Bachelor of Liberal Arts and Science

Bachelor of Liberal Arts and Science

These resolutions must be read in conjunction with applicable University By-laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the Coursework Policy 2014, the Resolutions of the Faculty, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Up to date versions of all such documents are available from the Policy Register: http://sydney.edu.au/policies.

Course resolutions

1 Course codes

Code	Course title
BPLIARSC-01	Bachelor of Liberal Arts and Science
BHLIARSH-01	Bachelor of Liberal Arts and Science (Honours)

2 Attendance pattern

The attendance pattern for this course is full time or part time according to candidate choice.

3 Admission to candidature

Admission to undergraduate courses at the University of Sydney is either on the basis of completion of secondary study via the NSW Higher School Certificate, leading to the award of an Australian Tertiary Admission Ranking (ATAR) or equivalent (and subject to special admissions provisions as set out in the Coursework Rule), or on the basis of Mature Age Admission as set out in the Admissions chapter of the Coursework Policy.

4 Requirements for award

To qualify for the award of the pass degree, a student must successfully complete 144 credit points, with at least 132 credit points from the Bachelor of Liberal Arts and Science Units Table, Arts Table A or Science Table 1:

COMMON REQUIREMENTS FOR ALL STUDENTS

(1) a minimum of 36 credit points of units listed in the Bachelor of Liberal Arts and Science Units Table; including
- (a) ATHK1001 and WRIT1001; and
- (b) a minimum of 6 credit points of units from Part C Ethics in the Bachelor of Liberal Arts and Science Units Table; and
- (c) the remaining 18 credit points of Liberal Studies units may be taken from any of the six areas of the Bachelor of Liberal Arts and Science Units Table, Parts A-F.

(2) units of study chosen to satisfy requirements of the Bachelor of Liberal Arts and Science Units Table can not count towards the Science or Arts requirements below; and

(3) all students must complete either a Science major or an Arts major:
- (a) For a Science Major
  - (i) a major in Science from Table 1; and
  - (ii) a minimum of 36 credit points of units of study from Arts Table A, which must include at least 12 credit points at Arts senior level (2000 or 3000 level); or
- (b) For an Arts Major
  - (i) a major in Arts from Table A; and
  - (ii) a minimum of 36 credit points of units of study from Science Table 1, which must include at least 12 credit points at Science intermediate or senior level (2000 or 3000 level);

(4) a maximum of 12 credit points from outside of Arts Table A and Science Table 1 may be taken with approval from the relevant Faculty; and

(5) no more than 84 credit points of junior units of study.

5 Majors

(1) Completion of a major is a requirement of the course. Units of study counted towards one major may not count toward any other major.

(2) The list of Table 1 Science majors available is specified in the course resolutions for the Bachelor of Science.

(3) The list of Table A Arts majors available is specified in the resolutions of the Faculty of Arts and Social Sciences.

(4) Units of study counted towards a major may not count toward the Liberal Studies requirements.

6 Requirements for the Honours degree

(1) Honours is available to meritorious candidates who complete an additional year of full time study in either Science or Arts at the completion of the degree.

(2) Admission and award requirements for honours in Science are described in the Coursework Policy and in the resolutions of the Faculty of Science. Admission and award requirements for honours in Arts are described in the resolutions of the Faculty of Arts and Social Sciences.

7 Award of the degree

(1) The Bachelor of Liberal Arts and Science is awarded as either Pass or Honours. The honours degree is awarded in classes ranging from First Class to Third Class according to the requirements of the Coursework Policy, the Resolutions of the Faculty of Science and the resolutions of the Faculty of Arts and Social Sciences.

(2) Candidates for the award of the Honours degree who do not meet the requirements, and who have not already graduated, will be awarded the pass degree.

8 Transitional provisions

(1) These resolutions apply to persons who commenced their candidature after 1 January, 2016 and persons who commenced their candidature prior to 1 January, 2016 who elect to proceed under these resolutions.

(2) Candidates who commenced prior to 1 January, 2016 may complete the requirements in accordance with the resolutions in force at the time of their commencement, provided that requirements are completed by 1 January, 2020, or later date as the Faculty may, in special circumstances, approve.

(3) Students who commenced their degree prior to 1 January 2018 or who progress according to degree resolutions applicable to students commencing before that date may take major/s from the major/s listed under 'Transitional Provisions' in Table 1.

Please note:

The following course resolution is published subject to approval by the Academic Board on 28 November 2017.

Bachelor of Liberal Arts and Science

Bachelor of Liberal Arts and Science Units Table

Unit of study	***Credit points***	***A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition***	***Session***
Candidates are required to complete 36 credit points from units listed in the Liberal Studies Units Table. ATHK1001 and WRIT1001 and at least one 6 credit point unit of study from Part C Ethics must be completed. The remaining 18 credit points of Liberal Studies units may be taken from any of the six areas of the table, A-F. It is strongly recommended that ATHK1001 and WRIT1001 are taken in the first year of the degree.			
A. Analytical Thinking			
Core units of study			
ATHK1001 **Analytical Thinking**	6	*ATHK1001 is a compulsory unit within the Bachelor of Liberal Arts and Science (BLAS) degree and will only be available to students enrolled in BLAS.*	Semester 1
Elective units of study			
LNGS1001 **Structure of Language**	6		Semester 1
PHIL1012 **Introductory Logic**	6		Intensive July Semester 2
PHIL2615 **Logic and Proof** *This unit of study is not available in 2018*	6	**P** PHIL1012 **N** PHIL2215 or PHIL3215	Semester 2
PHIL2642 **Critical Thinking**	6	**P** 12 Junior credit points	Semester 2
DATA2002 **Data Analytics: Learning from Data**	6	**A** (Basic Linear Algebra and some coding) or QBUS1040 **P** [DATA1001 or ENVX1001 or ENVX1002] or [MATH10X5 and MATH1115] or [MATH10X5 and STAT2011] or [MATH1905 and MATH1XXX (except MATH1XX5)] or [BUSS1020 or ECMT1010 or STAT1021] **N** STAT2012 or STAT2912	Semester 2
Any unit of study in Mathematics and Statistics from the Faculty of Science Table 1 to a maximum of 12 credit points can be counted towards the Liberal Studies requirements.			
B. Communication			
Core units of study			
WRIT1001 **Writing and Rhetoric: Academic Essays**	6		Semester 1 Semester 2 Summer Main
Elective units of study			
ENGL1007 **Language, Texts and Time**	6		Semester 2
LNGS1002 **Language and Social Context**	6		Semester 2
WRIT1000 **Introduction to Academic Writing**	6		Semester 1 Semester 2
WRIT2002 **Arguments that Change the World**	6	**P** 12 Junior credit points	Intensive December Semester 1 Semester 2
Any unit of study in a language subject area other than English, from the Faculty of Arts Table A to a maximum of 12 credit points in languages can be counted towards the Liberal Studies requirements.			
C. Ethics			
HPSC1000 **Bioethics**	6	**N** HPSC1900 *This Junior unit of study is highly recommended to Intermediate and Senior Life Sciences students.*	Intensive July Semester 1 Summer Main
HPSC1900 **Bioethics (Advanced)**	6	**A** (ATAR 90 or above) or equivalent **N** HPSC1000 *Note: Department permission required for enrolment*	Semester 1
HPSC3107 **Science, Ethics and Society**	6	**P** (HPSC2100 or HPSC2900) and (HPSC2101 or HPSC2901) **N** HPSC3022 or HPSC3024 or HPSC2011	Semester 1
PHIL1011 **Reality, Ethics and Beauty**	6	**N** PHIL1003 or PHIL1004 or PHIL1006 or PHIL1008	Semester 1
PHIL2617 **Practical Ethics**	6	**P** 12 Junior credit points **N** PHIL2517 or PHIL3617	Semester 2
PHIL2623 **Moral Psychology**	6	**P** 12 Junior credit points in Philosophy **N** PHIL2513 or PHIL3513	Semester 1

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
D. Culture, Society and Global Citizenship			
AMST1001 **Global America**	6	*Students intending to do a major in American Studies must complete AMST1001 and either HSTY1023 or HSTY1076*	Semester 2
ANTH1001 **Cultural Difference: An Introduction**	6	**N** ANTH1003 *Note: Department permission required for enrolment*	Intensive July Semester 1 Summer Main Winter Main

ANTH2627 **Medical Anthropology**	6	**P** 12 Junior credit points each in any of Anthropology, Gender Studies or Cultural Studies **N** ANTH2027	Semester 1
HPSC2101 **What Is This Thing Called Science?**	6	**P** 24 credit points of Junior units of study **N** HPSC2901	Semester 2 Summer Main
HPSC2901 **What Is This Thing Called Science? (Adv)**	6	**P** 24 credit points of Junior study with a Distinction average **N** HPSC2101 *Note: Department permission required for enrolment*	Semester 2
HPSC2100 **The Birth of Modern Science**	6	**P** 24 credit points of Junior units of study **N** HPSC2900	Semester 1 Summer Main
HPSC2900 **The Birth of Modern Science (Advanced)**	6	**P** 24 credit points of Junior study with a Distinction average **N** HPSC2100 *Note: Department permission required for enrolment*	Semester 1
PHYS1500 **Astronomy**	6	*No assumed knowledge of Physics.*	Semester 2
F. Technological Literacy			
ARIN2610 **Internet Transformations**	6	**P** 18 Junior credit points in any of Anthropology, Art History, Computer Science, Design Computing, English, Gender and Culture Studies, History, Information Systems, Information Technology, Linguistics, Media and Communication, Philosophy, Psychology or Sociology or 12 credit points at 1000 level in Digital Cultures **N** ARIN2100	Semester 2
ARIN2620 **Cyberworlds**	6	**P** 18 junior credit points in any of Anthropology, Art History, Computer Science, Design Computing, English, Gender and Culture Studies, History, Information Systems, Information Technology, Linguistics, Media and Communication, Philosophy, Psychology or Sociology or 12 credit points at 1000 level in Digital Cultures **N** ARIN2200	Semester 1
ARIN2630 **Digital Arts**	6	**P** 18 junior credit points in any of Anthropology, Art History, Computer Science, Design Computing, English, Gender and Culture Studies, History, Information Systems, Information Technology, Linguistics, Media and Communication, Philosophy, Psychology or Sociology or 12 credit points at 1000 level in Digital Cultures **N** ARIN2300	Semester 2

Bachelor of Psychology

Please note:

The following course resolution is published subject to approval by the Academic Board on 28 November 2017.

Bachelor of Psychology

These resolutions must be read in conjunction with applicable University By-laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the Coursework Policy 2014, the Resolutions of the Faculty, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Up to date versions of all such documents are available from the Policy Register: http://sydney.edu.au/policies.

Course Resolutions

1 Course codes

Code	Course title
BPPSYCHO-02 / BHPSYCHH-01	Bachelor of Psychology

2 Attendance pattern

The attendance pattern for this course is full time or part time according to candidate choice.

3 Admission to candidature

Admission to undergraduate courses at the University of Sydney is either on the basis of completion of secondary study via the NSW Higher School Certificate, leading to the award of an Australian Tertiary Admission Ranking (ATAR) or equivalent (and subject to special admissions provisions as set out in the Coursework Policy).

4 Requirements for award

(1) Students are required to nominate either the Science stream or the Arts and Social Sciences stream upon commencement of candidature.

(2) To qualify for the award of the Bachelor of Psychology, students must successfully complete 192 credit points, comprising all common requirements and units from either Arts and Social Sciences or Science.

(3) *Common requirements for all students*

(a) no more than 60 credit points of junior units of study; and

(i) a minimum of 12 credit points of junior Psychology units of study, with a minimum average mark of 65; and

(ii) 24 credit points of intermediate Psychology units of study (PSYC2010 / PSYC2910, PSYC2012, PSYC2013, PSYC2014), with a minimum average mark of 75; and

(iii) a minimum of 30 credit points of senior Psychology units of study (which must include PSYC3010 and (PSYC3018, if PSYC2010 / PSYC2910 not previously completed) with a minimum average mark of 75; and

(b) 48 credit points of Psychology Honours units of study from the Honours units of study table.

(4) *Science Stream*

(a) The only units of study which may be taken by students in the Science stream of the degree are set out in Table 1 from the Faculty of Science and Table A and Table B from the Faculty of Arts and Social Sciences.

(b) Students in the Science stream must complete a minimum of 96 credit points from Science subject areas in Table 1 before progression to Honours; including:

(i) a minimum of 12 credit points from the Science subject areas of Mathematics and Statistics; and

(ii) a minimum of 12 credit points of Junior units of study from Science subject areas other than Psychology and Mathematics and Statistics; or

(5) *Arts and Social Sciences Stream*

(a) The only units of study which may be taken by students in the Arts and Social Sciences stream of the degree are set out in Table A from the Faculty of Arts and Social Sciences and Table 1 from the Faculty of Science. Units of study cannot be taken from Table B from the Faculty of Arts and Social Sciences.

(b) Students in the Arts and Social Sciences stream must:

(I) complete a major in an Arts and Social Science subject area from Table A as set out in the course resolution for Bachelor of Arts degree before progression to Honours; and

(II) ensure a minimum of 60 credit points of units of study from Table A.

5 Progression rules

(1) Students must achieve a minimum average mark of 65 in junior Psychology units of study and a minimum average mark of 75 in both intermediate and senior Psychology units of study in order to progress to the final Honours year.

(2) Students who fail to maintain the required average in Psychology units of study specified above will be transferred to either the Bachelor of Science or the Bachelor of Arts in their next year of enrolment with full credit for the units of study completed.

(3) Students who complete all course requirements to the end of the third year, but fail to achieve the required average in Psychology units in order to progress to the Honours year will be awarded the Bachelor of Science or Bachelor of Arts.

(4) Completion of the Honours year in Psychology is a requirement for the award of the Bachelor of Psychology.

(5) To qualify for admission to the Honours year a candidate must have completed 144 credit points including the remaining common requirements and the relevant units from Arts and Social Sciences or Science.

(6) To qualify for the award of the Bachelor of Psychology a candidate must complete 48 credit points of units of study from the Honours units of study table, with an honours mark of at least 65.

6 Award of the degree

(1) The Bachelor of Psychology is an integrated Honours program. In accordance with the Coursework Policy, the award of Honours is assessed and calculated using a grade average based on 48 credit points of Psychology Honours units of study undertaken in the candidate’s final year of study. Psychology Honours units of study are set out in the Faculty of Science Honours units of study table.

(2) The Bachelor of Psychology is awarded in classes ranging from First Class to Third Class according to the conditions specified in the Coursework Policy and the Resolutions of the Faculty of Science.

(3) Candidates who do not achieve an Honours mark of 65 or more will be awarded a Bachelor of Science or Bachelor of Arts, depending on their chosen stream.

7 Transitional provisions

(1) These resolutions apply to persons who commenced their candidature after 1 January, 2017 and persons who commenced their candidature prior to 1 January, 2017 who elect to proceed under these resolutions.

(2) Candidates who commenced prior to 1 January, 2017 may complete the requirements in accordance with the resolutions in force at the time of their commencement, provided that requirements are completed by 1 January, 2022, or later date as the Faculty may, in special circumstances, approve.

(3) Students who commenced their degree prior to 1 January 2018 or who progress according to degree resolutions applicable to students commencing before that date may take major/s from the major/s listed under 'Transitional Provisions' in Table 1.

Bachelor of Science

Bachelor of Science

Bachelor of Science/Bachelor of Advanced Studies

These resolutions must be read in conjunction with applicable University By-laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the Coursework Policy 2014, the Resolutions of the Faculty, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Up to date versions of all such documents are available from the Policy Register: http://sydney.edu.au/policies.

Course resolutions

1 Course codes

Code	Course title
BPSCIENC-05	Bachelor of Science
BPSCIAVS-01	Bachelor of Science / Bachelor of Advanced Studies

2 Attendance pattern

The attendance pattern for this course is full time or part time according to candidate choice.

3 Streams

(1) Candidates may enter and complete the Bachelor of Science or the Bachelor of Science/Bachelor of Advanced Studies through a stream.
(2) The Bachelor of Science is available in the following streams:
(a) Health
(b) Medical Science
(c) Dalyell
(3) Completion of a stream is not a requirement of the Bachelor of Science. The requirements for the completion of each stream are as specified in Table A for the Bachelor of Science or, in the case of the Dalyell stream, in Table S of the Shared Pool for Undergraduate Degrees.
(4) The Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies are available in the following streams:
(a) Advanced
(b) Agriculture
(c) Animal and Veterinary Science
(d) Food and Agribusiness
(e) Health
(f) Medical Science
(g) Dalyell
(5) Completion of a stream is not a requirement of the Bachelor of Science/Bachelor of Advanced Studies. The requirements for the completion of each stream are as specified in Table A for the Bachelor of Science or, in the case of the Dalyell stream, in Table S of the Shared Pool for Undergraduate Degrees.
(6) Candidates wishing to transfer between streams should contact the Student Centre.
(7) Candidates who qualify for the Dalyell stream may complete that stream while also completing another stream.

4 Cross-faculty management

(1) Candidates in Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies will be under the supervision of the Faculty of Science throughout.
(2) Candidates undertaking honours will be under the management of the Faculty of Science. Admission, requirements, award of the honours mark, and award of the grade of honours for an honours component undertaken by a candidate will be under the academic governance of the faculty offering and supervising the embedded honours component. The faculty offering and supervising the embedded component will direct the Faculty of Science on all matters relating to admission, requirements, award of honours mark and award of honours grade.
(3) The Dean of the Faculty of Science shall exercise authority in any matter concerned with the Bachelor of Science/Bachelor of Advanced Studies and the Bachelor of Science/Bachelor Advanced Studies with honours not otherwise dealt with in these resolutions.

5 Admission to candidature

(1) Admission to this course is on the basis of a secondary school leaving qualification such as the NSW Higher School Certificate (including national and international equivalents), tertiary study or an approved preparation program. English language requirements must be met where these are not demonstrated by sufficient qualifications taught in English. Special admission pathways are open for mature aged applicants who do not possess a school leaving qualification, educationally disadvantaged applicants and for Aboriginal and Torres Strait Islander applicants. Applicants are ranked by merit and offers for available places are issued according to the ranking. Details of admission policies are found in the Coursework Rule and the Coursework Policy.
(2) Admission to the Dalyell stream requires achievement of a minimum tertiary admission rank (ATAR) set by the Board of Interdisciplinary Studies, or equivalent.

6 Requirements for award

(1) The units of study that may be taken for the Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies are set out in:
(a) Table A for the Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies;
(b) Table S of the Shared Pool for Undergraduate Degrees; and
(c) Table O of the Shared Pool for Undergraduate Degrees. In these resolutions, except where otherwise specified, Table A, Table S and Table O mean Table A, Table S and Table O as specified here.

(2) *Bachelor of Science:*
To qualify for the award of the Bachelor of Science, a candidate must complete 144 credit points, comprising:
(a) Degree Core: 12 credit points of mathematics degree core units of study as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement); and 12 credit points of 1000-level science elective units of study (excluding units listed as Mathematics degree core) as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement); and
(b) a major (48 credit points) or program listed and defined in Section 7 below and specified in Table A; and
(c) a minor (36 credit points) or second major (48 credit points) as defined in Section 7 below and listed and specified in Table A or Table S; and
(d) a minimum of 12 credit points of units of study in the Open Learning Environment as listed in Table O and
(e) where appropriate, elective units from Table A and Table S; and
(f) if enrolled in a stream, complete the requirements for the stream as specified in Table A.
(3) *Bachelor of Science/Bachelor of Advanced Studies:*
(a) Degree Core: 12 credit points of mathematics degree core units of study as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement); and 12 credit points of 1000-level science elective units of study (excluding units listed as Mathematics degree core) as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement); and
(b) a major (48 credit points) or program listed and defined in Section 7 below and specified in Table A; and
(c) a second major (48 credit points) as defined in Section 7 below and specified in Table A or Table S; and
(d) a minimum of 12 credit points of units of study in the Open Learning Environment as listed in Table O; and
(e) a minimum of 24 credit points at 4000 level from Table A or Table S, including a research, community, industry or entrepreneurship project of at least 12 and a maximum of 36 credit points; and
(f) where appropriate, elective units from Table A or Table S; and
(g) if enrolled in a stream, complete the requirements for the stream as specified in Table A.

7 Programs, majors and minors

(1) *Bachelor of Science:*
(a) Completion of a major or program from Table A and a minor or second major from Table A or Table S is a requirement of the Bachelor of Science. Requirements for completion of majors and minors are as set out in Table A and Table S.
(b) Candidates in the Bachelor of Science have the option of completing:
(i) a program (which contains a major); and
(ii) a second major from Table A or Table S in place of the minor.
(2) *Bachelor of Science/Bachelor of Advanced Studies:*
Completion of a major or a program (which contains a major) from Table A and second major from Table A or Table S is a requirement of the Bachelor of Science/Bachelor of Advanced Studies. Requirements for completion of majors and minors are as set out in Table A and Table S.
(3) The majors and minors available in Table A in the Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies are:

Majors	Minors
Anatomy and Histology	Anatomy and Histology
Animal Health, Disease and Welfare	Animal Health, Disease and Welfare
Animal Production	Animal Production
Animal Veterinary Bioscience (only available in Animal Veterinary Bioscience program)	
Applied Medical Science	Applied Medical Science
Behavioural Sciences	Behavioural Sciences
Biochemistry and Molecular Biology	Biochemistry and Molecular Biology
Biology	Biology Plant Science
Cell and Developmental Biology	Cell and Developmental Biology
Chemistry	Chemistry
Computer Science	Computer Science
Data Science	Data Science
Ecology and Evolutionary Biology	Wildlife Conservation
Environmental Studies	Environmental Studies
Environmental Science (only available in Environmental Science program)	
Financial Mathematics and Statistics	Financial Mathematics and Statistics
Food Science	Food Science
Genetics and Genomics	Genetics and Genomics
Geography	Geography
Geology and Geophysics	Geology and Geophysics
Health (only available in Health stream)	
History and Philosophy of Science	History and Philosophy of Science
Human Movement (only available in Health stream)	Human Movement (only available in Health stream) Immunology
Immunology and Pathology	Pathology

Statistics	Statistics

(4) The programs available in Table A of the Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies are:

The programs available in the Bachelor of Science are:	The programs available in the Bachelor of Science/Bachelor of Advanced Studies are:
Agroecosystems	Agriculture (only available in Agriculture stream)
Medical Science (only available in Medical Science stream)	Agroecosystems
Environmental Science	Food and Agribusiness (only available in Food and Agribusiness stream)
Neuroscience	Animal Veterinary Bioscience (only available in Animal Veterinary Bioscience stream
Psychology	Medical Science (only available in Medical Science stream)
Mathematical Sciences (only available in Dalyell stream)	Environmental Science
	Nanoscience and Nanotechnology
	Neuroscience
	Psychology
	Mathematical Sciences (only available in Dalyell stream)

(5) The minors and majors available as second majors in the Bachelor of Science are as listed in Table A and Table S.

8 Progression rules

(1) *Progression within a stream, program or Honours component:*
Enrolment and progression for each candidate for a stream, program or honours component is governed by progression rules specified in the relevant Table for the component.

(2) *Progression within Bachelor of Science/Bachelor of Advanced Studies:*
Except with the permission of the Dean, candidates who are not in the Dalyell stream must complete the degree requirements listed under Section 6(1) before progressing to 4000-level units (including 4000-level project units).

(3) *Progression within the Dalyell Stream:*
(a) With the permission of the Dalyell coordinator, candidates in the Dalyell Stream may attempt units at higher levels than the usual sequence.
(b) Candidates must achieve an Annual Average Mark at a level determined by the Board of Interdisciplinary Studies in each year of study or over for each 48 credit-point block to continue in the Dalyell Stream. Candidates who do not maintain an Annual Average Mark at the level determined by the Board of Interdisciplinary Studies may continue in any other stream into which they were admitted, major, program or minor but will not remain in the Dalyell Stream.

(4) *Progression within the Advanced Stream:*
(a) Candidates in the Advanced Stream may attempt advanced or units at higher levels than the usual sequence.
(b) Candidates must achieve an Annual Average Mark of at least 65.0 for each 48 credit-point block to continue in the Advanced Stream. Candidates who do not maintain an Annual Average Mark at this level may continue in the Bachelor of Science, major, program or minor but will not remain in the Advanced Stream.

9 Requirements for the Bachelor of Science/Bachelor of Advanced Studies with honours

(1) An embedded honours component, involving a research project, is available to meritorious students in the Bachelor of Science/Bachelor of Advanced Studies who complete an alternative set of units of study in the final year. Candidates undertaking an honours component within the Faculty of Science must complete the requirements for the honours component full-time over two consecutive semesters. If the School is satisfied that a student is unable to attempt the honours component on a full time basis and if the Associate Dean so recommends, permission may be granted to undertake honours part-time over four consecutive semesters. For candidates undertaking an honours component with the Faculty of Science, admission, requirements and award of honours are according to the Coursework Policy, these resolutions and the Resolutions of the Faculty of Science. For candidates undertaking an honours component in another faculty, admission, requirements and award of honours are according to the Coursework Policy, these resolutions and the relevant resolutions of the faculty in which the component is undertaken.

(2) Admission to the honours program is by permission of the Associate Dean and relevant honours coordinator or head of department after the completion of all of the following requirements:
(a) a Bachelor of Science degree (or equivalent) including at least one major or program; or 144 credit points, including at least one major or program, any degree or stream-specific core, and a minor, or equivalent studies at another institution.
(b) an AAM of at least 65.0 in units of study completed to that point, and a major or study of equivalent depth in the area of the proposed honours project; or a credit average in 48 credit points in relevant intermediate and senior Science units of study relevant to the honours area, as determined by the School concerned;
(c) any requirements for honours entry set by the relevant department, school or faculty.

(3) To qualify for the award of the Bachelor of Science/Bachelor of Advanced Studies with honours, a candidate must complete the requirements for the pass degree and at least 36 and a maximum of 48 credit points of additional honours units at 4000 level or above, including an honours research project of at least 12 and a maximum of 36 credit points, and at least 12 and a maximum of 36 credit points of honours coursework, as required by the relevant department and published in the faculty handbook. Honours subject areas and units of study for honours within the Faculty of Science are listed in Table A for the relevant faculty or Table S in the Shared Pool for Undergraduate degrees.

(4) The grade of honours will be determined by an honours mark calculated from work, including the embedded honours component as specified in these resolutions, in the resolutions for the Faculty of Science or in the resolutions of the relevant faculty.

10 Award of the Bachelor of Science, Bachelor of Science/Bachelor of Advanced Studies and Bachelor of Science/Bachelor of Advanced Studies with Honours

(1) Candidates for the Bachelor of Science/Bachelor of Advanced Studies combined degree who have completed requirements for the Bachelor of Science who do not meet requirements for the combined degree will be awarded the Bachelor of Science.

(2) Honours in the Bachelor of Science/Bachelor of Advanced Studies is awarded in classes ranging from First Class to Third Class according to the following table and rules specified in the Resolutions of the Faculty of Science or relevant resolutions for the faculty in which the embedded honours component is undertaken.

A student who achieves an honours mark in the range …	will be awarded honours …
80 honours mark 100	First Class
75 honours mark < 80	Second Class / Division 1
70 honours mark < 75	Second Class / Division 2
65 honours mark < 70	Third Class

(3) Candidates for the award of the Bachelor of Science/Bachelor of Advanced Studies with honours who do not meet the requirements for the honours degree, but who otherwise meet requirements for the Bachelor of Science, or the Bachelor of Science/Bachelor of Advanced Studies will be awarded the Bachelor of Science or Bachelor of Science/Bachelor of Advanced Studies as appropriate.

11 Cross-institutional study

Cross-institutional study is available in this course under conditions specified in the Resolutions of the Faculty of Science.

12 International exchange

The Faculty of Science encourages candidates in this course to participate in international exchange programs as set out in the Resolutions of the Faculty of Science.

13 Course transfer

A candidate may transfer from the Bachelor of Science and elect to complete the Bachelor of Science/Bachelor of Advanced Studies in accordance with these resolutions and receive full credit for work completed in the Bachelor of Science. A candidate may abandon the Bachelor of Science/Bachelor of Advanced Studies combined degree and elect to complete the Bachelor of Science in accordance with these resolutions and receive credit in accordance with the requirements of the Bachelor of Science. Readmission to the Bachelor of Science/Bachelor of Advanced Studies in the future will require a new application for admission to candidature for that course and completion in accordance with the resolutions governing that degree.

14 Credit for previous study

Credit transfer is subject to the provisions of the Coursework Policy and the Resolutions of the Faculty of Science or, in the case of a major or minor offered by another faculty, any relevant resolutions of that faculty.

15 Transitional provisions

(1) These resolutions apply to students who commenced their candidature after 1 January, 2018 and students who commenced their candidature prior to 1 January, 2018 who elect to proceed under these resolutions. Students who commenced their candidature prior to 1 January 2018 who elect to transfer and proceed under these resolutions should note that the University does not undertake to offer 4000 level units and projects in the Bachelor of Science/Bachelor of Advanced Studies combined degree prior to 2020 and 2000 and 3000 level units of study prior to 2019 and that it may not be possible to complete requirements for the combined degree before the end of Semester 2 2020 or the single degree before the end of Semester 2 2019.

(2) Candidates who commence candidature after 1 January, 2018 who are seeking credit for prior study should note that the University does not undertake to offer 4000 level units and projects in the Bachelor of Science/Bachelor of Advanced Studies combined degree prior to 2020 and 2000 and 3000 level units of study prior to 2019 and that it may not be possible to complete requirements for the combined degree before the end of Semester 2 2020 or the single degree before the end of Semester 2 2019. Where a student in the Bachelor of Science proceeding under these resolutions applies for and is granted credit and wishes to complete the degree before 1 January 2020, the student will be offered the opportunity to complete the Bachelor of Science degree under the resolutions that applied at 1 January 2017.

(3) Candidates who commenced prior to 1 January, 2018 may complete the requirements in accordance with the resolutions in force at the time of their commencement.

Bachelor of Science / Bachelor of Advanced Studies

Bachelor of Science

Bachelor of Science/Bachelor of Advanced Studies

These resolutions must be read in conjunction with applicable University By-laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the Coursework Policy 2014, the Resolutions of the Faculty, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Up to date versions of all such documents are available from the Policy Register: http://sydney.edu.au/policies.

Course resolutions

1 Course codes

Code	Course title
BPSCIENC-05	Bachelor of Science
BPSCIAVS-01	Bachelor of Science / Bachelor of Advanced Studies

2 Attendance pattern

The attendance pattern for this course is full time or part time according to candidate choice.

3 Streams

(1) Candidates may enter and complete the Bachelor of Science or the Bachelor of Science/Bachelor of Advanced Studies through a stream.
(2) The Bachelor of Science is available in the following streams:
(a) Health
(b) Medical Science
(c) Dalyell
(3) Completion of a stream is not a requirement of the Bachelor of Science. The requirements for the completion of each stream are as specified in Table A for the Bachelor of Science or, in the case of the Dalyell stream, in Table S of the Shared Pool for Undergraduate Degrees.
(4) The Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies are available in the following streams:
(a) Advanced
(b) Agriculture
(c) Animal and Veterinary Science
(d) Food and Agribusiness
(e) Health
(f) Medical Science
(g) Dalyell
(5) Completion of a stream is not a requirement of the Bachelor of Science/Bachelor of Advanced Studies. The requirements for the completion of each stream are as specified in Table A for the Bachelor of Science or, in the case of the Dalyell stream, in Table S of the Shared Pool for Undergraduate Degrees.
(6) Candidates wishing to transfer between streams should contact the Student Centre.
(7) Candidates who qualify for the Dalyell stream may complete that stream while also completing another stream.

4 Cross-faculty management

(1) Candidates in Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies will be under the supervision of the Faculty of Science throughout.
(2) Candidates undertaking honours will be under the management of the Faculty of Science. Admission, requirements, award of the honours mark, and award of the grade of honours for an honours component undertaken by a candidate will be under the academic governance of the faculty offering and supervising the embedded honours component. The faculty offering and supervising the embedded component will direct the Faculty of Science on all matters relating to admission, requirements, award of honours mark and award of honours grade.
(3) The Dean of the Faculty of Science shall exercise authority in any matter concerned with the Bachelor of Science/Bachelor of Advanced Studies and the Bachelor of Science/Bachelor Advanced Studies with honours not otherwise dealt with in these resolutions.

5 Admission to candidature

(1) Admission to this course is on the basis of a secondary school leaving qualification such as the NSW Higher School Certificate (including national and international equivalents), tertiary study or an approved preparation program. English language requirements must be met where these are not demonstrated by sufficient qualifications taught in English. Special admission pathways are open for mature aged applicants who do not possess a school leaving qualification, educationally disadvantaged applicants and for Aboriginal and Torres Strait Islander applicants. Applicants are ranked by merit and offers for available places are issued according to the ranking. Details of admission policies are found in the Coursework Rule and the Coursework Policy.
(2) Admission to the Dalyell stream requires achievement of a minimum tertiary admission rank (ATAR) set by the Board of Interdisciplinary Studies, or equivalent.

6 Requirements for award

(1) The units of study that may be taken for the Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies are set out in:
(a) Table A for the Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies;
(b) Table S of the Shared Pool for Undergraduate Degrees; and
(c) Table O of the Shared Pool for Undergraduate Degrees. In these resolutions, except where otherwise specified, Table A, Table S and Table O mean Table A, Table S and Table O as specified here.

(2) *Bachelor of Science:*

To qualify for the award of the Bachelor of Science, a candidate must complete 144 credit points, comprising:

(a) Degree Core: 12 credit points of mathematics degree core units of study as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement); and 12 credit points of 1000-level science elective units of study (excluding units listed as Mathematics degree core) as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement); and

(b) a major (48 credit points) or program listed and defined in Section 7 below and specified in Table A; and

(c) a minor (36 credit points) or second major (48 credit points) as defined in Section 7 below and listed and specified in Table A or Table S; and

(d) a minimum of 12 credit points of units of study in the Open Learning Environment as listed in Table O and

(e) where appropriate, elective units from Table A and Table S; and

(f) if enrolled in a stream, complete the requirements for the stream as specified in Table A.

(3) *Bachelor of Science/Bachelor of Advanced Studies:*

(a) Degree Core: 12 credit points of mathematics degree core units of study as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement); and 12 credit points of 1000-level science elective units of study (excluding units listed as Mathematics degree core) as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement); and

(b) a major (48 credit points) or program listed and defined in Section 7 below and specified in Table A; and

(c) a second major (48 credit points) as defined in Section 7 below and specified in Table A or Table S; and

(d) a minimum of 12 credit points of units of study in the Open Learning Environment as listed in Table O; and

(e) a minimum of 24 credit points at 4000 level from Table A or Table S, including a research, community, industry or entrepreneurship project of at least 12 and a maximum of 36 credit points; and

(f) where appropriate, elective units from Table A or Table S; and

(g) if enrolled in a stream, complete the requirements for the stream as specified in Table A.

7 Programs, majors and minors

(1) *Bachelor of Science:*

(a) Completion of a major or program from Table A and a minor or second major from Table A or Table S is a requirement of the Bachelor of Science. Requirements for completion of majors and minors are as set out in Table A and Table S.

(b) Candidates in the Bachelor of Science have the option of completing:

(i) a program (which contains a major); and

(ii) a second major from Table A or Table S in place of the minor.

(2) *Bachelor of Science/Bachelor of Advanced Studies:*

Completion of a major or a program (which contains a major) from Table A and second major from Table A or Table S is a requirement of the Bachelor of Science/Bachelor of Advanced Studies. Requirements for completion of majors and minors are as set out in Table A and Table S.

(3) The majors and minors available in Table A in the Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies are:

Majors	**Minors**
Anatomy and Histology	Anatomy and Histology
Animal Health, Disease and Welfare	Animal Health, Disease and Welfare
Animal Production	Animal Production
Animal Veterinary Bioscience (only available in Animal Veterinary Bioscience program)	
Applied Medical Science	Applied Medical Science
Behavioural Sciences	Behavioural Sciences
Biochemistry and Molecular Biology	Biochemistry and Molecular Biology
Biology	Biology Plant Science
Cell and Developmental Biology	Cell and Developmental Biology
Chemistry	Chemistry
Computer Science	Computer Science
Data Science	Data Science
Ecology and Evolutionary Biology	Wildlife Conservation
Environmental Studies	Environmental Studies
Environmental Science (only available in Environmental Science program)	
Financial Mathematics and Statistics	Financial Mathematics and Statistics
Food Science	Food Science
Genetics and Genomics	Genetics and Genomics
Geography	Geography
Geology and Geophysics	Geology and Geophysics
Health (only available in Health stream)	
History and Philosophy of Science	History and Philosophy of Science
Human Movement (only available in Health stream)	Human Movement (only available in Health stream) Immunology
Immunology and Pathology	Pathology
Infectious Diseases	Infectious Diseases
Information Systems	Information Systems
Marine Science	Marine Science
Mathematics	Mathematics
Medical Science (only available in Medical Science program)	
Medicinal Chemistry	Medicinal Chemistry
Microbiology	Microbiology

Majors	Minors
Neuroscience	Neuroscience
Nutrition Science	Nutrition Science
Pharmacology	Pharmacology
Physics	Physics
Physiology	Physiology
Plant Production	Plant Production
Quantitative Life Sciences	Quantitative Life Sciences
Software Development	Software Development
Soil Science and Hydrology	Soil Science and Hydrology
Statistics	Statistics

(4) The programs available in Table A of the Bachelor of Science and the Bachelor of Science/Bachelor of Advanced Studies are:

The programs available in the Bachelor of Science are:	The programs available in the Bachelor of Science/Bachelor of Advanced Studies are:
Agroecosystems	Agriculture (only available in Agriculture stream)
Medical Science (only available in Medical Science stream)	Agroecosystems
Environmental Science	Food and Agribusiness (only available in Food and Agribusiness stream)
Neuroscience	Animal Veterinary Bioscience (only available in Animal Veterinary Bioscience stream
Psychology	Medical Science (only available in Medical Science stream)
Mathematical Sciences (only available in Dalyell stream)	Environmental Science
	Nanoscience and Nanotechnology
	Neuroscience
	Psychology
	Mathematical Sciences (only available in Dalyell stream)

(5) The minors and majors available as second majors in the Bachelor of Science are as listed in Table A and Table S.

8 Progression rules

(1) *Progression within a stream, program or Honours component:*
Enrolment and progression for each candidate for a stream, program or honours component is governed by progression rules specified in the relevant Table for the component.

(2) *Progression within Bachelor of Science/Bachelor of Advanced Studies:*
Except with the permission of the Dean, candidates who are not in the Dalyell stream must complete the degree requirements listed under Section 6(1) before progressing to 4000-level units (including 4000-level project units).

(3) *Progression within the Dalyell Stream:*

(a) With the permission of the Dalyell coordinator, candidates in the Dalyell Stream may attempt units at higher levels than the usual sequence.

(b) Candidates must achieve an Annual Average Mark at a level determined by the Board of Interdisciplinary Studies in each year of study or over for each 48 credit-point block to continue in the Dalyell Stream. Candidates who do not maintain an Annual Average Mark at the level determined by the Board of Interdisciplinary Studies may continue in any other stream into which they were admitted, major, program or minor but will not remain in the Dalyell Stream.

(4) *Progression within the Advanced Stream:*

(a) Candidates in the Advanced Stream may attempt advanced or units at higher levels than the usual sequence.

(b) Candidates must achieve an Annual Average Mark of at least 65.0 for each 48 credit-point block to continue in the Advanced Stream. Candidates who do not maintain an Annual Average Mark at this level may continue in the Bachelor of Science, major, program or minor but will not remain in the Advanced Stream.

9 Requirements for the Bachelor of Science/Bachelor of Advanced Studies with honours

(1) An embedded honours component, involving a research project, is available to meritorious students in the Bachelor of Science/Bachelor of Advanced Studies who complete an alternative set of units of study in the final year. Candidates undertaking an honours component within the Faculty of Science must complete the requirements for the honours component full-time over two consecutive semesters. If the School is satisfied that a student is unable to attempt the honours component on a full time basis and if the Associate Dean so recommends, permission may be granted to undertake honours part-time over four consecutive semesters. For candidates undertaking an honours component with the Faculty of Science, admission, requirements and award of honours are according to the Coursework Policy, these resolutions and the Resolutions of the Faculty of Science. For candidates undertaking an honours component in another faculty, admission, requirements and award of honours are according to the Coursework Policy, these resolutions and the relevant resolutions of the faculty in which the component is undertaken.

(2) Admission to the honours program is by permission of the Associate Dean and relevant honours coordinator or head of department after the completion of all of the following requirements:

(a) a Bachelor of Science degree (or equivalent) including at least one major or program; or 144 credit points, including at least one major or program, any degree or stream-specific core, and a minor, or equivalent studies at another institution.

(b) an AAM of at least 65.0 in units of study completed to that point, and a major or study of equivalent depth in the area of the proposed honours project; or a credit average in 48 credit points in relevant intermediate and senior Science units of study relevant to the honours area, as determined by the School concerned;

(c) any requirements for honours entry set by the relevant department, school or faculty.

(3) To qualify for the award of the Bachelor of Science/Bachelor of Advanced Studies with honours, a candidate must complete the requirements for the pass degree and at least 36 and a maximum of 48 credit points of additional honours units at 4000 level or above, including an honours research project of at least 12 and a maximum of 36 credit points, and at least 12 and a maximum of 36 credit points of honours coursework, as required by the relevant department and published in the faculty handbook. Honours subject areas and units of study for honours within the Faculty of Science are listed in Table A for the relevant faculty or Table S in the Shared Pool for Undergraduate degrees.

(4) The grade of honours will be determined by an honours mark calculated from work, including the embedded honours component as specified in these resolutions, in the resolutions for the Faculty of Science or in the resolutions of the relevant faculty.

10 Award of the Bachelor of Science, Bachelor of Science/Bachelor of Advanced Studies and Bachelor of Science/Bachelor of Advanced Studies with Honours

(1) Candidates for the Bachelor of Science/Bachelor of Advanced Studies combined degree who have completed requirements for the Bachelor of Science who do not meet requirements for the combined degree will be awarded the Bachelor of Science.

(2) Honours in the Bachelor of Science/Bachelor of Advanced Studies is awarded in classes ranging from First Class to Third Class according to the following table and rules specified in the Resolutions of the Faculty of Science or relevant resolutions for the faculty in which the embedded honours component is undertaken.

A student who achieves an honours mark in the range …	**will be awarded honours …**
80 honours mark 100	First Class
75 honours mark < 80	Second Class / Division 1
70 honours mark < 75	Second Class / Division 2
65 honours mark < 70	Third Class

(3) Candidates for the award of the Bachelor of Science/Bachelor of Advanced Studies with honours who do not meet the requirements for the honours degree, but who otherwise meet requirements for the Bachelor of Science, or the Bachelor of Science/Bachelor of Advanced Studies will be awarded the Bachelor of Science or Bachelor of Science/Bachelor of Advanced Studies as appropriate.

11 Cross-institutional study

Cross-institutional study is available in this course under conditions specified in the Resolutions of the Faculty of Science.

12 International exchange

The Faculty of Science encourages candidates in this course to participate in international exchange programs as set out in the Resolutions of the Faculty of Science.

13 Course transfer

A candidate may transfer from the Bachelor of Science and elect to complete the Bachelor of Science/Bachelor of Advanced Studies in accordance with these resolutions and receive full credit for work completed in the Bachelor of Science. A candidate may abandon the Bachelor of Science/Bachelor of Advanced Studies combined degree and elect to complete the Bachelor of Science in accordance with these resolutions and receive credit in accordance with the requirements of the Bachelor of Science. Readmission to the Bachelor of Science/Bachelor of Advanced Studies in the future will require a new application for admission to candidature for that course and completion in accordance with the resolutions governing that degree.

14 Credit for previous study

Credit transfer is subject to the provisions of the Coursework Policy and the Resolutions of the Faculty of Science or, in the case of a major or minor offered by another faculty, any relevant resolutions of that faculty.

15 Transitional provisions

(1) These resolutions apply to students who commenced their candidature after 1 January, 2018 and students who commenced their candidature prior to 1 January, 2018 who elect to proceed under these resolutions. Students who commenced their candidature prior to 1 January 2018 who elect to transfer and proceed under these resolutions should note that the University does not undertake to offer 4000 level units and projects in the Bachelor of Science/Bachelor of Advanced Studies combined degree prior to 2020 and 2000 and 3000 level units of study prior to 2019 and that it may not be possible to complete requirements for the combined degree before the end of Semester 2 2020 or the single degree before the end of Semester 2 2019.

(2) Candidates who commence candidature after 1 January, 2018 who are seeking credit for prior study should note that the University does not undertake to offer 4000 level units and projects in the Bachelor of Science/Bachelor of Advanced Studies combined degree prior to 2020 and 2000 and 3000 level units of study prior to 2019 and that it may not be possible to complete requirements for the combined degree before the end of Semester 2 2020 or the single degree before the end of Semester 2 2019. Where a student in the Bachelor of Science proceeding under these resolutions applies for and is granted credit and wishes to complete the degree before 1 January 2020, the student will be offered the opportunity to complete the Bachelor of Science degree under the resolutions that applied at 1 January 2017.

(3) Candidates who commenced prior to 1 January, 2018 may complete the requirements in accordance with the resolutions in force at the time of their commencement.

Bachelor of Science / Bachelor of Laws

Bachelor of Science and Bachelor of Laws

These resolutions must be read in conjunction with applicable University By-laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the Coursework Policy 2014, the Resolutions of the Faculty of Science and of the University of Sydney Law School, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Up to date versions of all such documents are available from the Policy Register: http://sydney.edu.au/policies.

Course resolutions

1 Course codes

Code	Course title
BPSCILAW-02	Bachelor of Science and Bachelor of Laws

2 Attendance pattern

The attendance pattern for this course is full time only.

3 Streams

(1) The Bachelor of Science in this combined degree is available in the following streams:
(a) Dalyell.
(2) Completion of a stream is not a requirement of the Bachelor of Science. The requirements for the completion of each stream are as specified in Table A for the Bachelor of Science or, in the case of the Dalyell Stream, in Table S of the Shared Pool for Undergraduate Degrees.
(3) Candidates wishing to transfer between streams should contact the Student Centre.
(4) Candidates who qualify for the Dalyell Stream may complete that stream while also completing another stream.

4 Cross faculty management

(1) Candidates will be under the general supervision of the Faculty of Science until the end of the semester in which they complete requirements for the Bachelor of Science. After completion of requirements for the Bachelor of Science, students will be under the supervision of the University of Sydney Law School.
(2) The Dean of the Faculty of Science and the Head of School and Dean of the Sydney Law School shall jointly exercise authority in any matter concerned with the combined course not otherwise dealt with in these resolutions.

5 Admission to candidature

(1) Admission to this course is on the basis of a secondary school leaving qualification such as the NSW Higher School Certificate (including national and international equivalents), tertiary study or an approved preparation program. English language requirements must be met where these are not demonstrated by sufficient qualifications taught in English. Special admission pathways are open for educationally disadvantaged applicants and for Aboriginal and Torres Strait Islander people. Applicants are ranked by merit and offers for available places are issued according to the ranking. Details of admission requirements are found in the Coursework Rule and the Coursework Policy.
(2) Admission to the Dalyell Stream requires achievement of a minimum tertiary admission rank (ATAR) set by the Board of Interdisciplinary Studies or above in or equivalent standard.

6 Requirements for award

(1) The units of study that may be taken for this combined degree are set out in:
(a) Table A for the Bachelor of Science;
(b) the University of Sydney Law School Undergraduate Table;
(c) Table S from the Shared Pool for Undergraduate Degrees; and
(d) Table O of the Shared Pool for Undergraduate Degrees.
(e) In these resolutions, except where otherwise specified, Table A, the University of Sydney Law School Undergraduate Table, Table S and Table O mean Table A, the University of Sydney Law School Undergraduate Table, Table S and Table O as specified here.
(2) To qualify for the award of the pass combined degrees, a candidate must complete 240 credit points, comprising:
(a) a major (48 credit points) from Table A for the Bachelor of Science as set out in Section 7 below;
(b) 12 credit points of mathematics degree core units of study as set out in Table A (students may count the units from their major to fulfil this requirement); and
(c) 12 credit points of junior science elective units of study (excluding Mathematics) as set out in Table A (students may count the units from their major to fulfil this requirement); and
(d) 12 credit points of units from the Open Learning Environment as set out in Table O in the Shared Pool for Undergraduate Degrees;
(e) a minimum of 24 credit points of elective units or units taken towards a program from Table A for the Bachelor of Science or Table S in the Shared Pool for Undergraduate Degrees;
(f) if enrolled in a stream, complete the requirements for the stream as specified in Table A; and
(g) 144 credit points of Law units of study as specified in the University of Sydney Law School Undergraduate Table, of which 48 credit points are Combined Law compulsory units of study for Years 1, 2 and 3 of the combined degree and are credited towards the requirements for both the Bachelor of Science and the Bachelor of Laws.
(3) Requirements for the Bachelor of Science
To qualify for the award of the Bachelor of Science, a candidate must complete 144 credit points, comprising:
(a) 96 credit points specified in 6 (2) (a) – (f) above; and
(b) 48 credit points of Combined Law compulsory subjects from years 1, 2 and 3 from the University of Sydney Law School Undergraduate Table which shall take the place of the minor specified in the course resolutions for the Bachelor of Science.
(4) Requirements in the Bachelor of Science and Bachelor of Laws who also enrol in the Bachelor of Advanced Studies

For candidates completing the Bachelor of Science in a combined degree with the Bachelor of Laws who enrol in the Bachelor of Advanced Studies to complete a stream or honours, the requirement in the Bachelor of Advanced Studies for completion of a second major shall be met by the 48 credit points of Law units specified in 6 (3) (b) above.

(5) Requirements for the Bachelor of Laws

To qualify for the award of the Bachelor of Laws, a candidate must complete 144 credit points taken from the Sydney Law School Undergraduate Table, comprising:

(a) 102 credit points of compulsory units of study as specified in the University of Sydney Law School Undergraduate Table;
(b) 42 credit points from the Elective Unit of Study Table (undergraduate) for the University of Sydney Law School, of which a maximum of 36 credit points are taken from Part 1, Elective Units of Study, or as specified in 6 (5) (c) below, and a minimum of 6 credit points are taken from Part 2, Jurisprudence Units of Study; and
(c) Students may apply to take up to a maximum of 24 credit points of advanced learning Master's units of study as elective units of study.
(i) Enrolment in Master's units of study will be subject to availability and any unit pre-requisites or assumed knowledge, which may include relevant industry experience or prior specialist study.
(ii) Enrolment in Master’s units is only permitted after a candidate has completed 96 credit points towards the Bachelor of Laws.
(iii) Students may only enrol in Master’s units listed in the Bachelor of Laws Elective units of study Table.

7 Majors and Programs

(1) Completion of a major from Table A for the Bachelor of Science is a requirement for this combined degree.
(2) Candidates have the option of completing a program with an embedded major from Table A for the Bachelor of Science of up to 72 credit points.
(3) The majors and programs for the Bachelor of Science are as specified in the Learning and Teaching Policy and in the degree resolutions and Table A for the Bachelor of Science.

8 Progression rules

(1) Candidates in a combined law program must successfully complete LAWS1006 Foundations of Law before enrolling in any other Bachelor of Laws units of study.
(2) Candidates are required to complete Bachelor of Laws units in the order listed in the Sydney Law School Undergraduate Table.
(3) Except with permission of the Head of School and Dean of the Sydney Law School, candidates must complete the requirements for the Bachelor of Science before proceeding to Year Four of the combined degree with the Bachelor of Laws.
(5) Progression with the Dalyell Stream

Candidates in the Dalyell Stream may proceed in the Bachelor of Science according to the resolutions of the Bachelor of Science, Bachelor of Science/Bachelor of Advanced Studies and Table S.

9 Requirements for award with Honours

(1) Honours is available to meritorious candidates in the Bachelor of Laws and in an area of study within the Bachelor of Science by enrolling in the Bachelor of Advanced Studies and taking an embedded honours component after the completion of the pass Bachelor of Science degree.
(2) Candidates who qualify to undertake honours in the Bachelor of Science may elect to enrol in the honours program:
(a) by suspending candidature from the Bachelor of Laws degree for one year, with the permission of the University of Sydney Law School, and enrolling in the Bachelor of Advanced Studies and taking an embedded honours component; or
(b) by enrolling in the Bachelor of Advanced Studies and undertaking an embedded honours component after completion of both degrees in the combined program.
(3) For candidates completing the Bachelor of Science in a combined degree with the Bachelor of Laws and also completing an embedded honours component in the Bachelor of Advanced Studies, the requirement in the Bachelor of Advanced Studies for completion of a second major shall be met by the 48 credit points of Law units specified in 6 (3) (b) above.
(4) Honours in the Bachelor of Laws is available to meritorious students who complete an alternative set of units of study in the final year of the Combined Law program. Admission, requirements and calculation of the honours grade are as set out in the resolutions for the Bachelor of Laws.

10 Award of the degrees

(1) The Bachelor of Laws is awarded in the grades of either Pass or Honours.
(2) Candidates who successfully complete requirements for the Bachelor of Science as specified in 6 (4) and also complete an embedded honours component or a stream with the Bachelor of Advanced Studies shall be awarded the Bachelor of Science and the Bachelor of Advanced Studies with the appropriate stream or honours.
(3) Candidates who attempt the Bachelor of Science with an embedded honours component in the Bachelor of Advanced Studies who do not meet the requirements for honours but who meet the requirement for the pass degree, may be awarded the relevant degree or combined degree for which they fulfil requirements at pass level.
(4) Honours in the Bachelor of Laws may be awarded in First Class or Second Class in accordance with the Resolutions of the Bachelor of Laws.
(5) Candidates for the award of the Honours degree who do not meet the requirements,and who have not already graduated, will be awarded the relevant pass degree.
(6) For candidates qualifying for the Dalyell Stream, the words “Dalyell scholar” will beinserted below the degree name on the testamur.

11 Cross-institutional study

Cross-institutional study is available in this course subject to the terms set out in the Resolutions of the Faculty of Science during the first 144 credit points of the Combined degree and subsequently subject to the terms set out in the Resolutions of the University of Sydney Law School.

12 International exchange

The Faculty of Science and the University of Sydney Law School encourage candidates in this course to participate in international exchange programs subject to the terms set out in the Resolutions of the Faculty of Science during the first 144 credit points of the combined degree and subsequently subject to the terms set out in the Resolutions of the School ofLaw.

13 Course transfer

(1) A candidate may withdraw from the combined degree program and elect to transfer to the Bachelor of Science by written application to the Faculty of Science, and complete the requirements in accordance with the resolutions governing that degree at the time of transfer. Candidature in the Bachelor of Laws will cease in these circumstances.
(2) With the permission of the Faculty of Science and the University of Sydney Law School, suitably qualified candidates may, after completing requirements for the Bachelor of Science as specified in 6 (3) and 6 (4), defer progression to the Bachelor of Laws and undertake an embedded honours component in the Bachelor of Advanced Studies and then continue to the Bachelor of Laws.

(3) A candidate who has suspended enrolment in the combined degree to enrol in the Bachelor of Advanced Studies to complete requirements honours or a stream may abandon the Bachelor of Advanced Studies and return to the combined Bachelor of Science and Bachelor of Laws.

14 Credit for previous study

Credit transfer is subject to the relevant provisions of the Coursework Policy and the Resolutions of the Faculty of Science and the University of Sydney Law School.

15 Transitional provisions

(1) These resolutions apply to students who commenced their candidature after 1 January, 2018 who are not seeking credit for prior study and students who commenced their candidature prior to 1 January, 2018 who elect to proceed under these resolutions. Students who commenced their candidature prior to 1 January, 2018 who elect to transfer and proceed under these resolutions should note that the University does not undertake to offer 3000 level units of study prior to 2019 and that it may not be possible to complete requirements for the Bachelor of Science degree before the end of Semester 2 of that year or the single degree before the end of Semester 2, 2019.

(2) Candidates who commence candidature after 1 January, 2018 who are seeking credit for prior study should note that the University does not undertake to offer 2000 and 3000-level units of study prior to 2019 and that it may not be possible to complete requirements for the Bachelor of Science degree before the end of Semester 2 of that year. Where a student in the Bachelor of Science proceedingunder these resolutions applies for and is granted credit and wishes to complete the degree before 1 January 2020, the student will be offered the opportunity to complete the Bachelor of Science degree under the resolutions that applied at 1 January 2017.

