This project is to build building for certain purpose at site.
My tutorial group site is Isehan, where located at Iran.
I designed building as a Market with open space at middle.
The open space between shop building at both side is whole walk way on week days, on week end this space become free market space which people can open their own little shops at any space. There are accesses from all directions, easy access may be have car and/or motorcycle parking near by. Also provide cafes at front (South direction from main building). These four block of cafes are all same cafe, just separate building, therefore there are gaps between four building which can be access to next site.
