Optimal strategies for disaster and hazard mitigation

Proceedings of the International Forum on Engineering Decision Making
Third IFED Forum, 12-15 December 2007, Shoal Bay, NSW, Australia

Edited by Stuart Reid and Mark Stewart
Contents

Editorial
Stuart Reid and Mark Stewart

1 Assessment and mitigation of risk from low-probability, high-consequence hazards ................................................................. 1
Bruce R. Ellingwood

2 Development of a Synthetic Hurricane Wind Speed Database for Hazard Analysis and Risk Studies................................................. 9
David V. Rosowsky and Kyung Ho Lee

3 Life Safety Risks and Optimisation of Protective Measures for Terrorist Threats to Built Infrastructure........................................ 19
Mark G. Stewart

4 Risk-based Decision-making for Multi-hazard Mitigation for Woodframe Residential Construction............................................. 31
Yue Li and Bruce R. Ellingwood

5 Managing geotechnical hazards at various scales in urban soils using a 3D model............................................................. 41
A. Marache, S. Dominique, D. Breysse, J. Dubost and A. Denis

6 Multi-Attribute Aspects for Risk Assessment of Natural Hazards................. 51
Evan M. Hammel and Ross B. Corotis

7 Conceptual Dynamic Response Recovery Model for Emergency Events............. 61
Frederico Ferreira, Andre Dantas and Erica Seville

8 Risk analysis of structures in presence of stochastic fields of deterioration: flowchart for coupling inspection results and structural reliability.................... 71
Franck Schoefs

9 Decision in the face of risks: optimization of decision schedule..................... 82
Aurélie Talon and Daniel Boissier

10 Hazard Estimation with Random Fields.................................................. 92
Karl Breitung
Editorial

The papers in this book comprise the proceedings of the 3rd International Forum on Engineering Decision Making (IFED’07) “Optimal Strategies for Disaster and Hazard Mitigation”, held at Shoal Bay, NSW, Australia, 12-15 December 2007. This volume comprises original research papers that have been selected and accepted on the basis of double peer-review independent of the author by members of the IFED Consortium.

IFED’07
The 3rd International Forum on Engineering Decision Making
“Optimal Strategies for Disaster and Hazard Mitigation”
12-15 December 2007
Shoal Bay, NSW, Australia

Organised by the IFED Consortium
General information about the International Forums on Engineering Decision Making may be found at http://www.ifed.ethz.ch. The forums are organised by the IFED Consortium comprising:
- Michael Faber, ETH Zurich, Switzerland
- Jun Kanda, University of Tokyo, Japan
- Marc Maes, University of Calgary, Canada
- Stuart Reid, University of Sydney, Australia
- Mark Stewart, University of Newcastle, Australia.

IFED’07 was organised under the co-chairmanship of Stuart Reid (University of Sydney) and Mark Stewart (University of Newcastle).