(3) Candidates who commenced prior to 1 January, 2018 may complete the requirements in accordance with the resolutions in force at the time of their commencement, provided that the requirements are completed by 1 January, 2027.

Bachelor of Science / Doctor of Dental Medicine

Bachelor of Science/Doctor of Dental Medicine

These resolutions must be read in conjunction with applicable University By-laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the Coursework Policy 2014, the Resolutions of the Faculty of Science and the Faculty of Dentistry, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Up to date versions of all such documents are available from the Policy Register: http://sydney.edu.au/policies.

Course resolutions

1 Course codes

Code	Course title
BPSCIDMD-01	Bachelor of Science/Doctor of Dental Medicine

2 Attendance pattern

The attendance pattern for this course is full time only.

3 Streams

(1) The Bachelor of Science in this double degree is available in the following stream:
(a) Dalyell.
(2) Completion of a stream is not a requirement of the Bachelor of Science/Doctor of Dental Medicine. The requirements for the completion of the stream is as specified in Table A for the Bachelor of Science or, in the case of the Dalyell stream, in Table S of the Shared Pool for Undergraduate Degrees.

4 Cross faculty management

(1) Candidates in this double degree program will be under the general supervision of the Faculty of Science until the end of the semester in which they complete the requirements for the Bachelor of Science. They will then be under the supervision of the Faculty of Dentistry.
(2) The Faculty of Science and the Faculty of Dentistry shall jointly exercise authority in any matter concerned with the double degree program not otherwise dealt with in these resolutions.

5 Admission to candidature

(1) Admission to this course is on the basis of a secondary school leaving qualification such as the NSW Higher School Certificate (including national and international equivalents) leading to the award of an Australian Tertiary Admission Ranking (ATAR) or equivalent. English language requirements must be met where these are not demonstrated by sufficient qualifications taught in English. Special admission pathways are open for Aboriginal and Torres Strait Islander people. Applicants are ranked by merit and offers for available places are issued according to the ranking. Details of admission policies are found in the Coursework Rule.
(2) Applicants are only eligible for assessment for admission to the first available course intake following the receipt of their final ATAR results or equivalent. Applicants are ineligible for admission to the course in subsequent years.
(3) Admission to this course requires the applicant to participate in an assessment process, including a written assessment and a panel discussion session. The result of this assessment will form part of the ranking of applicants.
(4) Admission to the Dalyell stream requires achievement of a minimum tertiary admission rank (ATAR) set by the Board of Interdisciplinary Studies, or equivalent standard.

6 Requirements for award

(1) The units of study that may be taken for the course are set out in;
(a) Table A for the Bachelor of Science; and
(b) Table S from the Shared Pool for Undergraduate Degrees; and
(c) Table O from the Shared Pool for Undergraduate Degrees; and
(d) The Table of units for the Doctor of Dental Medicine from the Faculty of Dentistry.
(2) In these resolutions, except where otherwise specified, Table A, Table S and Table O mean Table A, Table S and Table O as specified here.
(3) To qualify for the award of both degrees a candidate must successfully complete 336 credit points, comprising:
(a) 144 credit points to qualify for the award of the Bachelor of Science as specified in the resolutions for the Bachelor of Science, including;
(i) Degree core: 12 credit points of mathematics degree core units of study as set out in Table A (candidates may count the units from their major(s) or minor(s) to fulfil this requirement); and 12 credit points of 1000-level science elective units of study (excluding units listed as mathematics degree core) as set out in Table A (candidates may count the units from their major(s) or minor(s) to fulfil this requirement); and
(ii) A major (48 credit points) or program defined in Section 7 below and listed in Table A; and
(iii) A minor (36 credit points) or second major (48 credit points) as defined in Section 7 below and listed in Table A or Table S; and
(iv) 12 credit points of units of study in the Open Learning Environment as listed in Table O; and
(v) 6 credit points of foundational knowledge units of study for dentistry selected from BIOL1XX3, or BIOL1XX6, or BIOL1XX7 or BIOL1XX8 and one zero credit point unit of study (SDDP1011); and
(vi) Where appropriate, elective units from Table A and Table S; and
(vii) If enrolled in the Dalyell stream, complete the requirements for the stream as specified in Table A or Table S.
(b) 192 credit points to qualify for the award of the Doctor of Dental Medicine as specified in the resolutions for the Doctor of Dental Medicine.

7 Programs, majors and minors

(1) Completion of a major from Table A for the Bachelor of Science is a requirement for this double degree.
(2) Completion of a minor or second major from Table A or Table S is a requirement for this double degree.

(3) Candidates have the option of completing a program with an embedded major from Table A of up to 72 credit points.
(4) The programs and majors available as first majors in the Bachelor of Science are as specified in the resolutions for the Bachelor of Science, Bachelor of Science/Bachelor of Advanced Studies and in Table A.
(5) The minors and majors available as second majors in the Bachelor of Science are as specified in Table A and Table S.

8 Progression rules

(1) Progression within the Bachelor of Science
(a) Candidates must complete all requirements for the degree of Bachelor of Science, including the designated foundational knowledge units of study for dentistry offered by the Faculty of Science specified in 6 (3) (a) (v), within three years (or four years if candidates take an embedded honours component through the Bachelor of Advanced Studies), excluding any authorised periods of suspension.
(b) Candidates must achieve a Weighted Average Mark of at least 65.0 in each year of study for each 48 credit point block in the Bachelor of Science to continue in the double degree, this being the minimum achievement required for admission to candidature for the Doctor of Dental Medicine.
(c) Failure to maintain the minimum progression requirements will result in candidates being transferred from the double degree program to a Bachelor of Science degree with full credit for all units of study successfully completed.
(2) Progression within the Dalyell Stream
(a) With the permission of the Dalyell coordinator, candidates in the Dalyell Stream may attempt units of study at higher levels than the usual sequence.
(b) Candidates must achieve a WAM at a level determined by the Board of Interdisciplinary Studies in each year of study to continue in the Dalyell Stream. Candidates who do not maintain this WAM at the level determined by the Board of Interdisciplinary Studies may continue in the Bachelor of Science component of the double degree but will not remain in the Dalyell Stream.
(3) Progression within the Doctor of Dental Medicine
(a) Progression within the Doctor of Dental Medicine is as specified in the resolutions for the Doctor of Dental Medicine.

9 Requirements for award with Honours

(1) Honours in the Bachelor of Science is available to meritorious candidates who have completed requirements for the Bachelor of Science degree, by suspending candidature, with the permission of the Faculty of Science and Faculty of Dentistry, in the double degree for one year, enrolling in the Bachelor of Advanced Studies and taking an embedded honours component in an additional year of full time study.
(2) The grade of honours in the Bachelor of Advanced Studies will be determined by an honours mark calculated from work in the embedded honours component as specified in Table A and the Resolutions of the Faculty of Science.

10 Award of the degrees

(1) The Bachelor of Science is awarded at Pass level. Honours in science is taken by enrolling in the Bachelor of Advanced Studies and completing an embedded honours component.
(2) Candidates who attempt the Bachelor of Science with an embedded honours component in the Bachelor of Advanced Studies who do not meet the requirements for honours but who meet the requirement for the pass degree, may be awarded the relevant degree or degrees at pass level for which they fulfil requirements.
(3) Candidates who attempt the Bachelor of Science with an embedded honours component in the Bachelor of Advanced Studies who do not meet the requirements for honours but who meet the requirement for the pass degree, may be awarded the relevant degree or combined degree at pass level for which they fulfil requirements.
(4) The Doctor of Dental Medicine is awarded as a Pass grade.

11 Cross-institutional study

Cross institutional study is not available in this double degree course.

12 International exchange

The Faculty of Science encourages candidates in this course to participate in international exchange programs as set out in the Resolutions of the Faculty of Science provided that the progression requirements and timelines in Section 8 of these resolutions can be met.

13 Course Transfer

(1) A candidate may abandon the double degree program and elect to complete the Bachelor of Science in accordance with the resolutions governing that degree. Completion of the Doctor of Dental Medicine in the future will require a new application for admission to that course and completion in accordance with the resolutions governing that degree.
(2) With the permission of the Faculty of Science and the Faculty of Dentistry, suitably qualified candidates may, after completing requirements for the Bachelor of Science, defer progression to the Doctor of Dental Medicine and undertake an embedded honours component in the Bachelor of Advanced Studies and then, upon completion of the Bachelor of Advanced Studies, continue to the Doctor of Dental Medicine.
(3) A candidate who has suspended enrolment in the double degree program to enrol in the Bachelor of Advanced Studies to complete requirements of honours or a stream may, with the permission of the Faculty of Science and the Faculty of Dentistry, abandon the Bachelor of Advanced Studies and enrol in the Doctor of Dental Medicine.

14 Credit for previous study

It is not possible for candidates enrolled in the Bachelor of Science/ Doctor of Dental Medicine to obtain credit for previous studies.

15 Transitional provisions

(1) These resolutions apply to candidates who commenced their candidature after 1 January 2018 who are not seeking credit for prior study and candidates who commenced their candidature prior to 1 January 2018 who elect to proceed under these resolutions.
(2) Candidates who commenced their candidature prior to 1 January 2018 who elect to transfer and proceed under these resolutions, should note that the University does not undertake to offer 4000 level honours units of study in the Bachelor of Advanced Studies degree prior to 2020, nor 2000 or 3000 level units of study prior to 2019 and that it may not be possible to complete requirements for the Bachelor of Advanced Studies before the end of Semester 2 2020 or the Bachelor of Science component of the double degree before the end of Semester 2 2019.
(3) Candidates who commenced their candidature prior to 1 January 2018 may complete the requirements in accordance with the resolutions in force at the time of their commencement.

Bachelor of Science / Doctor of Medicine

Bachelor of Science/Doctor of Medicine

These resolutions must be read in conjunction with the applicable University By-Laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the Coursework Policy 2014 ('the Coursework Policy'), the Learning and Teaching Policy 2015, the Resolutions of the Faculty of Science, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Up to date versions of all such documents are available from the Policy Register: http://sydney.edu.au/policies.

Course resolutions

1 Course codes

Code	Course title
BPSCIMED-01	Bachelor of Science/Doctor of Medicine

2 Attendance pattern

The attendance pattern for this course is full time only.

3 Streams

(1) The Bachelor of Science in this double degree is available in the following streams:
(a) Medical Science
(b) Dalyell.
(2) Completion of a stream is not a requirement of the Bachelor of Science. The requirements for the completion of each stream are as specified in Table A for the Bachelor of Science or, in the case of the Dalyell stream, in Table S of the Shared Pool for Undergraduate Degrees.
(3) Candidates wishing to transfer between streams should contact the Student Centre.
(4) Candidates who qualify for the Dalyell stream may complete that stream while also completing another stream.

4 Cross faculty management

(1) Candidates in this double degree program will be under the general supervision of the Faculty of Science until the end of the semester in which they complete the requirements for the Bachelor of Science. They will then be under the supervision of the University of Sydney Medical School.
(2) The Faculty of Science and the University of Sydney Medical School shall jointly exercise authority in any matter concerned with the double degree program not otherwise dealt with in these resolutions.

5 Admission to candidature

(1) Admission to this course is on the basis of a secondary school leaving qualification such as the NSW Higher School Certificate (including national and international equivalents) leading to the award of an Australian Tertiary Admission Ranking (ATAR) or equivalent. English language requirements must be met where these are not demonstrated by sufficient qualifications taught in English. Special admission pathways are open for Aboriginal and Torres Strait Islander people. Applicants are ranked by merit and offers for available places are issued according to the ranking. Details of admission policies are found in the Coursework Rule.
(2) Applicants are only eligible for assessment for admission to the first available course intake following the receipt of their final ATAR results or equivalent. Applicants are ineligible for admission to the course in subsequent years.
(3) Admission to this course requires the applicant to participate in an assessment process, including a written assessment and a panel discussion session. The result of this assessment will form part of the ranking of applicants.
(4) Admission to the Dalyell stream requires achievement of a minimum tertiary admission rank (ATAR) set by the Board of Interdisciplinary Studies or equivalent standard.

6 Requirements for award

(1) The units of study that may be taken for the course are set out in:
(a) Table A for the Bachelor of Science; and
(b) Table S from the Shared Pool for Undergraduate Degrees; and
(c) Table O from the Shared Pool for Undergraduate Degrees; and
(d) The Table of units for the Doctor of Medicine from the Faculty of Medicine.
(2) In these resolutions, Table A, Table S, Table O mean Table A, Table S and Table O as specified here.
(3) To qualify for the award of both degrees a candidate must successfully complete 336 credit points, comprising:
(a) 144 credit points to qualify for the award of the Bachelor of Science as specified in the resolutions for the Bachelor of Science, including:
(i) 12 credit points of mathematics degree core units of study as set out in Table A (candidates may count the units from their major(s) or minor(s) to fulfil this requirement); and 12 credit points of 1000-level science elective units of study (excluding units listed as mathematics degree core) as set out in Table A (candidates may count the units from their major(s) or minor(s) to fulfil this requirement); and
(ii) A major (48 credit points) or program defined in Section 7 below and listed in Table A; and
(iii) A minor (36 credit points) or second major (48 credit points) as defined in Section 7 below and listed in Table A or Table S; and
(iv) 12 credit points of units of study in the Open Learning Environment as listed in Table O; and
(v) 18 credit points of foundational knowledge units of study for medicine offered by the Faculty of Science comprising BIOL1XX7, PHSI2X05 or MEDS2001, ANAT2011 or MEDS2005 and one zero credit point unit (SMTP3007); and
(vi) Where appropriate, elective units from Table A and Table S; and
(vii) If enrolled in a stream, complete the requirements for the stream as specified in Table A or Table S.
(b) 192 credit points to qualify for the award of the Doctor of Medicine as specified in the resolutions for the Doctor of Medicine.

7 Programs, majors and minors

(1) Completion of a major from Table A is a requirement for this double degree.
(2) Completion of a minor or second major from Table A or Table S is a requirement for this double degree.
(3) Candidates have the option of completing a program with an embedded major from Table A provided that the total credit point value of the program and the degree core does not exceed 78 credit points.
(4) The programs and majors available as first majors in the Bachelor of Science are as specified in the resolutions for the Bachelor of Science, Bachelor of Science/Bachelor of Advanced Studies and in Table A.
(5) The minors and majors available as second majors in the Bachelor of Science are as specified in Table A and Table S.

8 Progression rules

(1) Progression within the Bachelor of Science
(a) Candidates must complete all requirements for the degree of Bachelor of Science, including the designated foundational knowledge units of study for medicine offered by the Faculty of Science specified in (6) (3) (a) (v), within three years (or four years if candidates take an embedded honours component through the Bachelor of Advanced Studies), excluding any authorised periods of suspension, in order to progress to the Doctor of Medicine degree.
(b) Candidates must achieve an Annual Average Mark (AAM) of at least 65.0 in each year of study in the Bachelor of Science to continue in the double degree, this being the minimum achievement required for admission to candidature for the Doctor of Medicine.
(c) Failure to maintain the minimum progression requirements will result in candidates being transferred from the double degree program to a Bachelor of Science degree with full credit for all units of study successfully completed.
(2) Progression within the Dalyell Stream
(a) With the permission of the Dalyell coordinator, candidates in the Dalyell Stream may attempt units of study at higher levels than the usual sequence.
(b) Candidates must achieve an AAM at a level determined by the Board of Interdisciplinary Studies in each year of study to continue in the Dalyell Stream. Candidates who do not maintain this AAM at the level determined by the Board of Interdisciplinary Studies may continue in the Bachelor of Science component of the double degree, but will not remain in the Dalyell Stream.
(3) Progression within the Medical Science Stream
(a) Candidates in this stream will be required to meet the progression requirements for the stream as specified in the resolutions of the Bachelor of Science.
(4) Progression within the Doctor of Medicine is as specified in the resolutions for the Doctor of Medicine.
(a) Progression within the Doctor of Medicine is as specified in the Resolutions for the Doctor of Medicine.

9 Requirements for the award with Honours

(1) Honours in the Bachelor of Science is available to meritorious candidates who have completed requirements for the Bachelor of Science degree, by suspending candidature, with the permission of the Faculty of Science and the University of Sydney Medical School, in the double degree for one year, enrolling in the Bachelor of Advanced Studies and taking an embedded honours component in an additional year of full time study.
(2) The grade of honours in the Bachelor of Advanced Studies will be determined by an honours mark calculated from work in the embedded honours component as specified in Table A and the Resolutions of the Faculty of Science.

10 Award of the degrees

(1) The Bachelor of Science is awarded at Pass level. Honours in science is taken by enrolling in the Bachelor of Advanced Studies and completing an embedded honours component.
(2) Candidates who attempt the Bachelor of Science with an embedded honours component in the Bachelor of Advanced Studies who do not meet the requirements for honours but who meet the requirement for the pass degree, may be awarded the relevant degree ordegrees at pass level for which they fulfil requirements.
(3) The Doctor of Medicine is awarded as a Pass grade.

11 Cross-institutional study

Cross institutional study is not available in this double degree course.

12 International exchange

The Faculty of Science encourages candidates in this course to participate in international exchange programs while undertaking the Bachelor of Science as specified in the Resolutions of the Faculty of Science provided that the progression requirements and timelines in Section 8 of these resolutions can be met.

13 Course transfer

(1) A candidate may abandon the double degree program and elect to complete the Bachelor of Science in accordance with the resolutions governing the degree. Completion of the Doctor of Medicine in the future will require a new application for admission to that course and completion in accordance with the resolutions governing that degree.
(2) With the permission of the Faculty of Science and the University of Sydney Medical School, suitably qualified candidates may, after completing requirements for the Bachelor of Science, defer progression to the Doctor of Medicine and undertake an embedded honours component in the Bachelor of Advanced Studies, and, upon completion of the Bachelor of Advanced Studies, continue to the Doctor of Dental Medicine.
(3) A candidate who has suspended enrolment in the double degree to enrol in the Bachelor of Advanced Studies to complete requirements of honours or a stream may, with the permission of the Faculty of Science and the Faculty of Medicine, abandon the Bachelor of Advanced Studies and enrol in the Doctor of Medicine.

14 Credit for previous study

It is not possible for candidates enrolled in the Bachelor of Science / Doctor of Medicine to obtain credit for previous studies.

15 Transitional provisions

(1) These resolutions apply to candidates who commenced their candidature after 1 January, 2018 and candidates who commenced their candidature prior to 1 January, 2018 who elect to proceed under these resolutions.
(2) Candidates who commenced their candidature prior to 1 January, 2018 who elect to transfer and proceed under these resolutions should note that the University does not undertake to offer 4000 level honours units of study in the Bachelor of Advanced Studies degree prior to 2020 nor 2000 or 3000 level units of study prior to 2019 and that it may not be possible to complete requirements for the Bachelor of Advanced Studies before the end of Semester 2 2020 or the Bachelor of Science component of the double degree before the end of Semester 2 2019.
(3) Candidates who commenced their candidature prior to 1 January 2018 may complete the requirements in accordance with the resolutions in force at the time of their commencement.

Bachelor of Science / Master of Nutrition and Dietetics

Bachelor of Science/ Master of Nutrition and Dietetics

These resolutions must be read in conjunction with applicable University By-laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the Coursework Policy 2014, the Resolutions of the Faculty, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Up to date versions of all such documents are available from the Policy Register: http://sydney.edu.au/policies.

Course resolutions

1 Course codes

Code	Course title
BPSCINUD-02	Bachelor of Science / Master of Nutrition and Dietetics
MANUTDIE-01	Master of Nutrition and Dietetics

2 Attendance pattern

The attendance pattern for the Bachelor of Science is full time or part time according to student choice, whereas the attendance pattern for the Master of Nutrition and Dietetics is full time only.

3 Streams

(1) The Bachelor of Science and Master of Nutrition and Dietetics is available in the following stream:
(b) Dalyell.
(2) Completion of a stream is not a requirement of the Bachelor of Science and Master of Nutrition and Dietetics. The requirements for the completion of each stream are as specified in Table A for the Bachelor of Science or, in the case of the Dalyell stream, in Table S of the Shared Pool for Undergraduate Degrees.
(3) Candidates wishing to transfer between streams should contact the Student Centre.
(4) Candidates who qualify for the Dalyell stream may complete that stream while also completing another stream.

4 Master's type

The master's degree in these resolutions is a professional master's course, as defined by the Coursework Rule. It is accredited by the Dietitians Association of Australia.

5 Admission to candidature

(1) Admission to this course is on the basis of a secondary school leaving qualification such as the NSW Higher School Certificate (including national and international equivalents), tertiary study or an approved preparation program. English language requirements must be metwhere these are not demonstrated by sufficient qualifications taught in English. Special admission pathways are open for Aboriginal and Torres Strait Islander people. Applicants are ranked by merit and offers for available places are issued according to the ranking.Details of admission policies are found in the Coursework Rule and the Coursework Policy.
(2) Admission to the Dalyell stream requires achievement of a minimum tertiary admission rank (ATAR) set by the Board of Interdisciplinary Studies, or equivalent standard.

6 Requirements for award

(1) The units of study that may be taken for the course are set out in:
(a) Table A for the Bachelor of Science;
(b) Table S of the Shared Pool for Undergraduate Degrees;
(c) Table O of the Shared Pool for Undergraduate Degrees; and
(d) The Table of units for the Master of Nutrition and Dietetics from the Faculty of Science.
(e) In these resolutions, except where otherwise specified, Table A, Table S and Table O mean Table A, Table S and Table O as specified here.
(2) To qualify for the award of both degrees a candidate must successfully complete 240 credit points, comprising:
(a) 144 credit points to qualify for the award of the Bachelor of Science as specified in resolutions for the Bachelor of Science, including:
(i) 12 credit points of mathematics degree core units of study as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement);
(ii) 12 credit points of 1000-level science elective units of study (excluding units listed as Mathematics degree core) as set out in Table A (students may count the units from their major(s) or minor(s) to fulfil this requirement);
(iii) a program (72 credit points) in Nutrition and Dietetics as defined in Section 7 below and specified in Table A;
(iv) a minor (36 credit points) or second major (48 credit points) as defined in Table A or Table S;
(v) 12 credit points of units of study in the Open Learning Environment as listed in Table O;
(vi) where appropriate, elective units from Table A and Table S; and
(vii) if enrolled in a stream, complete the requirements for the stream as specified in Table A or Table S.
(b) 96 credit points for the award of the Master of Nutrition and Dietetics as required by the resolutions and Table of units for the Master of Nutrition and Dietetics.

7 Programs, majors and minors

(1) Completion of a program in Nutrition and Dietetics from Table A for the Bachelor of Science is a requirement for this double degree.
(2) Completion of a minor or second major from Table A or Table S is a requirement for this double degree.
(3) The minors and majors available as second majors in the Bachelor of Science are as specified in Table A and Table S.

8 Progression rules

(1) Candidates must complete the requirements for the Bachelor of Science with a Weighted Average Mark of at least 65 in order to be eligible to proceed to the Master of Nutrition and Dietetics.

(2) Candidates who complete the requirements for the Bachelor of Science but fail to achieve a WAM of 65 will not progress to the Master of Nutrition and Dietetics and will be awarded the Bachelor of Science only.

(3) *Progression within the Dalyell Stream:*

(a) With the permission of the Dalyell coordinator, candidates in the Dalyell Stream may attempt units at higher levels than the usual sequence.

(b) Candidates must achieve an Annual Average Mark at a level determined by the Board of Interdisciplinary Studies or over for each 48 credit-point block to continue in theDalyell Stream. Candidates who do not maintain an Annual Average Mark at the level determined by the Board of Interdisciplinary Studies may continue in any other stream into which they were admitted, major, program or minor but will not remain in the Dalyell Stream.

9 Requirements for the Bachelor of Science with honours

(1) Honours in the Bachelor of Science is available to meritorious candidates who havecompleted requirements for the Bachelor of Science degree, by suspending candidature,with the permission of the Faculty of Science, in the double degree for one year, enrolling inthe Bachelor of Advanced Studies and taking an embedded honours component in anadditional year of full time study.

(2) The grade of honours in the Bachelor of Advanced Studies will be determined by anhonours mark calculated from work in the embedded honours component as specified inTable A and the Resolutions of the Faculty of Science.

10 Award of the degree

(1) The Bachelor of Science is awarded at Pass level. Honours in science is taken by enrolling in the Bachelor of Advanced Studies and completing an embedded honours component.

(2) Candidates who attempt the Bachelor of Science with an embedded honours component in the Bachelor of Advanced Studies who do not meet the requirements for honours but who meet the requirement for the pass degree, may be awarded the relevant degree or degrees at pass level for which they fulfil requirements.

(3) The Master of Nutrition and Dietetics is awarded as a Pass degree only.

11 Course transfer

(1) A candidate may abandon the double degree program and elect to complete the Bachelor of Science in accordance with the resolutions governing that degree. Completion of the Master of Nutrition and Dietetics in the future will require a new application for admission to that course and completion in accordance with the resolutions governing that degree.

(2) With the permission of the Faculty of Science, suitably qualified candidates may, after completing requirements for the Bachelor of Science, defer progression to the Master of Nutrition and Dietetics and undertake an embedded honours component in the Bachelor ofAdvanced Studies and then, upon completion of the Bachelor of Advanced Studies, continue to the Master of Nutrition and Dietetics.

(3) A candidate who has suspended enrolment in the double degree program to enrol in the Bachelor of Advanced Studies to complete requirements of honours or a stream may, with the permission of the Faculty of Science, abandon the Bachelor of Advanced Studies and enrol in the Master of Nutrition and Dietetics.

12 Transitional provisions

These resolutions apply to students who commenced their candidature after 1 January, 2018 who are not seeking credit for prior study and students who commenced theircandidature prior to 1 January, 2018 who elect to proceed under these resolutions. Students who commenced their candidature prior to 1 January 2018 who elect to transfer and proceed under these resolutions should note that the University does not undertake to offer 4000 level honours units in the Bachelor of Advanced Studies degree prior to 2020 and 2000 and 3000 level units of study prior to 2019 and that it may not be possible to complete requirements for the Bachelor of Advanced Studies before the end of Semester 2 2020 or the Bachelor of Science before the end of Semester 2 2019.

(2) Candidates who commenced prior to 1 January 2018 may complete the requirements in accordance with the resolutions in force at the time of their commencement, provided that the requirements are completed by 1 January 2027.

Bachelor of Veterinary Biology / Doctor of Veterinary Medicine

Bachelor of Veterinary Biology / Doctor of Veterinary Medicine

These resolutions must be read in conjunction with the applicable University By-Laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the Coursework Policy 2014 ('the Coursework Policy'), the Learning and Teaching Policy 2015, the Resolutions of the Faculty of Science, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Course resolutions

1 Course codes

Code	Course title
BPVBLVMD-01	Bachelor of Veterinary Biology/Doctor of Veterinary Medicine
BHVETBIO-01	Bachelor of Veterinary Biology (Honours)

2 Attendance pattern

1. The attendance pattern for Year 1 and Year 2 of the Bachelor of Veterinary Biology is full time or part-time according to candidate choice.
2. The attendance pattern for Year 3 to Year 6 is full-time only.

3 Admission to candidature

(1) Admission to this course is on the basis of a secondary school leaving qualification such as the NSW Higher School Certificate (including national and international equivalents) and tertiary study. English language requirements must be met where these are not demonstrated by sufficient qualifications taught in English. Special admission pathways are open for educationally disadvantaged applicants, rural applicants and for Aboriginal and Torres Strait Islander people. Applicants are ranked by merit and offers for available places are issued according to the ranking. Details of admission policies are found in the Coursework Rule. In addition, admission to this course requires the applicant to submit a Commitment to Veterinary Science Form. The results of this process will form part of the ranking of applicants.

4 Requirements for award

(1) The units of study that may be taken for the course are set out in the Table of units of study for the Bachelor Veterinary Biology/Doctor of Veterinary Medicine.
(2) To qualify for the award of both degrees, a candidate must successfully complete 288 credit points comprising:
(a) 144 credit points from the Bachelor of Veterinary Biology, and
(b) 144 credit points from the Doctor of Veterinary Medicine.

5 Progression rules

Progression to Year 3 of the course is based on successful completion of Year 1 and Year 2 of the course and academic merit in Year 1 and Year 2 of the course.

(1) All students who have successfully completed Year 1 and Year 2 with a Weighted Average Mark (WAM) of 65.0 or greater at the end of Year 2 will be eligible for progression to Year 3.
(2) Students who have successfully completed Year 1 and Year 2 with a Year 1 plus Year 2 WAM of less than 65.0 will not be eligible for entry into Year 3 of the course.
(3) Students who commenced prior to 1 Januray 2018 and who fail to achieve progression into Year 3 of the combined course will be transferred to the Bachelor of Science or the Bachelor of Animal and Veterinary Bioscience until 2019.
(4) Students who commenced prior to 1 January, 2018 and who fail to achieve progression into Year 3 of the combined course will be transferred to the Bachelor of Science or the Bachelor of Science/Bachelor of Advanced Studies (AVBS) from 2020.
(5) Students who commenced after 1 January 2018 and who fail to achieve progression into Year 3 of the combined course will be transferred into the Bachelor of Science (no stream), or the Bachelor of Science/Bachelor of Advanced Studies (AVBS stream) with credit for the units of study completed.
(6) Students for the course may enrol in the units of study prescribed for Year 4 of candidature only after completion of Year 1, Year 2 and Year 3.
(7) Students for the course may enrol in the units of study prescribed for Year 5 of candidature only after completion of Year 1, Year 2, Year 3 and Year 4
(8) Students for the course may enrol in the units of study prescribed for Year 6 of candidature only after completion of Year 1, Year 2, Year 3, Year 4 and Year 5.

6 Requirements for the Honours degree

(1) Honours in the Bachelor of Veterinary Biology is available to meritorious candidates who complete an additional year of full time study, after the successful completion of Year 3. Students must complete the requirements for the honours course full-time over two consecutive semesters. If the Faculty is satisfied that a student is unable to attempt the honours course on a full time basis and if the Dean so recommends, permission may be granted to undertake honours part-time over four consecutive semesters.
(2) Students who qualify to undertake honours in the Bachelor of Veterinary Biology may elect to enrol in the honours programme:
(a) by suspending candidature from the Bachelor of Veterinary Biology/Doctor of Veterinary Medicine for one year after successful completion of Year 3 or Year 4 or Year 5, with the permission of the Faculty; or
(b) by undertaking the honours course after completion of both courses in the combined course.

7 Award of the degree

(1) The Bachelor of Veterinary Biology/Doctor of Veterinary Medicine is awarded as either Pass or Honours. The honours degree, Bachelor of Veterinary Biology Honours/Doctor of Veterinary Medicine, is awarded in classes ranging from First Class to Third Class.
(2) The grade of honours and the honours mark are determined by performance in the honours course.
(3) Honours is awarded in the following classes:

Description	Mark range
Honours Class I	Mark >= 80
Honours Class II (Division 1)	75 <= Mark < 80
Honours Class II (Division 2)	70 <= Mark < 75
Honours Class III	65<= Mark < 70
Honours not awarded	Mark < 65

Candidates for the award of the Honours degree who do not meet the requirements, and who have not already graduated, will be awarded the pass degree.

8 Course transfer

A candidate may abandon the combined programme and elect to complete a Bachelor of Science or Bachelor of Animal and Veterinary Bioscience in accordance with the resolutions governing that degree. Candidates who discontinue after Year 3 without completing the combined course, but have satisfactorily completed 144 credit points including all requirements for Year 1, Year 2 and Year 3 may exit with the Bachelor of Veterinary Biology. Completion of the Doctor of Veterinary Medicine in the future will require a new application for admission to that course and completion in accordance with the resolutions governing that course.

9 Reassessment

Students enrolled in a postgraduate unit of study prescribed for Year 3, Year 4, Year 5 or Year 6 of candidature of the Bachelor of Veterinary Biology/Doctor of Veterinary Medicine, who fail one unit of study only within a semester may be offered the opportunity for re-assessment for the failed unit of study.

(a) The scope of the re-assessment will encompass all topics and learning outcomes within the unit of study. The methods used for re-assessment may differ from those used in the original delivery of the unit.

(b) Re-assessment will only be offered to eligible students on the dates prescribed in the year schedule, and it is the student's responsibility to be available to attend at these times.

(c) The maximum mark awarded for a unit of study in these circumstances will be Pass (50 - PS for units of study with Mark and Grade assessment type or SR for units of study with Grade only (Pass/Fail) assessment type).

(d) Students who have been awarded an Absent Fail grade for a unit of study will not be eligible for re-assessment for that unit of study.

10 Transitional Provisions

These provisions apply for candidates who commenced after 1 Januray 2015.

Bachelor of Veterinary Biology / Doctor of Veterinary Medicine

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
Bachelor of Veterinary Biology/Doctor of Veterinary Medicine			
Year 1			
Year 1 has the following 48 credit point structure: a core (36 credit points), and electives (12 credit points) selected from the lists below.			
Core Units of Study			
BIOL1006 **Life and Evolution**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996	Semester 1 Summer Main
or			
BIOL1906 **Life and Evolution (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent. **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 *Note: Department permission required for enrolment*	Semester 1
or			
BIOL1996 **Life and Evolution (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 *Note: Department permission required for enrolment*	Semester 1
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
or			
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
or			
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2
CHEM1111 **Chemistry 1A**	6	**A** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 *Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1 Semester 2 Summer Main
or			
CHEM1911 **Chemistry 1A (Advanced)**	6	**A** 80 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 *Note: Department permission required for enrolment*	Semester 1
or			
CHEM1991 **Chemistry 1A (Special Studies Program)**	6	**A** 90 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 *Note: Department permission required for enrolment*	Semester 1
CHEM1112 **Chemistry 1B**	6	**P** CHEM1111 or CHEM1911 or CHEM1101 or CHEM1901 or (75 or above in CHEM1011 or CHEM1001) **N** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1012 or CHEM1912 or CHEM1992	Semester 1 Semester 2
or			
CHEM1912 **Chemistry 1B (Advanced)**	6	**P** CHEM1911 or CHEM1991 or CHEM1901 or CHEM1903 or (75 or above in CHEM1111 or CHEM1101) or (90 or above in HSC Chemistry or equivalent) **N** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1012 or CHEM1112 or CHEM1992 *Students who commence in semester 2 are strongly advised that you would be better served by taking the mainstream level units in sequence, Chemistry 1A before Chemistry 1B, rather than the Advanced units in the opposite order.*	Semester 2
or			
CHEM1992 **Chemistry 1B (Special Studies Program)**	6	**P** 75 or above in CHEM1991 or CHEM1903 or (90 or above in HSC Chemistry or equivalent) **N** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1012 or CHEM1112 or CHEM1912 *Entry is by invitation. This unit of study is deemed to be an Advanced unit of study. Students who commence in semester 2 are strongly advised that you would be better served by taking the mainstream level units in sequence, Chemistry 1A before Chemistry 1B, rather than the Special Studies Program units in the opposite order.*	Semester 2

Unit of study	*Credit points*	*A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition*	*Session*
ENVX1002 **Introduction to Statistical Methods**	6	**N** ENVX1001 *Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams*	Semester 1
AVBS1002 **Concepts of Animal Management**	6	**A** AGEN1004 or BIOL1XXX or AVBS1003 **N** AGEN2006	Semester 2
Or (for students who commenced the course in or before 2017)			
AVBS1003 **Animals and Us**	6	**N** VETS1018	Semester 1
Electives			
Bachelor of Animal and Veterinary Bioscience (Progression Strategy) for students who commenced the course in or before 2017			
ENVI1003 **Global Challenges: Food, Water, Climate**	6		Semester 2
AVBS1002 **Concepts of Animal Management**	6	**A** AGEN1004 or BIOL1XXX or AVBS1003 **N** AGEN2006	Semester 2
Bachelor of Science (Progression Strategy) for students who commenced the course in or before 2017			
GEOS1001 **Earth, Environment and Society**	6	**N** GEOS1901 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001	Semester 1
PSYC1001 **Psychology 1001**	6		Intensive June Semester 1 Summer Main
PHYS1001 **Physics 1 (Regular)**	6	**A** HSC Physics or PHYS1003 or PHYS1004 or PHYS1902 or equivalent. Students who have not completed HSC Physics (or equivalent) are strongly advised to take the Physics Bridging Course (offered in February). Students are also encouraged to take (MATH1X21 or MATH1931 or MATH1X01 or MATH1906) and MATH1X02 concurrently. **N** PHYS1002 or PHYS1901 or EDUH1017 or PHYS1903	Semester 1
PHYS1004 **Physics 1 (Environmental and Life Science)**	6	**A** HSC Physics or PHYS1001 or PHYS1002 or PHYS1901 or equivalent. Students who have not completed HSC Physics (or equivalent) are strongly advised to take the Physics Bridging Course (offered in February). Students are also encouraged to take (MATH1X23 or MATH1933 or MATH1X03 or MATH1907) and MATH1X05 concurrently. **N** PHYS1003 or PHYS1902 or PHYS1904 *It is recommended that PHYS1001 or PHYS1002 or PHYS1901 be completed before this unit*	Semester 2
MATH1004 **Discrete Mathematics**	3	**A** HSC Mathematics or MATH1111. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **N** MATH1904 or MATH1064 or MATH2011	Semester 2 Summer Main
MATH1013 **Mathematical Modelling**	3	**A** HSC Mathematics or a credit or higher in MATH1111. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). Please note: this unit does not normally lead to a major in Mathematics or Statistics or Financial Mathematics and Statistics. **N** MATH1003 or MATH1903 or MATH1907 or MATH1023 or MATH1923 or MATH1933	Semester 2 Summer Main
MATH1014 **Introduction to Linear Algebra**	3	**A** HSC Mathematics or MATH1111. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). Please note: this unit does not normally lead to a major in Mathematics or Statistics or Financial Mathematics and Statistics. **N** MATH1012 or MATH1002 or MATH1902	Semester 2
Bachelor of Science/Bachelor of Advanced Studies (Animal and Veterinary Bioscience) (Progression Strategy) for students commencing the course in or after 2018			
AVBS1003 **Animals and Us**	6	**N** VETS1018	Semester 1
And 6 credit points of 1000-level units from any of the areas of study listed in Science Table A			
Bachelor of Science (Progression Strategy) for students commencing the course in or after 2018			
6 credit points of MATH1XXX units from the BSc Core units of study, and			
6 credit points of 1000-level units from any of the areas of study listed in Science Table A, excluding Mathematics units of study			
Year 2			
Year 2 has the following 48 credit point structure: a core (36 credit points), and electives (12 credit points) selected from the lists below.			
Core Units of Study for students commencing the course in or after 2018			
AVBS2001 **Introductory Veterinary Pathogenesis**	6	**A** (CHEM1XX1 or CHEM1903) and (CHEM1XX2 or CHEM1904) **P** 6cp of BIOL1XXX or MBLG1XX1	Semester 2
GEGE2001 **Genetics and Genomics**	6	**A** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **N** GENE2002 or MBLG2972 or GEGE2901 or MBLG2072	Semester 1 Semester 2
or			
GEGE2901 **Genetics and Genomics (Advanced)**	6	**A** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **P** Annual average mark of at least 70 **N** GENE2002 or MBLG2072 or GEGE2001 or MBLG2972	Semester 1 Semester 2
AVBS2002-2005 to be developed for offiering in 2019.			
Core Units of Study for students who commenced the course in or before 2017			
ANSC3101 **Animal Nutrition 3**	6	**A** Fundamentals of Biochemistry **P** AVBS2001 and [VETS1032 or AGEN2001 or (MICR2X31 or MICR2024)] **C** AVBS2001 and MICR2X31	Semester 2

Unit of study	*Credit points*	*A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition*	*Session*
ANSC3103 **Animal Structure and Function A**	6	**A** AVBS1002 **P** 12cp from (BIOL1XXX, VETS1032, AGEN2001)	Semester 1
ANSC3104 **Animal Structure and Function B**	6	**P** ANSC3103	Semester 2
AVBS2001 **Introductory Veterinary Pathogenesis**	6	**A** (CHEM1XX1 or CHEM1903) and (CHEM1XX2 or CHEM1904) **P** 6cp of BIOL1XXX or MBLG1XX1	Semester 2
GEGE2001 **Genetics and Genomics**	6	**A** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **N** GENE2002 or MBLG2972 or GEGE2901 or MBLG2072	Semester 1 Semester 2
or			
GEGE2901 **Genetics and Genomics (Advanced)**	6	**A** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **P** Annual average mark of at least 70 **N** GENE2002 or MBLG2072 or GEGE2001 or MBLG2972	Semester 1 Semester 2
Students who commenced the course in or before 2017 are advised to take GEGE2X01 in semester 1.			
VETS1032 **Animal Energetics and Homeostasis**	6	**A** HSC level chemistry and/or biology would be an advantage	Semester 1
Electives			
Bachelor of Animal and Veterinary Bioscience (Progression Strategy) for students who commenced the course in or before 2017			
BIOL2032 **Australian Wildlife Biology**	6	**N** ANSC2005	Semester 2
ENVX2001 **Applied Statistical Methods**	6	**P** [6cp from (ENVX1001 or ENVX1002 or BIOM1003 or MATH1011 or MATH1015 or DATA1001)] OR [3cp from (MATH1XX1 or MATH1906 or MATH1XX3 or MATH1907) and an additional 3cp from (MATH1XX5)] *Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams*	Semester 1
Bachelor of Science (Progression Strategy) - subject to approval for students who commenced the course in or before 2017			
BCMB2001 **Biochemistry and Molecular Biology**	6	**P** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901	Semester 1
BCMB2901 **Biochemistry and Molecular Biology (Advanced)**	6	**P** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2001	Semester 1
BCMB2002 **Proteins in Cells**	6	**P** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **N** BCHM2071 or BCHM2971 or BCMB2902	Semester 2
BCMB2902 **Proteins in Cells (Advanced)**	6	**P** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **N** BCHM2071 or BCHM2971 or BCMB2002	Semester 2
BIOL2021 **Zoology**	6	**A** BIOL1XXX or MBLG1XXX **N** BIOL2921 or BIOL2011 or BIOL2911 or BIOL2012 or BIOL2912	Semester 1
BIOL2022 **Biology Experimental Design and Analysis**	6	**A** BIOL1XXX or MBLG1XXX **P** 6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5) **N** BIOL2922 or BIOL3006 or BIOL3906	Semester 2
CHEM2401 **Molecular Reactivity and Spectroscopy**	6	**A** 6cp MATH1XXX **P** (CHEM1XX1 or CHEM1903) and (CHEM1XX2 or CHEM1904) **N** CHEM2001 or CHEM2101 or CHEM2301 or CHEM2311 or CHEM2502 or CHEM2901 or CHEM2903 or CHEM2911 or CHEM2915 *This is a required chemistry unit of study for students intending to major in chemistry.*	Semester 1
CHEM2402 **Chemical Structure and Stability**	6	**A** 6cp MATH1XXX **P** (CHEM1XX1 or CHEM1903) and (CHEM1XX2 or CHEM1904) **N** CHEM2202 or CHEM2302 or CHEM2902 or CHEM2912 or CHEM2916 *This is a required chemistry unit of study for students intending to major in chemistry.*	Semester 2
Bachelor of Science/Bachelor of Advanced Studies (Animal and Veterinary Bioscience) (Progression Strategy) for students commencing the course in or after 2018			
ENVX2001 **Applied Statistical Methods**	6	**P** [6cp from (ENVX1001 or ENVX1002 or BIOM1003 or MATH1011 or MATH1015 or DATA1001)] OR [3cp from (MATH1XX1 or MATH1906 or MATH1XX3 or MATH1907) and an additional 3cp from (MATH1XX5)] *Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams*	Semester 1
And 6 credit points of 2000-level units from Science Table A that enables the completion of a second major.			
Bachelor of Science (Progression Strategy) for students commencing the course in or after 2018			
12 credit points of 2000-level units from Science Table A			
Years 3 to 6			
Candidates who successfully complete the progression requirements enrol in the units of study for the Doctor of Veterinary Medicine degree.			
The requirements for the Doctor of Veterinary Medicine degree are set out in the Science Postgraduate Handbook.			
Doctor of Veterinary Medicine			
Year 1 has the following 48 credit point structure:			
VETS6101 **The Veterinary Professional 1**	3	**A** One semester of study in each of: general chemistry (physical and inorganic), organic chemistry, biology and biochemistry.	Semester 1

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
VETS6102 **Professional Skills 1A**	6	**A** Basic knowledge of clinical veterinary practice; empathy for and confidence in interactions with animals, One semester of study in each of general chemistry (physical and inorganic), organic chemistry, biology and biochemistry.	Semester 1
VETS6103 **Research and Enquiry 1A**	3		Semester 1
VETS6104 **Foundations of Veterinary Science A**	12	**A** One semester of study in each of general chemistry (physical and inorganic), organic chemistry, biology and biochemistry.	Semester 1
VETS6105 **Animal Management Systems 1**	3	**A** Basic knowledge of clinical veterinary practice, one semester of study in each of general chemistry (physical and inorganic), organic chemistry, biology and biochemistry **P** VETS6102	Semester 2
VETS6106 **Professional Skills 1B**	6	**A** Basic knowledge of clinical veterinary practice; empathy for and confidence in interactions with animals, one semester of study in each of general chemistry (physical and inorganic), organic chemistry, biology and biochemistry **P** VETS6102	Semester 2
VETS6107 **Research and Enquiry 1B**	3	**P** VETS6103	Semester 2
VETS6108 **Foundations of Veterinary Science B**	12	**A** 2 semesters of chemistry, 1 semester of biology, 1 semester of biochemistry **P** VETS6104	Semester 2
Year 2 has the following 48 credit point structure:			
VETS6201 **The Veterinary Professional 2**	3	**P** VETS6101 and VETS6102 and VETS6103 and VETS6104 and VETS6105 and VETS6106 and VETS6107 and VETS6108	Semester 1
VETS6202 **Professional Skills 2A**	6	**P** VETS6101 and VETS6102 and VETS6103 and VETS6104 and VETS6105 and VETS6106 and VETS6107 and VETS6108 *It is assumed that student have a basic knowledge of clinical veterinary practice; empathy for and confidence in interactions with animals*	Semester 1
VETS6203 **Research and Enquiry 2A**	3	**P** VETS6101 and VETS6102 and VETS6103 and VETS6104 and VETS6105 and VETS6106 and VETS6107 and VETS6108	Semester 1
VETS6204 **Principles of Animal Disease A**	12	**P** VETS6101 and VETS6102 and VETS6103 and VETS6104 and VETS6105 and VETS6106 and VETS6107 and VETS6108	Semester 1
VETS6205 **Animal Management Systems 2**	3	**P** VETS6101 and VETS6102 and VETS6103 and VETS6104 and VETS6105 and VETS6106 and VETS6107 and VETS6108 and VETS6201 and VETS6202 and VETS6203 and VETS6204 *It is assumed that students have a basic knowledge of clinical veterinary practice, biology and biochemistry*	Semester 2
VETS6206 **Professional Skills 2B**	6	**P** VETS6101 and VETS6102 and VETS6103 and VETS6104 and VETS6105 and VETS6106 and VETS6107 and VETS6108 and VETS6201 and VETS6202 and VETS6203 and VETS6204 *It is assumed that student have a basic knowledge of clinical veterinary practice; empathy for and confidence in interactions with animals*	Semester 2
VETS6207 **Research and Enquiry 2B**	3	**P** VETS6101 and VETS6102 and VETS6103 and VETS6104 and VETS6105 and VETS6106 and VETS6107 and VETS6108 and VETS6201 and VETS6202 and VETS6203 and VETS6204	Semester 2
VETS6208 **Principles of Animal Disease B**	12	**P** VETS6101 and VETS6102 and VETS6103 and VETS6104 and VETS6105 and VETS6106 and VETS6107 and VETS6108 and VETS6201 and VETS6202 and VETS6203 and VETS6204	Semester 2
Year 3 has the following 48 credit point structure:			
VETS6301 **Veterinary Public Practice**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208	Semester 1
VETS6302 **Clinical Foundations**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208	Semester 1
VETS6303 **Small Animal Practice A**	6	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208 **C** VETS6302	Semester 1
VETS6304 **Livestock Practice A**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208 **C** VETS6302	Semester 1
VETS6305 **Equine Practice A**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208 **C** VETS6302	Semester 1
VETS6306 **Exotic and Wildlife Practice**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208 **C** VETS6302	Semester 1
VETS6307 **Research and Enquiry 3A**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208	Semester 1
VETS6308 **Veterinary Practice Management**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208	Semester 2
VETS6309 **Small Animal Practice B**	6	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6303	Semester 2
VETS6310 **Livestock Practice B**	6	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6304	Semester 2
VETS6311 **Equine Practice B**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6305	Semester 2

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
VETS6312 **Intensive Animal Practice**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6302	Semester 2
VETS6313 **Research and Enquiry 3B**	3	**P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208	Semester 2
Year 4 has the following 48 credit point structure:			
VETS6401 **Small Animal Clinics A**	6	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313 *The majority of the unit of study will involve practical work in the form of clinical practice, facilitated in a rotational format. Students will be involved in the handling, examination, diagnostic procedures and treatment of various small animal species.*	Semester 1 Semester 2
VETS6402 **Small Animal Clinics B**	6	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313 *This unit of study involved four weeks of practical clinical experience at the UVTHS, focusing on developing clinical knowledge and skills in the area of veterinary anaesthesia.*	Semester 1 Semester 2
VETS6403 **Small Animal Clinics C**	6	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313 *The majority of the unit of study will involve practical work in the form of clinical practice, facilitated in a rotational format. Students will be involved in the handling, examination, diagnostic procedures and treatment of dogs, cats, birds, reptiles, exotic pets and wildlife.*	Semester 1 Semester 2
VETS6404 **Small Animal Clinics D**	3	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313 *The majority of the unit of study will involve practical work in the form of general clinical practice. Students will be involved in the handling, examination, diagnostic procedures and treatment, and wellness management of animals commonly presented in small animals practice.*	Semester 1 Semester 2
VETS6405 **Large Animal Clinics A**	6	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313 *Four weeks of practical experience in clinical environments focusing on multiple disciplinary areas required to facilitate effective equine clinical assessment and care.*	Semester 1 Semester 2
VETS6406 **Large Animal Clinics B**	3	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313 *Two weeks of clinical practical experience in working with livestock, ruminant, and herd populations via the University Livestock Veterinary Service at Camden campus.*	Semester 1 Semester 2
VETS6407 **Lab Investigations of Clinical Disease**	3	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313 *The unit of study is entirely practical, utilising diagnostic accessions to perform and interpret laboratory testing.*	Semester 1 Semester 2
VETS6408 **Public, Industry, or Community Placement**	3	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105, VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313 *Four weeks of practical experience of professional practice as required within a public, industry, or community-based body that serves the public good and/or underprivileged communities that lack regular access to veterinary services directly involved in servicing the livestock industries and/or public health. Students will also undertake a 3-day placement at an export abattoir.*	Semester 1 Semester 2
VETS6409 **Extramural Placement 1**	3	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105,VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313	Semester 1 Semester 2
VETS6410 **Extramural Placement 2**	3	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105,VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313	Semester 1 Semester 2
VETS6411 **Extramural Placement 3**	3	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105,VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313	Semester 1 Semester 2

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
VETS6412 **Extramural Placement 4**	3	**A** All content from Years 1, 2, and 3 of the DVM **P** VETS6101, VETS6102, VETS6103, VETS6104, VETS6105,VETS6106, VETS6107, VETS6108, VETS6201, VETS6202, VETS6203, VETS6204, VETS6205, VETS6206, VETS6207, VETS6208, VETS6301, VETS6302, VETS6303, VETS6304, VETS6305, VETS6306, VETS6307, VETS6308, VETS6309, VETS6310, VETS6311, VETS6312, VETS6313	Semester 1 Semester 2

Resolutions of the Senate

Resolutions of the Senate

1 Degrees, diplomas and certificates of the Faculty of Science

(1) With the exception of the Doctor of Science, the Doctor of Philosophy, the Doctor of Agricultural Economics, the Doctor of Science in Agriculture, and the Doctor of Veterinary Science, the Senate, by authority of the University of Sydney Act 1989 (as amended), provides and confers the following degrees, diplomas and certificates, according to the rules specified by the Faculty of Science. The Doctor of Science, the Doctor of Philosophy, the Doctor of Agricultural Economics, the Doctor of Science in Agriculture, and the Doctor of Veterinary Science, are provided and conferred according to the rules specified by the Senate and the Academic Board.

(2) This list is amended with effect from 1 January, 2018. Degrees, diplomas and certificates no longer open for admission will be conferred by the Senate according to the rules specified by the Faculty at the time.

2 Degrees

Code	Course title & stream	Abbreviation	Credit points
RHSCIENC-01	Doctor of Science	DSc	Published Work
RHAGRECO-01	Doctor of Agricultural Economics	DAgrEc	Published Work
RHSCAGRI-01	Doctor of Science in Agriculture	DScAgr	Published Work
RHVETSCI-01	Doctor of Veterinary Science	DVSc	Published Work
RPPHDSCI-01	Doctor of Philosophy	PhD	Published Work
RPPHDAGR-01	Doctor of Philosophy *(no new intake from 2017)*	PhD	Published Work
RPPHDVET-01	Doctor of Philosophy *(no new intake from 2017)*	PhD	Published Work
RMPHLSCI-01	Master of Philosophy	MPhil	Research
RMPHLAGR-01	Master of Philosophy *(no new intake from 2017)*	MPhil	Research
MASCIENC-01	Master of Science *(no new intake from 2016)*	MSc	Research
RMSCVESC-01	Master of Science in Veterinary Science *(no new intake from 2017)*	MScVetSc	Research
RMVETCLS-01	Master of Veterinary Clinical Studies	MVetClinStud	Research
RMVETSCI-01	Master of Veterinary Science *(no new intake from 2017)*	MVSc	Research
MASCPSCO-01	Master of Science in Coaching Psychology	MSc(CoachPsyc)	48
MAMASCMG-02	Master of Marine Science and Management	MMarSciMgt	72
MAENVSCI-01	Master of Environmental Science	MEnviSci	72
MAENSCLA-02	Master of Environmental Science and Law	MEnviSciLaw	72
MAMEDPHY-01	Master of Medical Physics	MMedPhys	72
MANUTDIE-01	Master of Nutrition and Dietetics	MNutrDiet	96
MASUSTAI-01	Master of Sustainability	MSust	72
MACLIPSY-01	Master of Clinical Psychology	MCP	96
MAAGRENV-01	Master of Agriculture and Environment	MAgrEnv	72
MAANMSCI-01	Master of Animal Science *(no new intake from 2018)*	MAnimSc	72
MAASCABM-01	Animal Breeding Management (available by distance online only) *(no new intake from 2018)*	MAnimSc(ABMgt)	72
	Animal Genetics *(no new intake from 2018)*	MAnimSc(Animal Genetics)	72
	Animal Nutrition *(no new intake from 2018)*	MAnimSc(Animal Nutrition)	72
	Animal Reproduction *(no new intake from 2018)*	MAnimSc(Animal Reproduction)	72
MAVETPHE-01	Master of Veterinary Public Health *(no new intake from 2017)*	MVPH	48
MAVEPHMA-01	Master of Veterinary Public Health Management *(no new intake from 2018)*	MVPHMgt	48
MAVETSTD-02	Master of Veterinary Studies *(no new intake from 2018)*	MVetStud	72
MAVETSTD-03	Master of Veterinary Studies (Small Animal Clinical Studies)	MVetStud(Small Animal Clinical Studies)	48
MAWIHEPM-01	Master of Wildlife Health and Population Management *(no new intake from 2018)*	MWHPMgt	72

Code	Course title & stream	Abbreviation	Credit points
MAVETMED-01	Doctor of Veterinary Medicine	DVM	192
BPLIARSC-01	Bachelor of Liberal Arts and Science*	BLAS	144
BPMEDSCI-02	Bachelor of Medical Science* *(no new intake from 2018)*	BMedSc	144

Resolutions of the Faculty

Resolutions of the Faculty of Science for coursework awards

These resolutions apply to all undergraduate and postgraduate coursework award courses in the Faculty, unless specifically indicated otherwise. Students enrolled in postgraduate research awards should consult the resolutions for their course. These resolutions must be read in conjunction with applicable University By-laws, Rules and policies including (but not limited to) the University of Sydney (Coursework) Rule 2014 (the 'Coursework Rule'), the resolutions for the course of enrolment, the University of Sydney (Student Appeals against Academic Decisions) Rule 2006 (as amended), the Academic Honesty in Coursework Policy 2015 and the Academic Honesty Procedures 2016. Up to date versions of all such documents are available from the Policy Register: http://sydney.edu.au/policies.

