (08589) Project Development
Semester 1 - 4 credit points (**)
This unit provides students with an opportunity to integrate learning by defining, planning, and developing a project related to professional practice in Aboriginal health and Community Development.

COMH5150 (08590) Project Management
Semester 2 - 4 credit points (**)
In this unit students, using management tools, are practically engaged in the management of a project in areas of health and health care system.

COMH5037 (08441) Program Planning and Evaluation
Semester 1 - 6 credit points (*N)
The aim of this unit is to examine factors and elements involved in the process of planning and evaluating community health programs.

BEHS5098 (10565) Psychology of Adolescent Development and Adjustment
Semester 1 and 2 - 4 credit points (**)
This unit provides an overview and critical evaluation of theoretical approaches which attempt to explain adolescent development and adjustment. Aspects of physical growth and psychosocial changes will be examined together with factors affecting development and the impact of those changes. Discussion of cognitive and psychosocial development during adolescence will highlight interaction between the adolescent, self and society. Topics will include identity formation, relations withpeers and family, sexuality and intimacy, body image and personality; the 'youth culture' role of the media. Adolescent health concerns will also be discussed including alcohol and drug use and abuse, STDs, adolescent suicide.

BEHS5097 (10564) Psychology of Child Development and Adjustment
Semester 1 and 2 - 4 credit points (**)
Biological factors, sociocultural expectations, life experiences, personal choices and chance events all contribute to the process of human development. This unit addresses theoretical and applied perspectives related to the study of child development and adjustment. The period of pregnancy (genetic and biological influences) and prenatal development are discussed together with psychosocial factors associated with pregnancy and the birth process. The period of infancy and childhood is examined and topics such as sensory, motor, cognitive and moral development are explored with reference to the effects of variation in attachment, class and culture. The development and function of play and its importance are highlighted together with social and emotional development including; sex role development, friendship patterns and self-esteem and one's self-concept.

BEHS5142 (10460) Psychosocial Aspects of Sport
Semester 2 - 4 credit points (**)
The first part of this unit considers psychological factors in sports performance. Topics covered include: managing motivation, anxiety and aggression; arousal-performance relationships; psychosocial characteristics of peak performance; personality and sport performance; relaxation and energising techniques; cognitive techniques; attention control training; goal-setting; leadership; team cohesion; athlete staleness and burnout; stress, injury and psychological rehabilitation.

The second part of the unit is concerned with the historical development of leisure and its relationship to work; sport as a dominant aspect of Australian culture; sources of tensions and conflicts in sport and leisure which are related to power, race, class, gender, age, ideology in sporting and leisure contexts.

BEHS5063 (10530) Qualitative Research Analysis
Semester 1 and 2 - 4 credit points (**)
Pre-requisite Qualitative Research Methods (10505)
In this unit students will execute a qualitative research project and write a report of the findings. The unit will focus on conceptualization, social context, proposition testing and theory construction. Use of computer programs for the analysis of data will be discussed.

MRTY5010 (18505) Radiation Therapy Treatment Planning Systems
Semester 1 or 2 - 4 credit points (X)
This unit provides the radiation therapist with an understanding of the functional features of and differences between two and three dimensional treatment planning systems. Visualisation imaging, evaluation and dose computation tools will be examined with emphasis on their applications in the workplace. This unit will be presented in a series of distance education modules which will be supported by on-line internet discussion groups.
BEHS5064 (10531)  Research Methods for Medical Anthropologists
Semester 2 - 4 credit points (**)
This unit provides knowledge of various methods of fieldwork and the consequences and problems of pursuing them. By analysing examples of published research, attention will be drawn to the problems and difficulties in undertaking a research project in the field of medical anthropology. In particular, specific research strategies will be covered which are relevant to potential thesis topics.

COMH5139 (08579)  Residential Care Policies and Services
Semester 1 or 2 - 6 credit points (#)
This unit provides an overview of the development and implementation of residential care policies for older Australians and explores specific issues in the delivery of residential aged care services.

COMH5151 (08591)  School Health
Semester 2 - 4 credit points (#)
Schools are among those domains that provide opportunities for their residents, students, teachers, parents and others to develop a healthy behaviour that will enable them to reach their fullest potential. The purpose of this unit is to make the participants familiar with the concept of Healthy Schools a new approach in building a healthy community.

