**Table 2A-E. Summary of statistical analyses results for associating *Cystodiscus axonis* and *Cystodiscus australis* with lesions of disease**

**A**

<b>Brain histopathology (GGBF)</b>						
<b>Univariable binary logistic regression</b>						
<b>Outcome</b>	<b>Explanatory variables</b>	<b>b</b>	<b>s.e.</b>	<b>Odds Ratio</b>	<b>95% C.I</b>	<b>p</b>
Presence of brain plasmodia	Age (Adult versus Tadpoles)	1.04	0.79	2.83	-0.64, 2.57	0.21
	Season					0.003*
Gliosis	Presence of brain plasmodia**	3.75	0.89	42.50	8.83, 325.64	<0.001
	Parasitic load					<0.001*

\*Fisher's exact test

**B**

<b>Chi-sq test</b>		<b>p</b>
Presence of brain plasmodia	Striped marsh frog tadpoles versus GGBF	0.0086
	Peron's tree frog tadpoles versus GGBF	0.0004

**C**

<b>Liver histopathology (GGBF)</b>						
<b>Univariable binary logistic regression</b>						
<b>Outcomes</b>	<b>Explanatory variables</b>	<b>b</b>	<b>s.e.</b>	<b>Odds Ratio</b>	<b>95% C.I</b>	<b>p</b>

**Detection limit for multiplex species specific PCR.** Ten fold dilutions of quantified myxospore samples for *Cystodiscus axonis* and *C. australis* using *Cystodiscus* internal transcribed spacer rDNA specific primers. Reactions were run in triplicate and visualised on a 2% agarose gel stained with Gel Red (Biotium, Australia).