1. Admissions

(1) The provisions of the Coursework Rule and the Coursework Policy apply to the admission of domestic and international applicants to undergraduate and postgraduate coursework courses. Course resolutions may prescribe additional admission requirements.

(2) The Faculty participates in the following approved special admission programs under the Coursework Policy:

Course	Broadway Scheme	Cadigal Program	E12 Scheme	Mature Age Applicants Scheme	Elite Athletes or Performers Scheme	Special Consideration for Admission Scheme	Future Leaders Scheme
Bachelor of Liberal Arts and Science	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Science	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Science and Bachelor of Advanced Studies	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Science (Advanced) and Bachelor of Advanced Studies	Yes	Yes	Yes	No	Yes	Yes	Yes
Bachelor of Science (Medical Science)	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Science (Medical Science) and Bachelor of Advanced Studies	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Science (Health)	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Science (Health) and Bachelor of Advanced Studies	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Science and Bachelor of Advanced Studies (Agriculture)	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Science and Bachelor of Advanced Studies (Food and Agribusiness)	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Science and Bachelor of Advanced Studies (Animal and Veterinary Bioscience)	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Bachelor of Veterinary Bioscience and Doctor of Veterinary Medicine	Yes	Yes	Yes	No	Yes	Yes	No
Bachelor of Science and Doctor of Dental Medicine	No	Yes	No	No	No	No	No
Bachelor of Science and Doctor of Medicine	No	Yes	No	No	No	No	No

Course	Broadway Scheme	Cadigal Program	E12 Scheme	Mature Age Applicants Scheme	Elite Athletes or Performers Scheme	Special Consideration for Admission Scheme	Future Leaders Scheme

Master of Clinical Psychology and Doctor of Philosophy	n/a	Yes	n/a	n/a	n/a	n/a	n/a

2. Enrolment restrictions

(1) Except with the permission of the Associate Dean an undergraduate student may not enrol in units of study with a total value of more than 30 credit points in either semester one or two, 12 credit points in the summer session and 6 credit points in the winter session.

(2) Except with the permission of the Associate Dean a postgraduate coursework student may not enrol in units of study with a total value of more than 24 credit points in either semester one or two, 12 credit points in the summer session and 6 credit points in the winter session.

(3) Except with the permission of the Associate Dean, undergraduate students are prohibited from:

(a) re-enrolling in a unit of study that they have previously completed within the last 10 calendar years, regardless of whether the unit of study was completed in their current or previous award course; and

(b) enrolling in any unit of study:

(i) that overlaps substantially in content with a unit of study already completed in their current or previous award course within the last 10 calendar years; and/or

(ii) for which credit equivalence or exemption has been granted within the last 10 calendar years.

(4) Except with the permission of the Associate Dean, postgraduate coursework students are prohibited from:

(a) re-enrolling in a unit of study that they have previously completed within the last 5 calendar years, regardless of whether the unit of study was completed in their current or previous award course; and

(b) enrolling in any unit of study:

(i) that overlaps substantially in content with a unit of study already completed in their current or previous award course within the last 5 calendar years; and/or

(ii) for which credit equivalence or exemption has been granted within the last 5 calendar years.

3. Time Limits

The provisions of the Coursework Rule apply to the time limits for undergraduate and postgraduate programs, unless otherwise stated in the course resolutions.

4. Re-enrolment after an absence

Unless otherwise stated within the course resolutions, provisions of the Coursework Rule and the Coursework Policy apply. A student who plans to re-enrol after a period of suspension must advise the Student Centre of their intention prior to the commencement of semester. Students should pay careful attention to the significant dates in processes and their effect on results and financial liability.

5. Course Transfer

(1) Schedule 1 of the Faculty Resolutions lists the allowable Undergraduate course transfers and the conditions for transfer approved by the Faculty of Science for students who commenced their studies after 1 January 2018. Schedule 2 of the Faculty Resolutions lists the allowable Postgraduate course transfers and the conditions for transfer approved by the Faculty of Science for students who commenced their studies after 1 January 2018. For students who commenced their studies prior to 1 January 2018, please refer to the 2017 Handbook.

(2) Providing students satisfy the admission requirements for each stage of an articulated postgraduate coursework program, a student may apply to progress to the award of any of the courses within that sequence. Only the highest award completed will be conferred.

(3) A student enrolled in a postgraduate coursework masters may, with the approval of the Associate Dean, elect to discontinue study and graduate with the graduate diploma from the embedded sequence provided the requirements of the graduate diploma have been met.

(4) A student enrolled in a postgraduate coursework graduate diploma may, with the approval of the Associate Dean, elect to discontinue study and graduate with the graduate certificate from the embedded sequence provided the requirements of the graduate certificate have been met.

(5) All applications for transfer in a postgraduate coursework program must satisfy the Faculty specified time limits for application and transfer requests.

6. Credit for previous study

(1) Unless otherwise stated within the course resolutions, the provisions of the Coursework Rule and the Coursework Policy apply to the granting of credit, and in addition:

Course	Rule
Undergraduate courses	All students must complete all the 3000-level units of study required for a Science Table A major at the University of Sydney.

Course	Rule
Postgraduate courses	Credit is available in the articulated postgraduate courses for postgraduate study as long as it has been undertaken in these award courses within the previous five years. Unless otherwise stated in the course resolutions, external credit and reduced volume of learning are not available to students enrolled in postgraduate programs.
Master of Agriculture and Environment	Credit may be granted for specific core units up to a maximum of 25 percent of the requirements for the degree, but not for the elective units or research units. A reduction in volume of learning of up to 24 credit points may be available to students who have completed a qualification in an appropriate discipline at Level 8 of the Australian Qualifications Framework.
Bachelor of Veterinary Biology/Doctor of Veterinary Medicine	Credit may be granted only for specific core and elective units in Year 1 and Year 2 up to a maximum of 48 credit points. Studies must have been completed with at least a credit grade and no more than five years prior to admission.

7. Cross institutional study

(1) Provided the Associate Dean's permission has been obtained in advance, a student may be permitted to complete a unit of study offered by another institution and have that unit credited to the student's course requirements, provided that:
(a) the unit of study content is not taught in any corresponding unit of study at the University; or
(b) the student is unable, for good reason, to attend a corresponding unit of study at the University.
(2) Cross-institutional study is regarded as another form of credit.
(3) Unless otherwise stated in the course resolutions, cross-institutional study is not available to students enrolled in postgraduate programs.

8. International Study

(1) The Faculty encourages students to participate in international study, unless the resolutions for a particular course preclude this. Provided the Associate Dean's permission has been obtained a student may be permitted to count units completed overseas towards their undergraduate degree by participating in:
(a) the University of Sydney Exchange Program; or
(b) a Study Abroad program; or
(c) an International Placement
(2) For International Placements, Associate Dean approval must be given well in advance of travel for unit of study enrolment based on an agreed degree plan.
(3) Students applying for Study Abroad should refer to the Faculty of Science - Short Term Independent Undergraduate Study Abroad local provisions.

9. Attendance

(1) Unless otherwise stated in a separate local provision, students are expected to attend a minimum of 80% of timetabled activities for a unit of study, unless granted exemption by the Associate Dean.
(2) For some units of study the minimum attendance requirement, as specified in the relevant table of units or the unit of study outline, may be greater than 80%.
(3) The Associate Dean may determine that a student has failed a unit of study because of inadequate attendance.
(4) The Associate Dean may allow additional assessment items where attendance is lower than the requirement as specified in 9(1) and 9(2).

10. Results

(1) The provisions of the Coursework Rule and the Coursework Policy apply to the award of grades in Science units of study.
(2) The determination of what warrants a DC grade after the published date for Discontinued not to count as failure is made at the discretion of the Associate Dean on a documented case-by-case basis. Discretion will not be exercised where:
(a) the request is made 12 months or more after the advertised date of result publication; or
(b) where the student has passed the unit of study.

11. Satisfactory Progress

In addition to meeting the provisions of the Coursework Rule and the Coursework Policy, students must also meet all progression requirements listed in specific course resolutions.

12. Re-assessment

Re-assessment is not permitted unless otherwise specified in the course resolutions.

13. Award of the bachelor degree with honours

The following rules apply to the award of the bachelor degree with Honours unless otherwise stipulated in the relevant course resolutions.
(1) To qualify for admission to the bachelor degree with honours, an applicant must meet all of the following requirements:
(a) have either:
(i) qualified for the award of a relevant pass degree from the Faculty of Science; or
(ii) be a pass graduate of the Faculty of Science; or
(iii) be a pass graduate holding an equivalent qualification from another institution,
(b) have completed a minimum of 24 credit points of senior units of study relevant to the intended honours course (or equivalent at another institution);
(c) have achieved either:
(i) a SCIWAM of at least 65 (or equivalent at another institution); or
(ii) a credit average in 48 credit points in relevant intermediate and senior Science units of study as determined by the School concerned,
(d) satisfy any additional criteria set by the Head of School concerned.
(2) General conditions of candidature include:
(a) Students must complete the requirements for the honours course full-time over two consecutive semesters. If the School is satisfied that a student is unable to attempt the honours course on a full-time basis permission may be granted by the Associate Dean to undertake honours part-time.

(b) An applicant who is qualified to enrol in two honours courses may either:
(i) complete the honours courses in the two subject areas separately and in succession; or
(ii) complete a joint honours course, equivalent to an honours course in a single subject area, in the two subject areas as agreed by the Associate Dean and both Schools. A joint honours course shall comprise such parts of the two honours courses as may be decided by the Associate Dean.
(c) A student may not re-attempt an honours course.
(4) To qualify for the award of honours, a student must complete 48 credit points of honours undergraduate units of study, as described in the Science Honours Unit of Study Table.
(5) The grade of honours and the honours mark are determined by performance in only the units of study listed in the Science Honours Unit of Study Table.
(6) Honours is awarded in the following classes:

Description	Mark Range
Honours Class I	Mark >= 80
Honours Class II (Division 1)	75 <= Mark < 80
Honours Class II (Division 2)	70 <= Mark < 75
Honours Class III	65 <= Mark < 70
Honours not awarded	Mark < 65

14. University Medal

A student who is awarded Honours Class 1 may be awarded a university medal. The medal is awarded at the discretion of the Faculty to the highest achieving students who, in the opinion of the Faculty, have an outstanding academic record, in accordance with the Coursework Rule.

15. Weighted Average Mark (WAM) and Science Weighted Average Mark (SCIWAM)

(1) The University has a formula for calculating a WAM, which is defined in the University Glossary. WAMs are used by the University as one indicator of academic performance.
(2) A SCIWAM is used by the Faculty of Science as one indicator of academic performance.
(a) A SCIWAM is calculated from the results of all intermediate and senior units of study with a weighting of two for intermediate units and three for senior units. Junior units are not included in the calculation.
(b) Discontinued - Fail (DF) grades will contribute to the SCIWAM. The mark used for units of study with a grade of DF is zero.
(c) Discontinued - Not to count as failure (DC) grades do not contribute to the SCIWAM.
(d) Pass/Fail units of study do not contribute to the SCIWAM, with the exception of Exchange units where a mark is available.
(3) In this Faculty:
(a) A junior unit of study is a 1000-level unit.
(b) An intermediate unit of study is a 2000-level unit.
(c) A senior unit of study is a 3000-level unit or above.

16. Talented Student Program

(1) The Talented Student Program (TSP) is a special program of study for students of exceptional merit who are enrolled in undergraduate degrees administered by the Faculty of Science or for the Science component of combined and double degrees who commenced prior to January 1 2018.
(2) Entry to the TSP is by invitation from the Dean. Invitations are made each year, for that year. The following guidelines apply generally, although schools and departments may have additional (and more stringent) requirements for entry to the activities they offer in the program:
(a) To be considered for the program in their first year, students should have an ATAR (or equivalent) of 99.00 or higher.
(b) To be considered for entry into the Program in their second or third years, students not in the Program in the previous year should have AAMs of 85 or over in their previous year of study. Subsequent entry to TSP is available only to students who have been enrolled full-time in units of study totalling at least 48 credit points in the previous 12 months.
(4) Readmission to the Program in a subsequent year requires:
(a) AAM of 80 or above; and
(b) completion of 42 credit points in the previous 12 months.
(5) At the discretion of the Associate Dean, these requirements may be varied on a year to year or individual basis.

Schedule 1: Allowable Undergraduate Course Transfers

(1) **Single Undergraduate Degrees**

Transfer From	Transfer To	Requirements
Bachelor of Psychology (Arts and Social Sciences)	Bachelor of Arts	
Bachelor of Psychology (Science)	Bachelor of Science	

(2) **Combined Undergraduate Degrees**

Transfer From	Transfer To
Bachelor of Science and Bachelor of Laws	Bachelor of Arts and Bachelor of Laws
	Bachelor of Commerce and Bachelor of Laws
	Bachelor of Economics and Bachelor of Laws
	Bachelor of Engineering Honours and Bachelor of Laws

Transfer From	Transfer To
	Bachelor of Science

(3) **Double Degrees**

Transfer From	Transfer To	Requirements
Bachelor of Science and Master of Nutrition and Dietetics	Bachelor of Science	
Bachelor of Science / Doctor of Medicine	Bachelor of Science	Faculty Approval Required
Bachelor of Science and Doctor of Dental Medicine	Bachelor of Science	Faculty Approval Required

Schedule 2: Allowable Postgraduate Course Transfers

Transfer From	Transfer To	Requirements
Graduate Certificate in Coaching Psychology	Graduate Diploma in Coaching Psychology	Complete the requirements of the Graduate Certificate OR; accumulate a minimum of 18 cps in the Graduate Certificate within a maximum of two consecutive semesters with a WAM of at least 65.0.
Graduate Diploma in Coaching Psychology	Graduate Certificate in Coaching Psychology	
	Master of Science in Coaching Psychology	Complete the requirements of the Graduate Diploma OR; accumulate a minimum of 18 cps in the Graduate Diploma within a maximum of two consecutive semesters with a WAM of at least 65.0.
Master of Science in Coaching Psychology	Graduate Certificate in Coaching Psychology	
	Graduate Diploma in Coaching Psychology	
Master of Clinical Psychology and Doctor of Philosophy	Doctor of Philosophy	Course Coordinator approval required
	Master of Clinical Psychology	Course Coordinator approval required
Graduate Certificate in Environmental Science	Graduate Diploma in Environmental Science	Complete the requirements of the Graduate Certificate OR; accumulate a minimum of 18 cps in the Graduate Certificate within a maximum of two consecutive semesters with a WAM of at least 65.0.
Graduate Diploma in Environmental Science	Graduate Certificate in Environmental Science	
	Master of Environmental Science	Complete the requirements of the Graduate Diploma OR; accumulate a minimum of 18 cps in the Graduate Diploma within a maximum of two consecutive semesters with a WAM of at least 65.0.
Master of Environmental Science	Graduate Certificate in Environmental Science	
	Graduate Diploma in Environmental Science	
Graduate Certificate in Marine Science and Management	Graduate Diploma in Marine Science and Management	Complete the requirements of the Graduate Certificate OR; accumulate a minimum of 18 cps in the Graduate Certificate within a maximum of two consecutive semesters with a WAM of at least 65.0.
Graduate Diploma in Marine Science and Management	Graduate Certificate in Marine Science and Management	
	Master of Marine Science and Management	Complete the requirements of the Graduate Diploma OR; accumulate a minimum of 18 cps in the Graduate Diploma within a maximum of two consecutive semesters with a WAM of at least 65.0.
Master of Marine Science and Management	Graduate Certificate in Marine Science and Management	
	Graduate Diploma in Marine Science and Management	
Graduate Certificate in Sustainability	Graduate Diploma in Sustainability	Complete the requirements of the Graduate Certificate OR; accumulate a minimum of 18 cps in the Graduate Certificate within a maximum of two consecutive semesters with a WAM of at least 65.0.
Graduate Diploma in Sustainability	Graduate Certificate in Sustainability	
	Master of Sustainability	Complete the requirements of the Graduate Diploma OR; accumulate a minimum of 18 cps in the Graduate Diploma within a maximum of two consecutive semesters with a WAM of at least 65.0.
Master of Sustainability	Graduate Certificate in Sustainability	
	Graduate Diploma in Sustainability	
Graduate Diploma in Medical Physics	Master of Medical Physics	Complete the requirements of the Graduate Diploma with a WAM of 65.0 or better and have Course Coordinator approval.
Master of Medical Physics	Graduate Diploma in Medical Physics	Complete the Graduate Diploma requirements and have Course Coordinator approval
Graduate Certificate in Science (History and Philosophy of Science)	Graduate Diploma in Science	Course Coordinator approval required
Graduate Diploma in Agriculture and Environment	Graduate Certificate in Agriculture and Environment	Complete the degree requirements.
	Master of Agriculture and Environment	
Master of Agriculture and Environment	Graduate Certificate in Agriculture and Environment	Complete the degree requirements.
	Graduate Diploma in Agriculture and Environment	Complete the degree requirements.

Prohibited units of study

ECMT1010

No student in any degree administered by the Faculty of Science (including those degrees jointly administered by the Faculty of Science and another faculty) is permitted to undertake ECMT1010. No exception is made for any student. ECMT1010 has been deemed mutually exclusive with MATH1005, MATH1015, MATH1905 and DATA1001.

If their degree resolutions allow, students may enrol into ECMT1020 or intermediate Econometrics and Economics units of study. These units are not deemed mutually exclusive with Science Table 1 and Science Table A.

Students wishing to complete an Economics major should take one of MATH1005, MATH1015 or MATH1905 in lieu of ECMT1010.

Any BSc/BA or BLAS degree students who have completed ECMT1010 before 2013 will be made an exception. They are permitted to count ECMT1010 towards completion of their degree.

Affected students should seek degree planning advice from the Faculty of Science directly, or, for BLAS degree affected students, seek degree planning advice from the BLAS degree coordinators – Professor Fiona White (Science stream) and Dr Benjamin Miller (Arts stream).

ECON1003

No student in any degree administered by the Faculty of Science (including those degrees jointly administered by the Faculty of Science and another faculty) shall be permitted to undertake ECON1003. No exception is made for any students. ECON1003 has been deemed mutually exclusive with units in Science Table 1 and Science Table A – namely MATH1111, MATH1011, MATH1001, MATH1901, MATH1906, MATH1021, MATH1921 and MATH1931.

Students wishing to undertake ECON1003 should consider taking one of MATH1111, MATH1011, MATH1021, MATH1921 and MATH1931 instead.

Students in any degree administered by the Faculty of Science who have completed ECON1003 as part of their degree prior to 2014 shall be made an exception. They will be permitted to count ECON1003 towards completion of their degree.

BUSS1020

No student in any degree administered by the Faculty of Science (including those degrees jointly administered by the Faculty of Science and another faculty) shall be permitted to undertake BUSS1020. BUSS1020 has been deemed mutually exclusive with units in Science Table 1 and Science Table A – namely MATH1005, MATH1015, MATH1905 and DATA1001.

Table A Overview

Award requirements

Bachelor of Science

To qualify for the award of the Bachelor of Science, a candidate must complete 144 credit points, comprising:

1. 24 credit points of degree core units of study as set out in the table below
2. A major (48 credit points) or program from the table below
3. A minor (36 credit points) or second major (48 credit points) listed and specified in the table below or Table S
4. 12 credit points of units of study in the Open Learning Environment as listed in Table O
5. Where appropriate, elective units from Table A and Table S
6. If enrolled in a stream, complete the requirements for the stream as specified in the table for that stream.

Bachelor of Science / Bachelor of Advanced Studies

To qualify for the award of the Bachelor of Science / Bachelor of Advanced Studies, a candidate must complete 192 credit points, comprising:

1. 24 credit points of degree core units of study as set out in the table below
2. A major (48 credit points) or program from the table below
3. A second major (48 credit points) listed and specified in the table below or Table S
4. 12 credit points of units of study in the Open Learning Environment as listed in Table O
5. Where appropriate, elective units from Table A and Table S
6. If enrolled in a stream, complete the requirements for the stream as specified in the table for that stream.

Streams

The available streams in the Bachelor of Science are:

- Health
- Medical Science
- Dalyell.

The available streams in the Bachelor of Science / Bachelor of Advanced Studies are:

- Advanced
- Agriculture
- Animal and Veterinary Bioscience
- Food and Agribusiness
- Health
- Medical Science
- Dalyell.

In addition to the requirements specified in the degree resolutions, achievement of the Dalyell stream requires completion of 12 credit points of Dalyell units as set out in Table S.

Programs

The available programs in the Bachelor of Science are:

- Agroecosystems
- Medical Science (only available in Medical Science stream)
- Environmental Science
- Neuroscience
- Psychology
- Mathematical Science (only available in Dalyell stream).

Requirements for the Bachelor of Science programs are listed in Table A.

The available programs in the Bachelor of Science / Bachelor of Advanced Studies are:

- Agriculture (only available in Agriculture stream)
- Agroecosystems
- Food and Agribusiness (only available in Food and Agribusiness stream)
- Animal and Veterinary Bioscience (only available in Animal and Veterinary Bioscience stream)
- Medical Science (only available in Medical Science stream)
- Environmental Science
- Nanoscience and Nanotechnology

- Neuroscience
- Psychology
- Mathematical Science (only available in Dalyell stream).

Requirements for the Bachelor of Science / Bachelor of Advanced Studies programs are listed in Table A.

Majors

Table A majors are:

- Anatomy and Histology
- Animal Health, Disease and Welfare
- Animal Production
- Animal and Veterinary Bioscience (only available in Animal and Veterinary Bioscience program)
- Applied Medical Science
- Behavioural Sciences
- Biochemistry and Molecular Biology
- Biology
- Cell and Developmental Biology
- Chemistry
- Computer Science
- Data Science
- Ecology and Evolutionary Biology
- Environmental Studies
- Environmental Science (only available in Environmental Science program)
- Financial Mathematics and Statistics
- Food Science
- Genetics and Genomics
- Geography
- Geology and Geophysics
- Health (only available in Health stream)
- History and Philosophy of Science
- Human Movement (only available in Health stream)
- Immunology and Pathology
- Infectious Diseases
- Information Systems
- Marine Science
- Mathematics
- Medical Science (only available in Medical Science program)
- Medicinal Chemistry
- Microbiology
- Neuroscience
- Nutrition Science
- Pharmacology
- Physics
- Physiology
- Plant Production
- Quantitative Life Sciences
- Software Development
- Soil Science and Hydrology
- Statistics.

Minors

Table A minors are:

- Anatomy and Histology
- Animal Health, Disease and Welfare
- Animal Production
- Applied Medical Science
- Behavioural Sciences
- Biochemistry and Molecular Biology
- Biology
- Cell and Developmental Biology
- Chemistry
- Computer Science
- Data Science
- Environmental Studies
- Financial Mathematics and Statistics
- Food Science
- Genetics and Genomics
- Geography
- Geology and Geophysics
- History and Philosophy of Science
- Human Movement (only available in Health stream)
- Immunology

- Infectious Diseases
- Information Systems
- Marine Science
- Mathematics
- Medicinal Chemistry
- Microbiology
- Neuroscience
- Nutrition Science
- Pathology
- Pharmacology
- Physics
- Physiology
- Plant Production
- Plant Science
- Quantitative Life Sciences
- Software Development
- Soil Science and Hydrology
- Statistics
- Virology
- Wildlife Conservation.

Table A Degree Core units of study

The required degree core for this course is:

(i) 12 credit points of 1000-level units from any of the areas of study listed in Science Table A, excluding Mathematics units of study.
(ii) 12 credit points of 1000-level units of study listed in the table below according to the following rules:

- Students should consult relevant stream resolutions for stream-specific requirements.
- 6 credit points of calculus and 3 credit points of linear algebra and 3 credit points of statistics; or
- 6 credit points of data science and 3 credit points of calculus and 3 credit points of linear algebra.

(iii) Students cannot include units from outside Science Table A, including BUSS1020 and ECMT1010, or any other unit of study deemed mutually exclusive with units of study listed in Science Table A, in the degree core.

Unit of study	*Credit points*	*A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition*	*Session*
DEGREE CORE			
The required degree core for this course is:			
(i) 12 credit points of 1000-level units from any of the areas of study listed in Science Table A, excluding Mathematics units of study.			
(ii) 12 credit points of 1000-level units of study listed in the table below according to the following rules: (a) Students should consult relevant stream resolutions for stream-specific requirements. (b) 6 credit points of calculus and 3 credit points of linear algebra and 3 credit points of statistics; or (c) 6 credit points of data science and 3 credit points of calculus and 3 credit points of linear algebra.			
(iii) Students cannot include units from outside Science Table A, including BUSS1020 and ECMT1010, or any other unit of study deemed mutually exclusive with units of study listed in Science Table A, in the degree core.			
1000-level units of study			
Calculus units			
MATH1021 **Calculus Of One Variable**	3	**A** HSC Mathematics Extension 1. Students who have not completed HSC Extension 1 Mathematics (or equivalent) are strongly advised to take the Extension 1 Mathematics Bridging Course (offered in February). **N** MATH1011 or MATH1901 or MATH1906 or MATH1111 or ENVX1001 or MATH1001 or MATH1921 or MATH1931	Semester 1
MATH1921 **Calculus Of One Variable (Advanced)**	3	**A** (HSC Mathematics Extension 2) OR (Band E4 in HSC Mathematics Extension 1) or equivalent. **N** MATH1001 or MATH1011 or MATH1906 or MATH1111 or ENVX1001 or MATH1901 or MATH1021 or MATH1931 *Note: Department permission required for enrolment*	Semester 1
MATH1931 **Calculus Of One Variable (SSP)**	3	**A** Band E4 in HSC Mathematics Extension 2 or equivalent. **N** MATH1001 or MATH1011 or MATH1901 or MATH1111 or ENVX1001 or MATH1906 or MATH1021 or MATH1921 *Note: Department permission required for enrolment* *Enrolment is by invitation only.*	Semester 1
MATH1023 **Multivariable Calculus and Modelling**	3	**A** HSC Mathematics Extension 1. Students who have not completed HSC Extension 1 Mathematics (or equivalent) are strongly advised to take the Extension 1 Mathematics Bridging Course (offered in February). **N** MATH1013 or MATH1903 or MATH1907 or MATH1003 or MATH1923 or MATH1933	Semester 2
MATH1923 **Multivariable Calculus and Modelling (Adv)**	3	**A** (HSC Mathematics Extension 2) OR (Band E4 in HSC Mathematics Extension 1) or equivalent. **N** MATH1003 or MATH1013 or MATH1907 or MATH1903 or MATH1023 or MATH1933 *Note: Department permission required for enrolment*	Semester 2
MATH1933 **Multivariable Calculus and Modelling (SSP)**	3	**A** Band E4 in HSC Mathematics Extension 2 or equivalent. **N** MATH1003 or MATH1903 or MATH1013 or MATH1907 or MATH1023 or MATH1923 *Note: Department permission required for enrolment* *Enrolment is by invitation only.*	Semester 2
MATH1011 **Applications of Calculus**	3	**A** HSC Mathematics. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). Please note: this unit does not normally lead to a major in Mathematics or Statistics or Financial Mathematics and Statistics. **N** MATH1001 or MATH1901 or MATH1906 or MATH1111 or BIOM1003 or ENVX1001 or MATH1021 or MATH1921 or MATH1931	Semester 1 Summer Main
MATH1013 **Mathematical Modelling**	3	**A** HSC Mathematics or a credit or higher in MATH1111. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). Please note: this unit does not normally lead to a major in Mathematics or Statistics or Financial Mathematics and Statistics. **N** MATH1003 or MATH1903 or MATH1907 or MATH1023 or MATH1923 or MATH1933	Semester 2 Summer Main

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
MATH1111 **Introduction to Calculus**	6	**A** HSC General Mathematics. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **N** MATH1011 or MATH1901 or MATH1906 or MATH1001 or HSC Mathematics Extension 1 or HSC Mathematics Extension 2 or ENVX1001 or MATH1021 or MATH1921 or MATH1931 *Note: Department permission required for enrolment* *Students who have previously successfully studied calculus at a level at least equivalent to HSC Mathematics are prohibited.*	Semester 1
Linear algebra units			
MATH1014 **Introduction to Linear Algebra**	3	**A** HSC Mathematics or MATH1111. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). Please note: this unit does not normally lead to a major in Mathematics or Statistics or Financial Mathematics and Statistics. **N** MATH1012 or MATH1002 or MATH1902	Semester 2
MATH1002 **Linear Algebra**	3	**A** HSC Mathematics or MATH1111. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **N** MATH1012 or MATH1014 or MATH1902	Semester 1 Summer Main
MATH1902 **Linear Algebra (Advanced)**	3	**A** (HSC Mathematics Extension 2) OR (90 or above in HSC Mathematics Extension 1) or equivalent **N** MATH1002 or MATH1012 or MATH1014 *Note: Department permission required for enrolment*	Semester 1
Statistics units			
MATH1005 **Statistical Thinking with Data**	3	**A** HSC Mathematics. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **N** MATH1015 or MATH1905 or STAT1021 or STAT1022 or ECMT1010 or ENVX1001 or ENVX1002 or BUSS1020	Semester 2 Summer Main Winter Main
MATH1015 **Biostatistics**	3	**A** HSC Mathematics. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **N** MATH1005 or MATH1905 or STAT1021 or STAT1022 or ECMT1010 or BIOM1003 or ENVX1001 or ENVX1002 or BUSS1020	Semester 1
MATH1905 **Statistical Thinking with Data (Advanced)**	3	**A** (HSC Mathematics Extension 2) OR (90 or above in HSC Mathematics Extension 1) or equivalent **N** MATH1005 or MATH1015 or STAT1021 or STAT1022 or ECMT1010 or ENVX1001 or ENVX1002 or BUSS1020 *Note: Department permission required for enrolment*	Semester 2
Data science units			
DATA1001 **Foundations of Data Science**	6	**N** MATH1005 or MATH1905 or MATH1015 or MATH1115 or ENVX1001 or ENVX1002 or ECMT1010 or BUSS1020 or STAT1021	Semester 1 Semester 2
Alternative units			
ENVX1002 **Introduction to Statistical Methods**	6	**N** ENVX1001 *Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams*	Semester 1
ENVX2001 **Applied Statistical Methods**	6	**P** [6cp from (ENVX1001 or ENVX1002 or BIOM1003 or MATH1011 or MATH1015 or DATA1001)] OR [3cp from (MATH1XX1 or MATH1906 or MATH1XX3 or MATH1907) and an additional 3cp from (MATH1XX5)] *Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams*	Semester 1

Table A Honours

Honours is available in the following areas:

- Agriculture*
- Agroecosystems*
- Anatomy and Histology
- Animal and Veterinary Bioscience*
- Animal Health, Disease and Welfare*
- Animal Production*
- Applied Medical Science
- Biochemistry and Molecular Biology
- Biology
- Cell and Developmental Biology
- Chemistry
- Computer Science^
- Data Science^
- Environmental Science*
- Environmental Studies
- Food and Agribusiness*
- Food Science*
- Genetics and Genomics
- Geography
- Geology
- Geophysics
- Health
- History and Philosophy of Science^
- Human Movement
- Immunology
- Infectious Diseases
- Information Systems^
- Mathematics (Applied)^
- Mathematics (Pure)^
- Medical Science
- Medicinal Chemistry
- Microbiology
- Nanoscience and Technology^
- Neurosciences
- Pathology
- Pharmacology
- Physics^
- Physiology
- Plant Production*
- Psychology^
- Software Development^
- Soil Science and Hydrology*
- Statistics^.

Requirements for Honours are completion of 36 credit points of project work and 12 credit points of coursework, with the exception of:

(i) areas marked * for which 24 credit points of project work and 12 credit points of coursework are required
(ii) areas marked ^ for which 24 credit points project work and 24 credit points of coursework are required

Dalyell Stream

The Dalyell stream is a targeted stream for high achievers. Students who participate in the Dalyell stream are known as the ‘Dalyell Scholars’.The Dalyell stream is named after a distinguished alumna of the University, Elsie Jean Dalyell (pronounced "Dee-el"). Elsie Jean Dalyell (1881-1948) was a distinguished medical graduate from the University of Sydney and she was also the first full-time female academic in our Faculty of Medicine. She was a pioneer resident medical officer at the Royal Prince Alfred Hospital, and following this she travelled to London on a scholarship where she served in the First World War, working as a senior clinician in a Vienna-based research team studying deficiency diseases in children. She was a leader in her field and it is in this spirit that the Dalyell Program has been developed.

Dalyell Scholars will need to maintain an AAM (annual average mark) of 75% to remain in this elite program which offers outstanding students the opportunity to engage in experiences that challenge them through a broader and deeper learning experience. The Dalyell stream will offer broad choice for talented students seeking to develop expertise beyond their discipline-specific skills with a focus on self-awareness, community contribution, leadership, innovation and creative solutions skills. The program will develop vision, adaptability, breadth of perspective, and a high level of capability in and across disciplinary and cultural boundaries.

As a Dalyell Scholar, students will have access to curricular and extra-curricular activities. These include, a three-stage mentoring program; a global mobility scholarship to assist with your global mobility experience; professional development in the form of master classes; insights from distinguished speakers; leadership development activities; and two exclusive Dalyell units (6 credit points each). In addition to these curricular and extra-curricular activities, with the permission of the Dalyell Program Director, students will have access to enrichment and accelerated units of study.

For further details regarding the Dalyell stream, please refer to the Interdisciplinary Studies Handbook.

Science Electives

Electives for students in the Bachelor of Science and Bachelor of Science/Bachelor of Advanced Studies are available in the subject areas in Table A. Students also have access to electives listed in Table S.

Other opportunities include Industry and Community project units, listed in the Interdisciplinary Studies handbook. In 2018, continuing students will have access to trial these units as electives within their degrees. For students commencing in 2018, these will be available as selectives within majors. The unit code for the Science Interdisciplinary Project unit is SCPU3001.

Table A Advanced Stream

The Advanced stream is only available in the Bachelor of Science/Bachelor of Advanced Studies.

The Advanced stream requires:

- An ATAR of 95.0
- For transfer students, a WAM of 70.0
- To remain in the stream, a WAM of 65.0 in each 48 credit point block
- Completion of a major in which a minimum of 24 credit points of advanced units of study at the 2000- and 3000-levels are taken.

Advanced units are either units designated “Adv” in the list of units for the major in Table A or units taken at a level higher level than the unit specified for the major in Table A.

For example, where Table A specifies a unit at 2000 level, a student doing a 3000-level unit in its place would be regarded as completing an advanced unit.

At the discretion of the discipline, the 24 credit points of advanced units of study can either:

- be all at the 3000-level
- 18 credit points at 3000 and 6 credit points at 2000, or
- 12 credit points at 3000 and 12 credit points at 2000

Agriculture

About the stream and embedded program

The growing demand for efficient food production and the development of new methodologies and technologies, including sensors, robotics and big data analytics means that the agriculture of the 21st century requires graduates who have the expertise to fully exploit these new and exciting approaches. Agriculture is by nature multi-disciplinary and requires breadth of knowledge in four main areas; plant production, animal production, soil science & hydrology, integrated with agribusiness.

The Agriculture program will provide students with the understanding they need to address the big challenges and opportunities facing agriculture into the future. In this program students will develop knowledge and skills to explain the role and relevance of agriculture and understand the major scientific, technological and economic drivers that support changes in agricultural practice. Students will develop strong multi-disciplinary understanding of agricultural practice and innovation, strengthened by the ability to generate, manage and analyse agriculturally derived experimental, temporal and spatial data.

Requirements for completion

A stream in Agriculture requires 120 credit points, consisting of:

(i)6 credit points of 1000-level degree core units
(ii)6 credit points of 2000-level degree core units
(iii)A 108 credit point program in Agriculture

A program in Agriculture requires 108 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level selective units
(iii)36 credit points of 4000-level core units
(iv)A 48 credit point major in Animal Production, Plant Production or Soil Science and Hydrology

First year

Stream core: ENVX1002
Program core: ENVI1003, GEOS1X01

Second year

The second year provides the breadth of knowledge in agriculture with units related to plant and animal production as well as focusing on the essential resources of soil and water. This is complimented by the development of skills in data analytics through the stream core.

Stream Core: ENVX2001

Students complete units from their chosen majors:

- AGRI2001 if completing Plant Production major;
- AVBS2006 if completing Animal Production major;
- SOIL2005 if completing Soil Science and Hydrology major.

Additionally students complete 12 credit points of program units as outlined below:

- AGRI2001 and AVBS2006 if completing Soil Science and Hydrology major;
- AGRI2001 and SOIL2005 if completing Animal production major;
- AVBS2006 and SOIL2005 if completing Plant Production major.

Third year

Students complete units from their chosen majors.

The third year provides further depth in at least one of the three majors in this stream, a choice from Plant Production, Animal Production, and Soil Science and Hydrology. In your third year you must take at least one designated project unit embedded in the major.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 24 credit points.

Honours
Requirements for Honours in the area of Agriculture: completion of 24 credit points of project work and 12 credit points of coursework.

Students can complete their second major in their fourth year of study alongside 4000-level units.

Core: AFNR4001 (6cp), AFNR4101 (12cp), AFNR4102 (12cp), AFNR4000 (6cp)

Example pathways

Students must take a major in either Animal Production, Plant Production, or Soil Science and Hydrology.

Learning Outcomes

Students who graduate from Agriculture will be able to:

1. Explain the role and relevance of agriculture and its related sciences, and agribusiness in society.
2. Understand the major biophysical, economic, social and policy drivers that underpin agricultural practice and how they contribute to practice change.
3. Understand how information is adopted and the context within which producers, processors and consumers make decisions.
4. Understand core sciences in the context of agriculture.
5. Understand relevant agricultural production systems and their value chains, with specialist knowledge in at least one area.
6. Understand how knowledge from different sub-disciplines within agriculture is integrated and applied into practice.
7. Understand how economics, business and social science apply to agriculture.

Units of study

The units of study are listed below.

1000-level units of study

Stream core

ENVX1002
Introduction to Statistical Methods

Credit points: 6 **Teacher/Coordinator:** A/Prof Thomas Bishop **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, one 1-hour tutorial per week, one 2-hour computer practical per week **Prohibitions:** ENVX1001 **Assessment:** One exam during the exam period (50%), three reports (10% each), ten online quizzes (2% each) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams

This is an introductory statistics unit for students in the agricultural, life and environmental sciences. It provides the foundation for statistics and data science skills that are needed for a career in science and for further study in applied statistics and data science. In the first portion of the unit the emphasis is on describing data using statistical and graphical summaries, and probability models. In the second part the focus is on formal hypothesis testing on experimental data using statistical tests. The final part of the unit is on finding patterns in biological and environmental data, through the use of linear and non-linear functions. In the practicals the emphasis is on applying theory to analysing real datasets using the spreadsheet package Excel and the statistical software package R. A key feature of the unit is using R to develop coding skills that are become essential in science for processing and analysing datasets of ever increasing size.

Textbooks
No textbooks are recommended but useful reference books are:
- Mead R, Curnow RN, Hasted AM (2002) 'Statistical methods in agriculture and experimental biology.' (Chapman and Hall: Boca Raton).
- Quinn GP, Keough MJ (2002) 'Experimental design and data analysis for biologists.' (Cambridge University Press: Cambridge, UK).

Program core

ENVI1003
Global Challenges: Food, Water, Climate

Credit points: 6 **Teacher/Coordinator:** A/Prof Stephen Cattle **Session:** Semester 2 **Classes:** Two lectures per week, 2hour tutorial/computer lab per week, two-day weekend field trip **Assessment:** One 2-hour exam (50%), field trip report (15%), tutorial presentation (20%), GIS reports (15%) **Practical field work:** Computer practicals and two day field trip **Mode of delivery:** Normal (lecture/lab/tutorial) day

In the 21st century the population of the world will increase both in size and its expectation in terms of food, energy and consumer demands. Against this demand we have a planet in crisis where natural resources are degraded, biodiversity is diminishing and planetary cycles related to climate are reaching points of irreversible change. Management of our precious natural resources is a balancing act between production and conservation as always, but now we have to do this against a background of potential large scale changes in climate. In this unit students will gain an understanding of the key environmental challenges of the 21st century; namely food security, climate change, water security, biodiversity protection, ecosystems services and soil security. In the second half using Australian case studies we will explore how we manage different agro-ecosystems within their physical constraints around water, climate and soil, while considering linkages with the global environmental challenges. Management now, in the past and the future will be considered, with an emphasis on food production. This unit is recommended unit for students interested in gaining a broad overview of the environmental challenges of the 21st century, both globally and within Australia.

GEOS1001
Earth, Environment and Society

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1901 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This is the gateway unit of study for Human Geography, Physical Geography, Environmental Studies and Geology. Its objective is to introduce the big questions relating to the origins and current state of the planet: climate change, environment, landscape formation, and the growth of the human population. During the semester you will be introduced to knowledge, theories and debates about how the world's physical and human systems operate. The first module investigates the evolution of the planet through geological time, with a focus on major Earth systems such as plate tectonics and mantle convection and their interaction with the atmosphere, hydrosphere, biosphere and human civilisations. The second module presents Earth as an evolving and dynamic planet, investigating global environmental change, addressing climate variability and human impacts on the natural environment and the rate at which these changes occur and how they have the potential to dramatically affect the way we live. Finally, the third module, focuses on human-induced challenges to Earth's future. This part of the unit critically analyses the relationships between people and their environments, with central consideration to debates on population change, resource use and the policy contexts of climate change mitigation and adaptation.

GEOS1901
Earth, Environment and Society Advanced

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1001 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Advanced students will complete the same core lecture material as for GEOS1001, but will be required to carry out more challenging practical assignments.

2000-level units of study

Stream core

ENVX2001
Applied Statistical Methods

Credit points: 6 **Teacher/Coordinator:** Dr Floris Van Ogtrop **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, one 3-hour computer practical per week **Prerequisites:** [6cp from (ENVX1001 or ENVX1002 or BIOM1003 or MATH1011 or MATH1015 or DATA1001)] OR [3cp from (MATH1XX1 or MATH1906 or MATH1XX3 or MATH1907) and an additional 3cp from (MATH1XX5)] **Assessment:** One exam during the exam period (50%),three reports (10% each), ten online quizzes (2% each) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams

This unit builds on introductory 1st year statistics units and is targeted towards students in the agricultural, life and environmental sciences. It consists of two parts and presents, in an applied manner, the statistical methods that students need to know for further study and their future careers. In the first part the focus is on designed studies including both surveys and formal experimental designs. Students will learn how to analyse and interpret datasets collected from designs from more than than 2 treatment levels, multiple factors and different blocking designs. In the second part the focus is on finding patterns in data. In this part the students will learn to model relationships between response and predictor variables using regression, and find patterns in datasets with many variables using principal components analysis and clustering. This part provides the foundation for the analysis of big data. In the practicals the emphasis is on applying theory to analysing real datasets using the statistical software package R. A key feature of the unit is using R to develop coding skills that are become essential in science for processing and analysing datasets of ever increasing size.

Textbooks

No textbooks are recommended but useful reference books are:

Selective units-choose two units not in chosen major

SOIL2005
Soil and Water: Earth's Life Support Systems

Credit points: 6 **Teacher/Coordinator:** Prof Balwant Singh **Session:** Semester 1 **Classes:** Lectures: 3 hours per week; lab: 3 hours per week for 10 weeks **Prohibitions:** SOIL2003 or LWSC2002 **Assessment:** Field excursion: attendance and creative assessment (5%), the attendance at the excursion is complusory to get any mark for this assessment task; quiz: (10%); written assignment: modelling assessment including modelling (15%); laboratory report: group oral presentation and written assignment (20%); final exam: final written exam (50%) **Practical field work:** Approximately eight hours working field at Cobbitty Farm Wk 0 (Friday, 2 March 2018) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Soil and water are the two most essential natural resources on the Earth's surface which influence all forms of terrestrial life. This unit of study is designed to introduce students to the fundamental properties and processes of soil and water that affect food security and sustain ecosystems. These properties and processes are part of the grounding principles that underpin crop and animal production, nutrient and water cycling, and environmental sustainability. You will participate in a field excursion to examine soils in a landscape to develop knowledge and understanding of soil properties, water storage, water movement and cycling of organic carbon and nutrients in relation to food production and ecosystem functioning. At the end of this unit you will be able to articulate and quantify the factors and processes that determine the composition and behaviour of soil, composition of water, soil water storage and the movement of water on the land surface. You will also be able to describe the most important properties of soil and water for food production and sustaining ecosystem functions and link this to human and climatic factors. The field excursion, report and laboratory/computer exercises have been designed to develop communication, team work and collaborative efforts.

AFNR4001
Professional Development

Credit points: 6 **Teacher/Coordinator:** A/Prof Damien Field **Session:** Semester 2 **Classes:** Workshops over four years **Prohibitions:** AGRF4000 **Assessment:** One blog posting (10%), one on-line (multi-media) (30%) and one portfolio (60%) **Practical field work:** 40 days of professional experience, 1 week long excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit of study is designed to allow students to critically reflect on the relationship between the rural enterprise and environment and how they can contribute to the future decisions and management affecting the rural community. It is a core unit of study in 4th year for the BAgrEc, BScAgr, BLWSc, BResEc, BHortSc which requires students to complete 40 days of professional experience with the expectation that students will examine the nature of facts from their degree in this environment. A minimum of 15 days must be completed on-farm/field. The remaining days may be at the student's discretion. The unit will be counted towards 4th year, but professional experience placements will normally be undertaken throughout the degree. In the early stages of the Professional Development program students participate in Faculty excursions that have been developed so they can experience a range of activities, such as research, extension, on-farm and industry both in the rural and urban environment to complement their learning within their individual degree programs. Building on this various workshops have been developed to assist students to identify a rural environment theme or issue of their interest with the specific emphasis being placed on them reflecting on how their new understandings of their theme of interest affects their personal and professional development. To complete this unit students will present a portfolio of their theme including critical reflection on the pivotal relationships between the academic degree, rural environment, professional experience, and beliefs and values if the rural community. Through developing these pivotal relationships, students will be able to use their new understandings to support and guide the future developments in the rural enterprise and environment. By developing and presenting the portfolio and engaging in other online activities the students will enhance their skills in inquiry, information literacy and communication. In particular the autonomous development of case studies reflecting the contemporary issues in agriculture and their professional placements the students will have to consider their understandings of ethical, social and professional issues and further develop the personal and intellectual autonomy.

Note: Department permission required for enrolment

AFNR4101
Research Project A

Credit points: 12 **Teacher/Coordinator:** Prof Budiman Minasny **Session:** Semester 1 **Classes:** No formal classes, approximately 18 hours per week **Prerequisites:** 144 credit points of level 1000-3000 units of study **Assessment:** Research proposal, literature review. **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit aims to develop a student's ability to undertake a major research project in an area of specialization. The unit builds on theoretical and applied knowledge gained across most of the units of study undertaken throughout their degree program. This unit is a corequisite with AFNR4102 and each student will work with an academic supervisor in an area of specialization and develop a well defined research project to be executed. The research project is undertaken to advance the students ability to build well-developed research skills, a strong analytical capacity, and the ability to provide high quality research results demonstrating a sound grasp of the research question. Working with an academic supervisor students will develop their ability to define a research project including the producing of testable hypotheses, identifying existing knowledge from reviewing the literature and the design and execution of a research strategy towards solving the research question. Students will build on their previous research and inquiry skills through sourcing a wide range of knowledge to solve the research problem and enhance their intellectual and personal autonomy by means of the development of experimental programs. Students will improve their written and planning skills by composing a research project proposal and the writing of a comprehensive literature review.

AFNR4102
Research Project B

Credit points: 12 **Teacher/Coordinator:** Prof Budiman Minasny **Session:** Semester 2 **Classes:** No formal classes, approximately 18 hours per week **Prerequisites:** AFNR4101 **Assessment:** Oral presentation, research paper, poster. **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is a continuation of the major research project initiated in AFNR4101 and continues to build on theoretical and applied knowledge gained across most of the units of study undertaken throughout their degree program. Working with their academic supervisor in the area of specialization the student will continue to pursue the defined research project towards presenting final results and conclusions. The research results are presented in a format of a research paper as submitted to a research journal. The research paper and corrected literature review is combined and presented together as a thesis. Students will continue to build their research skills, develop strong analytical capacity, demonstrate a sound grasp of the topic, and an ability to interpret results in a broad framework. Working with an academic supervisor students will develop their ability to produce results of high quality, draw reliable conclusions and identify future areas avenues of research. Students will build on their previous research and inquiry skills through sourcing a wide range of knowledge to solve the research problem and enhance their intellectual and personal autonomy by means of the managing the research program. Students will improve their communication skills through oral presentation of their research findings, the production of a poster detailing their research findings and the writing of a research paper.

AFNR4XXX to be developed for offering in 2020

Agroecosystems

About the program

The growing demand for food production and the development new technologies, including sensors, robotics and big data analytics, is placing an increasing demand on the agriculture of the 21st century. To meet this graduates are needed with expertise to exploit these new approaches.

The Agroecosystems program focuses on three multi-disciplinary areas:

- plant production
- animal production
- soil science and hydrology.

Students in this program will be provided with an overview of agroecosystems and the opportunity to develop expertise on one of the three majors.

Students will develop knowledge and skills to explain the major science behind the drivers of change in agricultural. Students will also develop strong multi-disciplinary understanding of agricultural practices and innovations strengthened by the ability to manage and analyse agriculturally derived experimental, temporal and spatial data.

Requirements for completion

A program in Agroecosystems requires 60 credit points, consisting of:

(i)12 credit points of 2000-level selective units
(ii)A 48 credit point major in Animal Production, Plant Production or Soil Science and Hydrology

First year

Students complete units that will contribute to one of the majors aligned with this program – animal production, plant production or soil science and hydrology.

Second year

The second year provides the breadth of knowledge in the science of agriculture with units related to plant and animal production as well as focusing on the essential resources of soil and water.

Students complete units that will contribute to their chosen majors:

- AGRI2001 if completing Plant Production major
- AVBS2006 if completing Animal Production major
- SOIL2005 if completing Soil Science and Hydrology major.

Additionally students complete 12 credit points of program units as outlined below:

- AGRI2001 and AVBS2006 if completing Soil Science and Hydrology major
- AGRI2001 and SOIL2005 if completing Animal production major
- AVBS2006 and SOIL2005 if completing Plant Production major.

Third year

Students complete units that will contribute to their chosen major.

The third year provides further depth in at least one of the three majors in this stream, a choice from Plant Production, Animal Production, and Soil Science and Hydrology,

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework

The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 24 credit points and 12 credit points of coursework. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Agroecosystems: completion of 24 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Example pathways

Students must take a major in either Animal Production, Plant Production, or Soil Science and Hydrology.

Learning Outcomes

Students who graduate from Agroecosystems will be able to:

1. Explain the role and relevance of agriculture and its related sciences in society.
2. Understand the major biophysical drivers that underpin agricultural practice and how they contribute to practice change.
3. Understand how information is adopted and the context within which producers, processors and consumers make decisions.
4. Understand the core sciences in the context of agriculture.
5. Understand how knowledge from different sub-disciplines within agriculture is integrated and applied into practice.

SOIL2005
Soil and Water: Earth's Life Support Systems

Credit points: 6 **Teacher/Coordinator:** Prof Balwant Singh **Session:** Semester 1 **Classes:** Lectures: 3 hours per week; lab: 3 hours per week for 10 weeks **Prohibitions:** SOIL2003 or LWSC2002 **Assessment:** Field excursion: attendance and creative assessment (5%), the attendance at the excursion is complusory to get any mark for this assessment task; quiz: (10%); written assignment: modelling assessment including modelling (15%); laboratory report: group oral presentation and written assignment (20%); final exam: final written exam (50%) **Practical field work:** Approximately eight hours working field at Cobbitty Farm Wk 0 (Friday, 2 March 2018) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Soil and water are the two most essential natural resources on the Earth's surface which influence all forms of terrestrial life. This unit of study is designed to introduce students to the fundamental properties and processes of soil and water that affect food security and sustain ecosystems. These properties and processes are part of the grounding principles that underpin crop and animal production, nutrient and water cycling, and environmental sustainability. You will participate in a field excursion to examine soils in a landscape to develop knowledge and understanding of soil properties, water storage, water movement and cycling of organic carbon and nutrients in relation to food production and ecosystem functioning. At the end of this unit you will be able to articulate and quantify the factors and processes that determine the composition and behaviour of soil, composition of water, soil water storage and the movement of water on the land surface. You will also be able to describe the most important properties of soil and water for food production and sustaining ecosystem functions and link this to human and climatic factors. The field excursion, report and laboratory/computer exercises have been designed to develop communication, team work and collaborative efforts.

AVBS2006 and AGRI2001 to be developed for offering in 2019.

Anatomy and Histology

Study in the Discipline of Anatomy and Histology is offered by the Sydney Medical School. Units of study in this major are mostly available at standard and advanced level.

The Discipline of Anatomy and Histology is an internationally recognised and respected education and research institution. The Discipline offers a range of undergraduate and postgraduate courses and carries out extensive biomedical research. Anatomy and Histology maintains a large catalogue of specimens for education and research. Research tools include a high-resolution transmission electron microscope and confocal microscope and excellent specimen preparation facilities. Other facilities include automated electrophoresis, high-pressure liquid chromatography, standard histology, immuno-cytochemistry, in-situ hybridisation and surgery.

The Discipline also houses major museums such as the JT Wilson Museum of Human Anatomy and the J.L. Shellshear Museum of Physical Anthropology and Comparative Anatomy as well as collections that are supplemented by a growing range of online learning resources.

About the major

A major in Anatomy and Histology introduces students to the detailed study of the structure and structural development of the human body from the subcellular and cellular levels through to the gross macroscopic level.

The qualitative and quantitative descriptions of structure are related to subcellular, cellular and gross physical function. Specialised study of the subcellular and cellular development and organization of body structures and systems is undertaken in units of study in histology.

Detailed study of the development and the structure and function of the musculoskeletal system, head and neck, the viscera and the brain spinal cord and peripheral nervous system are studied in units of study in anatomy.

A major in Anatomy and Histology will provide students with a thorough and broad understanding of the microscopic and macroscopic structure and function of the human body, of its development and maturation and of its normal organisation and potential for disruption and damage.

Requirements for completion

A major in Anatomy and Histology requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level core units
(iii)24 credit points of 3000-level core units

A minor in Anatomy and Histology is available and articulates to this major.

First year

Core: BIOL1XX8 (students enrolled in Medical Science take MEDS1X01 instead) and CHEM1XX1.

The major in Anatomy and Histology begins in first year with an introduction to human biology and an introduction to chemistry, both are key foundational knowledge in understanding human structure and function.

Second year

Core: ANAT2008 (Medical Science students take MEDS2005 instead) and ANAT2X10 (students enrolled in Medical Science take MEDS2001 or MEDS2004).

The major in Anatomy and Histology continues in second year with units which focus on the cellular building blocks of the body, which begins your studies in Histology and an introduction to the structure and function of the nervous system beginning your studies in Neuroanatomy.

In these second year units we examine the structure of human cells, tissues and organ systems at the light and electron microscopic levels. The way the body is constructed from the cellular to the organ levels and how different tissue types contribute and interact are key themes of the course. We also introduce students to the characteristics and essential structure and function of the cells that comprise the central and peripheral nervous system. We explore the make-up of the individual cells, followed by an examination of the different regions of the nervous system. We also focus on the organisation of sensory and motor systems, together with aspects of higher-order functions such as memory and attention. Based on an understanding of the organization of its components, students will also be introduced to the principles of brain organization, with specific reference to the evolution of the 'higher' centres in humans.

Third year

Core for Major and Selective for Minor: ANAT3X09, ANAT3XX4, ANAT3X07 and ANAT3X08.