BEHS5065 (10532)  Social Change and Health Services
Semester 1 and 2-4 credit points (**)
This elective will assist the student to develop an understanding of the processes of social change in health care systems, and will develop an ability to evaluate the efficiency of proposed structural and role changes within the health care system, and the implications of those changes for the quality of health care provided.

COMH5158 (08598)  Social Justice in Health
Semester 2 - 4 credit points (**)
Social justice is having equal opportunity for advancement in life. In health it means everyone having a fair opportunity to attain their full potential in life. In social settings there are circumstances which might enhance or hinder these developments. The purpose of this unit is to define inequalities and social injustices in health care system in accordance with various theories of models, discuss the advantages and disadvantages of using these models and suggests means to overcome these injustices.

BEHS5067 (10534)  Social Theory and Special Groups
4 credit points
This elective gives students a basic understanding of social theory. As an example of a special group which might be studied, it examines women’s health in the context of social class and gender divisions in Australian Society. Students will be encouraged to consider as research issues patterns and concerns regarding the status of women’s health using socialist, feminist and psychoanalytic perspectives. Research into particular ethnic groups and multicultural issues are also within the scope of this elective.

BEHS5096 (10563)  Sociology of Community and Family
Semester 1 and 2 - 4 credit points
This unit develops an understanding of urbanisation and of the concept of community in relation to young adults. It examines recent Australian community studies analysing the characteristics of neighbouring and friendship ties. It investigates the nature of networks in terms of size, intensity and homophily, and the support likely to be offered by networks in times of dependency occasioned by chronic illness, disability or sudden health crises in youth and adolescence. The interplay between assistance offered by formal health-care and community organisations with informal support is discussed from a sociological perspective. The debate about the predominance of the modified extended family versus the various types of nuclear families is considered and the effects of life-cycle stage and culture are examined. In particular it investigates dependency and support within the family context. The structure and functions of the Australian family in an historical context, together with the significance of changes, are important foci of the unit.

BEHS5068 (10535)  Sociology of Gender Relations
Semester 1 and 2 - 4 credit points (**)
This elective examines research perspectives concerning gender relations within the structure of industrial capitalism, with particular focus on relations of power, the sexual division of labour, sexuality, the social construction of gender, production and reproduction and family.

MRTY5018 (18513)  Specialised Skeletal Scintigraphy
Semester 1 or 2-4 credit points (X)
This unit provides advanced instruction in skeletal nuclear medicine. It is designed to maximise the practitioner’s ability to offer best practice in all nuclear medicine applications of bone disease. The unit will be offered in distance education mode, with full internet support, and optional intensive residential. It will run in semester one or two depending on demand.

PHTY5011 (18506)  Stabilisation and Positioning
Semester 1 or 2-4 credit points (X)
This unit covers in detail the latest research into stabilisation and positioning of the radiation therapy patient. Detection of patient and organ movement, the differences between stability and reproducibility, and random and systematic errors are investigated. Students will select a particular stabilisation or positioning problem and investigate ways of addressing the problem.

COMH5155 (08595)  Strategic Planning
Semester 1 or 2-4 credit points (**)
Strategic planning is used to create futures in large and small organisations, businesses, government agencies and health organisations. This elective is designed to provide health professionals with a model and set of tools to develop a long range strategic planning for an organisation, and the understanding and skills to use them. Students may use this opportunity to support the writing of a strategic plan for organisation to which they belong.
This elective considers how social context and external factors influence 'stress'. Arguments that the term 'stress' is misleading and that emphasis should be placed on changing external factors or social conditions will be considered. The effects of interpersonal and social relations on health and well-being and factors such as friendship, love and attraction will be considered. Cases of stressors impinging differentially on the effects of interpersonal and social relations on health and external factors or social conditions will be considered. The misleading and that emphasis should be placed on changing factors influence 'stress'. Arguments that the term 'stress' is not appropriate in certain contexts will be discussed. The elective will consider, especially with respect to generating research.

The research potential of procedures which focus on the modification of stress-related behaviours, such as Type A Behaviour, exercise and smoking, particularly behavioural and the relationship of research to individual accounts of stress management programs critically evaluated. Individual differences in personality and their effect on coping will be considered, especially with respect to generating research. The nature of the relationship of the psychophysiological stress response and the development of illness will be explored and critically evaluated in this elective. A range of strategies to facilitate the development of clinical reasoning will be examined. Participants will have the opportunity to plan the application of strategies to their teaching context.

This elective examines the incidence of various disabilities. Community perceptions will be examined, including the reasons behind the existence of 'high profile', 'stigma' and 'cultural acceptability' differences across disabilities. Factors associated with living with a disability will be examined, and the relationship of research to individual accounts critically examined.

This elective considers how social context and external factors influence 'stress'. Arguments that the term 'stress' is misleading and that emphasis should be placed on changing external factors or social conditions will be considered. The effects of interpersonal and social relations on health and well-being and factors such as friendship, love and attraction will be considered. Cases of stressors impinging differentially on the effects of interpersonal and social relations on health and external factors or social conditions will be considered. The misleading and that emphasis should be placed on changing factors influence 'stress'. Arguments that the term 'stress' is not appropriate in certain contexts will be discussed. The elective will consider, especially with respect to generating research.

The research potential of procedures which focus on the modification of stress-related behaviours, such as Type A Behaviour, exercise and smoking, particularly behavioural and the relationship of research to individual accounts of stress management programs critically evaluated. Individual differences in personality and their effect on coping will be considered, especially with respect to generating research. The nature of the relationship of the psychophysiological stress response and the development of illness will be explored and critically evaluated in this elective. A range of strategies to facilitate the development of clinical reasoning will be examined. Participants will have the opportunity to plan the application of strategies to their teaching context.

This elective examines the incidence of various disabilities. Community perceptions will be examined, including the reasons behind the existence of 'high profile', 'stigma' and 'cultural acceptability' differences across disabilities. Factors associated with living with a disability will be examined, and the relationship of research to individual accounts critically examined.

This elective considers how social context and external factors influence 'stress'. Arguments that the term 'stress' is misleading and that emphasis should be placed on changing external factors or social conditions will be considered. The effects of interpersonal and social relations on health and well-being and factors such as friendship, love and attraction will be considered. Cases of stressors impinging differentially on the effects of interpersonal and social relations on health and external factors or social conditions will be considered. The misleading and that emphasis should be placed on changing factors influence 'stress'. Arguments that the term 'stress' is not appropriate in certain contexts will be discussed. The elective will consider, especially with respect to generating research.

The research potential of procedures which focus on the modification of stress-related behaviours, such as Type A Behaviour, exercise and smoking, particularly behavioural and the relationship of research to individual accounts of stress management programs critically evaluated. Individual differences in personality and their effect on coping will be considered, especially with respect to generating research. The nature of the relationship of the psychophysiological stress response and the development of illness will be explored and critically evaluated in this elective. A range of strategies to facilitate the development of clinical reasoning will be examined. Participants will have the opportunity to plan the application of strategies to their teaching context.

This elective examines the incidence of various disabilities. Community perceptions will be examined, including the reasons behind the existence of 'high profile', 'stigma' and 'cultural acceptability' differences across disabilities. Factors associated with living with a disability will be examined, and the relationship of research to individual accounts critically examined.

This elective considers how social context and external factors influence 'stress'. The nature of the relationship of the psychophysiological stress response and the development of illness will be explored and critically evaluated in this elective. A range of strategies to facilitate the development of clinical reasoning will be examined. Participants will have the opportunity to plan the application of strategies to their teaching context.
COMH5138 (08578) The Residential Care Setting and Older People  
Semester 1 or 2 - 6 credit points (#)  
This unit examines the environment of supported accommodation from the perspective of older residents and professional care staff.

BEHS5095 (10562) The Sociology of Deviance  
Semester 1 - 4 credit points (**)  
This unit will use the paradigms developed by the theoretical approach to the sociology of deviance to examine adolescent behaviour in relation to substance abuse, homelessness and other non-traditional lifestyles. This unit will incorporate an historical approach to community breakdown, social control, the effects of media imagery and the changing approaches of social control agents such as governments, the legal system, law enforcement officers and medical personnel. An analysis of legislation and of royal commission findings will be made using structural and interactional theories.