The major in Anatomy and Histology continues in third year with units which focus in detail on the microscopic and macroscopic structure, organisation and function of the musculoskeletal system, the head and neck region and the viscera. The detailed focus of these units builds and extends upon the second year units, integrating knowledge gained about the cellular and neural organisation of the human body

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Anatomy and Histology: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Anatomy and Histology will be able to:

1. Demonstrate a deep and comprehensive understanding of the fundamental organization and development of the human body from its gross structure to the cellular and intracellular levels.
2. Demonstrate a deep understanding the fundamental functional properties of the body as it relates to structural properties and developmental processes.
3. Relate and apply knowledge of the structural organization and functional properties of the body to other biomedical and biological disciplines.
4. Understand the relationship(s) of anatomical and histological knowledge, with the knowledge of biological, anthropological and clinical disciplines.
5. Search, identify, discuss and evaluate the primary scientific literature in the field of the anatomical sciences, histology, cell biology and neurobiology.
6. Specify hypotheses, design research plans and specify experiments that address and test hypotheses.
7. Understand the range of histological and anatomical methodologies.
8. Appreciate the significance of histological and anatomical investigations that identify the origins of the scientific disciplines.
9. Demonstrate a thorough knowledge of the investigative and experimental approaches of the present, including state-of-the-art techniques.

ANAT3994 **Cranial and Cervical Anatomy (SSP)**	6	**A** Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01; demonstrated evidence of manual dexterity and ethical approach **P** A mark of 75 or above in ANAT3907 **N** ANAT3904 or ANAT3004 *Note: Department permission required for enrolment* *Department permission required for enrolment. Course is subject to availability of donor material for dissection.Course is by invitation ONLY.BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
ANAT3007 **Visceral Anatomy**	6	**A** BIOL1XX8 or BIOL1XX3 or MEDS1X01 **N** ANAT3907 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808	Semester 1
ANAT3907 **Visceral Anatomy (Advanced)**	6	**A** BIOL1XX8 or BIOL1XX3 or MEDS1X01 **P** An annual average mark of 70 or above in previous year **N** ANAT3007 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *Note: Department permission required for enrolment* *DEPARTMENTAL PERMISSION REQUIRED*	Semester 1
ANAT3008 **Musculoskeletal Anatomy**	6	**A** Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **P** 12cp (from ANAT2XXX, PHSI2XXX, MEDS 2XXX, PSYC2XXX or BIOL2XXX) or (BMED2401 and BMED2402) **N** ANAT3908 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
ANAT3908 **Musculoskeletal Anatomy (Advanced)**	6	**A** Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **P** A mark of 65 or above in [ANAT200X or (BMED2401 and BMED2402)] **N** ANAT3008 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
ANAT3X09 to be developed for offering in 2019			

Anatomy and Histology

ANATOMY AND HISTOLOGY

Advanced coursework and projects will be available in 2020 for students who complete this major.

Anatomy and Histology major

A major in Anatomy and Histology requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level core units(iii) 24 credit points of 3000-level core units

Anatomy and Histology minor

A minor in Anatomy and Histology minor requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level core units(iii) 12 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Core

BIOL1008
Human Biology

Credit points: 6 **Teacher/Coordinator:** Dr Osu Lilje **Session:** Semester 1, Summer Main **Classes:** Lectures; six 3-hour practical sessions; six workshops and tutorials; students encouraged to spend 1-2 hours per week accessing online resources **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Written and oral presentation, quiz, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences.

BIOL1908
Human Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Osu Lilje **Session:** Semester 1 **Classes:** Lectures; six 3-hour practical sessions; six workshops and tutorials.; in addition, students are strongly encouraged to spend 1-2 hours per week accessing on-line resources **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1008 or BIOL1998 **Assumed knowledge:** 85 or above in HSC Biology or equivalent **Assessment:** Written and oral presentation, quiz, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences. The advanced unit has the same overall concepts as the mainstream unit but material is discussed in a manner that offers a greater level of challenge and academic rigour. Students enrolled in the advanced stream will participate in alternative components which may for example include guest lecturers from medical science industries. The nature of these components may vary from year to year.

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks
Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks
Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks
Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry.

You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

2000-level units of study

Core

ANAT2008
Principles of Histology

Credit points: 6 **Teacher/Coordinator:** Dr Laura Lindsay, Dr Samson Dowland **Session:** Semester 1 **Classes:** Two 1-hour lectures **Prohibitions:** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** BIOL1XX3 or BIOL1XX8 or MEDS1X01 **Assessment:** One 1-hour theory exam,one 1-hour practical exam, mid-semester exam, theory and practical quizzes (100%) **Practical field work:** One 2-hour practical per week **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study covers the principles of cell biology and study of the structure of cells, tissues and organ systems at the light and electron microscopic levels. The focus is on human systems. Modern practical applications of histological techniques and analysis for research are also presented.

Paulina, W. Histology - A Text and Atlas. 7th Edition, Lippincott Williams and Wilkins. 2015.

ANAT2010
Concepts of Neuroanatomy

Credit points: 6 **Teacher/Coordinator:** Dr Karen Cullen **Session:** Semester 2 **Classes:** two 1-hour lectures per week **Prohibitions:** ANAT2910 or BIOS1171 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** BIOL1XX3 or BIOL1XX8 or MEDS1X01 **Assessment:** One theory exam, one practical exam, one mid-semester in-class quiz, periodic online quizzes and written poster presentation **Practical field work:** Tutorials: One 2-hour practical tutorial in 5 sessions during semester **Mode of delivery:** Normal (lecture/lab/tutorial) day

Students are introduced to the structure and organisation of the central and peripheral nervous system. The course begins with an exploration into the make-up of the individual cells, followed by an examination of the different regions of the nervous system. A final theme of the course touches on the organisation of sensory, motor and integrative systems, together with aspects of higher-order function such as memory and language. The subject covers general concepts of organisation, structure and function of the brain. Tutorial meetings will provide the opportunity to encounter topics in functional anatomy and histology of the brain using photographs, diagrams, models, animations and problem-solving. Topics in identification of central nervous system structure in typical magnetic resonance images will assist in reinforcing the theory of functional anatomy in a format students are likely to encounter in further study and in real-world situations and readings. This course will be of considerable interest to students studying anatomy and related disciplines, as well as those wishing to pursue further study in Neuroscience at senior levels.

Textbooks

ANAT2910
Concepts in Neuroanatomy Adv

Credit points: 6 **Teacher/Coordinator:** Dr Karen Cullen **Session:** Semester 2 **Classes:** 2 x 1hr lectures, 1 x 1hr tutorial **Prerequisites:** Annual average mark of at least 70 in previous year **Prohibitions:** ANAT2010 or BIOS1171 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** BIOL1XX3 or BIOL1XX8 or MEDS1X01 **Assessment:** one 2-hour theory exam, one 45 min practical exam, one 1200 word critical scientific review article, one mid-semester quiz, three short online quiz-style assignments **Practical field work:** 1 x 1 hr practical **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Students are introduced to the structure and organisation of the central and peripheral nervous system. The course begins with an exploration into the make-up of the individual cells, followed by an examination of the different regions of the nervous system. A final theme of the course touches on the organisation of various systems (sensory and motor), together with aspects of higher-order function such as memory and language. In essence, the subject covers general concepts of organisation, structure and function of the brain. The laboratory practical sessions offer students the special privilege to examine human specimens in the Anatomy labs and museum. Tutorial meetings will provide the opportunity to encounter topics in functional anatomy and histology of the brain using photographs, diagrams, models, animations and problem-solving. Topics in identification of central nervous system structure in typical magnetic resonance images will assist in reinforcing the theory of functional anatomy in a format students are likely to encounter in further study and in real-world situations and readings. This course will be of considerable interest to students studying anatomy and related disciplines, as well as those wishing to pursue further study in Neuroscience at senior levels.

MEDS2001, MEDS2004 and MEDS2005 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

3000-level units of study

Major core

ANAT3004
Cranial and Cervical Anatomy

Credit points: 6 **Teacher/Coordinator:** Ms Robin Arnold **Session:** Semester 2 **Classes:** Two 1-hour lectures and two 2-hour tutorials per week **Prerequisites:** 12cp (from ANAT2XXX, PHSI2XXX, MEDS 2XXX, PSYC2XXX or BIOL2XXX) or (BMED2401 and BMED2402) **Prohibitions:** ANAT3904 or ANAT3994 **Assumed knowledge:** Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **Assessment:** Theory exam, prac exam, continuous assessment (6 quizzes done at intervals during semester) (100%) **Practical field work:** Introductory practical talk followed by study of relevant prosections, models, X rays, also group discussions of features in CT and MR images with a view to understanding cross sectional and living anatomy. **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit of study aims to provide students with a detailed understanding of the anatomy of the head and neck regions, with a particular emphasis on the functional anatomy of the cranial nerves. This unit of study covers skull, muscles of facial expression, muscles of jaw and neck, ear, eye, nose, oral cavity and larynx and pharynx as well as peripheral distribution of cranial nerves in the head and neck. The functional components of the cranial nerves and their relationship to the special senses and special motor functions such as facial gesture and speech are also studied. The practical sessions aim to provide students with the ability to recognise the structures studied in human prosections and in medical images especially X Rays and CT scans and to know their main anatomical relationships. Students will also be encouraged to relate their understanding of these structures to current research in anatomy and histology and in related fields such as molecular biology and physiology. The course also aims to provide both theoretical and practical skills which can provide a basis for further studies in fields such as physiotherapy, chiropractic or forensic science or in post graduate medicine or dentistry or in areas of research requiring a knowledge of anatomy.

Textbooks

Rohan, Yokochi, Lutjen-Drecoll. Color Atlas of Human Anatomy.

ANAT3904
Cranial and Cervical Anatomy (Advanced)

Credit points: 6 **Teacher/Coordinator:** Ms Robin Arnold **Session:** Semester 2 **Classes:** Two lectures per week, two hour tutorials per week. **Prerequisites:** A mark of 65 or above in [ANAT200X or (BMED2401 and BMED2402)] **Prohibitions:** ANAT3004or ANAT3994 **Assumed knowledge:** Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **Assessment:** Theory exam, prac exam, continuous assessment (6 quizzes done at intervals during semester) **Practical field work:** Introductory practical talk followed by study of relevant prosections, models, X rays, also group discussions of features in CT and MR images with a view to understanding cross sectional and living anatomy plus further studies of medical images, anatomical features not covered in the mainstream course and details of development of selected head and neck structures. **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit of study aims to provide students with a detailed understanding of the anatomy of the head and neck regions, with a particular emphasis on the functional anatomy of the cranial nerves. This unit of study covers skull, muscles of facial expression, muscles of jaw and neck, ear, eye, nose, oral cavity and larynx and pharynx as well as peripheral distribution of cranial nerves in the head and neck. The functional components of the cranial nerves and their relationship to the special senses and special motor functions such as facial gesture and speech are also studied. The practical sessions aim to provide students with the ability to recognise the structures studied in human prosections and in medical images especially X Rays and to know their main anatomical relationships. Students will also be encouraged to relate their understanding of these structures to current research in anatomy and histology and in related fields such as molecular biology and physiology. The course also aims to provide both theoretical and practical skills which can provide a basis for further studies in fields such as physiotherapy, chiropractic or forensic science or in post graduate medicine or dentistry or in areas of research requiring a knowledge of anatomy. Also further studies of anatomical features not covered in the mainstream course and of details of development of selected head and neck structures.

ANAT3007
Visceral Anatomy

Credit points: 6 **Teacher/Coordinator:** Ms Robin Arnold **Session:** Semester 1 **Classes:** Two 1-hour lectures and two 2-hour tutorials per week. **Prohibitions:** ANAT3907 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** BIOL1XX8 or BIOL1XX3 or MEDS1X01 **Assessment:** Theory exam, prac exam, continuous assessment (6 quizzes done at intervals during semester) (100%) **Practical field work:** Introductory practical talk followed by study of relevant prosections, models, X rays, also group discussions of features in CT and MR images with a view to understanding cross sectional and living anatomy. **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study aims to provide an understanding of the anatomy of the viscera of the thorax, abdomen and pelvis. Structures covered include the heart and associated great vessels, lungs, mediastinum and the abdominal viscera, the alimentary organs and the genitourinary system. The structure of anterior thoracic and abdominal walls and pelvis along with the nerve supply to the viscera and relevant endocrine structures is also covered. Emphasis is placed on the relationship of structure to function especially with respect to the important functions of breathing, digestion, excretion and reproduction. Students will be encouraged to relate their understanding of these structures to current research in anatomy and histology and in related fields such as molecular biology and physiology. The course also aims to provide both theoretical and practical skills which can provide a basis for further studies in fields such as physiotherapy, chiropractic or forensic science or in post graduate medicine or dentistry or in areas of research requiring a knowledge of anatomy.

ANAT3008
Musculoskeletal Anatomy

Credit points: 6 **Teacher/Coordinator:** Dr Richard Ward **Session:** Semester 2 **Classes:** Two 1-hour lectures, two 2-hour tutorials per week **Prerequisites:** 12cp (from ANAT2XXX, PHSI2XXX, MEDS 2XXX, PSYC2XXX or BIOL2XXX) or (BMED2401 and BMED2402) **Prohibitions:** ANAT3908 **Assumed knowledge:** Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **Assessment:** One 90 minute paper (70%), one 60 minute paper (30%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

The unit provides an opportunity for students to study the topographical and systems anatomy of the upper limb, lower limb and the back regions. Emphasis is placed upon the identification and description of structures and the correlation of structure with function. This includes for the upper limb, its role in manipulation, for the lower limb standing and walking and for the back flexible support and protection. Emphasis is also given to the innervation of the limbs. The unit also aims to develop the general skills of observation, description, drawing, writing and discussion as applying to biological structure.

ANAT3908
Musculoskeletal Anatomy (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Richard Ward **Session:** Semester 2 **Classes:** 2 x 1hr lectures **Prerequisites:** A mark of 65 or above in [ANAT200X or (BMED2401 and BMED2402)] **Prohibitions:** ANAT3008 **Assumed knowledge:** Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **Assessment:** One 90 minute paper(70%), one practical examination (30%) **Practical field work:** 2 x 2hr Anatomy Wetlab Laboratories **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit of study aims to provide an opportunity for students to study the topographical and systems anatomy of the upper limb, lower limb and the back regions. Emphasis is placed upon the identification and description of structures and the correlation of structure with function, which for the upper limb includes its role in manipulation, for the lower limb standing and walking and for the back flexible support and protection. Emphasis is also given to the innervation of the limbs and the consequences of nerve lesions for limb function. The unit also aims to develop the general skills of observation, description, drawing, writing and discussion as applying to biological structure. The unit builds upon or compliments other macroscopic anatomy units offered by the Department and provides for the development of skills, which could be relevant to a later honours project or higher degree in the field of structural biology.

Emphasis is placed upon the identification and description of structures and the correlation of structure with function, which for the upper limb includes its role in manipulation, for the lower limb standing and walking and for the back flexible support and protection. Emphasis is also given to the innervation of the limbs and the consequences of nerve lesions for limb function. The unit also aims to develop the general skills of observation, description, drawing, writing and discussion as applying to biological structure. The unit builds upon or compliments other macroscopic anatomy units offered by the Department and provides for the development of skills, which could be relevant to a later honours project or higher degree in the field of structural biology.

ANAT3X09 to be developed for offering in 2019

Animal Disease, Health and Welfare

About the major

Animals play a significant role in the lives of people and communities, particularly in the areas of food, fibre production and as pets for companionship.

This Animal Health, Disease and Welfare major will integrate the areas of animal biology and ecology with comparative and veterinary science. You will learn about the science that underpins the biology of animal health and disease, including physiology, molecular biology, infectious agents and animal welfare.

An emphasis of this major is how to prevent, treat and understand disease in production and companion animals and wildlife. Your study could lead to a career in animal health sciences, including areas of infectious disease control, disease surveillance, animal welfare and animal production industries.

Requirements for completion

A major in Animal Health, Disease and Welfare requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)6 credit points of 2000-level core units
(iii)6 credit points of 2000-level selective units
(iv)24 credit points of 3000-level core units

A minor in Animal Health, Disease and Welfare is available and articulates to this major.

First year

Core: BIOL1XX6, BIOL1XX7

Second year

AVBS2001 and 6cp from: MICR2X22, IMMU2101, MICR2X31, IMMU2011, MIMI2X02 (Medical science students also have the option of MEDS2004)

Students entering the second year of the Animal Health, Disease and Welfare major will explore the principles of microbiology or immunology. They will then experience how these principles interact in the animal to influence health, disease and impact upon welfare through the core unit of study. The interaction between the host (or the animal), the agent of disease (genetics, physical, chemical and infectious agents) and environmental factors is explored. The disease and health states will be examined in this unit, through understanding how the host responds to the aetiological agent of disease and the environment through one of the basic five pathological processes that occur in tissues. These include inflammation and repair, degeneration and necrosis, circulatory disturbances, tissue deposits and pigments, and disorders of growth. Aspects covered in foundation microbiology and immunology units will be illustrated through case-based approaches used to teach the principles of pathological processes.

Third year

Core for Major: AVBS3001, AVBS3002, ANSC3106, and AVBS3000.

In third year students develop a detailed understanding of diseases impacting on animals, how we can influence disease risk through both pharmacological, ecological and welfare means in a variety of circumstances and importantly, how disease can be investigated such that causation of disease can be established.

Students will also gain techniques and broader skills through interdisciplinary project units, where they will explore key topics or explore new techniques so that new information that can be gained can potentially be utilised by the local animal carer through to farmers and government to optimise animal health and wellbeing and aid in the control, prevention and treatment of disease impacting both domesticated and wild animals.

Students will also gain a more detailed appreciation of how health and welfare issues of the animals in our care and environment can reflect on societal wellbeing (i.e. planetary health).

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000 level, including a project unit of study worth at least 12 credit points.

Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Animal Health, Disease and Welfare: completion of 24 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Contact and further information

Dr Gary Muscatello
Email: gary.muscatello@sydney.edu.au
Phone: +61 2 9114 0790

Example pathways

Those with a strong interest in **Microbiology** should choose these units at 2000-level: AVBS2001 and MICR2X31.

Those with a strong interest in **Immunology** should choose these units at 2000-level: AVBS2001 and IMMU2011.

Learning Outcomes

Students who graduate from Animal Disease, Health and Welfare will:

1. Understand the function of eukaryotic cells and an application of this knowledge in areas of diagnostics and screening for disease and traits in animals.
2. Understand the socio-economic importance of animals in various natural and manmade environments.
3. Handle animal derived samples in a safe manner.
4. Understand animal body systems, specifically maintenance of homeostasis and the animals' response to environmental factors and stressors.
5. Understand animal pathobiology through understanding a range of disease processes and be able to distinguished disease from healthy status.
6. Apply knowledge of modern molecular techniques used in screening of health and disease status in both domesticated and non-domesticated animals.
7. Appreciate the ethical issues and practical welfare concerns related to the testing for animal disease and investigations that explore and research animal health topics.

ANIMAL HEALTH, DISEASE AND WELFARE			
Advanced coursework and projects will be available in 2020 for students who complete this major.			
Animal Health, Disease and Welfare major			
A major in Animal Health, Disease and Welfare requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 6 credit points of 2000-level core units (iii) 6 credit points of 2000-level selective units (iv) 24 credit points of 3000-level core units			
Animal Health, Disease and Welfare minor			
A minor in Animal Health, Disease and Welfare requires 36 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 6 credit points of 2000-level core units (iii) 6 credit points of 2000-level selective units (iv) 6 credit points of 3000-level core units (v) 6 credit points of 3000-level selective units			
Units of study			
The units of study are listed below.			
1000-level units of study			
Core			
BIOL1006 **Life and Evolution**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996	Semester 1 Summer Main
BIOL1906 **Life and Evolution (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent. **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 *Note: Department permission required for enrolment*	Semester 1
BIOL1996 **Life and Evolution (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 *Note: Department permission required for enrolment*	Semester 1
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2

Animal Disease, Health and Welfare

ANIMAL HEALTH, DISEASE AND WELFARE

Advanced coursework and projects will be available in 2020 for students who complete this major.

Animal Health, Disease and Welfare major

A major in Animal Health, Disease and Welfare requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 6 credit points of 2000-level core units(iii) 6 credit points of 2000-level selective units(iv) 24 credit points of 3000-level core units

Animal Health, Disease and Welfare minor

A minor in Animal Health, Disease and Welfare requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 6 credit points of 2000-level core units(iii) 6 credit points of 2000-level selective units(iv) 6 credit points of 3000-level core units(v) 6 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Core

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

BIOL1906
Life and Evolution (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1 **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 **Assumed knowledge:** 85 or above in HSC Biology or equivalent. **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals.

Life and Evolution (Advanced) has the same overall structure as BIOL1006 but material is discussed in greater detail and at a more advanced level. Students enrolled in BIOL1906 participate in a research project with a focus on developing skills in critical evaluation, experimental design, data analysis and communication.

BIOL1996
Life and Evolution (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Mark de Bruyn **Session:** Semester 1 **Classes:** Lectures as per BIOL1906; one 3-hour practical per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), practical reports (25%), seminar presentation (15%), lab note book (5%), prelaboratory quizzes (5%) **Practical field work:** null **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, and proteins) to whole ecosystems in which myriad species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. The practical work syllabus for BIOL1996 is different from that of BIOL1906 (Advanced) and consists of a special project-based laboratory.

Bromham, L 2015, An Introduction to Molecular Evolution and Phylogenetics, Oxford University Press.

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

2000-level units of study

Core

AVBS2001
Introductory Veterinary Pathogenesis

Credit points: 6 **Teacher/Coordinator:** A/Prof Damien Higgins **Session:** Semester 2 **Classes:** 6 hours per week (lectures and practicals) **Prerequisites:** 6cp of BIOL1XXX or MBLG1XX1 **Assumed knowledge:** (CHEM1XX1 or CHEM1903) and (CHEM1XX2 or CHEM1904) **Assessment:** Practical class exercises (15%), mid-semester exam (20%), practical exam (15%), written exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The overarching theme for this unit of study is the concept of the interaction between the host (or the animal), the agent of disease (genetics, physical, chemical and infectious agents) and environmental factors. In disease states, the host responds to the aetiological agent of disease and the environment through one of the basic five pathological processes that occur in tissues. These include inflammation and repair, degeneration and necrosis, circulatory disturbances, tissue deposits and pigments, and disorders of growth. A case based approach will be used whenever possible to illustrate these principles and enable the student to develop a problem solving approach and the skills of critical thinking.

Selective

MICR2022
Microbes in Society

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 2 **Classes:** Two 1-hour lectures per week, plus an additional four 1-hour tutorials per semester. Eleven 3-hour practicals per semester **Prerequisites:** 6cp from (BIOL1XX7 or MBLG1XXX) and an additional 6cp from BIOL1XXX **Prohibitions:** MICR2922 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XXX and (MICR2X21 or MICR2024 or MICR2X31) **Assessment:** Theory (60%): One 2-hour theory exam; Practical (40%): continuous assessment in practicals, two assignments, one quiz, one practical exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This unit is not available to BMedSc students. This unit is not offered from 2019.

Pathogenic microbes cause infectious diseases of humans, animals and plants, and inflict enormous suffering and economic losses.

Beneficial microbes are important contributors to food production, agriculture, biotechnology, and environmental processes. The aims of MICR2022/2922 are to explore the impacts and applications of microbes in human society and in the environment at large, and to teach skills and specialist knowledge in several key areas of microbiology. Medical Microbiology lectures will cover bacterial, viral, and fungal pathogens, and will introduce the concepts of epidemiology, transmission, pathogenicity, virulence factors, host/parasite relationships, host defences, prevention of disease, and antibiotic types, functions, and resistance. Lecture topics in other areas include Food (preservation, spoilage, poisoning, industrial context), Industrial (fermentation, traditional and recombinant products, bioprospecting), Environmental (nutrient cycles, atmosphere, wastewater, pollution, biodegradation) and Agricultural (nitrogen fixation, plant pathogens, biocontrol) microbiology. The laboratory sessions are integrated with the lecture series and are designed to give students practical experience in isolating, identifying and manipulating live potentially pathogenic microorganisms.

Textbooks

Willey et al. Prescott's Microbiology. 10th edition. McGraw-Hill. 2016.

MICR2922
Microbes in Society (Advanced)

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 2 **Classes:** Two 1-hour lectures per week, plus an additional four 1-hour tutorials, three 1-hour seminars and eleven 3-hour practicals per semester **Prerequisites:** 6cp from (BIOL1XX7 or MBLG1XXX) and an additional 6cp from BIOL1XXX and a mark of 75 or above in 6cp from (BIOL1XXX or MBLG1XXX) **Prohibitions:** MICR2022 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XXX and (MICR2X21 or MICR2024 or MICR2X31) **Assessment:** Theory (60%): One 2-hour theory exam; Practical (40%): continuous assessment in practicals, one assignment, one quiz, one practical exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This unit is not available to BMedSc students. This unit is not offered from 2019.

This unit of study is based on MICR2022. A science communication exercise is unique to MICR2922 and consists of three small group sessions exploring how recent advances in microbiology are communicated to the wider public. This advanced component replaces one assignment exercise from the practical class and is assessed as short essay. The content and nature of this component is based on recent publications with potential high impact for society.

Textbooks

Willey et al. Prescott's Microbiology. 10th edition. McGraw-Hill. 2016.

IMMU2101
Introductory Immunology

Credit points: 6 **Teacher/Coordinator:** Dr Umaimainthan Palendira **Session:** Semester 1 **Classes:** Two 1 hour lectures per week, one 2-3 hour tutorial or practical per week. **Prerequisites:** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **Prohibitions:** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XX1 **Assessment:** Progressive assessment: includes written, practical, oral and online based assessments (50%); Formal assessment: one 2 hour examination (50%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.

Our immune system not only protects us from viruses, bacteria, and parasites, it can prevent the growth of tumours. Sometimes our immune system can be the cause of diseases like multiple sclerosis, Type 1 diabetes and rheumatoid arthritis. If you are interested in studying how our immune system works to keep us alive, then Introductory Immunology is for you. This unit of study will provide an overview of the immune system and the essential features of immune responses. You will be treated to a lecture course delivered by cutting edge immunologists that begins with a study of immunology as a basic research science. This includes an introduction to the nature of the cells and molecules involved in the immune response. We build on this foundation by introducing the immunological principles underlying the eradication of infectious diseases, successful vaccination strategies, organ transplantation, combatting autoimmune diseases and treating cancer. The integrated tutorials will build on the lecture material as well as provide you with instructions on how to successfully locate and critically analyse scientific literature. The practical sessions will further illustrate particular concepts introduced in the lecture program and provide you with valuable exposure to a variety of very important immunological techniques.

Textbooks

Abul K Abbas, Andrew H Lichtman and Shiv Pillai. Basic Immunology: Functions and Disorders of the Immune System. 5th Ed. 2016

MICR2031
Microbiology

Credit points: 6 **Teacher/Coordinator:** Prof Michael Kertesz **Session:** Semester 1 **Classes:** Two 1-hour lectures per week; one 3-hour practical per week; three tutorial sessions **Prohibitions:** MICR2021 or MICR2921 or MICR2024 or MICR2931 **Assumed knowledge:** Fundamental concepts of microorganisms, biomolecules and ecosystems; CHEM1XX1 **Assessment:** Theory 60%: one 45-minute mid-semester theory exam (20%) and one 1.5-hour theory exam (40%); Practical 40%: one written assignment (15%), one group oral presentation (10%) and online quizzes (15%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Microbes are essential for every aspect of life on the planet. Microbes in the human gut control our digestion and our immune system, microbes in the soil are required for plant growth, microbes in the ocean fix more carbon dioxide than all the earth's trees. This unit of study will investigate the diversity and activity of microorganisms - viruses, bacteria, fungi, algae and protozoa - and look at how they interact with us, each other, plants and animals. You will examine how microbes underpin healthy ecosystems through nutrient cycling and biodegradation, their use industrially in biotechnology and food production, and their ability to cause harm, producing disease, poisoning, pollution and spoilage. Aspects of microbial ecology, nutrition, physiology and genetics will also be introduced. This unit of study will provide you with the breadth of knowledge and skills needed for further studies of microbiology, and will provide the fundamental understanding of microbes that you will require if you specialise in related fields such as biochemistry, molecular biology, immunology, agriculture, nutrition and food sciences, bioengineering and biotechnology, ecology or science education.

Willey et al, PrescottÂ¿s Microbiology, 10th edition, McGraw-Hill, 2017

MICR2931
Microbiology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Michael Kertesz **Session:** Semester 1 **Classes:** Two 1-hour lectures per week; one 3-hour practical per week; three tutorial sessions **Prerequisites:** A mark of 70 or above in 6cp from (BIOL1XXX or MBLG1XXX) **Prohibitions:** MICR2021 or MICR2921 or MICR2024 or MICR2031 **Assumed knowledge:** Fundamental concepts of microorganisms, biomolecules and ecosystems; CHEM1XX1 **Assessment:** Theory 60%: one 45 minute mid-semester theory exam (20%) and one 1.5-hour theory exam (40%); Practical 40%: two written assignments (10%, 15%), and online quizzes (15%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Microbes are essential for every aspect of life on the planet. Microbes in the human gut control our digestion and our immune system, microbes in the soil are required for plant growth, microbes in the ocean fix more carbon dioxide than all the Earth's trees. In this unit of study you will investigate the diversity and activity of microorganisms - viruses, bacteria, fungi, algae and protozoa - and look at how they interact with us, each other, plants and animals. You will examine how microbes underpin healthy ecosystems through nutrient cycling and biodegradation, their use industrially in biotechnology and food production, and their ability to cause harm, producing disease, poisoning, pollution and spoilage. Detailed aspects of microbial ecology, nutrition, physiology and genetics will also be introduced. This unit of study will provide you with the breadth of knowledge and skills needed for further studies of microbiology, and will provide the fundamental understanding of microbes that you will require to specialise in related fields such as biochemistry, molecular biology, immunology, agriculture, nutrition and food sciences, bioengineering and biotechnology, ecology, or science education. As an Advanced unit, MICR2931 provides increased challenge and academic rigour to develop a greater understanding and depth of disciplinary expertise. You will actively participate in a series of small group tutorials investigating the molecular detail of microbial communication and function, which will culminate in you creating a scientific research report that communicates your understanding of recent research in microbiology.

Willey et al, PrescottÂ¿s Microbiology, 10th edition, McGraw-Hill, 2017

MEDS2004, IMMU2X11 and MIMI2X02 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

3000-level units of study

Major core

AVBS3001
Agents of Disease

Credit points: 6 **Teacher/Coordinator:** Dr Gary Muscatello **Session:** Semester 1 **Classes:** lectures 3 hours per week, laboratories/tutorials 2 hours per week, group work 1 hour per week **Prerequisites:** AVBS2001 **Assumed knowledge:** Animal and Veterinary Bioscience years 1-2 **Assessment:** 1500wd individual review (25%), 1000wd scenario-based group assignment (15%), 2 hour exam (50%), MCQ (10%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this unit is to examine and appreciate the diversity of various disease causing agents (microbiological and parasitological) of significance to animal industries and the various strategies employed by those agents in the host-pathogen-environment interaction. This study is based on an understanding of the physical, chemical and genetic characteristics of infectious agents of disease and builds on the pathological and immunological processes taught in AVBS2001 Introductory Veterinary Pathogenesis. A scenario/case based approach will be used whenever possible to enable the students to develop problem solving approaches and skills in critical thinking. Cases selected will be those that best illustrate particular concepts and/or are of particular significance to the animal/veterinary industry. Research and industry focus activities will infuse the subject content and student learning outcomes of this unit. This unit is located at the Camperdown campus.

Textbooks

A Unit of Study outline and LMS will contain detailed information and notes for this unit.
Recommended textbooks: Quinn PJ, Markey BK, Carter ME, Donnelly WJ and Leonard FC, 2011, Veterinary Microbiology and Microbial Disease. Blackwell Science, Oxford
Songer JG and Post KW, 2005, Veterinary Microbiology: Bacterial and Fungal Agents of Animal Disease. Saunders, St Louis
Hirsh DC, MacLachlan NJ and Walker RL, 2004, Veterinary Microbiology, Blackwell Science, Oxford

AVBS3002
Laboratory Disease Investigation

Credit points: 6 **Teacher/Coordinator:** A/Prof Jan Slapeta **Session:** Semester 2 **Classes:** Lectures 2 hours per week, laboratories/tutorials 4 hours per week (note these will vary depending upon the week) **Prerequisites:** 12cp from (MICR2X31 or IMMU2101 or AVBS2001 or AVBS3001) **Assumed knowledge:** CHEM1XXX and BIOL1XXX and ANSC3103 and ANSC3104 and (ENVX2001 or BIOM2001) **Assessment:** Assignments (60%), quiz (15%), theory exam (25%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this unit is to develop an investigative approach and familiarity with laboratory techniques, ethics and safety in preparation for honours or postgraduate training in disease research or disease investigation. Students will work through actual disease research or investigation scenarios via directed and self-directed, individual and group tasks.

Textbooks

There is no set text for this unit. Students will use primary literature and source various library texts as required for their investigations.

ANSC3106
Animal Behaviour and Welfare Science 3

Credit points: 6 **Teacher/Coordinator:** Dr Greg Cronin **Session:** Semester 2 **Classes:** 6 hours per week (including lectures, demonstrations, discussions and practical activities); classes will be held at the Camden campus **Prerequisites:** AVBS1002 **Assessment:** Assignments/presentations (50%), theory exam (50%) **Practical field work:** Practical class activities will be held at the May Farm pig unit and Camden poultry research unit, and there will be a full day excursion to Symbio Wildlife Zoo **Mode of delivery:** Normal (lecture/lab/tutorial) day

In Animal Behaviour and Welfare Science 3, the behavioural and physiological responses of mammals, birds and fish to stressors related to husbandry, housing, transport and slaughter are explored in some detail. This Unit enables students to develop an appreciation of the responses of animals to common interventions that arise in the context of interacting with humans, including the domestication of livestock species and the management of wildlife. The principles of animal responses to stress are illustrated with production species as the main examples. Contemporary approaches to the scientific measurement of animal stress and welfare, based on an appropriate selection of scientific disciplines including ethology, psychology, physiology and neuroscience, are assessed with an emphasis on farmed livestock species. Genetic, environmental and evolutionary determinants of pain, stress and fear responses in animals are considered in the light of what is known about cognition and motivation in animals. Methods for assessing and enhancing animal environments and husbandry systems are examined and the impact on animal behaviour and welfare of stockmanship is explored in the context of human-animal interactions. Finally, the design and conduct of scientific experiments are assessed with a focus on animal ethics and current welfare issues.

AVBS3XXX to be developed for offering in 2019.

Minor core

AVBS3001
Agents of Disease

Credit points: 6 **Teacher/Coordinator:** Dr Gary Muscatello **Session:** Semester 1 **Classes:** lectures 3 hours per week, laboratories/tutorials 2 hours per week, group work 1 hour per week **Prerequisites:** AVBS2001 **Assumed knowledge:** Animal and Veterinary Bioscience years 1-2 **Assessment:** 1500wd individual review (25%), 1000wd scenario-based group assignment (15%), 2 hour exam (50%), MCQ (10%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this unit is to examine and appreciate the diversity of various disease causing agents (microbiological and parasitological) of significance to animal industries and the various strategies employed by those agents in the host-pathogen-environment interaction. This study is based on an understanding of the physical, chemical and genetic characteristics of infectious agents of disease and builds on the pathological and immunological processes taught in AVBS2001 Introductory Veterinary Pathogenesis. A scenario/case based approach will be used whenever possible to enable the students to develop problem solving approaches and skills in critical thinking. Cases selected will be those that best illustrate particular concepts and/or are of particular significance to the animal/veterinary industry. Research and industry focus activities will infuse the subject content and student learning outcomes of this unit. This unit is located at the Camperdown campus.

Textbooks

A Unit of Study outline and LMS will contain detailed information and notes for this unit.
Recommended textbooks: Quinn PJ, Markey BK, Carter ME, Donnelly WJ and Leonard FC, 2011, Veterinary Microbiology and Microbial Disease. Blackwell Science, Oxford

Minor selective

AVBS3002
Laboratory Disease Investigation

Credit points: 6 **Teacher/Coordinator:** A/Prof Jan Slapeta **Session:** Semester 2 **Classes:** Lectures 2 hours per week, laboratories/tutorials 4 hours per week (note these will vary depending upon the week) **Prerequisites:** 12cp from (MICR2X31 or IMMU2101 or AVBS2001 or AVBS3001) **Assumed knowledge:** CHEM1XXX and BIOL1XXX and ANSC3103 and ANSC3104 and (ENVX2001 or BIOM2001) **Assessment:** Assignments (60%), quiz (15%), theory exam (25%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this unit is to develop an investigative approach and familiarity with laboratory techniques, ethics and safety in preparation for honours or postgraduate training in disease research or disease investigation. Students will work through actual disease research or investigation scenarios via directed and self-directed, individual and group tasks.

Textbooks

There is no set text for this unit. Students will use primary literature and source various library texts as required for their investigations.

AVBS3XXX to be developed for offering in 2019.

Animal Production

About the major

Contemporary animal production aims to yield high-quality products in an efficient, sustainable and humane fashion. As a student in the Animal Production major, you will:

- Learn how environment affects livestock productivity, how physiology affects production and reproduction and how to improve animal performance through the application of underpinning animal sciences.
- Study animal behaviour and learn about production systems that promote animal wellbeing and welfare.
- Acquire a sound understanding of resources required to address the challenges associated with achieving sustainable and profitable animal production enterprises.
- Graduate with a recognised industry-oriented and science-based education with a strong focus on enhancing the health, well-being and productivity of animals used in production systems, through innovative approaches.

Requirements for completion

A major in Animal Production requires 48 credit points, consisting of:

(i)6 credit points of 1000-level core units
(ii)6 credit points of 1000-selective units
(iii)12 credit points of 2000-level core units
(iv)12 credit points of 3000-level core units
(v)12 credit points of 3000-level selective units

A minor in Animal Production is available and articulates to this major.

First year

Core: AVBS1002 and 6cp from: BIOL1XX6 or BIOL1XX7.

Second year

Core: AVBS2004 and AVBS2006.

Students completing the second year of the Animal Production major will gain detailed knowledge on animal nutrition essential to sustain and optimise various animal production systems.

This will be complemented by a detailed understanding of animal production systems using a comparative approach to illustrate key differences, techniques and issues that need to be considered to optimise health and productivity in the various animal farming industries.

Third year

Core: AVBS3005, ANSC3106, and 12cp from: ANSC3102, AVBS3008, AVBS3009, AVBS3010

Third year students undertaking the Animal Production major will complete two units which will underpin their capacity to tackle an array of animal production challenges through an interdisciplinary project-based problem-solving unit, where issues faced by the animal farming industries are analysed and explored to produce real-world solutions.

Students will also have their experience infused by a unit which will ensure that any farming interventions are explored in an ethical manner with the welfare of the animal as a paramount concern.

Students also have the option of selecting two from an array of four units that can enable the student to gain detailed knowledge in animal reproduction to complement their general knowledge of animal production systems or they may wish to explore in detail the management and production systems used to farm pigs, poultry, ruminant livestock and aquatic creatures.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework

The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Animal Production: completion of 24 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Example pathways

Those with a strong interest in **beef or sheep production** may choose the below pathway in this major:

1000-level: AVBS1002, BIOL1006
2000-level: AVBS2004, AVBS2006
3000-level: AVBS3005, ANSC3106, ANSC3102 and AVBS3010

Those with a strong interest in **aquaculture** may choose the below pathway in this major:

1000-level: AVBS1002, BIOL1007
2000-level: AVBS2004, AVBS2006
3000-level: AVBS3005, ANSC3106, AVBS3008 and AVBS3009

Learning Outcomes

Students who graduate from Animal Production will be able to:

1. Describe and understand the nature and working framework that underpin animal farming systems and develop solutions for the many challenges faced by producers.
2. Handle production animals in a safe manner to minimise risk and stress for both human and animal.
3. Describe and explain animal body systems, specifically maintenance of homeostasis and the animals' response to environmental factors and stressors.
4. Develop an integrated understanding of animal nutrition in relation to animal health, wellbeing and productivity.
5. Apply a knowledge of animal husbandry in the context of optimising meat, milk or fibre production for humans and ensure product safety prior to consumption.
6. Apply innovative technologies and systems to enhance ethical, efficient and sustainable animal production.
7. Demonstrate and communicate ethical animal farming through applied best practices adhering to social demands and acceptance.

Animal Production

ANIMAL PRODUCTION

Advanced coursework and projects will be available in 2020 for students who complete this major.

Animal Production major

A major in Animal Production requires 48 credit points from this table including:(i) 6 credit points of 1000-level core units(ii) 6 credit points of 1000-level selective units(iii) 12 credit points of 2000-level core units (iv) 12 credit points of 3000-level core units (v) 12 credit points 3000-level selective units

Animal Production minor

A minor in Animal Production requires 36 credit points from this table including:(i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level selective units(iii) 12 credit points of 2000-level core units (iv) 12 credit points of 3000-level core units

Units of study

The units of study are listed below.

1000-level units of study

Core

AVBS1002
Concepts of Animal Management

Credit points: 6 **Teacher/Coordinator:** Dr Cameron Clark **Session:** Semester 2 **Classes:** On average 6 hours per week (lectures and practicals) **Prohibitions:** AGEN2006 **Assumed knowledge:** AGEN1004 or BIOL1XXX or AVBS1003 **Assessment:** Participation, written assignments, quizzes and end of semester examination **Practical field work:** There will be several whole day practical classes at the Camden campus **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will explore the management of animals in natural and man-made environments. At the end of this unit of study, students will understand: the characteristics of the management systems of the major domestic species used for production in Australia and in a world wide context; the characteristics and principles underpinning sustainable management of native animals in natural and man-made environments; an appreciation of the dependence of living organisms upon their environment; an appreciation of indigenous land management and the husbandry practices and innovations that have been adopted by the production industries to retain their competitive advantage; a demonstrated capability in handling and husbandry of the major domestic production animal species, and an appreciation of the application of these skills to non-domestic species; a demonstrated understanding of the importance of high standards of animal welfare practice in the management of animals.

Textbooks
There is no single text that adequately covers the unit content and for this reason no formal text is required. Where appropriate, relevant reference material will be identified for specific areas of the course.

Selective

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

BIOL1906
Life and Evolution (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1 **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 **Assumed knowledge:** 85 or above in HSC Biology or equivalent. **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals.

Life and Evolution (Advanced) has the same overall structure as BIOL1006 but material is discussed in greater detail and at a more advanced level. Students enrolled in BIOL1906 participate in a research project with a focus on developing skills in critical evaluation, experimental design, data analysis and communication.

Textbooks
Please see unit outline on LMS

BIOL1996
Life and Evolution (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Mark de Bruyn **Session:** Semester 1 **Classes:** Lectures as per BIOL1906; one 3-hour practical per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), practical reports (25%), seminar presentation (15%), lab note book (5%), prelaboratory quizzes (5%) **Practical field work:** null **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, and proteins) to whole ecosystems in which myriad species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. The practical work syllabus for BIOL1996 is different from that of BIOL1906 (Advanced) and consists of a special project-based laboratory.

Bromham, L 2015, An Introduction to Molecular Evolution and Phylogenetics, Oxford University Press.

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Textbooks

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

2000-level units of study

Core

AVBS2004 and AVBS2006 to be developed for offering in 2019.

3000-level units of study

Core

ANSC3106
Animal Behaviour and Welfare Science 3

Credit points: 6 **Teacher/Coordinator:** Dr Greg Cronin **Session:** Semester 2 **Classes:** 6 hours per week (including lectures, demonstrations, discussions and practical activities); classes will be held at the Camden campus **Prerequisites:** AVBS1002 **Assessment:** Assignments/presentations (50%), theory exam (50%) **Practical field work:** Practical class activities will be held at the May Farm pig unit and Camden poultry research unit, and there will be a full day excursion to Symbio Wildlife Zoo **Mode of delivery:** Normal (lecture/lab/tutorial) day

In Animal Behaviour and Welfare Science 3, the behavioural and physiological responses of mammals, birds and fish to stressors related to husbandry, housing, transport and slaughter are explored in some detail. This Unit enables students to develop an appreciation of the responses of animals to common interventions that arise in the context of interacting with humans, including the domestication of livestock species and the management of wildlife. The principles of animal responses to stress are illustrated with production species as the main examples. Contemporary approaches to the scientific measurement of animal stress and welfare, based on an appropriate selection of scientific disciplines including ethology, psychology, physiology and neuroscience, are assessed with an emphasis on farmed livestock species. Genetic, environmental and evolutionary determinants of pain, stress and fear responses in animals are considered in the light of what is known about cognition and motivation in animals. Methods for assessing and enhancing animal environments and husbandry systems are examined and the impact on animal behaviour and welfare of stockmanship is explored in the context of human-animal interactions. Finally, the design and conduct of scientific experiments are assessed with a focus on animal ethics and current welfare issues.

ANSC3102
Animal Reproduction

Credit points: 6 **Teacher/Coordinator:** A/Prof Simon de Graaf **Session:** Semester 1 **Classes:** Lectures 2 hours per week, tutorials 1 hour per week, practicals 3 hours per week **Assumed knowledge:** ANSC3104 **Assessment:** Written and oral assignments (30%), mid-semester practical exam (15%), end of semester written exam (55%) **Practical field work:** There will be several half day practical classes held at the Camden Campus **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides a comprehensive programme on basic and applied aspects of male and female reproductive biology, with particular emphasis on livestock and domestic animals. The fundamental topics include reproductive cycles, sexual differentiation, gametogenesis, fertilization, embryo development, gestation and parturition. An understanding of the applications of advanced reproductive technologies is developed through lectures, tutorials and the assignments. In addition, practical instruction is given on semen collection and processing, manipulation of the reproductive cycle, artificial insemination, and pregnancy diagnosis in sheep and pigs. Classes are held at the Camperdown Campus in Sydney and at the Camden Campus Animal Reproduction Unit and Mayfarm piggery.

Animal and Veterinary Bioscience

About the stream

The Animal and Veterinary Bioscience Program provides students with fundamental and applied knowledge in animal bioscience.

Students will acquire a broad overview of both domestic animals and wildlife species and their environment, and an integrated comparative knowledge in fields such as applied biotechnologies, reproduction and nutrition. This will be supported by detailed knowledge of animal structure and function and a focus on application of innovative approaches and technologies to enhance animal management and welfare.

Students will also study animal behaviour and management systems that respect ethical and environmental concerns, and promote animal welfare. Graduates will acquire an industry-oriented science-based education which could lead to a career in a wide variety of veterinary and animal science industries.

The program is broader and more detailed than either the Animal Production major or the Animal Disease and Welfare majors, providing graduates with an all-inclusive appreciation of the multidisciplinary sciences involved in veterinary and allied animal science industries including companion and wildlife.

Requirements for completion

The Animal and Veterinary Bioscience stream is 120 credit points, consisting of:

(i)6 credit points of 1000-level degree core units
(ii)6 credit points of 2000-level degree core units
(iii)A 108 credit point program in Animal and Veterinary Bioscience

A program in Animal and Veterinary Bioscience requires 108 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)6 credit points of 2000-level core units
(iii)6 credit points of 3000-level core units
(iv)24 credit points of 4000-level research units
(v)12 credit points of 4000-level advanced coursework selective units
(vi)A 48 credit point major in Animal and Veterinary Bioscience

A major in Animal and Veterinary Bioscience requires 48 credit points, consisting of:
(i)12 credit points of 1000-level core units
(ii)18 credit points of 2000-level core units
(iii)18 credit points of 3000-level core units, including 1 interdisciplinary unit and 1 project unit

First year

Core to major: CHEM1XX1, BIOL1XX7
Core to program: AVBS1002, AVBS1003
Core to stream: ENVX1002

Second year

Core to major: AVBS2002, AVBS2003, AVBS2004
Core to program: AVBS2005
Core to stream: ENVX2001

The second year of the Animal and Veterinary Bioscience stream provides students with an opportunity to understand how animals work, through studying anatomy and physiology in a comparative manner.

Students will couple this with an understanding of the molecular and cellular nature of biochemical processes in animals, and examine how we can feed animals to enable their optimal wellbeing in both a production and natural setting.

Students will also expand upon their understanding of statistical methodologies, exploring the application and use of statistical design and methods in both natural and experimental settings as a means of answering questions about animal populations, health and wellbeing through applied animal research.

Third year

Core to major: ANSC3102, ANSC3105, ANSC3106
Core to program: AVBS3000

Students undertaking the third year of the Animal and Veterinary Bioscience stream will explore and gain in-depth understanding of three key areas of applied animal science.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in the Animal and Veterinary Bioscience area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Animal and Veterinary Bioscience: completion of 24 credit points of project work and 12 credit points of coursework.

Learning Outcomes

Students who graduate from Animal and Veterinary Bioscience will be able to:

1. Understand the function of eukaryotic cells and an application of this knowledge in areas of diagnostics and screening for disease and traits in animals.
2. Understand the socio-economic importance of animals in various natural and human-made environments.
3. Work and handle animals in a safe manner to minimise risk and stress for both human and animal.
4. Understand animal body systems in detail, specifically maintenance of homeostasis and the animals' response to environmental factors and stressors.
5. Gain a detailed understanding of animal nutrition, animal biotechnologies and animal reproduction.
6. Have applied knowledge of animal behaviour, welfare and ethics in various animal-related industry and research scenarios.
7. Have an appreciation for the practical concerns of animal welfare in society and have a working knowledge of the impact of the animals' environment on behaviour and welfare.

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
ANIMAL AND VETERINARY BIOSCIENCE			
Animal and Veterinary Bioscience stream			
The Animal and Veterinary Bioscience stream is 120 credit points, consisting of: (i) 6 credit points of 1000-level degree core units (ii) 6 credit points of 2000-level degree core units (iii) A 108 credit point program in Animal and Veterinary Bioscience			
Animal and Veterinary Bioscience program			
This program is only available to students enrolled in Animal and Veterinary Bioscience stream. A program in Animal and Veterinary Bioscience requires 108 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 6 credit points of 2000-level core units (iii) 6 credit points of 3000-level core units (iv) 24 credit points of 4000-level research units (v) 12 credit points of 4000-level advanced coursework selective units (vi) A 48 credit point major in Animal and Veterinary Bioscience			
Animal and Veterinary Bioscience major			
This major is only available to students enrolled in Animal and Veterinary Bioscience program. A major in Animal and Veterinary Bioscience requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 18 credit points of 2000-level core units (iii) 18 credit points of 3000-level core units, including 1 interdisciplinary unit and 1 project unit			
Units of study			
The units of study are listed below.			
1000-level units of study			
Stream Core			
ENVX1002 **Introduction to Statistical Methods**	6	**N** ENVX1001 *Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams*	Semester 1
Program core			
AVBS1002 **Concepts of Animal Management**	6	**A** AGEN1004 or BIOL1XXX or AVBS1003 **N** AGEN2006	Semester 2
AVBS1003 **Animals and Us**	6	**N** VETS1018	Semester 1
Major core			
CHEM1011 **Fundamentals of Chemistry 1A**	6	**A** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 *Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1
CHEM1111 **Chemistry 1A**	6	**A** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 *Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1 Semester 2 Summer Main

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
CHEM1911 **Chemistry 1A (Advanced)**	6	**A** 80 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 *Note: Department permission required for enrolment*	Semester 1
CHEM1991 **Chemistry 1A (Special Studies Program)**	6	**A** 90 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 *Note: Department permission required for enrolment*	Semester 1
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2
2000-level units of study			
Stream core			
ENVX2001 **Applied Statistical Methods**	6	**P** [6cp from (ENVX1001 or ENVX1002 or BIOM1003 or MATH1011 or MATH1015 or DATA1001)] OR [3cp from (MATH1XX1 or MATH1906 or MATH1XX3 or MATH1907) and an additional 3cp from (MATH1XX5)] *Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams*	Semester 1
Program core			
AVBS2005 to be developed for offering in 2019.			
Major core			
AVBS2002, AVBS2003 and AVBS2004 to be developed for offering in 2019.			
3000-level units of study			
Program core			
AVBS3000 **Professional Development**	6		Semester 1 Semester 2
Major core			
ANSC3102 **Animal Reproduction**	6	**A** ANSC3104	Semester 1
ANSC3105 **Animal Biotechnology**	6		Semester 2
ANSC3106 **Animal Behaviour and Welfare Science 3**	6	**P** AVBS1002	Semester 2
4000-level units of study			
Research units			
AVBS4015 **Research Project A1**	6	**P** Animal and Veterinary Bioscience years 1-3. Students need to have obtained a second/third year WAM commensurate with obtaining honours; and must have the approval of the faculty to enrol. **C** AVBS4016 and AVBS4017 and AVBS4018 **N** AVBS4013 or AVBS4014	Semester 1 Semester 2
AVBS4016 **Research Project A2**	6	**P** Animal and Veterinary Bioscience years 1-3. Students need to have obtained a second/third year WAM commensurate with obtaining honours; and must have the approval of the faculty to enrol. **C** AVBS4015 and AVBS4017 and AVBS4018 **N** AVBS4013 or AVBS4014	Semester 1 Semester 2
AVBS4017 **Research Project A3**	6	**P** Animal and Veterinary Bioscience years 1-3. Students need to have obtained a second/third year WAM commensurate with obtaining honours; and must have the approval of the faculty to enrol. **C** AVBS4015 and AVBS4016 and AVBS4018 **N** AVBS4013 or AVBS4014	Semester 1 Semester 2
AVBS4018 **Research Project A4**	6	**P** Animal and Veterinary Bioscience years 1-3. Students need to have obtained a second/third year WAM commensurate with obtaining honours; and must have the approval of the faculty to enrol. **C** AVBS4015 and AVBS4016 and AVBS4017 **N** AVBS4013 or AVBS4014	Semester 1 Semester 2
Selective advanced coursework units			
AVBS4002 **Dairy Production and Technology**	6	**A** Enrolled students are expected to have some understanding of key components of the dairy production system, including basic knowledge of animal physiology and nutrition.	Semester 2
AVBS4004 **Food Safety Assessment and Management**	6	**P** AVBS3001 and AVBS4001	Semester 2
AVBS4005 **Feed Technology**	6	**P** ANSC3101	Semester 1
AVBS4012 **Extensive Animal Industries**	6	**P** Animal and Veterinary Bioscience years 1-3 OR Bachelor of Science in Agriculture years 1-3	Semester 1

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
AVBS4019 **Equine Science and Industry**	6		Semester 2

Animal and Veterinary Bioscience

ANIMAL AND VETERINARY BIOSCIENCE

Animal and Veterinary Bioscience stream

The Animal and Veterinary Bioscience stream is 120 credit points, consisting of:(i) 6 credit points of 1000-level degree core units(ii) 6 credit points of 2000-level degree core units(iii) A 108 credit point program in Animal and Veterinary Bioscience

Animal and Veterinary Bioscience program

This program is only available to students enrolled in Animal and Veterinary Bioscience stream.A program in Animal and Veterinary Bioscience requires 108 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 6 credit points of 2000-level core units(iii) 6 credit points of 3000-level core units(iv) 24 credit points of 4000-level research units(v) 12 credit points of 4000-level advanced coursework selective units(vi) A 48 credit point major in Animal and Veterinary Bioscience

Animal and Veterinary Bioscience major

This major is only available to students enrolled in Animal and Veterinary Bioscience program.A major in Animal and Veterinary Bioscience requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units(ii) 18 credit points of 2000-level core units(iii) 18 credit points of 3000-level core units, including 1 interdisciplinary unit and 1 project unit

Units of study

The units of study are listed below.

1000-level units of study

Stream Core

ENVX1002
Introduction to Statistical Methods

Credit points: 6 **Teacher/Coordinator:** A/Prof Thomas Bishop **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, one 1-hour tutorial per week, one 2-hour computer practical per week **Prohibitions:** ENVX1001 **Assessment:** One exam during the exam period (50%), three reports (10% each), ten online quizzes (2% each) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams

This is an introductory statistics unit for students in the agricultural, life and environmental sciences. It provides the foundation for statistics and data science skills that are needed for a career in science and for further study in applied statistics and data science. In the first portion of the unit the emphasis is on describing data using statistical and graphical summaries, and probability models. In the second part the focus is on formal hypothesis testing on experimental data using statistical tests. The final part of the unit is on finding patterns in biological and environmental data, through the use of linear and non-linear functions. In the practicals the emphasis is on applying theory to analysing real datasets using the spreadsheet package Excel and the statistical software package R. A key feature of the unit is using R to develop coding skills that are become essential in science for processing and analysing datasets of ever increasing size.

Textbooks

No textbooks are recommended but useful reference books are:
- Mead R, Curnow RN, Hasted AM (2002) 'Statistical methods in agriculture and experimental biology.' (Chapman and Hall: Boca Raton).
- Quinn GP, Keough MJ (2002) 'Experimental design and data analysis for biologists.' (Cambridge University Press: Cambridge, UK).

Program core

AVBS1002
Concepts of Animal Management

Credit points: 6 **Teacher/Coordinator:** Dr Cameron Clark **Session:** Semester 2 **Classes:** On average 6 hours per week (lectures and practicals) **Prohibitions:** AGEN2006 **Assumed knowledge:** AGEN1004 or BIOL1XXX or AVBS1003 **Assessment:** Participation, written assignments, quizzes and end of semester examination **Practical field work:** There will be several whole day practical classes at the Camden campus **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will explore the management of animals in natural and man-made environments. At the end of this unit of study, students will understand: the characteristics of the management systems of the major domestic species used for production in Australia and in a world wide context; the characteristics and principles underpinning sustainable management of native animals in natural and man-made environments; an appreciation of the dependence of living organisms upon their environment; an appreciation of indigenous land management and the husbandry practices and innovations that have been adopted by the production industries to retain their competitive advantage; a demonstrated capability in handling and husbandry of the major domestic production animal species, and an appreciation of the application of these skills to non-domestic species; a demonstrated understanding of the importance of high standards of animal welfare practice in the management of animals.

Textbooks

There is no single text that adequately covers the unit content and for this reason no formal text is required. Where appropriate, relevant reference material will be identified for specific areas of the course.

AVBS1003
Animals and Us

Credit points: 6 **Teacher/Coordinator:** Prof Claire Wade **Session:** Semester 1 **Classes:** Two lectures; one 3-hour practical; one peer assisted study session per week **Prohibitions:** VETS1018 **Assessment:** Assignments, presentation, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

We live in a world surrounded by and dependent on animals. Australia has one of the highest rates of animal ownership in the world: dogs, cats, rabbits, birds and reptiles being common. In this unit, you explore animals in society (including companion, pocket and pet, wildlife and zoo animals). You will investigate relationships between humans and animals and normal function of animals including development, disease, aging and death. This unit will describe how human and animal health are related, outline legislation and policies on the care and use of animals, cover topical issues in animal welfare and ethics, provide opportunities for students to observe animal behaviours and discuss how cultural backgrounds influence our relationships with animals. You will visit captive and clinical animal facilities where animals are displayed for conservation, curiosity, aesthetics and research. Practicals and workshops will provide students with skills in critical thinking, communication, information/digital literacy and an evidence informed basis on which to make decisions. This unit is for students who are interested in a professional career working with animals, such as those in the AVBS stream and BVB/DVM program or who generally seek an understanding of how animals enrich our lives.

Textbooks

Animals and Us Unit of Study Guide and Practical Manual TBD

Major core

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

2000-level units of study

Stream core

ENVX2001
Applied Statistical Methods

Credit points: 6 **Teacher/Coordinator:** Dr Floris Van Ogtrop **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, one 3-hour computer practical per week **Prerequisites:** [6cp from (ENVX1001 or ENVX1002 or BIOM1003 or MATH1011 or MATH1015 or DATA1001)] OR [3cp from (MATH1XX1 or MATH1906 or MATH1XX3 or MATH1907) and an additional 3cp from (MATH1XX5)] **Assessment:** One exam during the exam period (50%),three reports (10% each), ten online quizzes (2% each) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams

This unit builds on introductory 1st year statistics units and is targeted towards students in the agricultural, life and environmental sciences. It consists of two parts and presents, in an applied manner, the statistical methods that students need to know for further study and their future careers. In the first part the focus is on designed studies including both surveys and formal experimental designs. Students will learn how to analyse and interpret datasets collected from designs from more than than 2 treatment levels, multiple factors and different blocking designs. In the second part the focus is on finding patterns in data. In this part the students will learn to model relationships between response and predictor variables using regression, and find patterns in datasets with many variables using principal components analysis and clustering. This part provides the foundation for the analysis of big data. In the practicals the emphasis is on applying theory to analysing real datasets using the statistical software package R. A key feature of the unit is using R to develop coding skills that are become essential in science for processing and analysing datasets of ever increasing size.

AVBS2002, AVBS2003 and AVBS2004 to be developed for offering in 2019.

3000-level units of study

Program core

AVBS3000
Professional Development

Credit points: 6 **Teacher/Coordinator:** Dr Sabrina Lomax **Session:** Semester 1, Semester 2 **Classes:** Six preparatory workshops/seminars (throughout years 1-3), four 1-hour industry seminars for case studies (year 3) **Assessment:** Professional experience reports (65%), case studies (20%), essay on current animal issues (15%) **Practical field work:** 60 days of professional work experience to be completed by the commencement of fourth year **Mode of delivery:** Professional practice

Students are required to undertake professional development in University vacations as an integral and essential part of their overall training in the degree of Bachelor of Animal and Veterinary Bioscience. Students will complete 60 days of professional work experience throughout their program by the commencement of fourth year, including a minimum of 20 days spent on commercial animal production enterprises. Students will visit at least two different farming enterprises in the major and emerging animal production industries. The remaining 40 days will include at least one placement with an animal-related business or service provider, and experience in either a scientific research organisation or short scientific volunteer position. Students will undertake additional placements at relevant animal or animal-related businesses, farms or organisations as required to complete 60 days. A professional consultant-style report must be submitted after each placement. Seminars to promote awareness of career options and current issues in animal science will be provided on a regular basis by past graduates and other professionals working in the animal industries. Students are encouraged to attend as many of these as possible throughout their degree program, and are required to submit four case studies based on material presented in these seminars. Attendance at seminars is compulsory during third year. Students will also submit an essay on a current issue in the animal science area of their choice.

Major core

ANSC3102
Animal Reproduction

Credit points: 6 **Teacher/Coordinator:** A/Prof Simon de Graaf **Session:** Semester 1 **Classes:** Lectures 2 hours per week, tutorials 1 hour per week, practicals 3 hours per week **Assumed knowledge:** ANSC3104 **Assessment:** Written and oral assignments (30%), mid-semester practical exam (15%), end of semester written exam (55%) **Practical field work:** There will be several half day practical classes held at the Camden Campus **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides a comprehensive programme on basic and applied aspects of male and female reproductive biology, with particular emphasis on livestock and domestic animals. The fundamental topics include reproductive cycles, sexual differentiation, gametogenesis, fertilization, embryo development, gestation and parturition. An understanding of the applications of advanced reproductive technologies is developed through lectures, tutorials and the assignments. In addition, practical instruction is given on semen collection and processing, manipulation of the reproductive cycle, artificial insemination, and pregnancy diagnosis in sheep and pigs. Classes are held at the Camperdown Campus in Sydney and at the Camden Campus Animal Reproduction Unit and Mayfarm piggery.

ANSC3105
Animal Biotechnology

Credit points: 6 **Teacher/Coordinator:** Assoc. Prof. Peter Williamson **Session:** Semester 2 **Classes:** Lectures 3 hours per week, tutorials 1 hour per week, practicals 2-3 hours for seven weeks **Assessment:** Practicals and quizzes (30%), essay and seminars (30%), exam (40%) **Practical field work:** laboratory practical classes **Mode of delivery:** Normal (lecture/lab/tutorial) day

Lectures, tutorials, laboratories, seminars and supervised reading and directed learning instruction will cover the application of biotechnology to animal health, animal production and veterinary biosciences. The course is organised around modules that consider the methodologies, ethical and technical issues in application veterinary regenerative technology (gene therapy; stem cell therapy), transgenic technologies, antibody and antigen receptor engineering, molecular diagnostics, and mining molecular bioactives, all discussed in contexts relevant to domestic animals. The course also integrates an introduction to the emerging field of animal biosystems, which covers the application of big data in animal biotechnology.

ANSC3106
Animal Behaviour and Welfare Science 3

Credit points: 6 **Teacher/Coordinator:** Dr Greg Cronin **Session:** Semester 2 **Classes:** 6 hours per week (including lectures, demonstrations, discussions and practical activities); classes will be held at the Camden campus **Prerequisites:** AVBS1002 **Assessment:** Assignments/presentations (50%), theory exam (50%) **Practical field work:** Practical class activities will be held at the May Farm pig unit and Camden poultry research unit, and there will be a full day excursion to Symbio Wildlife Zoo **Mode of delivery:** Normal (lecture/lab/tutorial) day

In Animal Behaviour and Welfare Science 3, the behavioural and physiological responses of mammals, birds and fish to stressors related to husbandry, housing, transport and slaughter are explored in some detail. This Unit enables students to develop an appreciation of the responses of animals to common interventions that arise in the context of interacting with humans, including the domestication of livestock species and the management of wildlife. The principles of animal responses to stress are illustrated with production species as the main examples. Contemporary approaches to the scientific measurement of animal stress and welfare, based on an appropriate selection of scientific disciplines including ethology, psychology, physiology and neuroscience, are assessed with an emphasis on farmed livestock species. Genetic, environmental and evolutionary determinants of pain, stress and fear responses in animals are considered in the light of what is known about cognition and motivation in animals. Methods for assessing and enhancing animal environments and husbandry systems are examined and the impact on animal behaviour and welfare of stockmanship is explored in the context of human-animal interactions. Finally, the design and conduct of scientific experiments are assessed with a focus on animal ethics and current welfare issues.

A Unit of Study outline containing details of lecture outlines, objectives, reference lists, details of practical classes, staffing as well as other relevant class material will be available for students

4000-level units of study

Research units

AVBS4015
Research Project A1

Credit points: 6 **Teacher/Coordinator:** Dr Wendy Muir **Session:** Semester 1, Semester 2 **Classes:** Students must attend the compulsory course "Introduction to Animal Research (ITAR)" which is usually held in the week prior to the start of semester. There is no regular face-to-face teaching. The equivalent of 6 hours per week will be allocated from the course work timetable for research project activity. Relevant workshops, for example on scientific writing and statistical analysis will be completed during the sessions when the student is enrolled in AVBS4015, AVBS4016, AVBS4017 and AVBS4018. **Prerequisites:** Animal and Veterinary Bioscience years 1-3. Students need to have obtained a second/third year WAM commensurate with obtaining honours; and must have the approval of the faculty to enrol. **Corequisites:** AVBS4016 and AVBS4017 and AVBS4018 **Prohibitions:** AVBS4013 or AVBS4014 **Assessment:** written preliminary research proposal, literature review on the research topic, oral presentation on the research proposal, oral presentation on the research at the end of the project, research capabilities, written manuscript (assessment tasks scheduled throughout the four units comprising Research Project A (AVBS4015, AVBS4016, AVBS4017, ABVS4018) with the final grade averaged over all four units) **Practical field work:** Dependent on the particular research project **Mode of delivery:** Normal (lecture/lab/tutorial) day

Research Project A is composed of 24 credit points and consists of units AVBS4015 (Research Project A1), AVBS4016 (Research Project A2), AVBS4017 (Research Project A3) and AVBS4018 (Research Project A4). The units need to be taken in chronological order, commencing with enrolment in unit AVBS4015, which must be completed in a semester prior to unit AVBS4018. All four units are connected to the overall completion of the research project. Prior to start of this unit of study, students after consultation with an academic(s) and/or researcher(s) choose an area of research interest and this will form the basis of the entire Research Project A program (24 credit points in total). In unit AVBS4015 students will be required to undertake assessment tasks and conduct research activities.

At the end of this Unit of Study, students will:

Identify a research area, define a problem that impacts on animals and analyse this problem using information from various sources; critically evaluate current research (experimental design, statistical analysis, technical limitations) and identify where the present knowledge limiting for the chosen research topic; assimilate and manage information from within and across disciples to provide new concepts or understanding in the area of research; become familiar with scientific principles of research and the ethical use of animals in research; undertake research related to the project; meet set assessment tasks designed to develop written and oral presentation skills; apply the range of interpersonal skills necessary to work with peers and other researchers; meet deadlines and maintain accurate records related to the project.

Textbooks

No textbooks are required

AVBS4016
Research Project A2

Credit points: 6 **Teacher/Coordinator:** Dr Wendy Muir **Session:** Semester 1, Semester 2 **Classes:** There is no regular face-to-face teaching. The equivalent of 6 hours per week will be allocated from the course work timetable for research project activity. Relevant workshops, for example on scientific writing and statistical analysis will be completed during the sessions when the student is enrolled in AVBS4015, AVBS4016, AVBS4017 and AVBS4018. **Prerequisites:** Animal and Veterinary Bioscience years 1-3. Students need to have obtained a second/third year WAM commensurate with obtaining honours; and must have the approval of the faculty to enrol. **Corequisites:** AVBS4015 and AVBS4017 and AVBS4018 **Prohibitions:** AVBS4013 or AVBS4014 **Assessment:** See AVBS4015 **Practical field work:** Dependent on the particular research project **Mode of delivery:** Normal (lecture/lab/tutorial) day

Students will actively work on the research projects identified at the start of unit AVBS4015. This is will include, where appropriate, undertaking animal and laboratory studies, collection and analysis of samples and data, recording of data, continue to evaluate information from various sources and meet set assessment deadlines.

See under AVBS4015 for further information.

AVBS4017
Research Project A3

Credit points: 6 **Teacher/Coordinator:** Dr Wendy Muir **Session:** Semester 1, Semester 2 **Classes:** The equivalent of 6 hours per week will be allocated from the coursework timetable for research project activity. Relevant workshops, for example on scientific writing and statistical analysis will be completed during the sessions when the student is enrolled in AVBS4015, AVBS4016, AVBS4017 and AVBS4018 **Prerequisites:** Animal and Veterinary Bioscience years 1-3. Students need to have obtained a second/third year WAM commensurate with obtaining honours; and must have the approval of the faculty to enrol. **Corequisites:** AVBS4015 and AVBS4016 and AVBS4018 **Prohibitions:** AVBS4013 or AVBS4014 **Assessment:** See AVBS4015 **Practical field work:** Dependent on the particular research project **Mode of delivery:** Normal (lecture/lab/tutorial) day

See under AVBS4015 and AVBS4016.

AVBS4018
Research Project A4

Credit points: 6 **Teacher/Coordinator:** Dr Wendy Muir **Session:** Semester 1, Semester 2 **Classes:** There is no regular face-to-face teaching. The equivalent of 6 hours per week will be allocated from the coursework timetable for research project activity. Relevant workshops, for example on scientific writing and statistical analysis will be completed during the sessions when the student is enrolled in AVBS4015, AVBS4016, AVBS4017 and AVBS4018. **Prerequisites:** Animal and Veterinary Bioscience years 1-3. Students need to have obtained a second/third year WAM commensurate with obtaining honours; and must have the approval of the faculty to enrol. **Corequisites:** AVBS4015 and AVBS4016 and AVBS4017 **Prohibitions:** AVBS4013 or AVBS4014 **Assessment:** See AVBS4015 **Practical field work:** Dependent on the particular research project **Mode of delivery:** Normal (lecture/lab/tutorial) day

See under AVBS4015 and AVBS4016. Students must complete unit AVBS4018 in a separate semester to unit AVBS4015, and AVBS4015 must be completed prior to AVBS4018.

Selective advanced coursework units

AVBS4002
Dairy Production and Technology

Credit points: 6 **Teacher/Coordinator:** Prof Sergio (Yani) Garcia **Session:** Semester 2 **Classes:** Lectures up to 3 hours per week, practicals 3 hours per week **Assumed knowledge:** Enrolled students are expected to have some understanding of key components of the dairy production system, including basic knowledge of animal physiology and nutrition. **Assessment:** Assignment (report or lit review) (30%), pracs assessments, (30%), 1-hour exam (40%) **Practical field work:** At least two half day field trips and one or two full day trips/excursions including commercial farms and a milk processing plant **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will explore the various aspects of dairy farming and the dairy industry from a scientific point of view. The lectures are a mix of the principles on which sound dairy farming is based and practical examples of how this operates in practice. Focus is placed on integrating knowledge to gain understanding on the system of production as a whole. At the end of this unit of study, students will demonstrate a solid understanding of: the characteristics of the dairy industry in Australia and in a world wide context; the key components of pasture-based dairy systems; principles and practices of pasture and feeding management; the application of new technologies to improve efficiency and productivity (particularly automatic milking). In addition, students will demonstrate an appreciation of key aspects of reproduction and lactation physiology; the integration of knowledge of genetics and reproduction into the type of herd improvement structure set up in the dairy industry; the application of ruminant physiology knowledge to developing feeding programs for dairy cows; the extension of basic reproductive physiology onto the dairy farm using case studies as examples; the economics of the dairy farm business. Practical classes include milking cows; grazing and feeding management of dairy cows; calf rearing; and visits to commercial farms ranging from small pasture-based dairy farms to a feed-lot operation milking over 2,000 cows.

Textbooks

Students are advised to consult lecturers for recommended text, scientific and professional articles, technotes for advisors and industry-generated information for farmers

AVBS4004
Food Safety Assessment and Management

Credit points: 6 **Teacher/Coordinator:** Dr Gary Muscatello **Session:** Semester 2 **Classes:** Lectures 3 hours per week, tutorial/practicals 2 hours per week **Prerequisites:** AVBS3001 and AVBS4001 **Assessment:** 1000wd individual report (20%), 1000wd group assignment (20%), 2-hour exam (50%), MCQ (10%) **Practical field work:** Two field trips (compulsory) 16 hours total **Mode of delivery:** Normal (lecture/lab/tutorial) day

This Unit of Study focuses on the issues and practices in the animal industry relevant to food safety and zoonotic disease. This unit will cover general food safety issues, including risk assessment and hazard analysis of microbes and chemicals. Food-borne diseases of animal origin and their impact on public heath will be explored through the examination of zoonotic diseases in scenario-based learning activities. In these processes diagnostic and strategic methods of investigating, controlling and preventing food-borne disease outbreaks will be explored. Students will be introduced to national and international animal and human health policy pertaining to food safety regulations and surveillance initiatives and strategies that underpin these policies. Students in this unit will be introduced to the issues regarding emerging food-borne pathogens and current industry driven topics. By the end of the unit, students should have global and local perspective on the major food-borne diseases, surveillance and control programs. This unit is located at the Camden Campus.

AVBS4005
Feed Technology

Credit points: 6 **Teacher/Coordinator:** Dr Cormac OÂ¿Shea **Session:** Semester 1 **Classes:** Lectures three hours per week **Prerequisites:** ANSC3101 **Assessment:** Debate (10%), one page argument (10%), article (15%), lab book and feed formulation exercises (25%), 2-hour written exam (40%) **Practical field work:** Practicals/field work 3hrs/wk **Mode of delivery:** Normal (lecture/lab/tutorial) day

Feed accounts for approximately 70% of the input costs associated with animal industries, including both monogastric (poultry and pigs, laboratory animals) ruminants (feedlot cattle and sheep) and caecal fermenters (horses, rabbits). The "feed industry" is described as the largest supporting industry for animal agriculture and is a major employer of graduates (undergraduate and postgraduate). Feed technology is a broad topic and includes aspects of feed ingredient characteristics, feed manufacturing, feed additive biotechnology and applied nutrition. The course will provide in-depth understanding of the feed industry, factors influencing ingredient variability and availability (physical and economic), methods and applications of processing of ingredients to increase nutritional value, assessment of digestibility, and feed additives and supplements. All facets of the production and regulation of feed production will be discussed relative to their importance in animal agriculture and food production. Expect applied practical information as well as fairly detailed nutritional biochemistry.

No textbook required

AVBS4012
Extensive Animal Industries

Credit points: 6 **Teacher/Coordinator:** A/Prof Russell Bush **Session:** Semester 1 **Classes:** Lectures 3 hours per week, practicals 3 hours per week **Prerequisites:** Animal and Veterinary Bioscience years 1-3 OR Bachelor of Science in Agriculture years 1-3 **Assessment:** Case study (10%), practical report (15%), meat grading (15%), excursion report (20%) and written exam (40%) **Practical field work:** Five-day study tour to the Riverina **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit introduces the concepts of sheep (wool and meat) and beef cattle production in the Australian environment within the context of world food and fibre consumption and production. The key products as well as domestic and export markets for these are presented. The course provides an historical perspective of the basis for each of these industries and describes each of the production systems designed to meet the demand for these products.

Production in both the tropical and temperate regions of Australia will be covered and include the key elements of extensive grazing and intensive feedlot systems. Major issues will include breeds and breeding systems, basic nutrition and production practices and animal welfare issues as they affect the quality and quantity of product marketed.

The concepts of first stage processing of both meat and fibre products in abattoirs and top-making plants respectively will be presented. The major factors that influence the quality of product and therefore grading and market demand will be presented.

Lecture material will be supported with appropriate practical classes and a 5 day study tour to the Riverina to evaluate different commercial production systems. Students will also have an opportunity to compete in the annual Inter Collegiate Meat Judging (ICMJ) competition as a member of the University of Sydney team. This competition involves teams from numerous universities throughout Australia as well as Japan and the USA.

AVBS4019
Equine Science and Industry

Credit points: 6 **Teacher/Coordinator:** Dr Natasha Hamilton **Session:** Semester 2 **Classes:** One day a week, variable **Assessment:** Assignments (50%), mid-semester and final examinations (50%) **Practical field work:** Two offsite excursions to a racetrack and a commecrial horse stud **Mode of delivery:** Normal (lecture/lab/tutorial) day

This Unit of Study will give students wishing to work in the equine industries a strong scientifically based grounding in this field. The emphasis is on developing the students' basic knowledge of equine management, including day to day care, nutrition, reproduction, behaviour and training, disease and exercise physiology. Students will be introduced to the structure of equine industries in Australia, and basic horse handling and husbandry skills will be taught.

Equine Science, Pillner and Davies

Applied Medical Science

Study in the Discipline of Applied Medical Science is offered by the Sydney Medical School. Specific Applied Medical Science units of study are offered at 3000-level.

About the major

This major is available to students outside the Medical Science stream.

This major positions students at the intersection of science and medicine, giving them a fundamental understanding of human health and the mechanisms of diseases, their diagnosis, prevention and treatment. Graduates will be equipped with the insights and skills to understand ongoing scientific discoveries, and apply that knowledge to clinical situations.

The ability to apply theory to practice in medical science is essential for professionals addressing the major global health issues, such as mental health and neurodegenerative diseases, obesity, diabetes, cardiovascular disease, infections, cancer and auto-inflammatory disease. In this major you will learn the strategies by which medical science theory is translated into tangible health outcomes.
Through an understanding of fundamental medical science theory, you will learn the methods used to diagnose and treat human diseases, and how approaches to the diagnosis, treatment and prevention of human disease are developed and tested prior to implementation.
You will learn: the molecular basis of disease; how complex data generated in medical sciences are analysed, interpreted and communicated by the healthcare sector; how well-designed clinical trials can be used to test and verify the efficacy of new procedures and treatment options.
All this learning and application will occur in the real world in our medical research and hospital environment: the translational research hub at The University of Sydney Westmead campus.

Requirements for completion

A major in Applied Medical Science requires 48 credit points, consisting of:

(i)6 credit points of 1000-level core units
(ii)6 credit points of 1000-level selective units
(iii)6 credit points of 2000-level core units
(iv)6 credit points of 2000-level selective units
(v)24 credit points of 3000-level core units

A minor in Applied Medical Science is available and articulates to this major.

First year

BIOL1XX7 and 6 credit points from: CHEM1XX1 or BIOL1XX8 (Medical science students enrol in MEDS1X01 instead).

Second year

IMMU2101/MIMI2X02 and 6 credit points from PHSI2X05 or PCOL2011 or BCMB2X01 (Medical science students enrol in BMED2404/MEDS2004 instead and do 6 credit points from: MEDS2001 or MEDS2002 or MEDS2003).

Third year

Core: AMED3001, AMED3002, AMED3003, AMED3004.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours

Requirements for Honours in the area of Applied Medical Science: completion of 36 credit points of project work and 12 credit points of coursework.

Learning Outcomes

Students who graduate from Applied Medical Science will be able to:

1. Explain the fundamental role of basic scientific research and how it is translated from bench to bedside
2. Achieve competence in a range of valuable diagnostic techniques and data-gathering skills
3. Apply these techniques to address a diverse range of health-related problems
4. Explain the basics of clinical trials design and the important roles they play in the medical research enterprise
5. Describe the need for rigorous ethical, legal and biosafety assessments in medical research
6. Navigate, analyse, interpret, represent and communicate 'big data'
7. Read, understand and communicate the various types of scientific literature and multimedia that relate to human health
8. Take an active part in addressing complex scientific challenges relevant to the improvement of human health through medical science
9. Communicate their learning and findings in the applied medical sciences to diverse audiences through the use of conventional and multimedia platforms
10. Describe the processes by which discoveries in medical science become commercial products.

MEDS coded units of study are only available to students in the Medical Science stream.			
2000-level units of study			
Core			
BMED2404 **Microbes, Infection and Immunity**	6	**P** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **N** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011	Semester 2
IMMU2101 **Introductory Immunology**	6	**A** CHEM1XX1 **P** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **N** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.*	Semester 1
MEDS2004 and MIMI2X02 to be developed for offering in 2019.			
Selective			
PHSI2005 **Integrated Physiology A**	6	**P** 6cp from CHEM1XXX or (BIOL1XX7 or MBLG1XX1) **N** PHSI2905 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *The completion of 6 credit points of MBLG units of study is highly recommended for progression to Senior Physiology.*	Semester 1
PHSI2905 **Integrated Physiology A (Advanced)**	6	**P** A mark of 75 or above in CHEM1XXX or (BIOL1XX7 or MBLG1XX1) **N** PHSI2005 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *The completion of 6 credit points of MBLG units of study is highly recommended for progression to Senior Physiology.*	Semester 1
PCOL2011 **Pharmacology Fundamentals**	6	**A** BIOL1XXX or MBLG1XX1 **P** 6cp from CHEM1XXX **N** PCOL2555 orBMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808	Semester 1
BCMB2001 **Biochemistry and Molecular Biology**	6	**P** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901	Semester 1
BCMB2901 **Biochemistry and Molecular Biology (Advanced)**	6	**P** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2001	Semester 1
MEDS2001, MEDS2002 and MEDS2003 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).			
3000-level units of study			
Major core			
AMED3001 **Cancer**	6	*BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
AMED3002 **Interrogating Biomedical and Health Data**	6	**A** A Exploratory data analysis, sampling, simple linear regression, t-tests, confidence intervals and chi-squared goodness of fit tests, familiar with basic coding, basic linear algebra. Additional information for BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit. *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
AMED3003 **Diagnostics and Biomarkers**	6	*BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
AMED3004 **Clinical Science**	6	*BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2

Applied Medical Science

APPLIED MEDICAL SCIENCE

Advanced coursework and projects will be available in 2020 for students who complete this major.

Applied Medical Science major

A major in Applied Medical Science requires 48 credit points from this table including:(i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level selective units(iii) 6 credit points of 2000-level core units(iv) 6 credit points of 2000-level selective units (v) 24 credit points of 3000-level core units

Applied Medical Science minor

A minor in Applied Medical Science requires 36 credit points from this table including:(i) 6 credit points of 1000-level core units(ii) 6 credit points of 1000-level selective units (iii) 6 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units(v) 6 credit points of 3000-level core units (vi) 6 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Core

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Textbooks
Please see unit outline on LMS

BIOL1907
From Molecules to Ecosystems (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Pauline Ross **Session:** Semester 2 **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1007 or BIOL1997 **Assumed knowledge:** 85 or above in HSC Biology or equivalent **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . This unit of study has the same overall structure as BIOL1007 but material is discussed in greater detail and at a more advanced level. The content and nature of these components may vary from year to year.

Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

Selective

BIOL1008
Human Biology

Credit points: 6 **Teacher/Coordinator:** Dr Osu Lilje **Session:** Semester 1, Summer Main **Classes:** Lectures; six 3-hour practical sessions; six workshops and tutorials; students encouraged to spend 1-2 hours per week accessing online resources **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Written and oral presentation, quiz, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences.

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

MEDS1001
Human Biology

Credit points: 6 **Teacher/Coordinator:** Prof Philip Poronnik **Session:** Semester 1 **Classes:** this unit of study will involve between 5-6 hours of face-to-face activities run on the camperdown campus, these contact hours will comprise lectures; six 3-hour practical sessions; six workshops and tutorials **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1901 **Assessment:** Written and oral communication, quiz, practical and workshop reports, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the medical sciences suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology and medical sciences. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in the medical sciences.

MEDS1901
Human Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Philip Poronnik **Session:** Semester 1 **Classes:** this unit of study will involve between 5-6 hours of face-to-face activities run on the camperdown campus **Prerequisites:** 85 or above in HSC Biology or equivalent **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1001 **Assessment:** Written and oral presentation, quiz, assignment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences. The advanced unit has the same overall concepts as the mainstream unit but material is discussed in a manner that offers a greater level of challenge and academic rigour. Students enrolled in the advanced stream will participate in alternative components which may for example include guest lecturers from medical science industries. The nature of these components may vary from year to year.

MEDS coded units of study are only available to students in the Medical Science stream.

2000-level units of study

Core

BMED2404
Microbes, Infection and Immunity

Credit points: 6 **Teacher/Coordinator:** Dr Jim Manos **Session:** Semester 2 **Classes:** Two lectures and one practical per week, two tutorials **Prerequisites:** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **Prohibitions:** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011 **Assessment:** One 2-hour theory exam (60%), in-semester assessments (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study begins by introducing the concepts of disease transmission, pathogenicity and virulence mechanisms of microbes. For a full understanding of the process of infection, the structure and function of pathogenic microorganisms is examined. How the body deals with injury and infection is discussed by exploring barriers to infection and host response once those barriers are breached. The body's response to such physical damage is dealt with in a series of lectures on wound healing, clotting and inflammation, and is complemented by discussion of the pharmacological basis of anti-inflammatory drugs. This is followed by a comprehensive discussion of molecular and cellular immune responses to pathogen invasion. In particular, this gives students an appreciation of the processing of antigens, the structure, production and diversity of antibodies, the operation of the complement system and mechanisms for recognition and destruction of invading microbes. The unit concludes with an overview of microbial diseases, the characteristics of causative agents, pathogenesis and symptoms as well as treatment and control and culminates with exploring current issues of antibiotic resistance, important emerging infections and vaccination strategies.

Practical classes illustrate and underpin the lecture content. Students will investigate normal flora, host defences and medically important microbes and will obtain experience in, and an understanding of, a range of techniques in bacteriology. In these practical sessions experience will be gained handling live, potentially pathogenic microbes.

Textbooks

Robbins Basic Pathology Kumar V, Abbas AK and Aster J Saunders, Philadelphia, 9th Edition, 2013

IMMU2101
Introductory Immunology

Credit points: 6 **Teacher/Coordinator:** Dr Umaimainthan Palendira **Session:** Semester 1 **Classes:** Two 1 hour lectures per week, one 2-3 hour tutorial or practical per week. **Prerequisites:** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **Prohibitions:** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XX1 **Assessment:** Progressive assessment: includes written, practical, oral and online based assessments (50%); Formal assessment: one 2 hour examination (50%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.

Our immune system not only protects us from viruses, bacteria, and parasites, it can prevent the growth of tumours. Sometimes our immune system can be the cause of diseases like multiple sclerosis, Type 1 diabetes and rheumatoid arthritis. If you are interested in studying how our immune system works to keep us alive, then Introductory Immunology is for you. This unit of study will provide an overview of the immune system and the essential features of immune responses. You will be treated to a lecture course delivered by cutting edge immunologists that begins with a study of immunology as a basic research science. This includes an introduction to the nature of the cells and molecules involved in the immune response. We build on this foundation by introducing the immunological principles underlying the eradication of infectious diseases, successful vaccination strategies, organ transplantation, combatting autoimmune diseases and treating cancer. The integrated tutorials will build on the lecture material as well as provide you with instructions on how to successfully locate and critically analyse scientific literature. The practical sessions will further illustrate particular concepts introduced in the lecture program and provide you with valuable exposure to a variety of very important immunological techniques.

MEDS2004 and MIMI2X02 to be developed for offering in 2019.

Selective

PHSI2005
Integrated Physiology A

Credit points: 6 **Teacher/Coordinator:** Dr Michael Morris **Session:** Semester 1 **Classes:** Three 1 hour lectures per week. **Prerequisites:** 6cp from CHEM1XXX or (BIOL1XX7 or MBLG1XX1) **Prohibitions:** PHSI2905 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assessment:** One written exam; individual written assessments, and quizzes (100%) **Practical field work:** One 3 hour practical or one 3 hour tutorial per week. **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: The completion of 6 credit points of MBLG units of study is highly recommended for progression to Senior Physiology.

This unit of study offers an introduction to the basic concepts underpinning physiology, excitable cell (nerve and muscle) physiology, as well as the functions of the nervous system (central processing, and sensory and motor systems). It also incorporates cardiovascular and exercise physiology. The practical component involves experiments on humans and isolated tissues, with an emphasis on hypothesis generation and data analysis. Tutorial sessions develop critical thinking, the integrative nature of physiology, and generic skills in scientific writing and presentation. The practicals and tutorials also emphasise group learning and team work.

Textbooks

Dee Unglaub Silverthorn. Human Physiology: An Integrated Approach, 7th edition. 2015. ISBN-10: 0321981227; ISBN-13: 978-0321981226 (International Edition)

PHSI2905
Integrated Physiology A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Atomu Sawatari **Session:** Semester 1 **Classes:** Five 1 hour lectures, one 3 hour practical and one 3 hour tutorial per fortnight. Advanced students will be required to attend the designated Advanced Practical and Tutorial sessions. Students will also be exempt from all Inquiry-based learning tutorials. **Prerequisites:** A mark of 75 or above in CHEM1XXX or (BIOL1XX7 or MBLG1XX1) **Prohibitions:** PHSI2005 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assessment:** One written exam; individual and group oral presentations, 2 practical reports (reports will replace some other assessment items from regular course) (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: The completion of 6 credit points of MBLG units of study is highly recommended for progression to Senior Physiology.

This unit of study is an extension of PHSI2005 for talented students with an interest in Physiology and Physiological research. The lecture component of the course is run in conjunction with PHSI2005. This unit of study offers a basic introduction to the functions of the nervous system, excitable cell (nerve and muscle) physiology, sensory and motor systems, and central processing. It also incorporates haematology and cardiovascular physiology. The practical component involves experiments on humans and isolated tissues, with an emphasis on hypothesis generation and data analysis. Inquiry-based learning sessions develop critical thinking and generic skills while demonstrating the integrative nature of physiology. Oral and written communication skills are emphasized, as well as group learning and team work. The course will provide an opportunity for students to apply and extend their understanding of physiological concepts by designing and conducting actual experiments. Small class sizes will provide a chance for students to interact directly with faculty members mentoring the practical sessions. Assessment for this stream will be based on oral group presentations and two practical reports. These items will replace some other assessable activities from the regular course.

PCOL2011
Pharmacology Fundamentals

Credit points: 6 **Teacher/Coordinator:** Dr Hilary Lloyd **Session:** Semester 1 **Classes:** Lectures (2 x1 hr per week); wet and dry labs (5 x4 hrs), data anaylsis tutorials (2 x 2 hrs); workshops (6 x 2 hrs) **Prerequisites:** 6cp from CHEM1XXX **Prohibitions:** PCOL2555 orBMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** BIOL1XXX or MBLG1XX1 **Assessment:** In-semester (40%), which consists of 4 x on-line quizzes, 2 x lab reports, 3 x research topics, 1 x oral presentation, end-of-semester examination (60%), which consists of multiple choice and short answer questions **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides the fundamental grounding in four basic areas in Pharmacology: (1) principles of drug action (2) pharmacokinetics and drug metabolism (3) experimental design and autonomic pharmacology, and (4) drug design. The delivery of material involves lectures, practicals, computer-aided learning and problem-based workshops. Practical classes provide students with the opportunity of acquiring technical experience and teamwork skills. Problem-based workshops are based on real-life scenarios of drug use in the community. These workshops require students to integrate information obtained in lectures in order to provide solutions to the problems. Online quizzes accompany each module and are to encourage continued learning throughout the semester.

BCMB2001
Biochemistry and Molecular Biology

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 1 **Classes:** Three lectures/tutorials per week ; one 4-hour practical session per fortnight **Prerequisites:** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **Prohibitions:** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901 **Assessment:** Assignments, skills-based assessment, quizzes, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Without cells, life as we know it would not exist. These dynamic assemblies, packed with biological molecules are constantly in action. But how do cells work? Why is the food that you eat so important for cellular function? How is information transmitted from generation to generation? And, what happens as a result of disease or genetic mutation? In this unit of study you will learn how cells work at the molecular level, with an emphasis on human biochemistry and molecular biology. We will focus initially on cellular metabolism and how cells extract and store energy from fuels like fats and carbohydrates, how the use of fuels is modulated in response to exercise, starvation and disease, and how other key metabolites are processed. Then we will explore how genetic information is regulated in eukaryotes, including replication, transcription and translation, and molecular aspects of the cell cycle, mitosis and meiosis. Our practicals, along with other guided and online learning sessions will introduce you to widely applied and cutting edge tools that are essential for modern biochemistry and molecular biology. By the end of this unit you will be equipped with foundational skills and knowledge to support your studies in the life and medical sciences.

3000-level units of study

Major core

AMED3001
Cancer

Credit points: 6 **Teacher/Coordinator:** Assoc Prof Scott Byrne **Session:** Semester 1 **Classes:** interactive face to face activities 4 hrs/week; online 2 hrs/week; individual and/or group work 3-6 hrs/week **Assessment:** in-semester exam, assignments, quiz, presentation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

What does it mean when someone tells you: "you have cancer"? Initially you're probably consumed with questions like: "how did this happen?" and "will this cancer kill me?". In this unit, we will explore all aspects of the "cancer problem" from the underlying biomedical and environmental causes, through to emerging approaches to cancer diagnosis and treatment. You will integrate medical science knowledge from a diverse range of disciplines and apply this to the prevention, diagnosis and treatment of cancer both at the individual and community level. Together we will explore the epidemiology, aetiology and pathophysiology of cancer. You will be able to define problems and formulate solutions related to the study, prevention and treatment of cancer with consideration throughout for the economic, social and psychological costs of a disease that affects billions. Face-to-face and online learning activities will allow you to work effectively in individual and collaborative contexts. You will acquire the skills to interpret and communicate observations and experimental findings related to the "cancer problem" to diverse audiences. Upon completion, you will have developed the foundations that will allow you to follow a career in cancer research, clinical and diagnostic cancer services and/or the corporate system that supports the health care system.

Textbooks

Recommended Textbook: 1.,Weinberg (2013) The Biology of Cancer. 2nd edition. Garland Science Recommended reading: 1.,Hanahan and Weinberg (2000). The hallmarks of cancer. Cell 100, 57-70. 2.,Hanahan and Weinberg (2011). Hallmarks of cancer: the next generation. Cell 144, 646-74

AMED3002
Interrogating Biomedical and Health Data

Credit points: 6 **Teacher/Coordinator:** Prof Jean Yang **Session:** Semester 1 **Classes:** face to face 5 hrs/week; online 2 hrs/week; individual and/or group work 3-6 hrs/week **Assumed knowledge:** A Exploratory data analysis, sampling, simple linear regression, t-tests, confidence intervals and chi-squared goodness of fit tests, familiar with basic coding, basic linear algebra. Additional information for BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit. **Assessment:** in-semester exam, assignments, presentation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

Biotechnological advances have given rise to an explosion of original and shared public data relevant to human health. These data, including the monitoring of expression levels for thousands of genes and proteins simultaneously, together with multiple databases on biological systems, now promise exciting, ground-breaking discoveries in complex diseases. Critical to these discoveries will be our ability to unravel and extract information from these data. In this unit, you will develop analytical skills required to work with data obtained in the medical and diagnostic sciences. You will explore clinical data using powerful, state of the art methods and tools. Using real data sets, you will be guided in the application of modern data science techniques to interrogate, analyse and represent the data, both graphically and numerically. By analysing your own real data, as well as that from large public resources you will learn and apply the methods needed to find information on the relationship between genes and disease. Leveraging expertise from multiple sources by working in team-based collaborative learning environments, you will develop knowledge and skills that will enable you to play an active role in finding meaningful solutions to difficult problems, creating an important impact on our lives.

AMED3003
Diagnostics and Biomarkers

Credit points: 6 **Teacher/Coordinator:** Dr Fabienne Brilot-Turville **Session:** Semester 2 **Classes:** interactive face to face 4 hrs/week; online activities 2 hrs/week; individual and/or group work 3-6 hrs/week **Assessment:** in-semester exam, skill based assessments, presentation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

Diagnostic sciences have evolved at a rapid pace and provide the cornerstone of our health care system. Effective diagnostic assays enable the identification of people who have, or are at risk of, a disease, and guide their treatment. Research into the pathophysiology of disease underpins the discovery of novel biomarkers and in turn, the development of revolutionary diagnostic assays that make use of state-of-the-art molecular and cellular methods. In this unit you will explore a diverse range of diagnostic tests and gain valuable practical experience in a number of core diagnostic methodologies, many of which are currently used in hospital laboratories. Together we will also cover the regulatory, social, and ethical aspects of the use of biomarkers and diagnostic tests and explore the pathways to their translation into clinical practice. By undertaking this unit, you will develop your understanding of diagnostic assays and biomarkers and acquire the skills needed to embark on a career in diagnostic sciences.

AMED3004
Clinical Science

Credit points: 6 **Teacher/Coordinator:** Dr Wendy Gold **Session:** Semester 2 **Classes:** interactive face to face 4 hrs/week; online activities 2 hrs/week; individual and/or group work 3-6 hrs/week **Assessment:** in-semester exam, skill based assessment, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

Clinical science is a multidisciplinary science that combines the principles of experimental science with translational medicine. As a clinical scientist, you will have the capacity to interpret test results, isolate causes of disease, and ultimately develop new treatments that will save lives. Clinical Science will provide you with the breadth and depth of knowledge and skills that will give you a broad foundation of knowledge and open up a range of career opportunities in clinical sciences, including medical research, pharmaceutical development and clinical diagnostics. You will learn the language of the clinical world as you develop expertise in literature searching, study design, data interrogation and interpretation, evidence-based decision-making, and current knowledge in medical research. You will explore how discoveries in the medical sciences are translated into clinical practice, and pose your own clinical questions for investigation. You will study important medical conditions from the areas of infectious and genetic diseases and immunity. The capstone experience of your study in Clinical Science will be a short internship in a sector of the clinical sciences of your interest, such as a diagnostic lab, a research lab or a clinical trials centre.

Behavioural Sciences

Behavioural Sciences is the scientific study of human behavior, psychology, and mental processes. It is concerned with the way we behave as individuals as well as in groups; it is concerned with the way we act as well as the way we think; and it is concerned with our interaction with the physical world as well as our interaction with others.

When you study Behavioural Sciences, you will cover a range of areas including behavioural neuroscience, personality theory, social influences on the behaviour of individuals and groups, forensic psychology, health psychology, developmental psychology, abnormal psychology, memory, attention, intelligence, sensory processes and perception, research methods, and theories of learning and motivation.

The School of Psychology is part of the Faculty of Science. Units of study in this major are available at standard level, except for PSYC2010 (available at advanced level in PSYC2910), and PSYC3011 (available at advanced level in PSYC3911), PSYC3013 (available at advanced level in PSYC3913), PSYC3014 (available at advanced level in PSYC3914) and PSYC3016 (available at advanced level in PSYC3916).

About the major

The Behavioural Sciences Major is designed for students who do not necessarily wish to train to become accredited psychologists. Rather, this is designed for students who wish to engage in higher degree research in one or more of the areas of psychological science and/or to complement their studies in another major where expertise in one of the research areas of psychological sciences would be beneficial.

Please note: Students who wish to undertake professional training at the postgraduate level to become registered psychologists must complete the full Psychology Program. The Behavioural Sciences major is not a pathway to professional accreditation as a Psychologist.

Requirements for completion

A major in requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)6 credit points of 2000-level core units
(iii)12 credit points of 2000-level selective units
(iv)18 credit points of 3000-level selective units

A minor in Behavioural Sciences is available and articulates to this major.

First year

Core: PSYC1001 and PSYC1002.

In the first year, you will be introduced to all the disciplines in Psychology, including behavioural neuroscience, personality theory, social influences on the behaviour of individuals and groups, forensic psychology, health psychology, developmental psychology, abnormal psychology, memory, attention, intelligence, sensory processes and perception, research methods, and theories of learning and motivation.

Second year

PSYC2012 and 12 credit points from: PSYC2X10 or PSYC2013 or PSYC2014.

All students will be trained in the core research and statistical methods used in the Behavioural Sciences, and may select to specialise in two other core research disciplines in the Behavioural Sciences: Brain and Behaviour (Learning and Motivation; Clinical Psychology; Perceptual Systems; Neuroscience); Cognitive and Social Psychology, or Personality and Differential Psychology.

The second year course provides the essential training in statistical methods and the disciplinary knowledge required to undertake research projects in the Behavioural Sciences in the Third year.

Third year

18 credit points from: PSYC3010, PSYC3X11, PSYC3012, PSYC3X13, PSYC3X14, PSYC3015, PSYC3X16, PSYC3017, PSYC3018, PSYC3020, HPSC3023.

The third year courses allow students to specialise in a few of the major research disciplines in Psychology.

Students must choose to take specialist courses in the areas of Learning and Behaviour, Perceptual Systems, Cognitive Psychology, Neuroscience, Developmental Psychology, Social Psychology, Differential Psychology, Applied Psychology (Forensic, Health, Organisational), Clinical Psychology, Advanced Statistics, or Theoretical Psychology.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
There is no dedicated Honours program for the Behavioural Sciences Major. Students who wish to do the Psychology honours program must complete the full Psychology Program.

Learning Outcomes

Students who graduate from Behavioural Sciences will be able to:

1. Describe in detail the major theories of the core disciplines in the Psychological Sciences: Learning and Behaviour, Perceptual Systems, Cognitive Psychology, Neuroscience, Developmental Psychology, Social Psychology, Differential Psychology, Applied Psychology (Forensic, Health, Organisational), Clinical Psychology, Research Methods and Statistics, and Theoretical Psychology.
2. Understand, apply, and evaluate basic research methods in Psychology, including research design, data analysis and interpretation, and the appropriate use of technologies.
3. Apply these concepts to personal, social, and professional issues.
4. Design, conduct, and interpret experimental research in psychology
5. Apply critical and creative thinking, skeptical inquiry, and the scientific approach to solve problems related to Psychology
6. Value empirical evidence; act ethically and professionally; and understand the complexity of sociocultural and international diversity
7. Evaluate and communicate the findings of research and literature through scientific research report, essays, orally, and in other media

Behavioural Sciences

BEHAVIOURAL SCIENCES

Advanced coursework and projects will be available in 2020 for students who complete this major.

Behavioural Sciences major

A major in Behavioural Sciences requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 6 credit points of 2000-level core units(iii) 12 credit points of 2000-level selective units(iv) 18 credit points of 3000-level selective units

Behavioural Sciences minor

A minor in Behavioural Sciences requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level selective units(iii) 12 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Core

PSYC1001
Psychology 1001

Credit points: 6 **Session:** Intensive June, Semester 1, Summer Main **Classes:** Three 1 hour lectures and one 1 hour tutorial per week, plus 1 hour per week of additional web-based (self-paced) material related to the tutorial. **Assessment:** One 2.5hr exam, one 1000 word research report, multiple tutorial tests, experimental participation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Psychology 1001 is a general introduction to the main topics and methods of psychology, and is the basis for advanced work as well as being of use to those not proceeding with the subject. Psychology 1001 covers the following areas: science and statistics in psychology; applied psychology; themes in the history of psychology; social psychology; personality theory; human development. This unit is also offered in the Sydney Summer School. For more information consult the web site: http://sydney.edu.au/summer_school/

Textbooks
Available on-line once semester commences

PSYC1002
Psychology 1002

Credit points: 6 **Session:** Semester 2, Summer Main **Classes:** Three 1 hour lectures and one 1 hour tutorial per week, plus 1 hour per week of additional web-based (self-paced) material related to the tutorial. **Assessment:** One 2.5hr exam, one 1000 word research report, multiple tutorial tests, experimental participation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This unit is also offered in the Sydney Summer School. For more information consult the web site: http://sydney.edu.au/summer/

Psychology 1002 is a further general introduction to the main topics and methods of psychology, and it is the basis for advanced work as well as being of use to those not proceeding with the subject. Psychology 1002 covers the following areas: neuroscience; human mental abilities; learning and motivation; visual perception; cognitive processes; abnormal psychology.

This unit is also offered in the Sydney Summer School. For more information consult the web site:

http://sydney.edu.au/summer_school/

Textbooks
Available on-line once semester commences

2000-level units of study

Major core

PSYC2012
Statistics and Research Methods for Psych

Credit points: 6 **Session:** Semester 1 **Classes:** 3 x 1 hour lectures per week for 6 weeks (even weeks) and 2 x 1 hour lectures per week for the remaining 7 weeks (odd weeks); 2 hour tutorial per week **Prerequisites:** PSYC1001 OR PSYC1002 **Assumed knowledge:** Recommended: HSC Mathematics, any level **Assessment:** One 2 hour final exam plus a combination of in class tests, midsemester exam, and/or a written assignment (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim is to introduce students to fundamental concepts in statistics as applied to psychological research. These include summary descriptive statistics, an introduction to the principles and practice of research design, and the use of inferential statistics. Building upon this framework, the unit of study aims to develop each student's expertise in understanding the rationale for, and application of, a variety of statistical tests to the sorts of data typically obtained in psychological research.

Major selective

PSYC2010
Brain and Behaviour

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1hr lectures and 1x1hr tutorial per week **Prerequisites:** PSYC1002 **Prohibitions:** PSYC2011, PSYC2911, PSYC2910 **Assessment:** 1x2hr examination, 1x1500 word report, 1 x quiz, 1 x oral presentation/debate (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This Unit of Study examines a range of phenomena and principles in behaviour, learning and perception, abnormal psychology and their relations to underlying neural substrates. The emphasis in learning is on instrumental conditioning and the principle of reinforcement, ranging from applications of this principle to its neural substrates. Also covered are motivational aspects of behaviour, such as punishment and avoidance. The Abnormal Psychology section will focus on emotional and motivational disorders, such as anxiety and depression, addiction, sex and appetite, together with related neurochemical mechanisms and the effects of various psychopharmacological agents on these processes. A number of perceptual phenomena will be studied, such as motion detection, recognition of faces, identification of emotion, hearing and hearing loss, taste discrimination, and chronic pain. The practical classes are designed for students with an interest in clinical and therapeutic Psychology, and will allow students to design and implement a behaviour modification programme.

Textbooks
Bouton, M.E. (2007). Learning and Behavior: A Contemporary Synthesis. Sinauer.
Wickens, A. (2009) Introduction to Biopsychology, 3rd edition. Pearson.

PSYC2910
Brain and Behaviour (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Ian Johnston **Session:** Semester 1 **Classes:** 3x1hr lectures and 1x1hr tutorial per week **Prerequisites:** A mark of at least 75 in PSYC1002 **Prohibitions:** PSYC2011, PSYC2911, PSYC2010 **Assessment:** 1x2hr examination, 1x1500 word report, 1 x quiz, 1 x oral presentation/debate (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This Unit of Study focuses on the Behavioural Sciences, Neurosciences, Abnormal Psychology and the study of perception. The lecture content is the same as PSYC2011, and examines a range of phenomena and principles in behaviour, learning and perception, and their relations to underlying neural substrates. The emphasis in learning is on instrumental conditioning and the principle of reinforcement, ranging from applications of this principle to its neural substrates. Also covered are motivational aspects of behaviour, such as punishment and avoidance. The Abnormal Psychology section will focus on emotional and motivational disorders, such as anxiety and depression, addiction, sex and appetite, together with related neurochemical mechanisms and the effects of various psychopharmacological agents on these processes. A number of perceptual phenomena will be studied, such as motion detection, recognition of faces, identification of emotion, hearing and hearing loss, taste discrimination, and chronic pain. The practical classes differ from PSYC2011, as it is targeted for those who would like to learn more about the experimental study of behaviour and the neurosciences. Students will gain hands-on laboratory experience in how the principles and phenomena of behavioural neuroscience may be studied experimentally.

Textbooks

Bouton, M.E. (2007). Learning and Behavior: A Contemporary Synthesis. Sinauer.

Wickens, A. (2009) Introduction to Biopsychology, 3rd edition. Pearson.

PSYC2013
Cognitive and Social Psychology

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** PSYC1001 and PSYC1002 **Assessment:** One 2 hour exam, major assignment (1500-2000 word essay/report), minor assignment (short written practical exercise and/or tutorial quiz) (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit expands the depth and range of topics introduced in the first year lectures on Cognitive Processes, Social Psychology and Developmental Psychology. The section on Cognitive Processes focuses on current theories of memory, attention, and reasoning and discusses the methods and issues involved in investigating these processes in both healthy individuals and people with cognitive dysfunctions. The second section on Social Psychology examines salient social constructs such as impression management, and prejudice, and explores how mental processes affect social judgment and behaviour. The final section on Developmental Psychology presents and evaluates evidence about the early influences on children's social and cognitive development.

PSYC2014
Personality and Psychology Assessment 1

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** PSYC1001 and PSYC1002 **Assessment:** One 2 hour exam, major assignment (1500-2000 word essay/report), minor assignment (short written practical exercise and/or tutorial quizzes and/or class presentation) (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The main aim of this course is to introduce students to a number of influential theories in personality and intelligence. Students will be exposed to some conceptual analysis and will be expected to gain an understanding and be able to examine critically the various theories covered. Furthermore, students will be introduced to key topics in the scientific study and assessment of individual differences (Psychometrics) in personality and intelligence. The course will cover both conceptual (e.g. validity and reliability) and applied (e.g. Factor Analysis) elements of statistical psychometric inference.

Minor selective

PSYC2010
Brain and Behaviour

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1hr lectures and 1x1hr tutorial per week **Prerequisites:** PSYC1002 **Prohibitions:** PSYC2011, PSYC2911, PSYC2910 **Assessment:** 1x2hr examination, 1x1500 word report, 1 x quiz, 1 x oral presentation/debate (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This Unit of Study examines a range of phenomena and principles in behaviour, learning and perception, abnormal psychology and their relations to underlying neural substrates. PSYC2012
Statistics and Research Methods for Psych

Credit points: 6 **Session:** Semester 1 **Classes:** 3 x 1 hour lectures per week for 6 weeks (even weeks) and 2 x 1 hour lectures per week for the remaining 7 weeks (odd weeks); 2 hour tutorial per week **Prerequisites:** PSYC1001 OR PSYC1002 **Assumed knowledge:** Recommended: HSC Mathematics, any level **Assessment:** One 2 hour final exam plus a combination of in class tests, midsemester exam, and/or a written assignment (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim is to introduce students to fundamental concepts in statistics as applied to psychological research. These include summary descriptive statistics, an introduction to the principles and practice of research design, and the use of inferential statistics. Building upon this framework, the unit of study aims to develop each student's expertise in understanding the rationale for, and application of, a variety of statistical tests to the sorts of data typically obtained in psychological research.

PSYC2013
Cognitive and Social Psychology

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** PSYC1001 and PSYC1002 **Assessment:** One 2 hour exam, major assignment (1500-2000 word essay/report), minor assignment (short written practical exercise and/or tutorial quiz) (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit expands the depth and range of topics introduced in the first year lectures on Cognitive Processes, Social Psychology and Developmental Psychology. The section on Cognitive Processes focuses on current theories of memory, attention, and reasoning and discusses the methods and issues involved in investigating these processes in both healthy individuals and people with cognitive dysfunctions. The second section on Social Psychology examines salient social constructs such as impression management, and prejudice, and explores how mental processes affect social judgment and behaviour. The final section on Developmental Psychology presents and evaluates evidence about the early influences on children's social and cognitive development.