MRTY5012 (18507) Therapy of Radiation Therapy Planning Systems  
Semester 2 - 4 credit points (X)  
This unit is an in-depth study of radiation therapy planning, from basic monitor unit calculations through a thorough analysis of algorithms used in contemporary planning computers. Future developments in radiation therapy planning will be discussed. After examining the theory, students will determine the parameters that they would need to investigate when selecting a new planning system. This unit will be presented in a combination of distance and optional intensive block attendance modes. It will be supported by on-line internet discussion groups.

BEHS5092 (10559) Therapy with Children, Adolescents and their Families  
Semester 1 and 2 - 4 credit points (**)  
Theoretical models addressing concerns specific to children and adolescents will be considered covering a variety of theoretical perspectives; including behavioural, psychoanalytic and systemic. These models will provide a background for developing interviewing techniques. Students will gain practical skills in interviewing the client within the context relevant to the presenting problem; for example the student will learn when to interview an individual and when to interview the entire family. The unit will conclude with a consideration of the role of the therapist during the process and termination of therapy.

BEHS5090 (10557) Violence Against Children and Adolescents  
Semester 1 and 2 - 4 credit points (**)  
Effective intervention into violence against children and adolescents requires an awareness and understanding of the nature and extent of this crime, together with a knowledge of the impact of such violence on all involved: victims/survivors, families, perpetrators and professionals working in the area. Course content will include discussion of the nature and extent of abuse (physical, neglect, sexual, external and systems abuse), theoretical approaches and models which attempt to explain such abuse and a critical examination of attitudes and beliefs about victimisation of children and adolescents. The unit will also examine the Criminal Justice Response to child abuse, including police involvement and related legal issues such as reliability and credibility of children's evidence. Characteristics of perpetrators, child pornography, and prostitution will also be discussed, as will child protection programs and the burden of care falling to the professionals working in the area. This unit will adopt an interdisciplinary approach with an applied focus and will involve input from various agencies such as the police, D.P.P. and other community agencies and service providers.

COMH5173 (08445) Women's Health  
Semester 2 - 4 credit points (* N)  
This unit seeks to examine the pattern and sources of women's health in Australia and to critically evaluate health care services for women.

BEHS5116 (10585) Youth Suicide  
Semester 1 and 2 - 4 credit points (**)  
In the past fifteen years considerable anxiety has been expressed in the literature regarding the increase of rates of completed and attempted suicide by young people. Rates of youth suicide in the Western world have doubled or even tripled in some parts. Australia has the second worst record in this regard. Factors associated with the increase rate in youth suicide are currently unknown. Issues regarding how one classifies an act as suicidal, or parasuicidal, how to assess and treat such people, and the development of school or community based prevention programs are most controversial. Even though there is some hope that the current rate of increase is stabilising, the level of youth suicide now means more than one child a day will kill him/herself in this country. This elective provides an opportunity to explore aspects of this community mental health problem.
Research Electives

Action Research
COMH5129 (08563) Semester 1 - 6 credit points
COMH5166 (085A7) Semester 1 - 8 credit points
Contact: Ian Hughes (Ph: 9 351 9110)
Participatory action research extends knowledge and improves social practices through processes which empower ordinary people. Action research projects proceed through cycles of planning, acting, observing and reflecting, with the participation of the people affected by the practices under consideration. Students may study through independent learning and the internet.

Biological Measurement and Analysis
EXSS5017 (22518) Semester 2 - 6 credit points
EXSS5025 (22526) Semester 2 - 8 credit points
Contact: Dr R Smith (Ph: 9 351 9462)
This unit is a study in measurement, recording and analysis of biological signals. Concepts in the nature of biological signals, their transduction, storage and display, are presented and worked on within the students' own specific research application.

Casemix Measurement Systems
HIMT5046 (09469) Semester 2 - 6 credit points
Contact: Ms Johanna Westbrook (Ph: 9 351 9558)
This unit is designed to cover a variety of casemix classification systems for acute and non-acute inpatients and ambulatory patients.

Epidemiological Research
COMH5130 (08564) Semester 2 - 6 credit points
COMH5167 (085A8) Semester 2 - 8 credit points
Contact: Dr K Brock (Ph: 9 351 9124)
In this unit students will be exposed to aspects of conducting epidemiological research, an area which focuses on the study of the distribution of disease, the search for determinants of the observed distribution and a subsequent evaluation of a causal hypothesis.