PSYC2014
Personality and Psychology Assessment 1

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** PSYC1001 and PSYC1002 **Assessment:** One 2 hour exam, major assignment (1500-2000 word essay/report), minor assignment (short written practical exercise and/or tutorial quizzes and/or class presentation) (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The main aim of this course is to introduce students to a number of influential theories in personality and intelligence. Students will be exposed to some conceptual analysis and will be expected to gain an understanding and be able to examine critically the various theories covered. Furthermore, students will be introduced to key topics in the scientific study and assessment of individual differences (Psychometrics) in personality and intelligence. The course will cover both conceptual (e.g. validity and reliability) and applied (e.g. Factor Analysis) elements of statistical psychometric inference.

3000-level units of study

Selective

PSYC3010
Advanced Statistics for Psychology

Credit points: 6 **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 2 hour tutorial per week. **Prerequisites:** PSYC2012 plus at least one other Intermediate Psychology Unit of Study from PSYC2010, PSYC2910, PSYC2011, PSYC2911, PSYC2013, PSYC2014 **Assessment:** One 2 hour exam, class tests, practical exercises (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study expands upon students' knowledge of the general linear model and its applications in the analysis of data from psychological research. The first half focuses on multiple regression and its extensions, which are used when the primary interest is to predict or explain a particular variable based on a set of other variables. The second half of the course introduces students to contrast analysis as an extension of ANOVA, which allows for more focused analysis of data where group comparisons are the primary interest.

Textbooks

Keith, Z. T. (2006). Multiple Regression and Beyond. New York: Pearson Education, Inc.

PSYC3011
Learning and Behaviour

Credit points: 6 **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 2 hour tutorial per week. **Prerequisites:** (PSYC2011 or PSYC2911 or PSYC2010 or PSYC2910) and PSYC2012 **Prohibitions:** PSYC3911 **Assessment:** One 2 hour exam, one 2000 word prac report, tutorial quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit addresses the fundamental concepts and more important research findings related to contemporary theories of associative learning in animals and humans. It examines the application of such fundamental research to issues such as drug use and food choice. It is designed to foster skills in reading primary sources in this area, and provide the opportunity for hands-on experience in carrying out a research project.

Textbooks

Bouton, M. E. (2016). Learning and Behavior: A contemporary synthesis, 2nd edition. Sunderland, MA: Sinauer.

PSYC3911
Learning and Behaviour (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** 2x 1-hr lectures and 1x 2-hr tutorial per week **Prerequisites:** (A mark of 75 or above in PSYC2X10 or PSYC2X11) and PSYC2012 **Prohibitions:** PSYC3011 **Assessment:** One 2 hour exam, one 2500 word prac report, tutorial quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit addresses the fundamental concepts and more important research findings related to contemporary theories of associative learning in animals and humans. It examines the application of such fundamental research to issues such as drug use and food choice. It is designed to foster skills in reading primary sources in this area, and provide the opportunity for hands-on experience in carrying out a research project. In the advanced unit of study students will learn techniques to model learning and behaviour, and independently apply these skills to experimental data that they have collected.

Textbooks

Bouton, M. E. (2016). Learning and Behavior: A contemporary synthesis, 2nd edition. Sunderland, MA: Sinauer.

PSYC3012
Cognition, Language and Thought

Credit points: 6 **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 2 hour practical per week. **Prerequisites:** PSYC2012 and PSYC2013 **Assessment:** One 2 hour exam, 2000 word practical report, practical exercise(s) (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit extends the theories and methods of investigating memory and attentional processes discussed in PSYC2013 to consider a number of domains of higher cognitive processing. One strand of the course will focus on the cognitive processes involved in speech perception, language comprehension, language production, and reading. The remainder of the course will deal with the cognitive processes involved in reasoning and skill acquisition. The practical program will expose students to a variety of the research methods used to investigate higher cognitive processes, develop their understanding of how these methods can be used to investigate hypotheses about mental processes and consider applications of cognitive research to real-world problems and issues.

PSYC3013
Perceptual Systems

Credit points: 6 **Session:** Semester 2 **Classes:** Two 1-hour lectures and one 2-hour tutorial per week. **Prerequisites:** (PSYC2010 or PSYC2910 or PSYC2011 or PSYC2911) and PSYC2012 **Prohibitions:** PSYC3913 **Assessment:** One 2-hour exam, one 2000 word report, tutorial quiz, group presentation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Perception poses many challenges: how do we see colour and movement? How do we perceive surfaces and materials? How does combining information from multiple senses improve our perception? This unit draws on behavioural and neurophysiological perspectives to deepen understanding of current research topics in perception. The emphasis is on how visual information is processed to accomplish functions such as perceiving a single edge, extracting the contours that form a face, or the spatial relations needed to call offside on the sports field. Students also gain conceptual tools for evaluating the empirical and theoretical worth of recent research in perception. During the tutorial component of the course students will develop a practical experiment in which they formulate and test a hypothesis. In this way students gain important research experience that gives them valuable insight into the scientific process as it exists both in professional work and in the empirical research project required for the Honours degree.

PSYC3014
Behavioural and Cognitive Neuroscience

Credit points: 6 **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 2 hour practical per week. **Prerequisites:** [(PSYC2010 or PSYC2910 or PSYC2011 or PSYC2911) and 6 credit points from (PSYC2012 or PSYC2013 or PSYC2014)] OR [(PSYC2010 or PSYC2910 or PSYC2011 or PSYC2911 or PSYC2013) and (ANAT2010 or ANAT2910) and PCOL2011] **Prohibitions:** PSYC3914 **Assessment:** One 2 hour exam, one major essay/report 2000-2500 words, tutorial quizzes and participation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study will focus on approaches to studying neurosciences incorporating molecular, pre-clinical and clinical models of brain function. These biological models of brain function will be linked with behavioural, affective and cognitive function and dysfunction. The implications of focal cognitive deficits in neurological patients for models of normal cognitive function will also be explored. Specific topics to be covered will be selected from the following areas: sensorimotor integration and the neural and molecular basis of learning and memory, attention, language, visual cognition and praxis. In addition to lectures, a practical component will cover basic neuroanatomy and neuroscientific methods. The practical component will also introduce students to experimental and neuropsychological approaches to studying the relationahip between brain and behaviour.

PSYC3914
Behavioural and Cognitive Neuroscience Adv

Credit points: 6 **Session:** Semester 2 **Classes:** Two lectures, one 1 hour tutorial and one 2 hour practical per week. **Prerequisites:** [An average mark of 75 in (PSYC2010 or PSYC2910 or PSYC2011 or PSYC2911) and 6 credit points from (PSYC2012 or PSYC2013 or PSYC2014)] OR [An average mark of 75 in (PSYC2010 or PSYC2910 or PSYC2011 or PSYC2911 or PSYC2013) and (ANAT2010 or ANAT2910) and PCOL2011] **Prohibitions:** PSYC3014 **Assessment:** One 2 hour exam (end of semester), one quiz (mid-semester), one presentation, one written assignment (lab report), attendance and participation in tutorial/practical exercises (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study will focus on approaches to studying neurosciences incorporating molecular, pre-clinical and clinical models of brain function. These biological models of brain function will be linked with behavioural, affective and cognitive function and dysfunction. Specific topics to be covered will be selected from the following areas: sensorimotor integration, and the neural and molecular basis of learning and memory, attention, language, visual cognition and praxis. The lecture material will be the same as for PSYC3014, however, the practical class is targeted for those who would like to learn more about the experimental study of behaviour and the neurosciences. The practical component of the advanced stream will cover basic neuroanatomy, histology and neuropharmacology and will introduce students to experimental approaches to studying brain-behaviour relationships.

PSYC3015
Personality and Psychology Assessment 2

Credit points: 6 **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 2 hour tutorial per week. **Prerequisites:** PSYC2012 and PSYC2014 **Assessment:** One 2 hour exam; one 2000-2500 word major essay/report, and in-class activities (e.g., tutorial presentations, in-class quizzes) (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study addresses current issues in personality, psychological testing, intelligence, and individual differences. Students are introduced to different theoretical models used in personality, intelligence, emotional intelligence, and metacognition and expected to critically evaluate these theories based on the supporting research evidence. This unit also presents different psychological testing techniques and methods.

PSYC3016
Developmental Psychology

Credit points: 6 **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 2 hour tutorial per week. **Prerequisites:** PSYC2012 and PSYC2013 **Prohibitions:** PSYC3916 **Assessment:** One 2 hour exam, 2000 word prac report, practical exercise(s) (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit examines our understanding of human psychological development, focusing on selected issues and empirical traditions within the discipline of Developmental Psychology. Students are expected to gain an understanding of the theoretical influences that have come to dominate developmental research, and students will also be introduced to a range of theoretical and research approaches in contemporary Developmental Science. These include: sense of identity, conceptual development, children's thinking, social cognition, moral reasoning and behaviour, and the role of genetic and environmental influences on development. The course will also consider applications of developmental research and theory in developmental psychopathology and in educational contexts, as well as exploring children's experience of art, literature and drama. Students are expected to gain knowledge of, and develop a critical approach to, the analysis of current research and theoretical issues in these areas.

PSYC3916
Developmental Psychology (Advanced)

Credit points: 6 **Session:** Semester 2 **Classes:** 2x 1-hr lectures and 1x 2-hr tutorial per week **Prerequisites:** (A mark of 75 or above in PSYC2013) and PSYC2012 **Prohibitions:** PSYC3016 **Assessment:** one 2 hour exam, 2000 word prac report, practical exercise(s) (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit examines our understanding of human psychological development, focusing on selected issues and empirical traditions within the discipline of Developmental Psychology. Students are expected to gain an understanding of the theoretical influences that have come to dominate developmental research, and students will also be introduced to a range of theoretical and research approaches in contemporary Developmental Science. These include: sense of identity and self-worth, conceptual development, children's thinking, social cognition, moral reasoning and behaviour, and the role of genetic and environmental influences on development. The course will also consider applications of developmental research and theory in developmental psychopathology and in educational contexts, as well as exploring children's experience of art, literature and drama. Students are expected to gain knowledge of, and develop a critical approach to, the analysis of current research and theoretical issues in these areas. In the advanced unit of study students will collect, score, and analyse the data from children participating in research projects in the School's Developmental Laboratories.

PSYC3017
Social Psychology

Credit points: 6 **Session:** Semester 1 **Classes:** Two 1-hour lectures and one 2-hour tutorial per most weeks. **Prerequisites:** PSYC2013 **Assessment:** One 2-hour exam, one 2500 word research report (consisting of both group work and individually-written components), and tutorial presentation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit continues the coverage of topics in Social Psychology begun in PSYC1001 and PSYC2013. The unit is divided into topic areas, where the emphasis is on evaluating theories and the relevant evidence. Topics areas include among others: antisocial behaviours, discrimination, the self, emotion, cultural psychology, evolutionary psychology, and existential social psychology. Tutorials provide first-hand experience of research by involving students in a small group research project based on topics covered in the lectures. The tutorials also provide an opportunity to discuss issues pertaining to each step of the research process (e.g., ethical issues that underlie social psychological research, proper practice when collecting and handling data, how to communicate research findings in written and verbal form).

PSYC3018
Abnormal Psychology

Credit points: 6 **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 2 hour tutorial per week. **Prerequisites:** (PSYC2010 or PSYC2910 or PSYC2011 or PSYC2911) and PSYC2014 **Assessment:** One 2 hour exam, one 2000 word essay, quiz, and tutorial presentation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study critically examines core issues in abnormal psychology, concerning the description, explanation and treatment of psychological disorders. The unit of study will include topics such as:

(a) Adult abnormal psychology: Anxiety and related disorders (specific phobias, panic disorder, generalised anxiety disorder, OCD, PTSD); Substance-related and Addictive disorders (drug, alcohol, gambling); Eating disorders (anorexia nervosa, bulimia nervosa); Depressive disorders, Bipolar disorders; Schizophrenia, Personality disorders.

(b) Child abnormal psychology: Attention Deficit Hyperactivity Disorder; Conduct disorder; Anxiety disorders, Depression.

Textbooks

Rieger, E. (Ed.) (2014) Abnormal Psychology: Leading researcher perspectives. Sydney: McGraw-Hill Education. (3rd Ed).

PSYC3020
Applied Psychology

Credit points: 6 **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 2 hour tutorial per week **Prerequisites:** 12 credit points of junior psychology and 12 credit points in Intermediate Psychology **Prohibitions:** PSYC3019 **Assessment:** One 2 hour examination (50%), one 2500 word written assignment (30%), class quizzes (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this unit is to introduce students to various ways in which psychological theory and research can be applied in the real world. In particular, this unit will focus on Health Psychology, Forensic Psychology, and Organisational Psychology. The Health Psychology component of this course may include investigation into why we engage in risky health behaviours including smoking, overeating and alcohol use; inequalities in health including Aboriginal and Torres Strait Island health; dealing with chronic illness including death and dying, and survivorship. The Forensic Psychology component of the course may include investigation into lie detection, criminal offenders, victims of crime, and eyewitness memory. The Organisational Psychology component of the course may focus on personnel selection, training in organisations, performance measurement, workplace motivation, leadership and aspects of positive psychology.

HPSC3023
Psychology and Psychiatry: History and Phil

Credit points: 6 **Teacher/Coordinator:** A/Prof Hans Pols and Dr Fiona Hibberd **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 2 hour tutorial per week. **Prerequisites:** (12 credit points of Intermediate HPSC units) OR (Credit or greater in an HPSC Intermediate unit) OR (12 Intermediate credit points in Psychology units) **Assumed knowledge:** HPSC2100 and HPSC2101 **Assessment:** 1x 2500wd essay (45%) and 1x2hr exam (45%) class participation (10%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Across the unit we examine one of the most interesting aspects of the history and philosophy of science. viz., the scientific practices and assumptions involved in making human beings an object of study. We will examine the ways in which psychologists and psychiatrists have investigated human nature, the kinds of experimental approaches they have developed to that end, the major controversies in this field, and the basic philosophical assumptions that have been made in the sciences of human nature. We investigate the developments of psychological theories and investigative methods as well as the development of psychiatric theory, treatment methods, and institutions.

Biochemistry and Molecular Biology

Study in Biochemistry and Molecular Biology is taught within the School of Life and Environmental Sciences in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

Students who complete a major in Biochemistry and Molecular Biology will gain a thorough understanding of the chemistry of life and the molecules that regulate living processes, with an emphasis on how these molecules pass information and energy within and between cells, and from generation to generation, and how these processes impact form and function. This major is ideally suited for students who wish to study fundamental molecular processes that underlie normal physiology and disease in all kingdoms of life.

Requirements for completion

A major in Biochemistry and Molecular Biology requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level core units
(iii)18 credit points of 3000-level core units with project unit
(iv)6 credit points of 3000-level selective units

A minor in Biochemistry and Molecular Biology is available and articulates to this major.

First year

Core: CHEM1XX1 and BIOL1XX7.

Second year

Core: BCMB2X01 (Medical science students enrol in MEDS2003 instead) and BCMB2X02.

BCMB2X01/MEDS2003 will provide students with a solid foundation in molecular biology, human metabolism and metabolic biochemistry. BCMB2X02 will enable students to understand how communication, transport and response to stimuli is mediated by proteins and biomolecular interaction networks within cells.

Third year

BCHM3X81, BCHM3X71, BCMB3001 and 6 credit points from: BCHM3X72, BCHM3X92, BCHM3X82, PCOL3X12.

In your third year you must take at least one designated project unit. 3000-level units will focus on the molecular basis of key biological processes such as gene regulation, advanced metabolic biochemistry and causes of disease, as well as tools and techniques that can be harnessed to modulate these processes including protein engineering and inhibitor development.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Biochemistry and Molecular Biology: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Biochemistry and Molecular Biology will be able to:

1. Understand the basic chemical and physical principles governing the structure and function of biomolecules.
2. Understand how molecules regulate living processes.
3. Appreciate the relationships between biomolecules, cells and tissues in health and disease
4. Design a scientific experimental plan, including: development of hypotheses an aims, identification of controls, and choice of relevant measurable outcomes.
5. Understand the principles underlying and the applications of current techniques and model systems commonly used in biochemistry and molecular biology.
6. Acquire the technical expertise to use those techniques and carry out laboratory-based experiments in the molecular life sciences.
7. Collate, analyse and critically interpret data.
8. Carry out comprehensive literature searches and write a scientific review.
9. Critically evaluate the literature, ranging from popular science journalism to more in-depth research articles.
10. Solve biological, agricultural and medical problems using a molecular approach.
11. Communicate to the wider community the implications and impacts of the ever increasing number of breakthroughs and discoveries in the life and medical sciences that impact on modern life.
12. Appreciate ethics (from scientific record keeping and reporting to bioethics) and issues associated with safe working conditions (safe working procedures, risk assessments, evaluation of chemical safety).

Biochemistry and Molecular Biology

Unit of study	*Credit points*	*A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition*	*Session*
BIOCHEMISTRY AND MOLECULAR BIOLOGY Advanced coursework and projects will be available in 2020 for students who complete this major.			
Biochemistry and Molecular Biology major A major in Biochemistry and Molecular Biology requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 12 credit points of 2000-level core units (iii) 18 credit points of 3000-level core units with project unit (iv) 6 credit points of 3000-level selective units			
Biochemistry and Molecular Biology minor A minor in Biochemistry and Molecular Biology requires 36 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 12 credit points of 2000-level core units (iii) 6 credit points of 3000-level selective units without project (iv) 6 credit points of 3000-level of minor project selective units			
Units of study			
The units of study are listed below.			
1000-level units of study			
Core			
CHEM1011 **Fundamentals of Chemistry 1A**	6	**A** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 *Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1
CHEM1111 **Chemistry 1A**	6	**A** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 *Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1 Semester 2 Summer Main
CHEM1911 **Chemistry 1A (Advanced)**	6	**A** 80 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 *Note: Department permission required for enrolment*	Semester 1
CHEM1991 **Chemistry 1A (Special Studies Program)**	6	**A** 90 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 *Note: Department permission required for enrolment*	Semester 1
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2
2000-level units of study			
Core			
BCMB2001 **Biochemistry and Molecular Biology**	6	**P** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901	Semester 1

Unit of study	*Credit points*	*A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition*	*Session*
BCMB2901 **Biochemistry and Molecular Biology (Advanced)**	6	**P** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2001	Semester 1
BCMB2002 **Proteins in Cells**	6	**P** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **N** BCHM2071 or BCHM2971 or BCMB2902	Semester 2
BCMB2902 **Proteins in Cells (Advanced)**	6	**P** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **N** BCHM2071 or BCHM2971 or BCMB2002	Semester 2
MEDS2003 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).			
3000-level units of study			
Major core with project units			
BCHM3081 **Mol Biology and Biochemistry-Proteins**	6	**P** [12cp from (BCHM2X71 or BCHM2X72 or BCMB2X01 or BCMB2X02 or MBLG2X71)] OR [BMED2401 and BMED2405 and 6cp from (BCHM2X71 or BCMB2X02 or MBLG2X71)] **N** BCHM3981 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
BCHM3981 **Mol Biology and Biochem-Proteins (Adv)**	6	**P** [An average mark of 75 in 12cp from (BCHM2X71 or BCHM2X72 or BCMB2X01 or BCMB2X02 or MBLG2X71)] OR [BMED2401 and a mark of 75 or above in BMED2405 and a mark of 75 or above in 6cp from (BCHM2X71 or BCMB2X02 or MBLG2X71)] **N** BCHM3081 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1

Biology

Biological Science is offered by the School of Life and Environmental Sciences in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

Biology is the study of living organisms, whether single-celled or multi-cellular, as individuals or in groups, and their interaction with their environment and with each other. It is concerned with all levels of biological complexity from the molecular level through to cells and tissues, to organisms, their populations and the ecosystems of which they form part. Biologists seek to understand the structure and function of the living world. Biologists investigate how organisms access and use energy and the processes by which they develop and replicate. Evolution provides an overarching framework for understanding changes that have occurred in groups of organisms over time.

The major will initially cover fundamental concepts in biology, such as life, the structure and function of molecules, cells and organisms and processes including metabolism and respiration.

As a broad and interconnecting major, it is characterised by integrating 'biology' sub-disciplines which are distinguished by:

- their subject matter
- the scale of the subject matter
- the suite of tools used for investigation.

This major has been structured in this way because biology is now moving into a phase of rapid expansion and discovery that places biologists at the forefront of current scientific research.

Requirements for completion

A major in Biology requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)6 credit points of 200-level experimental design units
(iii)6 credit points of 2000-level taxonomy units
(iv)6 credit points of 2000-level breadth units
(v)6 credit points of 3000-level field units
(vi)12 credit points of 3000-level selective units

A minor in Biology and a minor in Plant Science are available and articulate to this major.

First year

Core: BIOL1XX6 and BIOL1XX7.

Second year

BIOL2X22 and 6 credit points from: BIOL2X30 or BIOL2X21, and 6 credit points from: ANAT2009, IMMU2101, GEGE2X01, MICR2X31, BIOL2X21, BIOL2X30, BIOL2032, BIOL2X29, BIOL2033, BIOL2031, IMMU2X11.

Third year

6 credit points from selective field work units, and 12 credit points from a large selection of Biology units.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework

The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Biology: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Biology will be able to:

1. Demonstrate a coherent understanding of biology by articulating the methods of biology, and explaining why current biological knowledge is both contestable and testable through further inquiry.
2. Demonstrate a coherent understanding of biology by explaining the role and relevance of biology in society.
3. Recognise that biological knowledge has been acquired by curiosity and creativity, and demonstrate creativity in thinking and problem solving.
4. Recognise and appreciate the significant role of biodiversity in sustaining life on our planet.
5. Exhibit depth and breadth of biological knowledge by demonstrating well-developed understanding of identified core concepts in biology.
6. Exhibit depth and breadth of biological knowledge by demonstrating that these core concepts have interdisciplinary connections with other disciplines.
7. Gather, synthesise and critically evaluate information about biological phenomena from a range of sources.
8. Critically analyse observations of biological phenomena by creating and developing models and/or proposing and testing hypotheses.
9. Design and conduct field, laboratory based, or virtual biological experiments.
10. Select and apply practical and/or theoretical techniques.
11. Collect, accurately record, interpret, analyse, and draw conclusions from biological data.
12. Effectively synthesise and communicate biological results using a range of modes (including oral, written, and visual) for a variety of purposes and audiences.
13. Account for their own learning and biological work by being independent and self-directed learners.
14. Work effectively, responsibly and safely in individual and peer or team contexts.
15. Demonstrate knowledge of the regulatory frameworks and ethical principles relevant to their sub-disciplinary area within biology, and apply these in practice.

Biology

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session

BIOLOGY

Advanced coursework and projects will be available in 2020 for students who complete this major.

Biology major

A major in Biology requires 48 credit points from this table including:

(i) 12 credit points of 1000-level core units

(ii) 6 credit points of 2000-level experimental design units

(iii) 6 credit points of 2000-level taxonomy units

(iv) 6 credit points of 2000-level breadth units

(v) 6 credit points of 3000-level field units

(vi) 12 credit points of 3000-level selective units

Biology minor*

A minor in Biology requires 36 credit points from this table including:

(i) 12 credit points of 1000-level core units

(ii) 6 credit points of 2000-level experimental design units

(iii) 6 credit points of 2000-level taxonomy units

(iv) 6 credit points of 2000-level breadth units

(v) 6 credit points of 3000-selective units

*The Plant Sciences minor also articulates to the Biology major

Units of study

The units of study are listed below.

1000-level units of study

Core

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
BIOL1006 **Life and Evolution**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996	Semester 1 Summer Main
BIOL1906 **Life and Evolution (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent. **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 *Note: Department permission required for enrolment*	Semester 1
BIOL1996 **Life and Evolution (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 *Note: Department permission required for enrolment*	Semester 1
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2

2000-level units of study

Experimental design units

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
BIOL2022 **Biology Experimental Design and Analysis**	6	**A** BIOL1XXX or MBLG1XXX **P** 6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5) **N** BIOL2922 or BIOL3006 or BIOL3906	Semester 2
BIOL2922 **Biol Experimental Design and Analysis Adv**	6	**A** BIOL1XXX or MBLG1XXX **P** [An annual average mark of at least 70 in the previous year] and [6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5)] **N** BIOL2022 or BIOL3006 or BIOL3906	Semester 2

Taxonomy units

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
BIOL2030 **Botany**	6	**A** Knowledge of concepts and skills in BIOL1XX6. **N** BIOL2023 or BIOL2923 or AGEN2001 or PLNT2001 or PLNT2901 or PLNT2002 or PLNT2902 or PLNT2003 or PLNT2903 or AGEN2005 or BIOL2930	Semester 1

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
BIOL2930 **Botany (Advanced)**	6	**A** Knowledge of concepts and skills in BIOL1XX6. **P** Annual average mark of at least 70 in previous year **N** BIOL2023 or BIOL2923 or AGEN2001 or PLNT2001 or PLNT2901 or PLNT2002 or PLNT2902 or PLNT2003 or PLNT2903 or AGEN2005 or BIOL2030	Semester 1
BIOL2021 **Zoology**	6	**A** BIOL1XXX or MBLG1XXX **N** BIOL2921 or BIOL2011 or BIOL2911 or BIOL2012 or BIOL2912	Semester 1
BIOL2921 **Zoology (Advanced)**	6	**A** BIOL1XXX or MBLG1XXX **P** Annual average mark of at least 70 in previous year **N** BIOL2021 or BIOL2011 or BIOL2911 or BIOL2012 or BIOL2912	Semester 1
Breadth units			
ANAT2009 **Comparative Primate Anatomy**	6	**A** BIOL1XX3 OR BIOL1XX8 **N** ANAT2002	Semester 2
IMMU2101 **Introductory Immunology**	6	**A** CHEM1XX1 **P** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **N** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.*	Semester 1
GEGE2001 **Genetics and Genomics**	6	**A** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **N** GENE2002 or MBLG2972 or GEGE2901 or MBLG2072	Semester 1 Semester 2
GEGE2901 **Genetics and Genomics (Advanced)**	6	**A** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **P** Annual average mark of at least 70 **N** GENE2002 or MBLG2072 or GEGE2001 or MBLG2972	Semester 1 Semester 2
MICR2031 **Microbiology**	6	**A** Fundamental concepts of microorganisms, biomolecules and ecosystems; CHEM1XX1 **N** MICR2021 or MICR2921 or MICR2024 or MICR2931	Semester 1
MICR2931 **Microbiology (Advanced)**	6	**A** Fundamental concepts of microorganisms, biomolecules and ecosystems; CHEM1XX1 **P** A mark of 70 or above in 6cp from (BIOL1XXX or MBLG1XXX) **N** MICR2021 or MICR2921 or MICR2024 or MICR2031	Semester 1
BIOL2021 **Zoology**	6	**A** BIOL1XXX or MBLG1XXX **N** BIOL2921 or BIOL2011 or BIOL2911 or BIOL2012 or BIOL2912	Semester 1
BIOL2921 **Zoology (Advanced)**	6	**A** BIOL1XXX or MBLG1XXX **P** Annual average mark of at least 70 in previous year **N** BIOL2021 or BIOL2011 or BIOL2911 or BIOL2012 or BIOL2912	Semester 1
BIOL2030 **Botany**	6	**A** Knowledge of concepts and skills in BIOL1XX6. **N** BIOL2023 or BIOL2923 or AGEN2001 or PLNT2001 or PLNT2901 or PLNT2002 or PLNT2902 or PLNT2003 or PLNT2903 or AGEN2005 or BIOL2930	Semester 1
BIOL2930 **Botany (Advanced)**	6	**A** Knowledge of concepts and skills in BIOL1XX6. **P** Annual average mark of at least 70 in previous year **N** BIOL2023 or BIOL2923 or AGEN2001 or PLNT2001 or PLNT2901 or PLNT2002 or PLNT2902 or PLNT2003 or PLNT2903 or AGEN2005 or BIOL2030	Semester 1
BIOL2032 **Australian Wildlife Biology**	6	**N** ANSC2005	Semester 2
BIOL2029 **Cells**	6	**P** BIOL1XX7 or MBLG1XXX **N** BIOL2016 or BIOL2916 or BIOL2929	Semester 1
BIOL2929 **Cells (Advanced)**	6	**P** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) **N** BIOL2016 or BIOL2916 orBIOL2029	Semester 1
BIOL2033 **Entomology**	6	**N** ENTO2001	Semester 2
BIOL2031 **Plants and Environment**	6	**A** Knowledge of concepts and skills in BIOL1XX6. **N** AGEN2005 or BIOL3043 or BIOL3943 or BIOL2931	Semester 2
BIOL2931 **Plants and Environment (Advanced)**	6	**A** Knowledge of concepts and skills in BIOL1XX6. **P** Annual average mark of at least 70 in previous year **N** AGEN2005 or BIOL3043 or BIOL3943 or BIOL2031	Semester 2
IMMU2X11 to be deveoped for offering in 2019.			
3000-level units of study			
Field units			
BIOL3007 **Ecology**	6	**P** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3907	Semester 2
BIOL3907 **Ecology (Advanced)**	6	**P** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3007	Semester 2
BIOL3008 **Marine Field Ecology** *This unit of study is not available in 2018*	6	**P** 12 credit points of Intermediate BIOL, or (6 credit points of Intermediate BIOL and (MBLG2072 or MBLG2972)) **N** BIOL3908 or BIOL2028 or BIOL2928 *Note: Department permission required for enrolment* *This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.*	Intensive July

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
BIOL3908 **Marine Field Ecology (Advanced)** *This unit of study is not available in 2018*	6	**P** Distinction average in either- 12cp Intermediate BIOL, or (6cp Intermediate BIOL and(MBLG2072 or MBLG2972)) **N** BIOL3008 or BIOL2028 or BIOL2928 *Note: Department permission required for enrolment* *This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.*	Intensive July
BIOL3009 **Terrestrial Field Ecology**	6	**P** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3909 or BIOL2009 or BIOL2909 *Note: Department permission required for enrolment* *This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.*	Intensive July
BIOL3909 **Terrestrial Field Ecology (Advanced)**	6	**P** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3009 or BIOL2009 or BIOL2909 *Note: Department permission required for enrolment* *This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered. This unit is not offered from 2019.*	Intensive July
BIOL3010 **Tropical Wildlife Biology** *This unit of study is not available in 2018*	6	**P** 12 credit points of Intermediate BIOL, or (6 credit points of Intermediate BIOL and (MBLG2072 or MBLG2972)) **N** BIOL3910 or BIOL2010 or BIOL2910 *Note: Department permission required for enrolment* *This unit runs in February. It cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2017, 2019) but students may apply for entry into an alternative Intermediate field unit in EVEN years.*	Intensive February
BIOL3910 **Tropical Wildlife Biology (Adv)** *This unit of study is not available in 2018*	6	**P** Distinction average in either- 12cp Intermediate BIOL, or (6cp Intermediate BIOL and(MBLG2072 or MBLG2972)) **N** BIOL3010 or BIOL2010 or BIOL2910 *Note: Department permission required for enrolment* *This unit runs in February. It cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2017, 2019) but students may apply for entry into an alternative Intermediate field unit in EVEN years.*	Intensive February
BIOL3016 **Coral Reef Biology**	6	**P** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3916 or BIOL2020 or BIOL2920 or NTMP3001 *Note: Department permission required for enrolment* *This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.*	Intensive July
BIOL3916 **Coral Reef Biology (Advanced)**	6	**P** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3016 or BIOL2020 or BIOL2920 or NTMP3001 *Note: Department permission required for enrolment* *This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.*	Intensive July
Major selective units			
BIOL3013 **Marine Biology**	6	**P** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3913	Semester 2
BIOL3913 **Marine Biology (Advanced)**	6	**P** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3013	Semester 2
BIOL3018 **Gene Technology and Genomics**	6	**P** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BCMB2XXX or QBIO2001 or IMMU2XXX or BIOL2XXX) **N** BIOL3918	Semester 1
BIOL3918 **Gene Technology and Genomics (Adv)**	6	**P** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BCMB2XXX or QBIO2001 or IMMU2XXX or BIOL2XXX)] **N** BIOL3018	Semester 1
BIOL3026 **Developmental Genetics**	6	**P** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX) **N** BIOL3926	Semester 2
BIOL3926 **Developmental Genetics (Advanced)**	6	**P** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX)] **N** BIOL3929 or BIOL3026	Semester 2

BIOL3918 **Gene Technology and Genomics (Adv)**	6	**P** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BCMB2XXX or QBIO2001 or IMMU2XXX or BIOL2XXX)] **N** BIOL3018	Semester 1
BIOL3026 **Developmental Genetics**	6	**P** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX) **N** BIOL3926	Semester 2
BIOL3926 **Developmental Genetics (Advanced)**	6	**P** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX)] **N** BIOL3929 or BIOL3026	Semester 2
BIOL3045 **Animal Ecological Physiology**	6	**P** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3945 or BIOL3011 or BIOL3911 or BIOL3012 or BIOL3912	Semester 1
BIOL3945 **Animal Ecological Physiology (Advanced)**	6	**P** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3045 or BIOL3011 or BIOL3911 or BIOL3012 or BIOL3912	Semester 1
BIOL3046 **Animal Behaviour**	6	**P** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3946 or BIOL3025 or BIOL3925	Semester 1
BIOL3946 **Animal Behaviour (Advanced)**	6	**P** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3046 or BIOL3025 or BIOL3925 *Note: Department permission required for enrolment*	Semester 1

BIOL3029, BIOL3033, BIOL3020 to be developed for offering in 2019.

Plant Science Minor

A minor in Plant Science requires 36 credit points from this table including:

(i) 12 credit points of 1000-level core units

(ii) 12 credit points of 2000-level core units

(iii) 6 credit points of 3000-level core units

(iv) 6 credit points of 3000-level selective units

Units of Study

The units of study are listed below.

1000-level units of study

Core

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
BIOL1006 **Life and Evolution**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996	Semester 1 Summer Main
BIOL1906 **Life and Evolution (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent. **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 *Note: Department permission required for enrolment*	Semester 1
BIOL1996 **Life and Evolution (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 *Note: Department permission required for enrolment*	Semester 1
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2

BIOL3029 to be developed for offering in 2019.			

Biology

BIOLOGY

Advanced coursework and projects will be available in 2020 for students who complete this major.

Biology major

A major in Biology requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 6 credit points of 2000-level experimental design units (iii) 6 credit points of 2000-level taxonomy units (iv) 6 credit points of 2000-level breadth units (v) 6 credit points of 3000-level field units(vi) 12 credit points of 3000-level selective units

Biology minor*

A minor in Biology requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 6 credit points of 2000-level experimental design units (iii) 6 credit points of 2000-level taxonomy units (iv) 6 credit points of 2000-level breadth units (v) 6 credit points of 3000-selective units *The Plant Sciences minor also articulates to the Biology major

Units of study

The units of study are listed below.

1000-level units of study

Core

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

Please see unit outline on LMS

BIOL1906
Life and Evolution (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1 **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 **Assumed knowledge:** 85 or above in HSC Biology or equivalent. **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals.

Life and Evolution (Advanced) has the same overall structure as BIOL1006 but material is discussed in greater detail and at a more advanced level. Students enrolled in BIOL1906 participate in a research project with a focus on developing skills in critical evaluation, experimental design, data analysis and communication.

Textbooks
Please see unit outline on LMS

BIOL1996
Life and Evolution (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Mark de Bruyn **Session:** Semester 1 **Classes:** Lectures as per BIOL1906; one 3-hour practical per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), practical reports (25%), seminar presentation (15%), lab note book (5%), prelaboratory quizzes (5%) **Practical field work:** null **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, and proteins) to whole ecosystems in which myriad species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. The practical work syllabus for BIOL1996 is different from that of BIOL1906 (Advanced) and consists of a special project-based laboratory.

Textbooks
Please see unit outline on LMS
Bromham, L 2015, An Introduction to Molecular Evolution and Phylogenetics, Oxford University Press.

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed**

knowledge: HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

2000-level units of study

Experimental design units

BIOL2022
Biology Experimental Design and Analysis

Credit points: 6 **Teacher/Coordinator:** A/Prof Clare McArthur **Session:** Semester 2 **Classes:** Two lectures per week and one 3-hour practical per week. **Prerequisites:** 6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5) **Prohibitions:** BIOL2922 or BIOL3006 or BIOL3906 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** Practical reports/presentations (60%), one 2-hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides foundational skills essential for doing research in biology and for critically judging the research of others. We consider how biology is practiced as a quantitative, experimental and theoretical science. We focus on the underlying principles and practical skills you need to explore questions and test hypotheses, particularly where background variation (error) is inherently high. In so doing, the unit provides you with an understanding of how biological research is designed, analysed and interpreted using statistics. Lectures focus on sound experimental and statistical principles, using examples in ecology and other fields of biology to demonstrate concepts. In the practical sessions, you will design and perform, analyse (using appropriate statistical tools) and interpret your own experiments to answer research questions in topics relevant to your particular interest. This unit of study provides a suitable foundation for senior biology units of study.

Textbooks
Required: Ruxton, G. and Colegrave, N. 2016. Experimental design for the life sciences. 4th Ed. Oxford
University Press
Recommended: Quinn, G. P. and M. J. Keough. 2002. Experimental Design and Data Analysis for Biologists. 1st Ed. Cambridge University Press, Cambridge.
Recommended: Field, A. 2013. Discovering statistics using SPSS. 4th Ed. SAGE Publications, London.

BIOL2922
Biol Experimental Design and Analysis Adv

Credit points: 6 **Teacher/Coordinator:** A/Prof Clare McArthur **Session:** Semester 2 **Classes:** Two lectures per week and one 3-hour practical per week. **Prerequisites:** [An annual average mark of at least 70 in the previous year] and [6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5)] **Prohibitions:** BIOL2022 or BIOL3006 or BIOL3906 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** Practical reports/presentations (60%), one 2-hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The content of BIOL2922 will be based on BIOL2022 but qualified students will participate in alternative components at a more advanced level. The content and nature of these components may vary from year to year.

BIOL2030
Botany

Credit points: 6 **Teacher/Coordinator:** A/Prof Rosanne Quinnell **Session:** Semester 1 **Classes:** Two 1-hour lecture/week; one 3-hour practical/week; a series of five 1-hour tutorial/week in the latter part of the semester **Prohibitions:** BIOL2023 or BIOL2923 or AGEN2001 or PLNT2001 or PLNT2901 or PLNT2002 or PLNT2902 or PLNT2003 or PLNT2903 or AGEN2005 or BIOL2930 **Assumed knowledge:** Knowledge of concepts and skills in BIOL1XX6. **Assessment:** Online quizzes (15%), anatomy project report and presentation (20%), practical exam (30%), theory exam (35%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

We are surrounded by plants, and rely on them every day for our wellbeing. Ecologists use botanical knowledge to help manage marine and terrestrial ecosystems, and public health and land management professionals depend on their understanding of plant science to help solve environmental problems and to enhance biosecurity. Botany aims to increase and improve our supply of medicines, foods, and other plant products, and is critical for anyone interested in contributing to the sustainable future of our planet. In this unit, you will explore the origins, diversity, and global significance of plants. You will gain insights into the micro- and macro-evolutionary processes and patterns behind how plants moved from aquatic ecosystems to terrestrial ecosystems. Integrated lectures, practical classes, and extensive online resources will allow you to develop and integrate practical skills and conceptual frame works in plant identification, plant physiology, plant anatomy, and plant morphology. Lectures and practical classes are augmented by self-instructional audio-visual sessions and by small group discussions to foster a sense of self-reliance and collaboration. Successful completion of BIOL2023 will allow you to contribute to a range of disciplines including: ecology, bioinformatics, molecular and cell biology, genetics and biotechnology, environmental law, agriculture, education and the arts.

BIOL2021
Zoology

Credit points: 6 **Teacher/Coordinator:** A/Prof Mathew Crowther **Session:** Semester 1 **Classes:** Two lectures and one 3-hour practical per week. **Prohibitions:** BIOL2921 or BIOL2011 or BIOL2911 or BIOL2012 or BIOL2912 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** One 2-hour theory exam (50%), Lab book (15%), Invertebrate Collection (20%), Oral presentation (15%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides an overview of the functional and phylogenetic diversity of invertebrate and vertebrate animals. The material is presented within the conceptual framework of evolution, the foundation of biology. Lectures explore the diversity of major functional systems and behaviour in the context of environmental challenges and the ecological roles of different animal groups. Laboratory classes include dissections and demonstrations of the functional anatomy of invertebrates and vertebrates, as well as experiments. This unit of study provides a suitable foundation for senior biology units of study.

Breadth units

ANAT2009
Comparative Primate Anatomy

Credit points: 6 **Teacher/Coordinator:** Dr Denise Donlon **Session:** Semester 2 **Classes:** Two 1-hour lectures **Prohibitions:** ANAT2002 **Assumed knowledge:** BIOL1XX3 OR BIOL1XX8 **Assessment:** Two quizzes (10%), theory exam (60%), practical exam (30%). **Practical field work:** One 2-hour practical per week **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of student covers the musculo-skeletal anatomy of the human body with particular emphasis on human evolution and comparisons with apes and fossil hominids. The topics covered include the versatility of the human hand, in manipulation and locomotion, bipedalism, climbing and brachiation in apes, and the change in pelvic anatomy associated with bipedalism and obstetric consequences.

IMMU2101
Introductory Immunology

Credit points: 6 **Teacher/Coordinator:** Dr Umaimainthan Palendira **Session:** Semester 1 **Classes:** Two 1 hour lectures per week, one 2-3 hour tutorial or practical per week. **Prerequisites:** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **Prohibitions:** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XX1 **Assessment:** Progressive assessment: includes written, practical, oral and online based assessments (50%); Formal assessment: one 2 hour examination (50%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.

Our immune system not only protects us from viruses, bacteria, and parasites, it can prevent the growth of tumours. Sometimes our immune system can be the cause of diseases like multiple sclerosis, Type 1 diabetes and rheumatoid arthritis. If you are interested in studying how our immune system works to keep us alive, then Introductory Immunology is for you. This unit of study will provide an overview of the immune system and the essential features of immune responses. You will be treated to a lecture course delivered by cutting edge immunologists that begins with a study of immunology as a basic research science. This includes an introduction to the nature of the cells and molecules involved in the immune response. We build on this foundation by introducing the immunological principles underlying the eradication of infectious diseases, successful vaccination strategies, organ transplantation, combatting autoimmune diseases and treating cancer. The integrated tutorials will build on the lecture material as well as provide you with instructions on how to successfully locate and critically analyse scientific literature. The practical sessions will further illustrate particular concepts introduced in the lecture program and provide you with valuable exposure to a variety of very important immunological techniques.

Abul K Abbas, Andrew H Lichtman and Shiv Pillai. Basic Immunology: Functions and Disorders of the Immune System. 5th Ed. 2016

GEGE2001
Genetics and Genomics

Credit points: 6 **Teacher/Coordinator:** Prof Peter Sharp **Session:** Semester 1, Semester 2 **Classes:** Two lectures; one 3-hour practical session; and one peer assisted study session on a weekly basis **Prohibitions:** GENE2002 or MBLG2972 or GEGE2901 or MBLG2072 **Assumed knowledge:** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **Assessment:** Assignments, quizzes, presentation, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

The era of genomics has revolutionised our approach to biology. Recent breakthroughs in genetics and genomic technologies have led to improvements in human and animal health, in breeding and selection of economically important organisms and in the curation and care of wild species and complex ecosystems. In this unit, students will investigate/describe ways in which modern biology uses genetics and genomics to study life, from the unicellular through to complex multicellular organisms and their interactions in communities and ecosystems. This unit includes a solid foundation in classical Mendelian genetics and its extensions into quantitative and population genetics. It also examines how our ability to sequence whole genomes has changed our capacities and our understanding of biology. Links between DNA, phenotype and the performance of organisms and ecosystems will be highlighted. The unit will examine the profound insights that modern molecular techniques have enabled in the fields of developmental biology, gene regulation, population genetics and molecular evolution.

GEGE2901
Genetics and Genomics (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Peter Sharp **Session:** Semester 1, Semester 2 **Classes:** Two lectures; one 3-hour practical session; and one peer assisted study session on a weekly basis **Prerequisites:** Annual average mark of at least 70 **Prohibitions:** GENE2002 or MBLG2072 or GEGE2001 or MBLG2972 **Assumed knowledge:** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **Assessment:** Assignments, quizzes, presentation, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

The era of genomics has revolutionised our approach to biology. Recent breakthroughs in genetics and genomic technologies have led to improvements in human and animal health, in breeding and selection of economically important organisms and in the curation and care of wild species and complex ecosystems. In this unit, students will investigate/describe ways in which modern biology uses genetics and genomics to study life, from the unicellular through to complex multicellular organisms and their interactions in communities and ecosystems. This unit includes a solid foundation in classical Mendelian genetics and its extensions into quantitative and population genetics. Links between DNA, phenotype and the performance of organisms and ecosystems will be highlighted. The unit will examine the profound insights that modern molecular techniques have enabled in the fields of developmental biology, gene regulation, population genetics and molecular evolution. The Advanced mode of Genetics and Genomics will provide you with challenge and a higher level of academic rigour. You will have the opportunity to plan and carry out a project that will develop your skills in contemporary genetics/molecular biology techniques and will provide you with a greater depth of disciplinary understanding. The Advanced mode will culminate in a written report and in an oral presentation where you will discuss a recent breakthrough that has been enabled by the use of modern genetics and genomics technologies. This is a unit for anyone wanting to better understand the how genetics has shaped the earth and how it will shape the future.

MICR2031
Microbiology

Credit points: 6 **Teacher/Coordinator:** Prof Michael Kertesz **Session:** Semester 1 **Classes:** Two 1-hour lectures per week; one 3-hour practical per week; three tutorial sessions **Prohibitions:** MICR2021 or MICR2921 or MICR2024 or MICR2931 **Assumed knowledge:** Fundamental concepts of microorganisms, biomolecules and ecosystems; CHEM1XX1 **Assessment:** Theory 60%: one 45-minute mid-semester theory exam (20%) and one 1.5-hour theory exam (40%); Practical 40%: one written assignment (15%), one group oral presentation (10%) and online quizzes (15%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Microbes are essential for every aspect of life on the planet. Microbes in the human gut control our digestion and our immune system, microbes in the soil are required for plant growth, microbes in the ocean fix more carbon dioxide than all the earth's trees. This unit of study will investigate the diversity and activity of microorganisms - viruses, bacteria, fungi, algae and protozoa - and look at how they interact with us, each other, plants and animals. You will examine how microbes underpin healthy ecosystems through nutrient cycling and biodegradation, their use industrially in biotechnology and food production, and their ability to cause harm, producing disease, poisoning, pollution and spoilage. Aspects of microbial ecology, nutrition, physiology and genetics will also be introduced. This unit of study will provide you with the breadth of knowledge and skills needed for further studies of microbiology, and will provide the fundamental understanding of microbes that you will require if you specialise in related fields such as biochemistry, molecular biology, immunology, agriculture, nutrition and food sciences, bioengineering and biotechnology, ecology or science education.

BIOL2032
Australian Wildlife Biology

Credit points: 6 **Teacher/Coordinator:** Dr Catherine Herbert **Session:** Semester 2 **Classes:** Three lectures; one 2-hour tutorial or practical session each week **Prohibitions:** ANSC2005 **Assessment:** Quizzes, presentation assignment, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Australia is home to a broad diversity of vertebrate wildlife species, many of which are unique to the Australian environment, having evolved in isolation from other large land-masses for millions of years. This unit examines the diversity of Australian reptiles, amphibians, birds and mammals (including all three mammalian lineages; monotremes, marsupials and eutherian mammals). We focus on the unique anatomical, physiological and behavioural adaptations that have enabled our wildlife to survive and thrive within varied Australian ecosystems. We also examine how the uniqueness of our wildlife is also one of its greatest challenges, being naÂ¿ve to the new threats that are present in our rapidly changing environments. At the end of this unit you should have an appreciation of the diversity and uniqueness of Australian wildlife; be able to determine the links between form and function in wildlife and understand the significance of these functional adaptations in relation to ecological challenges. You will also have an understanding of the interactions between humans and wildlife, and how the unique characteristics of our wildlife also make them vulnerable to threats within the rapidly changing Australian environment. Students will also develop enhanced scientific literacy and communication skills through tutorial activities and assessment tasks.

Textbooks

No text book requirements. Recommended reading throughout semester provided by each lecture relevant to their class content. Relevant scientific papers will be uploaded to LMS

BIOL2029
Cells

Credit points: 6 **Teacher/Coordinator:** Dr Murray Thomson **Session:** Semester 1 **Classes:** Two 1-hour lectures; one 4-hour practical per week **Prerequisites:** BIOL1XX7 or MBLG1XXX **Prohibitions:** BIOL2016 or BIOL2916 or BIOL2929 **Assessment:** 3-hour theory exam (60%), quizzes (lectures and laboratory work) (10%), marks for laboratory work (10%), report (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Cell Biology is one of the most dynamic areas in science today. During development, a single cell zygote must undergo numerous divisions to become a multi-cellular organism. In both plants and animals, cell to cell communication and coordination of the cell cycle, as well as cellular division and migration, are vital for normal development. Stem cells follow specialisation pathways to become increasingly committed to differentiation, and transformation into specialised cells that group together to form the variety of tissues that make up animals and plants. In this unit you will investigate, the diversity of cell types, how these different cells interact with each other, how the cell cycle is controlled as well as studying the roles of cellular movement, differentiation and interaction in reproduction and development. In Cells you will develop a deep understanding of the established knowledge base and develop research skills to extend this knowledge. Discussions will incorporate recent advances in cell research including the regenerative potential of stem cells and their use in treatments to replace damaged and diseased tissue. The laboratory program, provides you with hands on training in key techniques such as in vitro cell culture, organelle isolation and experimentation, as well as microscopy. These skills will prepare you for a research pathway and/or a career that includes cell biology.

Entomology

Credit points: 6 **Teacher/Coordinator:** Dr Tanya Latty **Session:** Semester 2 **Classes:** Two 1-hour lectures; one 3-hour practical sessions a weekly basis **Prohibitions:** ENTO2001 **Assessment:** Practical test, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Insects are the most abundant and diverse group of animals on earth; beetles alone account for 25% of animal life. Insects impact almost every facet of the ecosystem and our lives. Many insects play valuable and essential roles in pollinating different plant species, in predating and controlling insect pests and in recycling nutrients. Other insects are harmful and are the vectors for major diseases such as plague, malaria and recently emerged viral disease Zika. This unit will provide students with a broad introduction to entomology including insect evolution, ecology, anatomy and physiology. Students will learn applied entomological topics such as sustainable insect management in agricultural ecosystems, medical and veterinary entomology, insect-inspired technologies, and insects as a future food source for both livestock and humans. This theoretical background will be complemented by training in how to use and evaluate a range of identification tools such as lucid and traditional dichotomous keys that enable you to identify and classify major groups of insects. Practical classes will allow you to develop your identification, classification and preservation skills though examination of boxes of 'mystery insects' and through creating a museum-quality insect collection. Students will also learn procedures for caring and rearing live insects. By the end of the unit you will be well prepared to work in fields that require entomological skills.

Textbooks

Info will be made available via Blackboard. Keys will be available in practical classes and in the lab Manual

BIOL2031
Plants and Environment

Credit points: 6 **Teacher/Coordinator:** Prof Brent Kaiser **Session:** Semester 2 **Classes:** Two lectures; one 4-hour practical session on a weekly basis **Prohibitions:** AGEN2005 or BIOL3043 or BIOL3943 or BIOL2931 **Assumed knowledge:** Knowledge of concepts and skills in BIOL1XX6. **Assessment:** Online quiz (20%), lab assignment (15%), presentation (15%), exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Plants grow across a range of environments, influencing form, function and ultimately reproductive success. Being sessile, plants lack the luxury of seeking an alternative 'stress-free lifestyle' and therefore rely on genetic and physical adaptations to survive and reproduce. To understand how a plant can achieve such flexibility requires knowledge of plant structure and the influence of environmental drivers on plant growth and function. In this unit, you will examine the physiological processes controlling plant growth and reproduction linked to environmental constraints. You will understand the relationship between tissue and cellular structure and their underlying role in physiological and metabolic activities, particularly processes involving light capture, photosynthesis, water regulation, nutrient management and metabolite redistribution. Lectures and interactive practicals will together introduce you to plant processes that underpin life on earth. Experimentation and analysis of plant physiological processes will develop a skill base that will lead to a greater understanding and appreciation of common plant processes. As a component of the Plant Science minor and the Plant Production major, BIOL2031 will provide an important platform to extend your interests in plant science and plant related fields across the curriculum.

Textbooks

Taiz, L. and Zeiger, E. (2010) Plant Physiology, Fifth Edition. Sinauer Associates. Sunderland, MA.

BIOL2931
Plants and Environment (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Brent Kaiser **Session:** Semester 2 **Classes:** Two 1-hour lectures/week; one 4-hour practical/week **Prerequisites:** Annual average mark of at least 70 in previous year **Prohibitions:** AGEN2005 or BIOL3043 or BIOL3943 or BIOL2031 **Assumed knowledge:** Knowledge of concepts and skills in BIOL1XX6. **Assessment:** On-line quiz (20%), lab assignment (15%), independent project (15%), exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Plants grow across a range of environments, which influence form, function and ultimately reproductive success. Being sessile, plants lack the luxury of seeking an alternative 'stress-free lifestyle' and therefore rely on genetic and physical adaptations to help survive and reproduce. To understand how a plant can achieve such flexibility requires an understanding of plant structure and the influence that environmental drivers have on plant growth and function. In this unit, you will examine the physiological processes controlling plant growth and reproduction linked to environmental constraints. You will understand the relationship between tissue and cellular structure and their underlying role in physiological and metabolic activities, particularly processes involving light capture, photosynthesis, water regulation, nutrient management and metabolite redistribution. Lectures and interactive practicals will together introduce you to plant processes that we commonly depend upon for food production, and plant related materials. Experimentation and analysis of plant physiological processes will develop a skill base that will lead to a greater understanding and appreciation of common plant processes that guide plant growth. As a component of the Plant Science minor, this unit will provide an important platform to extend your interests in plant science and plant-related fields, including ecology, cell biology, genetics, breeding, agriculture, molecular biology, environmental law, education and the arts. The advanced unit has the same overall concepts as BIOL2031 but material is discussed in a manner that offers a greater level of challenge and academic rigour. Students enrolled in BIOL2931 participate in alternative components, which include a separate lecture and practical stream. The content and nature of these components may vary from year to year.

Textbooks

Resources required by the unit will be provided on the Blackboard learning management page for the unit. Taiz, L. and Zeiger, E. (2010) Plant Physiology, Fifth Edition. Sinauer Associates. Sunderland, MA.

IMMU2X11 to be deveoped for offering in 2019.

3000-level units of study

Field units

BIOL3007
Ecology

Credit points: 6 **Teacher/Coordinator:** A/Prof Dieter Hochuli **Session:** Semester 2 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3907 **Assessment:** One 2-hour exam, group presentations, one essay, one project report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit explores the dynamics of ecological systems, and considers the interactions between individual organisms and populations, organisms and the environment, and ecological processes. Lectures are grouped around four dominant themes: Interactions, Evolutionary Ecology, The Nature of Communities, and Conservation and Management. Emphasis is placed throughout on the importance of quantitative methods in ecology, including sound planning and experimental designs, and on the role of ecological science in the conservation, management, exploitation and control of populations. Relevant case studies and examples of ecological processes are drawn from marine, freshwater and terrestrial systems, with plants, animals, fungi and other life forms considered as required. Students will have some opportunity to undertake short term ecological projects, and to take part in discussions of important and emerging ideas in the ecological literature.

Textbooks

Begon M, Townsend CR, Harper JL (2005) Ecology, From individuals to ecosystems. Wiley-Blackwell.

BIOL3907
Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Dieter Hochuli **Session:** Semester 2 **Classes:** Two lectures per week, weekly tutorial and 3-hour practical per week **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3007 **Assessment:** One 2-hour exam, presentations, one essay, one project report (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit has the same objectives as BIOL3007 Ecology, and is suitable for students who wish to pursue certain aspects in greater depth. Entry is restricted, and selection is made from the applicants on the basis of their previous performance. Students taking this unit of study participate in alternatives to some elements of the standard course and will be encouraged to pursue the objectives by more independent means in a series of research tutorials. Specific details of this unit of study and assessment will be announced in meetings with students in week 1 of semester 2. This unit of study may be taken as part of the BSc (Advanced) program.

Textbooks

As for BIOL3007

BIOL3008
Marine Field Ecology

Credit points: 6 **Teacher/Coordinator:** A/Prof Ross Coleman **Session:** Intensive July **Classes:** Intensive 8-day field course held in the pre-semester break. **Prerequisites:** 12 credit points of Intermediate BIOL, or (6 credit points of Intermediate BIOL and (MBLG2072 or MBLG2972)) **Prohibitions:** BIOL3908 or BIOL2028 or BIOL2928 **Assessment:** Discussion groups, research project proposal, biodiversity survey report, data analysis and checking, research project report (100%). **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.

This field course provides a practical introduction to the experimental analysis of marine populations and assemblages. Students gain experience using a range of intertidal sampling techniques and develop a detailed understanding of the logical requirements necessary for manipulative ecological field experiments. No particular mathematical or statistical skills are required for this subject. Group experimental research projects in the field are the focus of the unit during the day, with lectures and discussion groups about the analysis of experimental data and current issues in experimental marine ecology occurring in the evening.

Textbooks

No textbook is prescribed but Coastal Marine Ecology of Temperate Australia. Eds. Underwood, A.J. & Chapman, M.G. 1995. University of New South Wales Press, provides useful background reading.

BIOL3908
Marine Field Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Ross Coleman. **Session:** Intensive July **Classes:** One 8-day field course held in the pre-semester break, plus four 1-hour tutorials during semester 2. **Prerequisites:** Distinction average in either- 12cp Intermediate BIOL, or (6cp Intermediate BIOL and(MBLG2072 or MBLG2972)) **Prohibitions:** BIOL3008 or BIOL2028 or BIOL2928 **Assessment:** Discussion groups, research project proposal, biodiversity report, data analysis and checking, research project report (100%). **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.

This unit has the same objectives as Marine Field Ecology BIOL3008, and is suitable for students wishing to pursue certain aspects of marine field ecology in a greater depth. Entry is restricted and selection is made from applicants on the basis of past performance. Students taking this unit of study will be expected to take part in a number of additional tutorials after the field course on advanced aspects of experimental design and analysis and will be expected to incorporate these advanced skills into their analyses and project reports. This unit may be taken as part of the BSc(Advanced).

Textbooks

As for BIOL 3008.

BIOL3009
Terrestrial Field Ecology

Credit points: 6 **Teacher/Coordinator:** Prof Glenda Wardle **Session:** Intensive July **Classes:** Note: One 6-day field trip held in the pre-semester break and four 4-hour practical classes during weeks 1-4 of semester 2 **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3909 or BIOL2009 or BIOL2909 **Assessment:** Discussions and quiz (10%), research project proposal and brief presentation (10%), sampling project report (20%), specimen collection (10%), research project report (50%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.

This intensive field-based course provides practical experience in terrestrial ecology suited to a broad range of careers in ecology, environmental consulting and wildlife management. Students learn a broad range of ecological sampling techniques and develop a detailed understanding of the logical requirements necessary for manipulative ecological field experiments. The field work takes place in native forest and incorporates survey techniques for plants, small mammals and invertebrates and thus provides a good background for ecological consulting work and an introduction into large-scale project management. Students attend a week-long field course and participate in a large-scale research project as well as conducting their own research project. Emphasis is placed on critical thinking in the context of environmental management and technical skills are developed in the area of data handling and analysis, report writing and team work. Invited experts contribute to the lectures and discussions on issues relating to the ecology, conservation and management of Australia's terrestrial flora and fauna.

BIOL3909
Terrestrial Field Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Glenda Wardle **Session:** Intensive July **Classes:** One 6-day field trip held in the pre-semester break and four 4-hour practical classes during weeks 1-4 of semester 2 **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3009 or BIOL2009 or BIOL2909 **Assessment:** Discussions and quiz (10%), research project proposal and brief presentation (10%), sampling project report (20%), sample and data processing (10%), research project report (50%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered. This unit is not offered from 2019.

This unit has the same objectives as BIOL3009 Terrestrial Field Ecology, and is suitable for students who wish to pursue certain aspects in greater depth. Entry is restricted, and selection is made from applicants on the basis of previous performance. Students taking this unit of study will complete an individual research project on a topic negotiated with a member of staff. It is expected that much of the data collection will be completed during the field trip but some extra time may be needed during semester 2. Specific details of this unit of study and assessment will be announced in meetings with students at the beginning of the unit. This unit of study may be taken as part of the BSc (Advanced) program.

BIOL3010
Tropical Wildlife Biology

Credit points: 6 **Teacher/Coordinator:** Dr Matthew Greenless **Session:** Intensive February **Classes:** One week intensive field trip to the Northern Territory plus one week intensive lecture and prac session at Sydney University. **Prerequisites:** 12 credit points of Intermediate BIOL, or (6 credit points of Intermediate BIOL and (MBLG2072 or MBLG2972)) **Prohibitions:** BIOL3910 or BIOL2010 or BIOL2910 **Assessment:** One 2-hour theory exam, one 1-hour practical exam, one 1500-word report, one 2000-word paper, one 15-minute oral presentation (100%). **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit runs in February. It cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2017, 2019) but students may apply for entry into an alternative Intermediate field unit in EVEN years.

Australia has a unique terrestrial vertebrate fauna, but also has the worst record of recent mammalian extinctions. Because of Australia's unusual climate, landforms, and the rarity of many species, the management of our native wildlife presents special challenges for biologists, conservationists and land managers. This unit of study addresses the biogeography, ecology and management of Australia's terrestrial fauna. The subject comprises of a five-day field course at Mary River Park in the Northern Territory. During the course, students will learn how to carry out wildlife surveys, how to identify animals, how to track wildlife, and how to design and complete a field experiment. The field trip will be complemented by guest lectures from experts in the fields of evolution, ecology and wildlife management. A one day field trip to Litchfield National Park will be held on the last day of the field course.

BIOL3910
Tropical Wildlife Biology (Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Matthew Greenless **Session:** Intensive February **Classes:** One week intensive field trip to the Northern Territory plus one week intensive lecture and prac session at Sydney University. **Prerequisites:** Distinction average in either- 12cp Intermediate BIOL, or (6cp Intermediate BIOL and(MBLG2072 or MBLG2972)) **Prohibitions:** BIOL3010 or BIOL2010 or BIOL2910 **Assessment:** One 2-hour theory exam, one 1-hour practical exam, one 1500-word report, one 2000-word paper, one 15-minute oral presentation (100%). **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit runs in February. It cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2017, 2019) but students may apply for entry into an alternative Intermediate field unit in EVEN years.

This unit has the same objectives as BIOL3010 Tropical Wildlife Biology and Management, and is suitable for students who wish to pursue certain aspects in greater depth. Entry is restricted, and selection is made from the applicants on the basis of their previous performance. Students taking this unit of study will participate in alternatives to some elements of the standard course and will be required to pursue the objectives by more independent means. For example, student willl be able to design and carry out their own field or laboratory experiment, and complete it during the five day firled trip. Specific details of this unit of study and assessment will be announced in meetings with students at the beginning of the unit.

BIOL3016
Coral Reef Biology

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Intensive July **Classes:** Fieldwork 80 hours block mode (during July) **Prerequisites:** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3916 or BIOL2020 or BIOL2920 or NTMP3001 **Assessment:** Participation in field work, essay, project report and an exam (100%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.

Coral Reef Biology is an intensive unit held at a research station on the Great Barrier Reef. The unit focuses on the dominant taxa in coral reef environments and the linkages between them. Emphasis is placed on the biological adaptations for life in tropical waters and the ecological, oceanographic and physiological processes involved. Aspects covered include: processes influencing the distribution of coral reefs, symbiosis, reef connectivity, lagoon systems, nutrient cycling and the impacts of climate change and other anthropogenic pressures on the world's corals reefs.

BIOL3916
Coral Reef Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Intensive July **Classes:** Fieldwork 80 hours block mode (during July) **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3016 or BIOL2020 or BIOL2920 or NTMP3001 **Assessment:** Participation in field work, essay, project report and exam (100%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.

This unit has the same objectives as BIOL3016, Coral Reef Biology, and is suitable for students who wish to pursue certain aspects of tropical marine biology in greater depth, with a focus on the GBR. Entry is restricted, and selection is made from the applicants on the basis of their previous performance. Students taking this unit of study will pursue individual projects in consultation with, and under the guidance of, the course coordinator. The aim is to design a project relating to the particular interests of the student. The nature of these projects will vary from year to year. This unit of study may be taken as part of the BSc (Advanced) program.

Major selective units

BIOL3013
Marine Biology

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Semester 2 **Classes:** Two 1-hour lectures and one 4-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3913 **Assessment:** Practical reports, data exercises and exams (100%). **Practical field work:** Combination of field, lab and computer based practical activities **Mode of delivery:** Normal (lecture/lab/tutorial) day

We will examine in detail processes that are important for the establishment and maintenance of marine communities. Lectures will expose students to the key ideas, researchers and methodologies within selected fields of marine biology. Laboratory sessions and field excursions will complement the lectures by providing students with hands-on experience with the organisms and the processes that affect them. Students will develop critical analysis and scientific writing skills while examining the current literature.

BIOL3913
Marine Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Semester 2 **Classes:** See BIOL3013. **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3013 **Assessment:** Practical reports, data exercises and exams (100%). **Practical field work:** Combination of field, lab and computer-based practical activities **Mode of delivery:** Normal (lecture/lab/tutorial) day

Qualified students will participate in alternative components of the BIOL3013 Marine Biology unit. The content and nature of these components may vary from year to year but generally involves an individual or group project, conducted with unit instructors, which takes the place of one of the practical-based assessments..

BIOL3018
Gene Technology and Genomics

Credit points: 6 **Teacher/Coordinator:** A/Prof Mary Byrne **Session:** Semester 1 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BCMB2XXX or QBIO2001 or IMMU2XXX or BIOL2XXX) **Prohibitions:** BIOL3918 **Assessment:** One 2-hour exam (60%), assignments (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

A unit of study with lectures, practicals and tutorials on the application of recombinant DNA technology and the genetic manipulation of prokaryotic and eukaryotic organisms. Lectures cover the applications of molecular genetics in biotechnology and consider the regulation, impact and implications of genetic engineering and genomics. Topics include biological sequence data and databases, comparative genomics, the cloning and expression of foreign genes in bacteria, yeast, animal and plant cells, novel human and animal therapeutics and vaccines, new diagnostic techniques for human and veterinary disease, and the genetic engineering of animals and plants. Practical work may include nucleic acid isolation and manipulation, gene cloning and PCR amplification, DNA sequencing and bioinformatics, immunological detection of proteins, and the genetic transformation and assay of plants.

BIOL3918
Gene Technology and Genomics (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Mary Byrne **Session:** Semester 1 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BCMB2XXX or QBIO2001 or IMMU2XXX or BIOL2XXX)] **Prohibitions:** BIOL3018 **Assessment:** One 2-hour exam (60%), assignments (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Qualified students will participate in alternative components of BIOL3018 Gene Technology and Genomics. The content and nature of these components may vary from year to year.

BIOL3026
Developmental Genetics

Credit points: 6 **Teacher/Coordinator:** Dr Jenny Saleeba **Session:** Semester 2 **Classes:** 24 1-hour lectures/tutorials per semester and up to 3 hours laboratory per week. **Prerequisites:** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX) **Prohibitions:** BIOL3926 **Assessment:** One 2-hour exam, assignments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Developmental genetics discusses major concepts and our current understanding of developmental biology with an emphasis on molecular genetics. The developmental genetics of animal and plant systems will be investigated, along with approaches used to determine gene function in relation to development of complex multicellular organisms. Topics include the features and resources for model organisms; the generation of mutants for forward and reverse genetics; the application of mutants to the study gene function and gene networks; spatial and temporal gene expression in pattern formation; quantitative trait loci analysis; utility of genome wide association studies; epigenetics in relation to inheritance; genome information in the study of human genetics. Reference will be made to the use of modern techniques in developmental biology such as transgenics, recombinant DNA technology, tissue-specific expression analysis. Various methods of genetic mapping will be covered. Practical work complements the theoretical aspects of the course and develops important skills in genetics.

BIOL3926
Developmental Genetics (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Jenny Saleeba **Session:** Semester 2 **Classes:** 24 1-hour lectures/tutorials per semester and up to 3 hours laboratory per week. **Prerequisites:** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX)] **Prohibitions:** BIOL3929 or BIOL3026 **Assessment:** One 2-hour exam, assignments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Qualified students will participate in alternative components to BIOL3026 Developmental Genetics. The content and nature of these components may vary from year to year. Some assessment will be in an alternative format to components of BIOL3026.

BIOL3045
Animal Ecological Physiology

Credit points: 6 **Teacher/Coordinator:** Prof Frank Seebacher **Session:** Semester 1 **Classes:** Two lectures and three practicals per week **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3945 or BIOL3011 or BIOL3911 or BIOL3012 or BIOL3912 **Assessment:** Two practical reports (20% and 40% of total marks, respectively), one 1.5-hour exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Animal Ecological Physiology is a conceptually based unit of study that covers physiological interactions between organisms and their environments. The unit explores evolutionary processes that allow animals to persist in variable environments. These concepts are essential to understanding biodiversity and ecological function of animal populations, and how these are likely to change under future climate change. The unit will be suitable for those with an interest in zoology, as well as students with a particular interest in ecology and evolution. There is a strong focus on experimental biology and incorporating theory into practical classes, during which students design their own experiments. Good working knowledge of statistical analyses is assumed. The unit provides essential skills for conducting and presenting research, and for critical evaluation of published research.

BIOL3945
Animal Ecological Physiology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Frank Seebacher **Session:** Semester 1 **Classes:** Two lectures and three practicals per week. **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3045 or BIOL3011 or BIOL3911 or BIOL3012 or BIOL3912 **Assessment:** One practical report (20%) and one advanced report (40%), one 1.5-hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The content will be based on the standard unit BIOL3045 but qualified students will participate in alternative components at a more advanced level. Animal Ecological Physiology is a conceptually based unit of study that covers physiological interactions between organisms and their environments. The unit explores evolutionary processes that allow animals to persist in variable environments. These concepts are essential to understanding biodiversity and ecological function of animal populations, and how these are likely to change under future climate change. The unit will be suitable for those with an interest in zoology, as well as students with a particular interest in ecology and evolution. There is a strong focus on experimental biology and incorporating theory into practical classes, during which students design their own experiments. Good working knowledge of statistical analyses is assumed. The unit provides essential skills for conducting and presenting research, and for critical evaluation of published research.

BIOL3046
Animal Behaviour

Credit points: 6 **Teacher/Coordinator:** Prof Ashley Ward **Session:** Semester 1 **Classes:** Two lectures and one 3-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3946 or BIOL3025 or BIOL3925 **Assessment:** Practical reports, one 2-hour exam (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The unit will provide a broad overview of the scientific study of animal behaviour. It will consider mechanistic and functional explanations of animal behaviour across contexts including kin selection and altruism, sociality, foraging, aggression and competition, sexual selection and mate choice, the behaviour of predators and prey, and communication and signalling. The information presented and discussed in this unit will reflect the most up-to-date research in each aspect of the field of animal behaviour. Practical sessions are closely aligned with the lecture material and will foster the development of key skills by providing hands-on experience of experimental design, data collection and analysis.

Textbooks

Davies, Krebs, West: An Introduction to Behavioural Ecology, 4th edition, Wiley-Blackwell.

BIOL3946
Animal Behaviour (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Ashley Ward **Session:** Semester 1 **Classes:** Two lectures and one 3-hour practical per week. **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3046 or BIOL3025 or BIOL3925 **Assessment:** Practical reports, one 2-hour exam (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

The content will be based on the standard unit BIOL3046 but qualified students will participate in alternative components at a more advanced level. The unit will provide a broad overview of the scientific study of animal behaviour. It will consider mechanistic and functional explanations of animal behaviour across contexts including kin selection and altruism, sociality, foraging, aggression and competition, sexual selection and mate choice, the behaviour of predators and prey, and communication and signalling. The information presented and discussed in this unit will reflect the most up-to-date research in each aspect of the field of animal behaviour. Practical sessions are closely aligned with the lecture material and will foster the development of key skills by providing hands-on experience of experimental design, data collection and analysis.

Minor selective units

BIOL3007
Ecology

Credit points: 6 **Teacher/Coordinator:** A/Prof Dieter Hochuli **Session:** Semester 2 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3907 **Assessment:** One 2-hour exam, group presentations, one essay, one project report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit explores the dynamics of ecological systems, and considers the interactions between individual organisms and populations, organisms and the environment, and ecological processes. Lectures are grouped around four dominant themes: Interactions, Evolutionary Ecology, The Nature of Communities, and Conservation and Management. Emphasis is placed throughout on the importance of quantitative methods in ecology, including sound planning and experimental designs, and on the role of ecological science in the conservation, management, exploitation and control of populations. Relevant case studies and examples of ecological processes are drawn from marine, freshwater and terrestrial systems, with plants, animals, fungi and other life forms considered as required. Students will have some opportunity to undertake short term ecological projects, and to take part in discussions of important and emerging ideas in the ecological literature.

Textbooks

Begon M, Townsend CR, Harper JL (2005) Ecology, From individuals to ecosystems. Wiley-Blackwell.

BIOL3907
Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Dieter Hochuli **Session:** Semester 2 **Classes:** Two lectures per week, weekly tutorial and 3-hour practical per week **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3007 **Assessment:** One 2-hour exam, presentations, one essay, one project report (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit has the same objectives as BIOL3007 Ecology, and is suitable for students who wish to pursue certain aspects in greater depth. Entry is restricted, and selection is made from the applicants on the basis of their previous performance. Students taking this unit of study participate in alternatives to some elements of the standard course and will be encouraged to pursue the objectives by more independent means in a series of research tutorials. Specific details of this unit of study and assessment will be announced in meetings with students in week 1 of semester 2. This unit of study may be taken as part of the BSc (Advanced) program.

Textbooks

As for BIOL3007

BIOL3013
Marine Biology

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Semester 2 **Classes:** Two 1-hour lectures and one 4-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3913 **Assessment:** Practical reports, data exercises and exams (100%). **Practical field work:** Combination of field, lab and computer based practical activities **Mode of delivery:** Normal (lecture/lab/tutorial) day

We will examine in detail processes that are important for the establishment and maintenance of marine communities. Lectures will expose students to the key ideas, researchers and methodologies within selected fields of marine biology. Laboratory sessions and field excursions will complement the lectures by providing students with hands-on experience with the organisms and the processes that affect them. Students will develop critical analysis and scientific writing skills while examining the current literature.

BIOL3913
Marine Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Semester 2 **Classes:** See BIOL3013. **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3013 **Assessment:** Practical reports, data exercises and exams (100%). **Practical field work:** Combination of field, lab and computer-based practical activities **Mode of delivery:** Normal (lecture/lab/tutorial) day

Qualified students will participate in alternative components of the BIOL3013 Marine Biology unit. The content and nature of these components may vary from year to year but generally involves an individual or group project, conducted with unit instructors, which takes the place of one of the practical-based assessments..

BIOL3018
Gene Technology and Genomics

Credit points: 6 **Teacher/Coordinator:** A/Prof Mary Byrne **Session:** Semester 1 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BCMB2XXX or QBIO2001 or IMMU2XXX or BIOL2XXX) **Prohibitions:** BIOL3918 **Assessment:** One 2-hour exam (60%), assignments (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

A unit of study with lectures, practicals and tutorials on the application of recombinant DNA technology and the genetic manipulation of prokaryotic and eukaryotic organisms. Lectures cover the applications of molecular genetics in biotechnology and consider the regulation, impact and implications of genetic engineering and genomics. Topics include biological sequence data and databases, comparative genomics, the cloning and expression of foreign genes in bacteria, yeast, animal and plant cells, novel human and animal therapeutics and vaccines, new diagnostic techniques for human and veterinary disease, and the genetic engineering of animals and plants. Practical work may include nucleic acid isolation and manipulation, gene cloning and PCR amplification, DNA sequencing and bioinformatics, immunological detection of proteins, and the genetic transformation and assay of plants.

BIOL3918
Gene Technology and Genomics (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Mary Byrne **Session:** Semester 1 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BCMB2XXX or QBIO2001 or IMMU2XXX or BIOL2XXX)] **Prohibitions:** BIOL3018 **Assessment:** One 2-hour exam (60%), assignments (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Qualified students will participate in alternative components of BIOL3018 Gene Technology and Genomics. The content and nature of these components may vary from year to year.

BIOL3026
Developmental Genetics

Credit points: 6 **Teacher/Coordinator:** Dr Jenny Saleeba **Session:** Semester 2 **Classes:** 24 1-hour lectures/tutorials per semester and up to 3 hours laboratory per week. **Prerequisites:** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX) **Prohibitions:** BIOL3926 **Assessment:** One 2-hour exam, assignments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Developmental genetics discusses major concepts and our current understanding of developmental biology with an emphasis on molecular genetics. The developmental genetics of animal and plant systems will be investigated, along with approaches used to determine gene function in relation to development of complex multicellular organisms. Topics include the features and resources for model organisms; the generation of mutants for forward and reverse genetics; the application of mutants to the study gene function and gene networks; spatial and temporal gene expression in pattern formation; quantitative trait loci analysis; utility of genome wide association studies; epigenetics in relation to inheritance; genome information in the study of human genetics. Reference will be made to the use of modern techniques in developmental biology such as transgenics, recombinant DNA technology, tissue-specific expression analysis. Various methods of genetic mapping will be covered. Practical work complements the theoretical aspects of the course and develops important skills in genetics.

BIOL3926
Developmental Genetics (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Jenny Saleeba **Session:** Semester 2 **Classes:** 24 1-hour lectures/tutorials per semester and up to 3 hours laboratory per week. **Prerequisites:** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX)] **Prohibitions:** BIOL3929 or BIOL3026 **Assessment:** One 2-hour exam, assignments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Qualified students will participate in alternative components to BIOL3026 Developmental Genetics. The content and nature of these components may vary from year to year. Some assessment will be in an alternative format to components of BIOL3026.

BIOL3045
Animal Ecological Physiology

Credit points: 6 **Teacher/Coordinator:** Prof Frank Seebacher **Session:** Semester 1 **Classes:** Two lectures and three practicals per week **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3945 or BIOL3011 or BIOL3911 or BIOL3012 or BIOL3912 **Assessment:** Two practical reports (20% and 40% of total marks, respectively), one 1.5-hour exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Animal Ecological Physiology is a conceptually based unit of study that covers physiological interactions between organisms and their environments. The unit explores evolutionary processes that allow animals to persist in variable environments. These concepts are essential to understanding biodiversity and ecological function of animal populations, and how these are likely to change under future climate change. The unit will be suitable for those with an interest in zoology, as well as students with a particular interest in ecology and evolution. There is a strong focus on experimental biology and incorporating theory into practical classes, during which students design their own experiments. Good working knowledge of statistical analyses is assumed. The unit provides essential skills for conducting and presenting research, and for critical evaluation of published research.

BIOL3945
Animal Ecological Physiology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Frank Seebacher **Session:** Semester 1 **Classes:** Two lectures and three practicals per week. **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3045 or BIOL3011 or BIOL3911 or BIOL3012 or BIOL3912 **Assessment:** One practical report (20%) and one advanced report (40%), one 1.5-hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The content will be based on the standard unit BIOL3045 but qualified students will participate in alternative components at a more advanced level. Animal Ecological Physiology is a conceptually based unit of study that covers physiological interactions between organisms and their environments. The unit explores evolutionary processes that allow animals to persist in variable environments. These concepts are essential to understanding biodiversity and ecological function of animal populations, and how these are likely to change under future climate change. The unit will be suitable for those with an interest in zoology, as well as students with a particular interest in ecology and evolution. There is a strong focus on experimental biology and incorporating theory into practical classes, during which students design their own experiments. Good working knowledge of statistical analyses is assumed. The unit provides essential skills for conducting and presenting research, and for critical evaluation of published research.

BIOL3046
Animal Behaviour

Credit points: 6 **Teacher/Coordinator:** Prof Ashley Ward **Session:** Semester 1 **Classes:** Two lectures and one 3-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3946 or BIOL3025 or BIOL3925 **Assessment:** Practical reports, one 2-hour exam (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The unit will provide a broad overview of the scientific study of animal behaviour. It will consider mechanistic and functional explanations of animal behaviour across contexts including kin selection and altruism, sociality, foraging, aggression and competition, sexual selection and mate choice, the behaviour of predators and prey, and communication and signalling. The information presented and discussed in this unit will reflect the most up-to-date research in each aspect of the field of animal behaviour. Practical sessions are closely aligned with the lecture material and will foster the development of key skills by providing hands-on experience of experimental design, data collection and analysis.

BIOL3029, BIOL3033, BIOL3020 to be developed for offering in 2019.

Plant Science Minor

A minor in Plant Science requires 36 credit points from this table including: (i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level core units(iii) 6 credit points of 3000-level core units (iv) 6 credit points of 3000-level selective units

Units of Study

The units of study are listed below.

1000-level units of study

Core

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:**

BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

BIOL1906
Life and Evolution (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1 **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 **Assumed knowledge:** 85 or above in HSC Biology or equivalent. **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals.

Life and Evolution (Advanced) has the same overall structure as BIOL1006 but material is discussed in greater detail and at a more advanced level. Students enrolled in BIOL1906 participate in a research project with a focus on developing skills in critical evaluation, experimental design, data analysis and communication.

Textbooks

Please see unit outline on LMS

BIOL1996
Life and Evolution (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Mark de Bruyn **Session:** Semester 1 **Classes:** Lectures as per BIOL1906; one 3-hour practical per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), practical reports (25%), seminar presentation (15%), lab note book (5%), prelaboratory quizzes (5%) **Practical field work:** null **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, and proteins) to whole ecosystems in which myriad species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. The practical work syllabus for BIOL1996 is different from that of BIOL1906 (Advanced) and consists of a special project-based laboratory.

Bromham, L 2015, An Introduction to Molecular Evolution and Phylogenetics, Oxford University Press.

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Textbooks

Please see unit outline on LMS

BIOL1907
From Molecules to Ecosystems (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Pauline Ross **Session:** Semester 2 **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1007 or BIOL1997 **Assumed knowledge:** 85 or above in HSC Biology or equivalent **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . This unit of study has the same overall structure as BIOL1007 but material is discussed in greater detail and at a more advanced level. The content and nature of these components may vary from year to year.

Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

2000-level units of study

Core

BIOL2030
Botany

Credit points: 6 **Teacher/Coordinator:** A/Prof Rosanne Quinnell **Session:** Semester 1 **Classes:** Two 1-hour lecture/week; one 3-hour practical/week; a series of five 1-hour tutorial/week in the latter part of the semester **Prohibitions:** BIOL2023 or BIOL2923 or AGEN2001 or PLNT2001 or PLNT2901 or PLNT2002 or PLNT2902 or PLNT2003 or PLNT2903 or AGEN2005 or BIOL2930 **Assumed knowledge:** Knowledge of concepts and skills in BIOL1XX6. **Assessment:** Online quizzes (15%), anatomy project report and presentation (20%), practical exam (30%), theory exam (35%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

We are surrounded by plants, and rely on them every day for our wellbeing. Ecologists use botanical knowledge to help manage marine and terrestrial ecosystems, and public health and land management professionals depend on their understanding of plant science to help solve environmental problems and to enhance biosecurity. Botany aims to increase and improve our supply of medicines, foods, and other plant products, and is critical for anyone interested in contributing to the sustainable future of our planet. In this unit, you will explore the origins, diversity, and global significance of plants. You will gain insights into the micro- and macro-evolutionary processes and patterns behind how plants moved from aquatic ecosystems to terrestrial ecosystems. Integrated lectures, practical classes, and extensive online resources will allow you to develop and integrate practical skills and conceptual frame works in plant identification, plant physiology, plant anatomy, and plant morphology. Lectures and practical classes are augmented by self-instructional audio-visual sessions and by small group discussions to foster a sense of self-reliance and collaboration. Successful completion of BIOL2023 will allow you to contribute to a range of disciplines including: ecology, bioinformatics, molecular and cell biology, genetics and biotechnology, environmental law, agriculture, education and the arts.

BIOL2930
Botany (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Rosanne Quinnell **Session:** Semester 1 **Classes:** Two 1-hour lectures/week; one 3-hour practical/week; a series of five 1-hour tutorial/week in the latter part of the semester **Prerequisites:** Annual average mark of at least 70 in previous year **Prohibitions:** BIOL2023 or BIOL2923 or AGEN2001 or PLNT2001 or PLNT2901 or PLNT2002 or PLNT2902 or PLNT2003 or PLNT2903 or AGEN2005 or BIOL2030 **Assumed knowledge:** Knowledge of concepts and skills in BIOL1XX6. **Assessment:** Online quizzes (15%), advanced project report (20%), practical exam (30%), theory exam (35%) **Practical field work:** null **Mode of delivery:** Normal (lecture/lab/tutorial) day

We are surrounded by plants, and rely on them every day for our wellbeing. Ecologists use botanical knowledge to help manage marine and terrestrial ecosystems, and public health and land management professionals depend on their understanding of plant science to help solve environmental problems and to inform biosecurity. Botany aims to increase and improve our supply of medicines, foods, and other plant products, and is critical for anyone interested in contributing to the sustainable future of our planet. In this unit, you will explore the origins, diversity, and global significance of plants. You will gain insights into the micro- and macro-evolutionary processes and patterns behind how plants moved from aquatic ecosystems to terrestrial ecosystems. Integrated lectures, practical classes and extensive online resources will allow you to develop and integrate practical skills and conceptual frameworks in plant identification, and plant physiology, morphology and anatomy. Lectures and practical classes are augmented by discussions to foster a sense of self-reliance and collaboration. The Advanced Botany unit of study requires engagement at a high standard of academic rigour and affords opportunities to engage with core aspect of Botany at depth and to create new knowledge. In partnership with academic staff advanced students will undertake an independent research project, which will develop skills in research and communication.

BIOL2031
Plants and Environment

Credit points: 6 **Teacher/Coordinator:** Prof Brent Kaiser **Session:** Semester 2 **Classes:** Two lectures; one 4-hour practical session on a weekly basis **Prohibitions:** AGEN2005 or BIOL3043 or BIOL3943 or BIOL2931 **Assumed knowledge:** Knowledge of concepts and skills in BIOL1XX6. **Assessment:** Online quiz (20%), lab assignment (15%), presentation (15%), exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Plants grow across a range of environments, influencing form, function and ultimately reproductive success. Being sessile, plants lack the luxury of seeking an alternative 'stress-free lifestyle' and therefore rely on genetic and physical adaptations to survive and reproduce. To understand how a plant can achieve such flexibility requires knowledge of plant structure and the influence of environmental drivers on plant growth and function. In this unit, you will examine the physiological processes controlling plant growth and reproduction linked to environmental constraints. You will understand the relationship between tissue and cellular structure and their underlying role in physiological and metabolic activities, particularly processes involving light capture, photosynthesis, water regulation, nutrient management and metabolite redistribution. Lectures and interactive practicals will together introduce you to plant processes that underpin life on earth. Experimentation and analysis of plant physiological processes will develop a skill base that will lead to a greater understanding and appreciation of common plant processes. As a component of the Plant Science minor and the Plant Production major, BIOL2031 will provide an important platform to extend your interests in plant science and plant related fields across the curriculum.

Textbooks

Taiz, L. and Zeiger, E. (2010) Plant Physiology, Fifth Edition. Sinauer Associates. Sunderland, MA.

BIOL2931
Plants and Environment (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Brent Kaiser **Session:** Semester 2 **Classes:** Two 1-hour lectures/week; one 4-hour practical/week **Prerequisites:** Annual average mark of at least 70 in previous year **Prohibitions:** AGEN2005 or BIOL3043 or BIOL3943 or BIOL2031 **Assumed knowledge:** Knowledge of concepts and skills in BIOL1XX6. **Assessment:** On-line quiz (20%), lab assignment (15%), independent project (15%), exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Plants grow across a range of environments, which influence form, function and ultimately reproductive success. Being sessile, plants lack the luxury of seeking an alternative 'stress-free lifestyle' and therefore rely on genetic and physical adaptations to help survive and reproduce. To understand how a plant can achieve such flexibility requires an understanding of plant structure and the influence that environmental drivers have on plant growth and function. In this unit, you will examine the physiological processes controlling plant growth and reproduction linked to environmental constraints. You will understand the relationship between tissue and cellular structure and their underlying role in physiological and metabolic activities, particularly processes involving light capture, photosynthesis, water regulation, nutrient management and metabolite redistribution. Lectures and interactive practicals will together introduce you to plant processes that we commonly depend upon for food production, and plant related materials. Experimentation and analysis of plant physiological processes will develop a skill base that will lead to a greater understanding and appreciation of common plant processes that guide plant growth. As a component of the Plant Science minor, this unit will provide an important platform to extend your interests in plant science and plant-related fields, including ecology, cell biology, genetics, breeding, agriculture, molecular biology, environmental law, education and the arts. The advanced unit has the same overall concepts as BIOL2031 but material is discussed in a manner that offers a greater level of challenge and academic rigour. Students enrolled in BIOL2931 participate in alternative components, which include a separate lecture and practical stream. The content and nature of these components may vary from year to year.

Textbooks

Resources required by the unit will be provided on the Blackboard learning management page for the unit. Taiz, L. and Zeiger, E. (2010) Plant Physiology, Fifth Edition. Sinauer Associates. Sunderland, MA.

3000-level units of study

Core

BOL3020 to be developed for offering in 2019.

Selective

BIOL3009
Terrestrial Field Ecology

Credit points: 6 **Teacher/Coordinator:** Prof Glenda Wardle **Session:** Intensive July **Classes:** Note: One 6-day field trip held in the pre-semester break and four 4-hour practical classes during weeks 1-4 of semester 2 **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3909 or BIOL2009 or BIOL2909 **Assessment:** Discussions and quiz (10%), research project proposal and brief presentation (10%), sampling project report (20%), specimen collection (10%), research project report (50%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.

This intensive field-based course provides practical experience in terrestrial ecology suited to a broad range of careers in ecology, environmental consulting and wildlife management. Students learn a broad range of ecological sampling techniques and develop a detailed understanding of the logical requirements necessary for manipulative ecological field experiments. The field work takes place in native forest and incorporates survey techniques for plants, small mammals and invertebrates and thus provides a good background for ecological consulting work and an introduction into large-scale project management. Students attend a week-long field course and participate in a large-scale research project as well as conducting their own research project. Emphasis is placed on critical thinking in the context of environmental management and technical skills are developed in the area of data handling and analysis, report writing and team work. Invited experts contribute to the lectures and discussions on issues relating to the ecology, conservation and management of Australia's terrestrial flora and fauna.

BIOL3909
Terrestrial Field Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Glenda Wardle **Session:** Intensive July **Classes:** One 6-day field trip held in the pre-semester break and four 4-hour practical classes during weeks 1-4 of semester 2 **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3009 or BIOL2009 or BIOL2909 **Assessment:** Discussions and quiz (10%), research project proposal and brief presentation (10%), sampling project report (20%), sample and data processing (10%), research project report (50%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered. This unit is not offered from 2019.

This unit has the same objectives as BIOL3009 Terrestrial Field Ecology, and is suitable for students who wish to pursue certain aspects in greater depth. Entry is restricted, and selection is made from applicants on the basis of previous performance. Students taking this unit of study will complete an individual research project on a topic negotiated with a member of staff. It is expected that much of the data collection will be completed during the field trip but some extra time may be needed during semester 2. Specific details of this unit of study and assessment will be announced in meetings with students at the beginning of the unit. This unit of study may be taken as part of the BSc (Advanced) program.

BIOL3029 to be developed for offering in 2019.

Cell and Developmental Biology

Study in Cell and Developmental Biology is offered by the Disciplines of Anatomy, Histology and Physiology, School of Medical Sciences, in the Sydney Medical School, as well as Developmental Biology in the School of Life and Environmental Sciences. Units of study in this major are available at standard and advanced level.

About the major

Cell and Developmental Biology aims to understand how a single cell undergoes divisions and cell differentiation to give rise to different cell and tissue types in a coordinated manner to lead to a whole organism. A comprehensive understanding of cell biology in the context of development provides a means to understand processes that lead to diseases such as cancer. Cell and Developmental Biology provides undergraduate units of study that are transdisciplinary in nature.

Requirements for completion

A major in Cell and Developmental Biology requires 48 credit points, consisting of:

(i)6 credit points of 1000-level core units
(ii)6 credit points of 1000-level selective units
(iii)6 credit points of 2000-level core units
(iv)6 credit points of 2000-level selective units
(v)24 credit points of 3000-level selective units

A minor in Cell and Developmental Biology is available and articulates to this major.

First year

BIOL1XX7 and 6 credit points from: BIOL1XX6 or CHEM1XX1.

Second year

BIOL2X29 and 6 credit points from a selection of BCMB2X02 or GEGE2X01.

Third year

24 credit points from: HSTO3003, HSTO3004, PHSI3X10, BIOL3X26, and a 3000-level project unit.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Cell and Developmental Biology: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Cell and Developmental Biology will be able to:

1. Understand cell and developmental biology and the coherence of these disciplines
2. Understand the methods in cell and developmental biology and how current knowledge in this field is both contestable and testable through further inquiry.
3. Explain the role and relevance of cell and developmental biology in society.
4. Demonstrate creativity in thinking and problem solving.
5. Appreciate the significant role of cells and development to health and the continuation of life.
6. Gather, synthesise and critically evaluate information about phenomena in cells and development from a range of sources.
7. Critically analyse observations of cells and developmental biology through proposing and testing hypotheses.
8. Design and conduct experiments in cells and development.
9. Collect, accurately record, interpret, analyse, and draw conclusions from data generated in the enquiry of cells and developmental biology.
10. Synthesise and communicate core concepts and results from enquiry in cells and development across a range of modes (including oral, written, and visual) for a variety of purposes and audiences.
11. Be accountable for their own learning by being independent and self-directed learners.
12. Work effectively, responsibly and safely in individual and peer or team contexts.
13. Demonstrate knowledge of the regulatory frameworks and ethical principles relevant to their sub-disciplinary area within cells and developmental biology, and apply these in practice.

HSTO3003 **Cells and Development: Theory**	6	**A** ANAT2008 or BMED2401) and Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
HSTO3004 **Cells and Development: Practical (Adv)**	6	**A** (ANAT2008 or BMED2401) and Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **P** An annual average mark of 65 or above in the previous year **C** HSTO3003 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
PHSI3010 **Reproduction, Development and Disease**	6	**P** (PHSI2X05 and PHSI2X06) or [12cp from (BCMB2X02, BIOL2X29, GEGE2X01)] or [12cp from (BMED2402, BMED2403, BMED2406)] **N** PHSI3905, PHSI3906, PHSI3005, PHSI3006, PHSI3910 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
BIOL3026 **Developmental Genetics**	6	**P** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX) **N** BIOL3926	Semester 2
BIOL3926 **Developmental Genetics (Advanced)**	6	**P** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX)] **N** BIOL3929 or BIOL3026	Semester 2
PRJT3XXX to be developed for offering in 2019.			

Cell and Developmental Biology

CELL AND DEVELOPMENTAL BIOLOGY

Advanced coursework and projects will be available in 2020 for students who complete this major.

Cell and Developmental Biology major

A major in Cell and Developmental Biology requires 48 credit points from this table including:(i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level selective units(iii) 6 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units(v) 24 credit points of 3000-level selective units

Cell and Developmental Biology minor

A minor in Cell and Developmental Biology requires 36 credit points from this table including:(i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level selective units(iii) 6 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units (v) 12 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Core

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating

genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

Selective

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals.

Life and Evolution (Advanced) has the same overall structure as BIOL1006 but material is discussed in greater detail and at a more advanced level. Students enrolled in BIOL1906 participate in a research project with a focus on developing skills in critical evaluation, experimental design, data analysis and communication.

2000-level units of study

Core

BIOL2029
Cells

Credit points: 6 **Teacher/Coordinator:** Dr Murray Thomson **Session:** Semester 1 **Classes:** Two 1-hour lectures; one 4-hour practical per week **Prerequisites:** BIOL1XX7 or MBLG1XXX **Prohibitions:** BIOL2016 or BIOL2916 or BIOL2929 **Assessment:** 3-hour theory exam (60%), quizzes (lectures and laboratory work) (10%), marks for laboratory work (10%), report (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Cell Biology is one of the most dynamic areas in science today. During development, a single cell zygote must undergo numerous divisions to become a multi-cellular organism. In both plants and animals, cell to cell communication and coordination of the cell cycle, as well as cellular division and migration, are vital for normal development. Stem cells follow specialisation pathways to become increasingly committed to differentiation, and transformation into specialised cells that group together to form the variety of tissues that make up animals and plants. In this unit you will investigate, the diversity of cell types, how these different cells interact with each other, how the cell cycle is controlled as well as studying the roles of cellular movement, differentiation and interaction in reproduction and development. In Cells you will develop a deep understanding of the established knowledge base and develop research skills to extend this knowledge. Discussions will incorporate recent advances in cell research including the regenerative potential of stem cells and their use in treatments to replace damaged and diseased tissue. The laboratory program, provides you with hands on training in key techniques such as in vitro cell culture, organelle isolation and experimentation, as well as microscopy. These skills will prepare you for a research pathway and/or a career that includes cell biology.

Selective

BCMB2002
Proteins in Cells

Credit points: 6 **Teacher/Coordinator:** Dr Sandro Ataide **Session:** Semester 2 **Classes:** Two 1-hour lectures per week; one 4-hour practical/tutorial session per week **Prerequisites:** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **Prohibitions:** BCHM2071 or BCHM2971 or BCMB2902 **Assessment:** Assignments, skills-based assessment, quiz, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

A single human cell contains billions of protein molecules that are constantly in motion. Why so many? What are they doing? And, how are they doing it? In simple terms, proteins define the function of and drive almost every process within cells. In this unit of study you will learn about the biochemistry of proteins in their natural environment - within cells - with a focus on eukaryotes including plant and other cell types. You will discover the dynamic interplay within and between proteins and other cellular components and how the physical properties of proteins dictate function. You will discover how proteins are compartmentalized, modified, folded, transported in and between cells, the mechanisms by which proteins regulate biological activities, interact and transport molecules across membranes, and how mutations in proteins can lead to pathological consequences. Our practicals, other guided and online learning sessions will introduce you to a wide range of currently utilised techniques for protein biochemistry ranging from protein visualization, quantification, purification and enzymatic activity, to in silico studies and cellular targeting experiments. By the end of this unit you will be equipped with foundational skills and knowledge to support your studies in the cellular and molecular biosciences.

BCMB2902
Proteins in Cells (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Sandro Ataide **Session:** Semester 2 **Classes:** Two 1-hour lectures per week; one 4-hour practical/tutorial session per week **Prerequisites:** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **Prohibitions:** BCHM2071 or BCHM2971 or BCMB2002 **Assessment:** Assignment, skills-based assessment, quiz, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

A single human cell contains billions of protein molecules that are constantly in motion. Why so many? What are they doing? And, how are they doing it? In simple terms, proteins define the function of and drive almost every process within cells. In this unit of study you will learn about the biochemistry of proteins in their natural environment - within cells - with a focus on eukaryotes including plant and other cell types. You will discover the dynamic interplay within and between proteins and other cellular components and how the physical properties of proteins dictate function. You will discover how proteins are compartmentalized, modified, folded, transported in and between cells, the mechanisms by which proteins regulate biological activities, interact and transport molecules across membranes, and how mutations in proteins can lead to pathological consequences. There will be a research-focused approach to the advanced practical component, including real and virtual extensions to key experiments. This approach will continue in the lecture series with several unique advanced lectures covering current research topics. You will further investigate a selected area of interest from these topics using original source material and present your findings through an oral presentation in dedicated advanced tutorials.

Lehninger Principles of Biochemistry 7th edition (2016) David L. Nelson Michael M. Cox Macmillan (ISBN-10: 1-4641-2611-9; ISBN-13: 978-1-4641-2611-6)

GEGE2001
Genetics and Genomics

Credit points: 6 **Teacher/Coordinator:** Prof Peter Sharp **Session:** Semester 1, Semester 2 **Classes:** Two lectures; one 3-hour practical session; and one peer assisted study session on a weekly basis **Prohibitions:** GENE2002 or MBLG2972 or GEGE2901 or MBLG2072 **Assumed knowledge:** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **Assessment:** Assignments, quizzes, presentation, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

The era of genomics has revolutionised our approach to biology. Recent breakthroughs in genetics and genomic technologies have led to improvements in human and animal health, in breeding and selection of economically important organisms and in the curation and care of wild species and complex ecosystems. In this unit, students will investigate/describe ways in which modern biology uses genetics and genomics to study life, from the unicellular through to complex multicellular organisms and their interactions in communities and ecosystems. This unit includes a solid foundation in classical Mendelian genetics and its extensions into quantitative and population genetics. It also examines how our ability to sequence whole genomes has changed our capacities and our understanding of biology. Links between DNA, phenotype and the performance of organisms and ecosystems will be highlighted. The unit will examine the profound insights that modern molecular techniques have enabled in the fields of developmental biology, gene regulation, population genetics and molecular evolution.

GEGE2901
Genetics and Genomics (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Peter Sharp **Session:** Semester 1, Semester 2 **Classes:** Two lectures; one 3-hour practical session; and one peer assisted study session on a weekly basis **Prerequisites:** Annual average mark of at least 70 **Prohibitions:** GENE2002 or MBLG2072 or GEGE2001 or MBLG2972 **Assumed knowledge:** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **Assessment:** Assignments, quizzes, presentation, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

The era of genomics has revolutionised our approach to biology. Recent breakthroughs in genetics and genomic technologies have led to improvements in human and animal health, in breeding and selection of economically important organisms and in the curation and care of wild species and complex ecosystems. In this unit, students will investigate/describe ways in which modern biology uses genetics and genomics to study life, from the unicellular through to complex multicellular organisms and their interactions in communities and ecosystems. This unit includes a solid foundation in classical Mendelian genetics and its extensions into quantitative and population genetics. It also examines how our ability to sequence whole genomes has changed our capacities and our understanding of biology. Links between DNA, phenotype and the performance of organisms and ecosystems will be highlighted. The unit will examine the profound insights that modern molecular techniques have enabled in the fields of developmental biology, gene regulation, population genetics and molecular evolution. The Advanced mode of Genetics and Genomics will provide you with challenge and a higher level of academic rigour. You will have the opportunity to plan and carry out a project that will develop your skills in contemporary genetics/molecular biology techniques and will provide you with a greater depth of disciplinary understanding. The Advanced mode will culminate in a written report and in an oral presentation where you will discuss a recent breakthrough that has been enabled by the use of modern genetics and genomics technologies. This is a unit for anyone wanting to better understand the how genetics has shaped the earth and how it will shape the future.

TBA

3000-level units of study

Selective

HSTO3003
Cells and Development: Theory

Credit points: 6 **Teacher/Coordinator:** Prof Frank Lovicu **Session:** Semester 2 **Classes:** Four to five 1-hour theory lectures and/or one 1-hour tutorial per week **Assumed knowledge:** ANAT2008 or BMED2401) and Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **Assessment:** One 2-hour exam, tutorial research papers and Seminar (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

The main emphasis of this unit of study concerns the mechanisms that control animal development. Early developmental processes including fertilisation, cleavage, and gastrulation leading to the formation of the primary germ layers and subsequent body organs are described in a range of animals, mainly vertebrates. Stem cells of both embryonic and adult origin will be covered. Emphasis will be placed on the parts played by inductive cell and tissue interactions in cell and tissue differentiation, morphogenesis and pattern formation. This will be studied at both cellular and molecular levels.

Textbooks

Gilbert, SF. Developmental Biology. 11th edition. Sinauer Associates Inc. 2016.

HSTO3004
Cells and Development: Practical (Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Stuart Fraser **Session:** Semester 2 **Prerequisites:** An annual average mark of 65 or above in the previous year **Corequisites:** HSTO3003 **Assumed knowledge:** (ANAT2008 or BMED2401) and Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **Assessment:** Practical class reports and Seminars (100%) **Practical field work:** Two 3-hour practicals per week **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This advanced unit of study complements HSTO3003 (Cells and Development: Theory) and is catered to provide students with laboratory research experience leading to Honours and higher degrees. It will primarily cover the design and application of experimental procedures involved in cell and developmental biology, using appropriate molecular and cellular techniques to answer developmental questions raised in HSTO3003. This unit of study will promote hands on experience, allowing students to observe and examine developing and differentiating tissues at the macroscopic and microscopic level. The main emphasis of this unit of study will concentrate on practical approaches to understanding the mechanisms that control animal development. Some projects may examine early developmental processes such as fertilization, cleavage, gastrulation and the formation of the primary germ layers and tissues. The parts played by stem cells and inductive cell and tissue interactions in differentiation, morphogenesis and pattern formation can also be examined at cellular and molecular levels.

Textbooks

Gilbert SF. Developmental Biology. 10th edition. Sinauer Associates Inc. 2013.

PHSI3010
Reproduction, Development and Disease

Credit points: 6 **Teacher/Coordinator:** Dr Stuart Fraser **Session:** Semester 1 **Classes:** 2 x 1hr lectures per week; 1 guest lecture/problem-based learning class introduction/organisation session per week. 2 x 3 hour problem-based learning classes per semester. **Prerequisites:** (PHSI2X05 and PHSI2X06) or [12cp from (BCMB2X02, BIOL2X29, GEGE2X01)] or [12cp from (BMED2402, BMED2403, BMED2406)] **Prohibitions:** PHSI3905, PHSI3906, PHSI3005, PHSI3006, PHSI3910 **Assessment:** one mid-semester MCQ exam, one 2hr final exam, two problem-solving learning tutorials, 3 practical class reports **Practical field work:** 3 x 3 hr practicals per semester **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

The aim of this unit is to provide students with advanced knowledge of the physiological processes that regulate normal and how these may go awry leading to significant human conditions or even disease. Lectures will focus on; male and female reproductive physiology, endocrinology of reproduction, physiology of fertilisation, cell cycle control and apoptosis, mechanisms of differentiation, gastrulation, cardiovascular development, tissue formation and organogenesis, stem cell biology and the link between developmental processes and cancer. Reprogramming and tissue regeneration will also feature in the lecture content. Problem-based learning will focus on reproductive physiology and regeneration. Practical classes will examine the processes regulating sperm function, embryogenesis and stem cell biology.

Textbooks

Alberts, B. Molecular Biology of the Cell. 5th edition. Garland Science

BIOL3026
Developmental Genetics

Credit points: 6 **Teacher/Coordinator:** Dr Jenny Saleeba **Session:** Semester 2 **Classes:** 24 1-hour lectures/tutorials per semester and up to 3 hours laboratory per week. **Prerequisites:** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX) **Prohibitions:** BIOL3926 **Assessment:** One 2-hour exam, assignments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Developmental genetics discusses major concepts and our current understanding of developmental biology with an emphasis on molecular genetics. The developmental genetics of animal and plant systems will be investigated, along with approaches used to determine gene function in relation to development of complex multicellular organisms. Topics include the features and resources for model organisms; the generation of mutants for forward and reverse genetics; the application of mutants to the study gene function and gene networks; spatial and temporal gene expression in pattern formation; quantitative trait loci analysis; utility of genome wide association studies; epigenetics in relation to inheritance; genome information in the study of human genetics. Reference will be made to the use of modern techniques in developmental biology such as transgenics, recombinant DNA technology, tissue-specific expression analysis. Various methods of genetic mapping will be covered. Practical work complements the theoretical aspects of the course and develops important skills in genetics.

BIOL3926
Developmental Genetics (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Jenny Saleeba **Session:** Semester 2 **Classes:** 24 1-hour lectures/tutorials per semester and up to 3 hours laboratory per week. **Prerequisites:** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BIOL2XXX or BCMB2XXX or QBIO2001 or IMMU2XXX)] **Prohibitions:** BIOL3929 or BIOL3026 **Assessment:** One 2-hour exam, assignments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Qualified students will participate in alternative components to BIOL3026 Developmental Genetics. The content and nature of these components may vary from year to year. Some assessment will be in an alternative format to components of BIOL3026.

PRJT3XXX to be developed for offering in 2019.

Chemistry

Study in the discipline of Chemistry is offered by the School of Chemistry in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

A major in Chemistry will equip you with the knowledge and understanding of molecules and processes that underpin many of the most important aspects of the natural world and new technologies. Through a detailed explanation of chemical structure and change you will be guided through advanced concepts in areas such as photosynthesis, the molecules of life, green energy technologies, new materials and the molecular underpinnings of nanotechnology.

1000-level units of study aim to provide students with an understanding of the molecular basis of the physical properties of materials, the reasons chemical reactions occur and the energy changes involved. Units are offered at different levels depending on whether chemistry was studied at the HSC level or equivalent and the results obtained.

2000-level core units Molecular Reactivity & Spectroscopy and Chemical Structure & Stability provide the mainstream chemistry essential for students planning to major in chemistry and other chemical-related sciences. Elective units in Forensic and Environmental Chemistry and in the Chemistry of Biological Molecules are also available.

3000-level units allow students to specialise in particular areas of chemistry and cover such areas as: biomolecules; organic structure and reactivity; materials; catalysis and sustainable processes; metal complexes in medicines and materials; synthetic medicinal chemistry; membranes, self-assembly and surfaces; and molecular spectroscopy and quantum theory.

Requirements for completion

A major in Chemistry requires 60 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level core units
(iii)24 credit points of 3000-level selective units, including 1 interdisciplinary unit and 1 project unit or 1 combined interdisciplinary and project unit

A minor in Chemistry is available and articulates to this major.

First year

1000-level Chemistry is offered in two halves, Chemistry 1A (CHEM1XX1), which should be taken first, and Chemistry 1B (CHEM1XX2). Each of these is offered at four levels (Fundamentals, mainstream, Advanced, and the Special Studies Program) to suit the background and interests of students.

These units underpin the Chemistry major and will provide a solid understanding of chemical structure and reactivity. A fundamental understanding of molecules and their behaviour is also required in a wide range of other majors, from medicine to nanotechnology.

Second year

Students in 2000-level Chemistry will take one unit of core chemistry in each semester from CHEM2401/2911/2915 and CHEM2402/2912/2916. These units cover an extension of the skills and knowledge acquired in 1000-level Chemistry and provide the broad base for further specialisation in 3000-level Chemistry.

Third year

24 credit points from a selection of eight available units of study. The flexibility in third year allows students to tailor their studies to their scientific interests.

In your third year you will take at least one designated project unit and you will have the chance to explore new aspects of Chemistry in both a disciplinary and an interdisciplinary context through project and practical work.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000 level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Chemistry: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Contact and further information

Address:
School of Chemistry
Chemistry Building F11
University of Sydney NSW 2006

Learning Outcomes

Students who graduate from Chemistry will know:

1. Both the concepts and language of organic, inorganic, physical and theoretical chemistry.
2. How recent advances in our understanding of chemical processes contribute to our society and wellbeing (an example of Interdisciplinary Effectiveness).
3. How the various analytical tools employed in the chemical laboratory lead us to an understanding of chemical structure and mechanism.
4. The diverse themes and trends of chemical reactivity summarised by the Periodic Table.
5. Important boundaries of what is known: where existing chemical knowledge meets areas of current academic and industrial research.

Students will be able to:

1. Communicate complicated scientific concepts involving molecular structure and change through both written and oral means.
2. Solve challenging problems in Chemistry by working individually and in teams, and through consultation of the scientific literature.
3. Ask and answer scientific questions through experiment in the chemical laboratory.
4. Analyse datasets and deploy skills in computing, numeracy and data handling to obtain answers to chemical questions.
5. Critically evaluate diverse sources of chemical information and judge their relative significance.