Epidemiology
HIMT5017 (09468) Semester 2 - 6 credit points
Contact: Ms Johanna Westbrook (Ph: 9 351 9558)
This unit introduces the student to epidemiology through the study of historical aspects and design strategies in epidemiological research. This introduction also includes measures of disease frequency and association, types of epidemiological studies - descriptive, case-control, cohort studies - and quantitative measures for epidemiological research. This unit also includes data management for clinical trials including stages in the development of a clinical trial, organisational structure of a collaborative trial, protocol design and interpretation, methods of data collection and forms design, quality control and maintaining the integrity of the trial, and presentation in data management.

Evaluation Research
COMH5127 (08561) Semester 2 - 6 credit points
COMH5166 (085A5) Semester 2 - 8 credit points
Contact: Mr Ian Hughes (Ph: 9 351 9110)
In this unit, students will examine aspects of conducting evaluation research, an area that focuses on the application of research methods to health services empowering and critical approaches will be included.

Group and Single Case Experimental Research in Clinical Settings
BEHS5108 (10576) Semester 1 - 6 credit points
BEHS5139 (105B2) Semester 1 - 8 credit points
Contact: Dr Lynn Harris (Ph: 9 351 9162)
This unit concerns experimental designs and analyses suitable for evaluating the effectiveness of clinical interventions. Applications for evaluating data obtained from single cases and groups of clients will be considered.

Intermediate Statistics
BEHS5103 (10575) Semester 1 - 6 credit points
BEHS5135 (105A6) Semester 1 - 8 credit points
Contact: Dr Peter Choo (Ph: 9 351 9583)
Pre-requisite: Research Methods I and II, or equivalent.
In this unit, students will extend and consolidate the research methods and statistical skills acquired in Research Methods I and II. Students will gain experience in data screening techniques, analysis of variance, multiple regression and non-parametric statistics. Students will learn how to use SPSS to conduct these statistical tests. This unit is usually offered on Mondays 5-8pm.
Introduction to Graduate Studies
BEHS5130 (105A1) Semester 1 - 8 credit points
Contact: Dr Carol O'Donnell (Ph: 9 351 9580)
This unit will provide information and practical exercises to assist students to achieve the basic knowledge of university policies, writing requirements, library, information technology resources, and project development skills necessary for effective understanding and dissemination of health research at a postgraduate level. This unit is compulsory for students undertaking a Graduate Diploma.

Issues in Educational Research
COMH5096 (08516) Semester 1 - 6 credit points (**)
COMH5162 (085A3) Semester 1 - 8 credit points
Contact: Ms Fran Everingham (Ph: 9 351 9116)
Victoria Neville (Ph: 9 351 9118) (for Health Science Education students only)
This unit explores issues in educational research, including using theories and conceptual frameworks to help deal with multiple dimensions of the educational process, and considers some of the methodologies used in educational research.

Multivariate Statistics
BEHS5105 (10573) Semester 1 - 6 credit points
BEHS5137 (105A8) Semester 1 - 8 credit points
Contact: Dr P Choo (Ph: 9 351 9583)
Pre-requisite Intermediate Statistics (10503), or equivalent
This unit examines a variety of multivariate designs and statistical procedures including factor analysis, discriminant function analysis, analysis of covariance. Other procedures will be considered according to the needs and interests of enrolling students.

Qualitative Research Methods
BEHS5104 (10572) Semester 1 - 6 credit points
BEHS5136 (105A7) Semester 1 - 8 credit points
Contact: Dr G Sullivan (Ph: 9 351 9588)
In this unit students will learn about qualitative research techniques such as in-depth interviewing and participant observation which focus on the investigation of people’s experiences and their interpretation of events. This unit examines the types of research questions for which these methods are best suited, and provides training in data collection methods and analysis. The unit is conducted as a seminar in which students actively participate, and students work on a research project of their choice throughout the semester. This unit is usually offered on Wednesdays 4-7 pm.

Research Design
BEHS5040 (10488) Semester 1 - 6 credit points (X)
Contact: Dr G Sullivan (Ph: 9 351 9588)
This unit has been designed especially for distance learning students instage 3 of the Master of Rehabilitation Counselling (by coursework) program. It introduces students to the research process and focuses on developing informed consumers of research. The unit includes consideration of the philosophy of science, research ethics, qualitative and quantitative research, the development of research questions and the specification of hypotheses and variables, conceptualisation and operationalisation, sampling issues, validity and reliability. A broad range of research methods will be introduced, including experimental research, single case designs, surveys, interview and observational studies, secondary data analysis and content analysis. Data quantification techniques will be discussed and students will be introduced to research applications in the health sciences including needs assessment, evaluation research, action research and epidemiology. Assessment for this subject will include a final exam, weekly exercises and formulation of a research prospectus.

Research Design and Methods for Therapists
OCCP6008 (15502) Semester 1 - 6 credit points (D)
OCCP5073 (15511) Semester 1 - 8 credit points
Contact: Dr M Fitzgerald (Ph: 9 351 9216)
The purpose of this unit is to explore a variety of research designs, research methods, and related issues appropriate to applied research. The exploration will be accomplished through student led seminar discussions of selected readings and each student will develop a research proposal on a topic of their choice content will include such things as: an overview of appropriate research designs, strengths and weaknesses of a broad selection of designs and methods, reliability and validity, selection of a study population, research ethics, development of research statements and questions, proposal writing, and the use of computers and other technology in research.

Research Elective Independent Study
COMH5097 (08517) Semester 1 - 6 credit points (**)
COMH5163 (085A4) Semester 1 - 8 credit points
Contact: Ms Fran Everingham (Ph: 9 351 9116)
Victoria Neville (Ph: 9 351 9118) (for Health Science Education students only)
This unit will function as an independent study program. As with other research elective units, it allows students to pursue an area of study related to the development of knowledge and skills in a specific area of research methodology in preparation for their research thesis. Students will enrol in this unit if the research methods they wish to study are not covered to the extent required in other research electives.
Research Elective Independent Study
PHTY5067 (16505)  Semester 1 - 6 credit points
PHTY5094 (16529)  Semester 1 - 8 credit points
Contact:  (Ph: 9 351 )
(For Physiotherapy Research students only)
This unit will function as an independent study program. As with other research elective units, it allows students to pursue an area of study related to the development of knowledge and skills in a specific area of research methods in preparation for their thesis.

Scientific Investigation C
PHTY6009 (164D8)  Semesters 1 - 6 credit points
PHTY5093 (16528)  Semesters 1 - 8 credit points
Contact:  (Ph: 9 351 )
Scientific Investigation C is intended for students enrolled in the Master of Applied Science (Physiotherapy) degree and requires the student to complete 42 hours of content from within the units 16508 Scientific Investigation I and 16512 Scientific Investigation II as negotiated with the Masters Coursework Programs Coordinator.

Single System Research Design and Evaluation Methods
OCCP5064 (15501)  Semester 2 - 6 credit points (D)
OCCP5072 (15510)  Semester 2 - 8 credit points
Contact: Dr C Chapparo (Ph: 9 351 9206)
The purpose of this unit is to explore the application of systematic research and evaluation methods through single system design. Students will have the opportunity to design a single system project which is appropriate to their work setting. In doing this, the following will be covered: comparison of traditional and single system research methods; measurement and recording procedures associated with single system designs; basic and advanced designs for single system evaluation and research; and visual and statistical analysis of single system data.

Structuring a Qualitative Research Thesis
PHTY5095 (16527)  Semester 1 - 4 credit points
Contact: Professor Joy Higgs (Ph: 9 351 9070)
Students engaged in qualitative research need to consider structures for their theses which can be different from traditional quantitative models. This unit explores elements of qualitative research in the context of graduate research programs. Topics will include: philosophical basis for research paradigms, the nature of qualitative research, paradigms and strategies, ethical issues and strategies in qualitative research, writing qualitative research, and quality in qualitative research. These elements will enable students to structure their research theses. The unit will be practical and numbers are limited. It is open to masters and doctoral students in the Faculty. (Limited to 12 students only).

Survey Research Methods
BEHS5106 (10574)  Semester 2 - 6 credit points
BEHS5138 (105A9)  Semester 2 - 8 credit points
Contact: Dr G Sullivan (Ph: 9 351 9588)
This unit examines survey research design principles and considers conceptualization, sampling, questionnaire construction and pilot testing of data collection instruments. Techniques for the collection, coding and keypunching of survey data will be covered and students will gain experience with computer analysis of survey data. The strengths and limitations of survey data will be discussed. This unit is usually offered on Mondays from 5-8pm.