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
CHEMISTRY Advanced coursework and projects will be available in 2020 for students who complete this major.			
Chemistry major A major in Chemistry requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 12 credit points of 2000-level core units (iii) 24 credit points of 3000-level selective units, including 1 interdisciplinary unit and 1 project unit or 1 combined interdisciplinary and project unit			
Chemistry minor A minor in Chemistry requires 36 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 12 credit points of 2000-level core units (iii) 12 credit points of 3000-level selective units			
Units of study			
The units of study are listed below.			
1000-level units of study			
Core			
CHEM1011 **Fundamentals of Chemistry 1A**	6	**A** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 *Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1
CHEM1111 **Chemistry 1A**	6	**A** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 *Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1 Semester 2 Summer Main
CHEM1911 **Chemistry 1A (Advanced)**	6	**A** 80 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 *Note: Department permission required for enrolment*	Semester 1
CHEM1991 **Chemistry 1A (Special Studies Program)**	6	**A** 90 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 *Note: Department permission required for enrolment*	Semester 1
CHEM1012 **Fundamentals of Chemistry 1B**	6	**P** CHEM1XX1 **N** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1112 or CHEM1912 or CHEM1992	Semester 2
CHEM1112 **Chemistry 1B**	6	**P** CHEM1111 or CHEM1911 or CHEM1101 or CHEM1901 or (75 or above in CHEM1011 or CHEM1001) **N** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1012 or CHEM1912 or CHEM1992	Semester 1 Semester 2
CHEM1912 **Chemistry 1B (Advanced)**	6	**P** CHEM1911 or CHEM1991 or CHEM1901 or CHEM1903 or (75 or above in CHEM1111 or CHEM1101) or (90 or above in HSC Chemistry or equivalent) **N** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1012 or CHEM1112 or CHEM1992 *Students who commence in semester 2 are strongly advised that you would be better served by taking the mainstream level units in sequence, Chemistry 1A before Chemistry 1B, rather than the Advanced units in the opposite order.*	Semester 2
CHEM1992 **Chemistry 1B (Special Studies Program)**	6	**P** 75 or above in CHEM1991 or CHEM1903 or (90 or above in HSC Chemistry or equivalent) **N** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1012 or CHEM1112 or CHEM1912 *Entry is by invitation. This unit of study is deemed to be an Advanced unit of study. Students who commence in semester 2 are strongly advised that you would be better served by taking the mainstream level units in sequence, Chemistry 1A before Chemistry 1B, rather than the Special Studies Program units in the opposite order.*	Semester 2

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session

CHEM3XX0, CHEM3XX1, CHEM3XX2, CHEM3XX3, CHEM3XX4, CHEM3XX5, CHEM3XX6, CHEM3XX7 to be developed for offering in 2019.			

Chemistry

CHEMISTRY

Advanced coursework and projects will be available in 2020 for students who complete this major.

Chemistry major

A major in Chemistry requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units (ii) 12 credit points of 2000-level core units (iii) 24 credit points of 3000-level selective units, including 1 interdisciplinary unit and 1 project unit or 1 combined interdisciplinary and project unit

Chemistry minor

A minor in Chemistry requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level core units (iii) 12 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Core

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic

orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1012
Fundamentals of Chemistry 1B

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 2 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prerequisites:** CHEM1XX1 **Prohibitions:** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1112 or CHEM1912 or CHEM1992 **Assessment:** quizzes, assignments, laboratory attendance and log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Chemistry transforms the way we live. It provides the basis for understanding biological, geological and atmospheric processes, how medicines work, the properties of materials and substances, how beer is brewed, and for obtaining forensic evidence. This unit of study builds upon your prior knowledge of chemistry to further develop your knowledge and skills in chemistry for broad application. You will learn about organic chemistry reactions, structural determination, nitrogen chemistry, industrial processes, kinetics, electrochemistry, thermochemistry, phase behaviour, solubility equilibrium and chemistry of metals. You will further develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through enquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. Fundamentals of Chemistry 1B is built on a satisfactory prior knowledge of Fundamentals of Chemistry 1A. Compared to the mainstream Chemistry 1B, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit requires completion of an online supplementary course.

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1112
Chemistry 1B

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2 **Classes:** 1x3-hr lecture; 1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prerequisites:** CHEM1111 or CHEM1911 or CHEM1101 or CHEM1901 or (75 or above in CHEM1011 or CHEM1001) **Prohibitions:** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1012 or CHEM1912 or CHEM1992 **Assessment:** quizzes, assignments, laboratory attendance and log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Chemistry transforms the way we live. It provides the basis for understanding biological, geological and atmospheric processes, how medicines work, the properties of materials and substances, how beer is brewed, and for obtaining forensic evidence. This unit of study builds upon your prior knowledge of chemistry to further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, industrial processing, and further study in chemistry. You will learn about organic chemistry reactions, structural determination, nitrogen chemistry, industrial processes, kinetics, electrochemistry, thermochemistry, phase behaviours, solubility equilibrium and chemistry of metals. You will further develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do we develop lotions that don't burn us, how do we measure UV absorption by sunscreens, how can we measure and alter soil pH, how are sticky things made, and how do we determine the concentration of vitamin C in juice? Through enquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. Chemistry 1B is built on a satisfactory prior knowledge of Chemistry 1A.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1912
Chemistry 1B (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 2 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prerequisites:** CHEM1911 or CHEM1991 or CHEM1901 or CHEM1903 or (75 or above in CHEM1111 or CHEM1101) or (90 or above in HSC Chemistry or equivalent) **Prohibitions:** CHEM1002 or CHEM1102 or CHEM1902 or CHEM1904 or CHEM1108 or CHEM1012 or CHEM1112 or CHEM1992 **Assessment:** quizzes, assignments, laboratory attendance and log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who commence in semester 2 are strongly advised that you would be better served by taking the mainstream level units in sequence, Chemistry 1A before Chemistry 1B, rather than the Advanced units in the opposite order.

Chemistry transforms the way we live. It provides the basis for understanding biological, geological and atmospheric processes, how medicines work, the properties of materials and substances, how beer is brewed, and for obtaining forensic evidence. This unit of study builds upon your prior knowledge of chemistry to further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about organic chemistry reactions, structural determination, nitrogen chemistry, industrial processes, kinetics, electrochemistry, thermochemistry, phase behaviour, solubility equilibrium and chemistry of metals. You will further develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through enquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. Chemistry 1B (Advanced) is built on a satisfactory prior knowledge of Chemistry 1A (Advanced). Compared to the mainstream Chemistry 1B, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

2000-level units of study

Core

CHEM2401
Molecular Reactivity and Spectroscopy

Credit points: 6 **Teacher/Coordinator:** A/Prof Siegbert Schmid **Session:** Semester 1 **Classes:** Three 1-hour lectures per week, seven 1-hour tutorials per semester, eight 4-hour practicals per semester **Prerequisites:** (CHEM1XX1 or CHEM1903) and (CHEM1XX2 or CHEM1904) **Prohibitions:** CHEM2001 or CHEM2101 or CHEM2301 or CHEM2311 or CHEM2502 or CHEM2901 or CHEM2903 or CHEM2911 or CHEM2915 **Assumed knowledge:** 6cp MATH1XXX **Assessment:** Quizzes, lab reports and final examination (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This is a required chemistry unit of study for students intending to major in chemistry.

This is one of the two core units of study for students considering majoring in chemistry, and for students of other disciplines who wish to acquire a good general background in chemistry. The unit considers fundamental questions of molecular structure, chemical reactivity, and molecular spectroscopy: What are chemical reactions and what makes them happen? How can we follow and understand them? How can we exploit them to make useful molecules? This course includes the organic and medicinal chemistry of aromatic and carbonyl compounds, organic reaction mechanisms, molecular spectroscopy, quantum chemistry, and molecular orbital theory.

Textbooks

See http://sydney.edu.au/science/chemistry/studying-chemistry/undergraduate/intermediate-chemistry.shtml

CHEM2911
Molecular Reactivity and Spectroscopy Adv

Credit points: 6 **Teacher/Coordinator:** A/Prof Siegbert Schmid **Session:** Semester 1 **Classes:** Three 1-hour lectures per week, seven 1-hour tutorials per semester and eight 4-hour practicals per semester **Prerequisites:** (A mark of 65 or above in CHEM1111 or CHEM1101 or CHEM1911 or CHEM1901 or CHEM1991 or CHEM1903) and (a mark of 65 or above in CHEM1112 or CHEM1102 or CHEM1912 or CHEM1902 or CHEM1992 or CHEM1904) **Prohibitions:** CHEM2001 or CHEM2101 or CHEM2301 or CHEM2311 or CHEM2312 or CHEM2401 or CHEM2502 or CHEM2901 or CHEM2903 or CHEM2915 **Assumed knowledge:** 6cp MATH1XXX **Assessment:** Quizzes, lab reports and final examination (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The syllabus for this unit is the same as that of CHEM2401 together with special Advanced material presented in the practical program. The lectures cover fundamental consideration of molecular electronic structure and its role in molecular reactivity and spectroscopy and include applications of spectroscopy, the organic chemistry of aromatic systems, molecular orbital theory and quantum chemistry. For more details of the lecture syllabus, please read the entry for CHEM2401.

Textbooks

See http://sydney.edu.au/science/chemistry/studying-chemistry/undergraduate/intermediate-chemistry.shtml

CHEM2915
Molecular Reactivity and Spectroscopy SSP

Credit points: 6 **Teacher/Coordinator:** A/Prof Siegbert Schmid **Session:** Semester 1 **Classes:** Three 1-hour lectures per week, twelve 1-hour SSP seminars per semester, eight 4-hour practicals per semester **Prerequisites:** (A mark of 75 or above in CHEM1111 or CHEM1101 or CHEM1911 or CHEM1901 or CHEM1991 or CHEM1903) and (a mark of 75 or above in CHEM1112 or CHEM1102 or CHEM1912 or CHEM1902 or CHEM1992 or CHEM1904) **Prohibitions:** CHEM2001 or CHEM2101 or CHEM2301 or CHEM2311 or CHEM2312 or CHEM2401 or CHEM2502 or CHEM2901 or CHEM2903 or CHEM2911 **Assumed knowledge:** 6cp MATH1XXX **Assessment:** Quizzes, assignments, lab reports and final examination (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: The number of places in this unit of study is strictly limited and entry is by invitation only. Enrolment is conditional upon available places.

The lectures for this unit comprise the lectures for CHEM2401 and the Advanced practical program together with additional SSP seminars.

Textbooks

See http://sydney.edu.au/science/chemistry/studying-chemistry/undergraduate/intermediate-chemistry.shtml

CHEM2402
Chemical Structure and Stability

Credit points: 6 **Teacher/Coordinator:** A/Prof Siegbert Schmid **Session:** Semester 2 **Classes:** Three 1-hour lectures per week, seven 1-hour tutorials per semester, eight 4-hour practicals per semester **Prerequisites:** (CHEM1XX1 or CHEM1903) and (CHEM1XX2 or CHEM1904) **Prohibitions:** CHEM2202 or CHEM2302 or CHEM2902 or CHEM2912 or CHEM2916 **Assumed knowledge:** 6cp MATH1XXX **Assessment:** Quizzes, lab reports and final examination (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This is a required chemistry unit of study for students intending to major in chemistry.

This is the second core unit of study for students considering majoring in chemistry, and for students seeking a good general background in chemistry. The unit continues the consideration of molecular structure and chemical reactivity. Topics include the structure and bonding of inorganic compounds, the properties of metal complexes, materials chemistry and nanotechnology, thermodynamics and kinetics.

Textbooks

See http://sydney.edu.au/science/chemistry/studying-chemistry/undergraduate/intermediate-chemistry.shtml

CHEM2912
Chemical Structure and Stability (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Siegbert Schmid **Session:** Semester 2 **Classes:** Three 1-hour lectures per week, seven 1-hour tutorials per semester, eight 4-hour practicals per semester **Prerequisites:** (A mark of 65 or above in CHEM1111 or CHEM1101 or CHEM1911 or CHEM1901 or CHEM1991 or CHEM1903) and (a mark of 65 or above in CHEM1112 or CHEM1102 or CHEM1912 or CHEM1902 or CHEM1992 or CHEM1904) **Prohibitions:** CHEM2202 or CHEM2302 or CHEM2402 or CHEM2902 or CHEM2916 **Assumed knowledge:** 6cp MATH1XXX **Assessment:** Quizzes, lab reports and final examination (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The syllabus for this unit is the same as that of CHEM2402 together with special Advanced material presented in the practical program. The lectures include the properties of inorganic compounds and complexes, statistical thermodynamics, the chemistry of carbonyls, nucleophilic organometallic reagents, and synthetic methods. For more details of the lecture syllabus, please read the entry for CHEM2402.

Textbooks

See http://sydney.edu.au/science/chemistry/studying-chemistry/undergraduate/intermediate-chemistry.shtml

CHEM2916
Chemical Structure and Stability (SSP)

Credit points: 6 **Teacher/Coordinator:** A/Prof Siegbert Schmid **Session:** Semester 2 **Classes:** Three 1-hour lectures per week, twelve 1-hour SSP seminars per semester, eight 4-hour practicals per semester **Prerequisites:** (A mark of 75 or above in CHEM1111 or CHEM1101 or CHEM1911 or CHEM1901 or CHEM1991 or CHEM1903) and (a mark of 75 or above in CHEM1112 or CHEM1102 or CHEM1912 or CHEM1902 or CHEM1992 or CHEM1904) **Prohibitions:** CHEM2202 or CHEM2302 or CHEM2402 or CHEM2902 or CHEM2912 **Assumed knowledge:** 6cp MATH1XXX **Assessment:** Quizzes, assignments, lab reports and final examination (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: The number of places in this unit of study is strictly limited and entry is by invitation only. Enrolment is conditional upon available places.

The lectures for this unit comprise the lectures for CHEM2402 and the Advanced practical program together with additional SSP seminars comprising three seminar series on state of the art topics in chemistry.

3000-level units of study

Selective

CHEM3XX0, CHEM3XX1, CHEM3XX2, CHEM3XX3, CHEM3XX4, CHEM3XX5, CHEM3XX6, CHEM3XX7 to be developed for offering in 2019.

Computer Science

The School of Information Technologies aims to teach fundamental principles and practical skills in IT, and to establish the foundations for an entire career. Units of study in the Computer Science major are available at standard and advanced level.

About the major

A major in computer science covers the key concepts of computation. You will learn the principles and techniques needed to solve tasks efficiently with computation, and how to express those solutions in software. You will also discover how computation can be modelled and how to reason about the limits of what computation can achieve.

A major in computer science will provide you with the knowledge and skills needed to innovate in information technology, and create fundamentally new IT solutions to future challenges.

Requirements for completion

A major in Computer Science requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)18 credit points of 2000-level core units
(iii)12 credit points of 3000-level core units
(iv)6 credit points of 3000-level selective units

A minor in Computer Science is available and articulates to this major.

First year

Core: INFO1110 and INFO1113.

Second year

Core: COMP2X23, COMP2017, COMP2X22.

Third year

COMP3615/3600 and COMP3X27 and 6 credit points from a selection of COMP3221, COMP3308, COMP3608, COMP3419, COMP3520.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Computer Science: completion of 24 credit points of project work and 24 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Computer Science will be able to:

1. Acquire knowledge of the fundamental mathematical properties of computer hardware, software, and certain applications thereof.
2. Find efficient solutions to a wide range of computational tasks, by applying known data structures and algorithms, or by designing new algorithms using a range of algorithm design techniques; and able to produce runnable implementations of these solutions.
3. Reason the correctness and efficiency of algorithms (both standard ones and novel ones).
4. Acquire knowledge of key ideas from the theory of computation and its limits, and ability to recognize tasks where efficient perfect solutions should not be expected, and where approximate solutions are appropriate.
5. Learn basic knowledge of the hardware & software stack including computer architecture, operating systems, programming languages, databases, and networking.

Computer Science

COMPUTER SCIENCE

Advanced coursework and projects will be available in 2020 for students who complete this major.

Computer Science major

A major in Computer Science requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 18 credit points of 2000-level core units(iii) 12 credit points of 3000-level core units(iv) 6 credit points of 3000-level selective units

Computer Science minor

A minor in Computer Science requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 18 credit points of 2000-level core units(iii) 6 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Core

INFO1110
Introduction to Programming

Credit points: 6 **Session:** Intensive July, Semester 1, Semester 2 **Classes:** lectures, laboratories, seminars **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is an essential starting point for software developers, IT consultants, and computer scientists to build their understanding of principle computer operation. Students will obtain knowledge and skills with procedural programming. Crucial concepts include defining data types, control flow, iteration, functions, recursion, the model of addressable memory. Students will be able to reinterpret a general problem into a computer problem, and use their understanding of the computer model to develop source code. This unit trains students with software development process, including skills of testing and debugging. It is a prerequisite for more advanced programming languages, systems programming, computer security and high performance computing.

INFO1113
Object-Oriented Programming

Credit points: 6 **Session:** Semester 1, Semester 2 **Classes:** lectures, laboratories, seminars **Prerequisites:** INFO1110 **Prohibitions:** INFO1103 OR INFO1105 OR INFO1905 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Object-oriented (OO) programming is a technique that arranges code into classes, each encapsulating in one place related data and the operations on that data. Inheritance is used to reuse code from a more general class, in specialised situations. Most modern programming languages provide OO features. Understanding and using these are an essential skill to software developers in industry. This unit provides the student with the concepts and individual programming skills in OO programming, starting from their previous mastery of procedural programming.

2000-level units of study

Core

COMP2123
Data Structures and Algorithms

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Tutorials **Prerequisites:** INFO1110 OR INFO1113 OR DATA1002 OR INFO1103 OR INFO1903 **Prohibitions:** INFO1105 OR INFO1905 OR COMP2823 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will teach some powerful ideas that are central to solving algorithmic problems in ways that are more efficient than naive approaches. In particular, students will learn how data collections can support efficient access, for example, how a dictionary or map can allow key-based lookup that does not slow down linearly as the collection grows in size. The data structures covered in this unit include lists, stacks, queues, priority queues, search trees, hash tables, and graphs. Students will also learn efficient techniques for classic tasks such as sorting a collection. The concept of asymptotic notation will be introduced, and used to describe the costs of various data access operations and algorithms.

COMP2823
Data Structures and Algorithms (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** lectures, tutorials **Prerequisites:** Distinction level result in at least one of INFO1110 OR INFO1113 OR DATA1002 OR INFO1103 OR INFO1903 **Prohibitions:** INFO1105 OR INFO1905 OR COMP2123 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

In particular, students will learn how data collections can support efficient access, for example, how a dictionary or map can allow key-based lookup that does not slow down linearly as the collection grows in size. The data structures covered in this unit include lists, stacks, queues, priority queues, search trees, hash tables, and graphs. Students will also learn efficient techniques for classic tasks such as sorting a collection. The concept of asymptotic notation will be introduced, and used to describe the costs of various data access operations and algorithms.

COMP2017
Systems Programming

Credit points: 6 **Session:** Semester 1 **Classes:** lectures, laboratories **Prerequisites:** INFO1113 OR INFO1105 OR INFO1905 OR INFO1103 **Corequisites:** COMP2123 OR COMP2823 OR INFO1105 OR INFO1905 **Prohibitions:** COMP2129 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

In this unit of study, elementary methods for developing robust, efficient, and re-usable software will be covered. The unit is taught in C, in a Unix environment. Specific coding topics include memory management, the pragmatic aspects of implementing data structures such as lists and hash tables and managing concurrent threads. Debugging tools and techniques are discussed and common programming errors are considered along with defensive programming techniques to avoid such errors. Emphasis is placed on using common Unix tools to manage aspects of the software construction process, such as version control and regression testing. The subject is taught from a practical viewpoint and it includes a considerable amount of programming practice.

COMP2022
Programming Languages, Logic and Models

Credit points: 6 **Session:** Semester 2 **Classes:** Lectures, Tutorials **Prerequisites:** INFO1103 OR INFO1903 OR INFO1113 **Prohibitions:** COMP2922 **Assumed knowledge:** MATH1004 OR MATH1904 OR MATH1064 OR MATH2069 OR MATH2969 **Assessment:** Through semester assessment (50%) and Final Exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides an introduction to the foundations of computational models, and their connection to programming languages/tools. The unit covers various abstract models for computation including Lambda Calculus, and Logic calculi (e. g. concept of formal proofs in propositional, predicate, and temporal logic). For each abstract model, we introduce programming languages/tools that are built on the introduced abstract computational models. We will discuss functional languages including Scheme/Haskell, and Prolog/Datalog.

COMP2922
Programming Languages, Logic and Models (Adv)

Credit points: 6 **Session:** Semester 2 **Classes:** lectures, tutorials **Prerequisites:** Distinction level result in INFO1103 OR INFO1903 OR INFO1113 **Prohibitions:** COMP2022 **Assumed knowledge:** MATH1004 OR MATH1904 OR MATH1064 OR MATH2069 OR MATH2969 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit provides an introduction to the foundations of computational models, and their connection to programming languages/tools. For each abstract model, we introduce programming languages/tools that are built on the introduced abstract computational models. We will discuss functional languages including Scheme/Haskell, and Prolog/Datalog.

3000-level units of study

Core

COMP3600
Computer Science Project (Adv)

Credit points: 6 **Session:** Semester 2 **Classes:** project work, sites visits, meetings **Prerequisites:** (COMP2123 OR COMP2823) AND COMP2017 AND (COMP2022 OR COMP2922) with Distinction level results in at least one of the above listed units **Prohibitions:** INFO3600 OR COMP3615 **Assessment:** through semester assessment (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit will provide students an opportunity to apply the knowledge and practise the skills acquired in the prerequisite and qualifying units, in the context of designing and building a substantial software development system in diverse application domains including life sciences. Working in groups for an external client combined with academic supervision, students will need to carry out the full range of activities including requirements capture, analysis and design, coding, testing and documentation. Students will use the XP methodology and make use of professional tools for the management of their project.

COMP3615
Computer Science Project

Credit points: 6 **Session:** Semester 2 **Classes:** Project Work, Site Visit, Meetings **Prerequisites:** (COMP2123 OR COMP2823) AND COMP2017 AND (COMP2022 OR COMP2922) **Prohibitions:** INFO3600 OR COMP3600 **Assessment:** Through semester assessment (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Working in groups for an external client combined with academic supervision, students will need to carry out the full range of activities including requirements capture, analysis and design, coding, testing and documentation. Students will use the XP methodology and make use of professional tools for the management of their project.

COMP3027
Algorithm Design

Credit points: 6 **Session:** Semester 1 **Classes:** lectures, tutorials **Prerequisites:** COMP2123 OR COMP2823 OR INFO1105 OR INFO1905 **Prohibitions:** COMP2007 OR COMP2907 OR COMP3927 **Assumed knowledge:** MATH1004 OR MATH1904 OR MATH1064 **Assessment:** through semester assessment (40%), final exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides an introduction to the design techniques that are used to find efficient algorithmic solutions for given problems. The techniques covered included greedy, divide-and-conquer, dynamic programming, and adjusting flows in networks. Students will extend their skills in algorithm analysis. The unit also provides an introduction to the concepts of computational complexity and reductions between problems.

COMP3927
Algorithm Design (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** lectures, tutorials **Prerequisites:** COMP2123 OR COMP2823 OR INFO1105 OR INFO1905 **Prohibitions:** COMP2007 OR COMP2907 OR COMP3027 **Assumed knowledge:** MATH1004 OR MATH1904 OR MATH1064 **Assessment:** through semester assessment (40%), final exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit provides an introduction to the design techniques that are used to find efficient algorithmic solutions for given problems. The unit also provides an introduction to the concepts of computational complexity and reductions between problems.

Major selective

COMP3221
Distributed Systems

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Laboratories, Project Work - own time **Prerequisites:** (INFO1105 OR INFO1905) OR ((INFO1103 OR INFO1113) AND (COMP2123 OR COMP2823)) **Prohibitions:** COMP2121 **Assessment:** through semester assessment (60%), final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will provide broad introduction to the principles of distributed computing and distributed systems and their design; provide students the fundamental knowledge required to analyse, design distributed algorithms and implement various types of applications, like blockchains; explain the common algorithmic design principles and approaches used in the design of message passing at different scales (e.g., logical time, peer-to-peer overlay, gossip-based communication).

COMP3308
Introduction to Artificial Intelligence

Credit points: 6 **Session:** Semester 1 **Classes:** Tutorials, Lectures **Prohibitions:** COMP3608 **Assumed knowledge:** Algorithms. Programming skills (e.g. Java, Python, C, C++, Matlab) **Assessment:** Through semester assessment (45%) and Final Exam (55%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Artificial Intelligence (AI) is all about programming computers to perform tasks normally associated with intelligent behaviour. Classical AI programs have played games, proved theorems, discovered patterns in data, planned complex assembly sequences and so on. This unit of study will introduce representations, techniques and architectures used to build intelligent systems. It will explore selected topics such as heuristic search, game playing, machine learning, neural networks and probabilistic reasoning. Students who complete it will have an understanding of some of the fundamental methods and algorithms of AI, and an appreciation of how they can be applied to interesting problems. The unit will involve a practical component in which some simple problems are solved using AI techniques.

COMP3608
Introduction to Artificial Intelligence (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Tutorials **Prerequisites:** Distinction-level results in some 2nd year COMP or MATH or SOFT units. **Prohibitions:** COMP3308 **Assumed knowledge:** Algorithms. Programming skills (e.g. Java, Python, C, C++, Matlab) **Assessment:** Through semester assessment (45%) and Final Exam (55%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: COMP3308 and COMP3608 share the same lectures, but have different tutorials and assessment (the same type but more challenging).

An advanced alternative to COMP3308; covers material at an advanced and challenging level.

COMP3419
Graphics and Multimedia

Credit points: 6 **Session:** Semester 2 **Classes:** Lectures, Tutorials **Prerequisites:** COMP2123 OR COMP2823 OR INFO1105 OR INFO1905 **Assumed knowledge:** Programming skills **Assessment:** Through semester assessment (40%) and Final Exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides a broad introduction to the field of graphics and multimedia computing to meet the diverse requirements of application areas such as entertainment, industrial design, virtual reality, intelligent media management, social media and remote sensing. It covers both the underpinning theories and the practices of computing and manipulating digital media including graphics / image, audio, animation, and video. Emphasis is placed on principles and cutting-edge techniques for multimedia data processing, content analysis, media retouching, media coding and compression.

COMP3520
Operating Systems Internals

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Tutorials **Prerequisites:** COMP2129 **Assessment:** Through semester assessment (40%) and Final Exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will provide a comprehensive discussion of relevant OS issues and principles and describe how those principles are put into practice in real operating systems. The contents include internal structure of OS; several ways each major aspect (process scheduling, inter-process communication, memory management, device management, file systems) can be implemented; the performance impact of design choices; case studies of common OS (Linux, MS Windows NT, etc.).

Minor selective

COMP3027
Algorithm Design

Credit points: 6 **Session:** Semester 1 **Classes:** lectures, tutorials **Prerequisites:** COMP2123 OR COMP2823 OR INFO1105 OR INFO1905 **Prohibitions:** COMP2007 OR COMP2907 OR COMP3927 **Assumed knowledge:** MATH1004 OR MATH1904 OR MATH1064 **Assessment:** through semester assessment (40%), final exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides an introduction to the design techniques that are used to find efficient algorithmic solutions for given problems. The techniques covered included greedy, divide-and-conquer, dynamic programming, and adjusting flows in networks. Students will extend their skills in algorithm analysis. The unit also provides an introduction to the concepts of computational complexity and reductions between problems.

COMP3927
Algorithm Design (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** lectures, tutorials **Prerequisites:** COMP2123 OR COMP2823 OR INFO1105 OR INFO1905 **Prohibitions:** COMP2007 OR COMP2907 OR COMP3027 **Assumed knowledge:** MATH1004 OR MATH1904 OR MATH1064 **Assessment:** through semester assessment (40%), final exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit provides an introduction to the design techniques that are used to find efficient algorithmic solutions for given problems. The techniques covered included greedy, divide-and-conquer, dynamic programming, and adjusting flows in networks. Students will extend their skills in algorithm analysis. The unit also provides an introduction to the concepts of computational complexity and reductions between problems.

COMP3221
Distributed Systems

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Laboratories, Project Work - own time **Prerequisites:** (INFO1105 OR INFO1905) OR ((INFO1103 OR INFO1113) AND (COMP2123 OR COMP2823)) **Prohibitions:** COMP2121 **Assessment:** through semester assessment (60%), final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will provide broad introduction to the principles of distributed computing and distributed systems and their design; provide students the fundamental knowledge required to analyse, design distributed algorithms and implement various types of applications, like blockchains; explain the common algorithmic design principles and approaches used in the design of message passing at different scales (e.g., logical time, peer-to-peer overlay, gossip-based communication).

COMP3308
Introduction to Artificial Intelligence

Credit points: 6 **Session:** Semester 1 **Classes:** Tutorials, Lectures **Prohibitions:** COMP3608 **Assumed knowledge:** Algorithms. Programming skills (e.g. Java, Python, C, C++, Matlab) **Assessment:** Through semester assessment (45%) and Final Exam (55%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Artificial Intelligence (AI) is all about programming computers to perform tasks normally associated with intelligent behaviour. Classical AI programs have played games, proved theorems, discovered patterns in data, planned complex assembly sequences and so on. This unit of study will introduce representations, techniques and architectures used to build intelligent systems. It will explore selected topics such as heuristic search, game playing, machine learning, neural networks and probabilistic reasoning. Students who complete it will have an understanding of some of the fundamental methods and algorithms of AI, and an appreciation of how they can be applied to interesting problems. The unit will involve a practical component in which some simple problems are solved using AI techniques.

COMP3608
Introduction to Artificial Intelligence (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Tutorials **Prerequisites:** Distinction-level results in some 2nd year COMP or MATH or SOFT units. **Prohibitions:** COMP3308 **Assumed knowledge:** Algorithms. Programming skills (e.g. Java, Python, C, C++, Matlab) **Assessment:** Through semester assessment (45%) and Final Exam (55%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: COMP3308 and COMP3608 share the same lectures, but have different tutorials and assessment (the same type but more challenging).

An advanced alternative to COMP3308; covers material at an advanced and challenging level.

COMP3419
Graphics and Multimedia

Credit points: 6 **Session:** Semester 2 **Classes:** Lectures, Tutorials **Prerequisites:** COMP2123 OR COMP2823 OR INFO1105 OR INFO1905 **Assumed knowledge:** Programming skills **Assessment:** Through semester assessment (40%) and Final Exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides a broad introduction to the field of graphics and multimedia computing to meet the diverse requirements of application areas such as entertainment, industrial design, virtual reality, intelligent media management, social media and remote sensing. It covers both the underpinning theories and the practices of computing and manipulating digital media including graphics / image, audio, animation,

and video. Emphasis is placed on principles and cutting-edge techniques for multimedia data processing, content analysis, media retouching, media coding and compression.

COMP3520
Operating Systems Internals

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Tutorials **Prerequisites:** COMP2129 **Assessment:** Through semester assessment (40%) and Final Exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will provide a comprehensive discussion of relevant OS issues and principles and describe how those principles are put into practice in real operating systems. The contents include internal structure of OS; several ways each major aspect (process scheduling, inter-process communication, memory management, device management, file systems) can be implemented; the performance impact of design choices; case studies of common OS (Linux, MS Windows NT, etc.).

Data Science

Study in the discipline of Data Science is jointly offered by the School of Mathematics and Statistics in the Faculty of Science and the School of Information Technologies in the Faculty of Engineering and Information Technologies. Units of study in this major are available at standard and advanced level.

About the major

Data is an essential asset in many organisations as it enables informed decision making into many areas including market intelligence and science. In the major in Data Science, you will learn computational and analytical skill sets that stem from statistics and computer science, to manage, interpret, understand, analyse and derive key knowledge from the data.

You will develop critical thinking about data and its use, a deep understanding of the core technical skills required and an appreciation for the context in which that data was collected. At the 3000-level of study and beyond, you will develop the ability to understand problems from many disciplines and place a data-driven problem into an analytical framework, solve the problem through computational means, interpret the results and communicate them to clients or collaborators.

Requirements for completion

A major in Data Science requires 48 credit points, consisting of:

(i)6 credit points of 1000-level core units
(ii)6 credit points of 1000-level units according to one of the following rules:
(a)6 credit points of selective units, or
(b)3 credit points of statistics units and 3 credit points of computations units, or
(c)3 credit points of advanced statistics and 3 credit points of calculus and linear algebra units
(iii)12 credit points of 2000-level core units
(iv)6 credit points of 2000-level selective units
(v)6 credit points of 3000-level interdisciplinary project units
(vi)6 credit points of 3000-level methodology-focussed units
(vii)6 credit points of 3000-level methodology or application and discipline-focussed units

A minor in Data Science is available and articulates to this major.

First year

DATA1001 Foundations of Data Science is a foundational unit in the Data Science major. The unit focuses on developing critical and statistical thinking skills for all students.

DATA1002 Informatics: Data and Computation is a foundational unit in the Data Science major. This unit covers computation and data handling, integrating sophisticated use of existing productivity software, e.g. spreadsheets, with the development of custom software using the general-purpose Python language.

Students are strongly encouraged to take DATA1001 and DATA1002 for this major. However, there are some equivalent selective units for DATA1001 and students can choose from: ENVX1002, MATH1005, MATH1015, MATH1115, MATH1905, MATH1021, MATH1921, MATH1931, MATH1023, MATH1923, MATH1933, MATH1002, MATH1902. Students should refer to Table A for specific 1000-level requirements.

Second year

DATA2001 – Data Science: Scale and Data Diversity focuses on methods and techniques to efficiently explore and analyse large data collections;

DATA2002 – Data Analytics: Learning from Data focuses on developing data analytic skills for a wide range of problems and data.

Students also complete one unit from a selection: COMP2123, COMP2823, STAT2X11, QBUS2830.

Third year

DATA3001 – Interdisciplinary Data Science Project is the capstone 3000-level unit for the major and will include both the disciplinary and interdisciplinary project. The main component for the unit will be a nine week project that applies the candidates' skills and knowledge to analyse a real, messy dataset from a knowledge domain outside data science and statistics.

Students will also select 6 credit points from a selection of DATA and STAT units focusing on methodology, and 6 credit points from a selection of methodology or application and discipline-focussed units.

Note that the following units will also be available in 2019 at 3000-level: COMP3308, COMP3027, COMP3608, COMP3927.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Data Science: completion of 24 credit points of project work and 24 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Data Science will be able to demonstrate:

Interdisciplinary Skills

1. Ability to engage with problems from many diverse areas of application and to understand the relationships between a given problem and data collected to solve the problem.
2. Ability to relate context specific knowledge to data, to understand how data can be used to generate context specific knowledge, and know how this knowledge can guide data analytics.

Foundational Understanding

1. Understanding of the importance of experimental design, its relationship with data output, and how this data should be analysed and evaluated, including potential pitfalls.
2. Ability to identify, at a general level, the type of data analytical approach required for a particular problem; whether that is data analysis, simulation based modelling or equation-based modelling.
3. Understanding of how the data context, organizational constraints and quality issues have implications for flow-on impacts in further stages of the analysis.

Data Science Methods and Tools

1. Skills in data management with an understanding of how data, metadata, and derived knowledge (including analytical models) are stored, accessed, and administered.
2. A range of computational skills including programming, choosing scientific data formats, creating and using databases (for storing and accessing metadata) and use of graphical information systems (for mapping and sharing high dimensional data). These skills also include understanding the principles of programming and the ability to translate this knowledge to new computational code and to create tools.
3. Data analytical competencies that include, but are not limited to, the use appropriate of quantitative models or visualisation methods on multiple data types to:

- enable prediction of outcome
- recognise significant patterns and trends
- critically assess the strengths and weaknesses of different analytical approaches.

Communication Skills

1. Ability and experience to confidently use one's data analytical competency to communicate discipline-specific outcomes in written and verbal form, and for decision making.

Problem Awareness

1. An awareness of data integrity issues including appreciation of data privacy and ethical issues.
2. General understanding of how data analytical tools can be automated and implemented efficiently and up-scaled if necessary using the available technologies.

DATA SCIENCE			
Advanced coursework and projects will be available in 2020 for students who complete this major.			
Data Science major			
A major in Data Science requires 48 credit points from this table including: (i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level units according to the following rules*: (a) 6 credit points of selective units (b) 3 credit points of statistics units and 3 credit points of computations units (c) 3 credit points of advanced statistics units and 3 credit points of calculus and linear algebra units (iii) 12 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units (v) 6 credit points of 3000-level interdisciplinary project units (vi) 6 credit points of 3000-level methodology-focussed units (vii) 6 credit points of 3000-level methodology or application and discipline-focussed units			
Additional application and discipline-focussed units will be available in 2019 in discipline areas including functional genomics, animal genetics/bioinformatics, geoscience /hydrology modelling. *Students not enrolled in the BSc may substitute ECMT1010 or BUSS1020			
Data Science minor			
A minor in Data Science requires 36 credit points from this table including: (i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level units according to the following rules*: (a) 6 credit points of selective units (b) 3 credit points of statistics units and 3 credit points of computations units (c) 3 credit points of advanced statistics units and 3 credit points of calculus and linear algebra units (iii) 12 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units (v) 6 credit points of 3000-level methodology-focussed units			
Units of study			
The units of study are listed below.			
1000-level units of study			
Core			
DATA1002 **Informatics: Data and Computation**	6	**N** INFO1903	Semester 2

STAT3X23, STAT3X22, STAT3021, STAT3024 and DATA3406 are to be developed for offering in 2019.			
Application and discipline-focussed units			
ENVX3001 **Environmental GIS**	6	**P** 6cp from (ENVI1003, AGEN1002) or 6cp from GEOS1XXX or 6cp from BIOL1XXX	Semester 2
ENVX3002 **Statistics in the Natural Sciences**	6	**P** ENVX2001 or BIOM2001 or STAT2X12 or BIOL2X22 or DATA2002 or QBIO2001 *Interdisciplinary Unit*	Semester 1
AMED3002 **Interrogating Biomedical and Health Data**	6	**A** A Exploratory data analysis, sampling, simple linear regression, t-tests, confidence intervals and chi-squared goodness of fit tests, familiar with basic coding, basic linear algebra. Additional information for BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit. *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
QBUS3810 **Actuarial Risk Analytics**	6	**P** QBUS2810 or DATA2002 or ECMT2110 **N** ECMT3180	Semester 1

Data Science

DATA SCIENCE

Advanced coursework and projects will be available in 2020 for students who complete this major.

Data Science major

A major in Data Science requires 48 credit points from this table including:(i) 6 credit points of 1000-level core units(ii) 6 credit points of 1000-level units according to the following rules*: (a) 6 credit points of selective units(b) 3 credit points of statistics units and 3 credit points of computations units(c) 3 credit points of advanced statistics units and 3 credit points of calculus and linear algebra units(iii) 12 credit points of 2000-level core units(iv) 6 credit points of 2000-level selective units (v) 6 credit points of 3000-level interdisciplinary project units(vi) 6 credit points of 3000-level methodology-focussed units(vii) 6 credit points of 3000-level methodology or application and discipline-focussed unitsAdditional application and discipline-focussed units will be available in 2019 in discipline areas including functional genomics, animal genetics/bioinformatics, geoscience /hydrology modelling.*Students not enrolled in the BSc may substitute ECMT1010 or BUSS1020

Data Science minor

A minor in Data Science requires 36 credit points from this table including:(i) 6 credit points of 1000-level core units(ii) 6 credit points of 1000-level units according to the following rules*: (a) 6 credit points of selective units(b) 3 credit points of statistics units and 3 credit points of computations units(c) 3 credit points of advanced statistics units and 3 credit points of calculus and linear algebra units(iii) 12 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units (v) 6 credit points of 3000-level methodology-focussed units

Units of study

The units of study are listed below.

1000-level units of study

Core

DATA1002
Informatics: Data and Computation

Credit points: 6 **Session:** Semester 2 **Classes:** Lectures, Laboratories, Project Work - own time **Prohibitions:** INFO1903 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit covers computation and data handling, integrating sophisticated use of existing productivity software, e.g. spreadsheets, with the development of custom software using the general-purpose Python language. It will focus on skills directly applicable to data-driven decision-making. Students will see examples from many domains, and be able to write code to automate the common processes of data science, such as data ingestion, format conversion, cleaning, summarization, creation and application of a predictive model.

Selective

DATA1001
Foundations of Data Science

Credit points: 6 **Teacher/Coordinator:** Dr Di Warren **Session:** Semester 1, Semester 2 **Classes:** lecture 3 hrs/week; computer tutorial 2 hr/week **Prohibitions:** MATH1005 or MATH1905 or MATH1015 or MATH1115 or ENVX1001 or ENVX1002 or ECMT1010 or BUSS1020 or STAT1021 **Assessment:** assignments, quizzes, presentation, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

DATA1001 is a foundational unit in the Data Science major. The unit focuses on developing critical and statistical thinking skills for all students. Does mobile phone usage increase the incidence of brain tumours? What is the public's attitude to shark baiting following a fatal attack? Statistics is the science of decision making, essential in every industry and undergirds all research which relies on data. Students will use problems and data from the physical, health, life and social sciences to develop adaptive problem solving skills in a team setting. Taught interactively with embedded technology, DATA1001 develops critical thinking and skills to problem-solve with data. It is the prerequisite for DATA2002.

Textbooks
Statistics, Fourth Edition, Freedman Pisani Purves

ENVX1002
Introduction to Statistical Methods

Credit points: 6 **Teacher/Coordinator:** A/Prof Thomas Bishop **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, one 1-hour tutorial per week, one 2-hour computer practical per week **Prohibitions:** ENVX1001 **Assessment:** One exam during the exam period (50%), three reports (10% each), ten online quizzes (2% each) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams

This is an introductory statistics unit for students in the agricultural, life and environmental sciences. It provides the foundation for statistics and data science skills that are needed for a career in science and for further study in applied statistics and data science. In the first portion of the unit the emphasis is on describing data using statistical and graphical summaries, and probability models. In the second part the focus is on formal hypothesis testing on experimental data using statistical tests. The final part of the unit is on finding patterns in biological and environmental data, through the use of linear and non-linear functions. In the practicals the emphasis is on applying theory to analysing real datasets using the spreadsheet package Excel and the statistical software package R. A key feature of the unit is using R to develop coding skills that are become essential in science for processing and analysing datasets of ever increasing size.

Textbooks
No textbooks are recommended but useful reference books are:
- Mead R, Curnow RN, Hasted AM (2002) 'Statistical methods in agriculture and experimental biology.' (Chapman and Hall: Boca Raton).
- Quinn GP, Keough MJ (2002) 'Experimental design and data analysis for biologists.' (Cambridge University Press: Cambridge, UK).

Statistics units

MATH1005
Statistical Thinking with Data

Credit points: 3 **Session:** Semester 2, Summer Main, Winter Main **Classes:** Lectures 2 hrs/week; Practical 1 hr/week **Prohibitions:** MATH1015 or MATH1905 or STAT1021 or STAT1022 or ECMT1010 or ENVX1001 or ENVX1002 or BUSS1020 **Assumed knowledge:** HSC Mathematics. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **Assessment:**

One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

In a data-rich world, global citizens need to problem solve with data, and evidence based decision-making is essential is every field of research and work.

This unit equips you with the foundational statistical thinking to become a critical consumer of data. You will learn to think analytically about data and to evaluate the validity and accuracy of any conclusions drawn. Focusing on statistical literacy, the unit covers foundational statistical concepts, including the design of experiments, exploratory data analysis, sampling and tests of significance.

Textbooks

Freedman, Pisani and Purves, Statistics, Norton, 2007

MATH1015
Biostatistics

Credit points: 3 **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1005 or MATH1905 or STAT1021 or STAT1022 or ECMT1010 or BIOM1003 or ENVX1001 or ENVX1002 or BUSS1020 **Assumed knowledge:** HSC Mathematics. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

MATH1015 is designed to provide a thorough preparation in statistics for students in the Biological and Medical Sciences. It offers a comprehensive introduction to data analysis, probability and sampling, inference including t-tests, confidence intervals and chi-squared goodness of fit tests.

Textbooks

Computation units

MATH1115
Interrogating Data

Credit points: 3 **Session:** Semester 1, Semester 2, Winter Main **Classes:** 2-hr lab; and 1x1-hr lecture per week **Prerequisites:** MATH1005 or MATH1015 **Prohibitions:** DATA1001 or STAT1021 or ECMT1010 or ENVX1001 or BUSS1020 or ENVX1002 or MATH1905 **Assessment:** projects/presentations, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

In a data-rich world, global citizens need to problem solve with data, and evidence based decision-making is essential is every field of research and work. This unit equips you with foundational statistical thinking to interrogate data. Focusing on statistical literacy, the unit covers foundational statistical concepts such as visualising data, the linear regression model, and testing significance using the t and chi-square tests. Based on a flipped learning approach, you will experience most of your learning in weekly collaborative 2 hour labs, supplemented by 1 hour lectures. Working in teams, you will explore three real data stories across different domains, with associated literature. The combination of MATH1005/1015 and MATH1115 is equivalent to DATA1001, allowing you to pathway to the Data Science, Statistics, or Quantitative Life Sciences majors.

Freedman, Pisani and Purves, Statistics, 2007

Advanced Statistics units

MATH1905
Statistical Thinking with Data (Advanced)

Credit points: 3 **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1005 or MATH1015 or STAT1021 or STAT1022 or ECMT1010 or ENVX1001 or ENVX1002 or BUSS1020 **Assumed knowledge:** (HSC Mathematics Extension 2) OR (90 or above in HSC Mathematics Extension 1) or equivalent **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit is designed to provide a thorough preparation for further study in mathematics and statistics. It is a core unit of study providing three of the twelve credit points required by the Faculty of Science as well as a Junior level requirement in the Faculty of Engineering. This Advanced level unit of study parallels the normal unit MATH1005 but goes more deeply into the subject matter and requires more mathematical sophistication.

MATH1021
Calculus Of One Variable

Credit points: 3 **Session:** Semester 1 **Classes:** 2x1-hr lectures; 1x1-hr tutorial per week **Prohibitions:** MATH1011 or MATH1901 or MATH1906 or MATH1111 or ENVX1001 or MATH1001 or MATH1921 or MATH1931 **Assumed knowledge:** HSC Mathematics Extension 1. Students who have not completed HSC Extension 1 Mathematics (or equivalent) are strongly advised to take the Extension 1 Mathematics Bridging Course (offered in February). **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Calculus is a discipline of mathematics that finds profound applications in science, engineering, and economics. This unit investigates differential calculus and integral calculus of one variable and the diverse applications of this theory. Emphasis is given both to the theoretical and foundational aspects of the subject, as well as developing the valuable skill of applying the mathematical theory to solve practical problems. Topics covered in this unit of study include complex numbers, functions of a single variable, limits and continuity, differentiation, optimisation, Taylor polynomials, Taylor's Theorem, Taylor series, Riemann sums, and Riemann integrals.

MATH1931
Calculus Of One Variable (SSP)

Credit points: 3 **Session:** Semester 1 **Classes:** 2x1-hr lectures; 1x1-hr seminar; and 1x1-hr tutorial per week **Prohibitions:** MATH1001 or MATH1011 or MATH1901 or MATH1111 or ENVX1001 or MATH1906 or MATH1021 or MATH1921 **Assumed knowledge:** Band E4 in HSC Mathematics Extension 2 or equivalent. **Assessment:** exam, quizzes, assignments, seminar participation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: Enrolment is by invitation only.

The Mathematics Special Studies Program is for students with exceptional mathematical aptitude, and requires outstanding performance in past mathematical studies. Students will cover the material of MATH1921 Calculus of One Variable (Adv), and attend a weekly seminar covering special topics on available elsewhere in the Mathematics and Statistics program.

MATH1023
Multivariable Calculus and Modelling

Credit points: 3 **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x1-hr tutorial per week **Prohibitions:** MATH1013 or MATH1903 or MATH1907 or MATH1003 or MATH1923 or MATH1933 **Assumed knowledge:** HSC Mathematics Extension 1. Students who have not completed HSC Extension 1 Mathematics (or equivalent) are strongly advised to take the Extension 1 Mathematics Bridging Course (offered in February). **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Calculus is a discipline of mathematics that finds profound applications in science, engineering, and economics. This unit investigates multivariable differential calculus and modelling. Emphasis is given both to the theoretical and foundational aspects of the subject, as well as developing the valuable skill of applying the mathematical theory to solve practical problems. Topics covered in this unit of study include mathematical modelling, first order differential equations, second order differential equations, systems of linear equations, visualisation in 2 and 3 dimensions, partial derivatives, directional derivatives, the gradient vector, and optimisation for functions of more than one variable.

Core

DATA2001
Data Science: Big Data and Data Diversity

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Laboratories, Project Work - own time **Prerequisites:** DATA1002 OR INFO1110 OR INFO1903 OR INFO1103 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This course focuses on methods and techniques to efficiently explore and analyse large data collections. Where are hot spots of pedestrian accidents across a city? What are the most popular travel locations according to user postings on a travel website? The ability to combine and analyse data from various sources and from databases is essential for informed decision making in both research and industry.

Students will learn how to ingest, combine and summarise data from a variety of data models which are typically encountered in data science projects, such as relational, semi-structured, time series, geospatial, image, text. As well as reinforcing their programming skills through experience with relevant Python libraries, this course will also introduce students to the concept of declarative data processing with SQL, and to analyse data in relational databases. Students will be given data sets from, eg. , social media, transport, health and social sciences, and be taught basic explorative data analysis and mining techniques in the context of small use cases. The course will further give students an understanding of the challenges involved with analysing large data volumes, such as the idea to partition and distribute data and computation among multiple computers for processing of 'Big Data'.

DATA2002
Data Analytics: Learning from Data

Credit points: 6 **Teacher/Coordinator:** Jean Yang **Session:** Semester 2 **Classes:** lecture 3 hrs/week; computer tutorial 2 hr/week **Prerequisites:** [DATA1001 or ENVX1001 or ENVX1002] or [MATH10X5 and MATH1115] or [MATH10X5 and STAT2011] or [MATH1905 and MATH1XXX (except MATH1XX5)] or [BUSS1020 or ECMT1010 or STAT1021] **Prohibitions:** STAT2012 or STAT2912 **Assumed knowledge:** (Basic Linear Algebra and some coding) or QBUS1040 **Assessment:** written assignment, presentation, exams **Mode of delivery:** Normal (lecture/lab/tutorial) day

Technological advances in science, business, engineering has given rise to a proliferation of data from all aspects of our life. Understanding the information presented in these data is critical as it enables informed decision making into many areas including market intelligence and science. DATA2002 is an intermediate course in statistics and data sciences, focusing on learning data analytic skills for a wide range of problems and data. How should the Australian government measure and report employment and unemployment? Can we tell the difference between decaffeinated and regular coffee ? In this course, you will learn how to ingest, combine and summarise data from a variety of data models which are typically encountered in data science projects as well as reinforcing their programming skills through experience with statistical programming language. You will also be exposed to the concept of statistical machine learning and develop the skill to analyze various types of data in order to answer a scientific question. From this unit, you will develop knowledge and skills that will enable you to embrace data analytic challenges stemming from everyday problems.

Selective

COMP2123
Data Structures and Algorithms

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Tutorials **Prerequisites:** INFO1110 OR INFO1113 OR DATA1002 OR INFO1103 OR INFO1903 **Prohibitions:** INFO1105 OR INFO1905 OR COMP2823 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will teach some powerful ideas that are central to solving algorithmic problems in ways that are more efficient than naive approaches. In particular, students will learn how data collections can support efficient access, for example, how a dictionary or map can allow key-based lookup that does not slow down linearly as the collection grows in size. The data structures covered in this unit include lists, stacks, queues, priority queues, search trees, hash tables, and graphs. Students will also learn efficient techniques for classic tasks such as sorting a collection. The concept of asymptotic notation will be introduced, and used to describe the costs of various data access operations and algorithms.

COMP2823
Data Structures and Algorithms (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** lectures, tutorials **Prerequisites:** Distinction level result in at least one of INFO1110 OR INFO1113 OR DATA1002 OR INFO1103 OR INFO1903 **Prohibitions:** INFO1105 OR INFO1905 OR COMP2123 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

ISYS2120
Data and Information Management

Credit points: 6 **Session:** Semester 2 **Classes:** Lectures, Tutorials, Laboratories, Project Work - own time **Prerequisites:** INFO1113 OR INFO1103 OR INFO1105 OR INFO1905 OR INFO1003 OR INFO1903 OR DECO1012 **Prohibitions:** INFO2120 OR INFO2820 OR COMP5138 **Assumed knowledge:** Programming skills **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The ubiquitous use of information technology leaves us facing a tsunami of data produced by users, IT systems and mobile devices. The proper management of data is hence essential for all applications and for effective decision making within organizations.

This unit of study will introduce the basic concepts of database designs at the conceptual, logical and physical levels. We will place particular emphasis on introducing integrity constraints and the concept of data normalization which prevents data from being corrupted or duplicated in different parts of the database. This in turn helps in the data remaining consistent during its lifetime. Once a database design is in place, the emphasis shifts towards querying the data in order to extract useful information. The unit will introduce the SQL database query languages, which is industry standard. Other topics covered will include the important concept of transaction management, application development with a backend database, and an overview of data warehousing and OLAP.

STAT2011
Probability and Estimation Theory

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory week. **Prerequisites:** (MATH1X21 or MATH1931 or MATH1X01 or MATH1906 or MATH1011) and (MATH1XX5 or STAT1021 or ECMT1010 or BUSS1020) **Prohibitions:** STAT2901 or STAT2001 or STAT2911 **Assessment:** One 2 hour exam, assignments and/or quizzes, and computer practical reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides an introduction to univariate techniques in data analysis and the most common statistical distributions that are used to model patterns of variability. Common discrete random models like the binomial, Poisson and geometric, continuous models including the normal and exponential will be studied along with elementary regression models. The method of moments and maximum likelihood techniques for fitting statistical distributions to data will be explored. The unit will have weekly computer classes where candidates will learn to use a statistical computing package to perform simulations and carry out computer intensive estimation techniques like the bootstrap method.

STAT2911
Probability and Statistical Models (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** [MATH19X3 or MATH1907 or (a mark of 65 in MATH1023 or MATH1003)] and [MATH1905 or MATH1904 or (a mark of 65 in MATH1005 or ECMT1010 or BUSS1020)] **Prohibitions:** STAT2001 or STAT2901 or STAT2011 **Assessment:** One 2 hour exam, assignments and/or quizzes, and computer practical reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is essentially an advanced version of STAT2011, with an emphasis on the mathematical techniques used to manipulate random variables and probability models. Common distributions including the Poisson, normal, beta and gamma families as well as the bivariate normal are introduced. Moment generating functions and convolution methods are used to understand the behaviour of sums of random variables. The method of moments and maximum likelihood techniques for fitting statistical distributions to data will be explored. The notions of conditional expectation and prediction will be covered as will be distributions related to the normal: chi^2, t and F. The unit will have weekly computer classes where candidates will learn to use a statistical computing package to perform simulations and carry out computer intensive estimation techniques like the bootstrap method.

QBUS2830
Actuarial Data Analytics

Credit points: 6 **Session:** Semester 2 **Classes:** 1x 2hr lecture per wk and 1x 1hr tutorial per wk **Prerequisites:** QBUS2810 or DATA2002 or ECMT2110 **Assumed knowledge:** BUSS1020 or ECMT1010 or ENVX1001 or ENVX1002 or ((MATH1005 or MATH1015) and MATH1115) or 6 credit points in MATH 1000-level units including MATH1905. **Assessment:** assignments (30%), mid-semester exam (20%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The unit covers a range of statistical models and methods for analysing quantitative actuarial data in general insurance. Both maximum likelihood estimation and Bayesian estimation methods are adopted for statistical inferences with the use of modern software tools such as the R and OpenBUGS packages. Topics covered include probability distributions for actuarial modelling, claim size modelling, claim frequency modelling, loss reserve forecasting, pure premium calculation, premium rates reviewing and revising (credibility theory), linear and generalised linear models, Poisson process and Markov process in actuarial modelling. Upon the completion of this unit and other relevant business analytics units, students may undertake professional examinations for actuaries or may get exemptions in some professional examination papers.

3000-level units of study

Interdisciplinary project unit

DATA3001 to be developed for offering in 2019.

Methodology-focussed units

DATA3404
Data Science Platforms

Credit points: 6 **Session:** Semester 1 **Classes:** lectures, tutorials **Prerequisites:** DATA2001 OR ISYS2120 OR INFO2120 OR INFO2820 **Prohibitions:** INFO3504 OR INFO3404 **Assumed knowledge:** This unit of study assumes that students have previous knowledge of database structures and of SQL. The prerequisite material is covered in DATA2001 or ISYS2120. Familiarity with a programming language (e.g. Java or C) is also expected. **Assessment:** through semester assessment (40%), final exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides a comprehensive overview of the internal mechanisms data science platforms and of systems that manage large data collections. These skills are needed for successful performance tuning and to understand the scalability challenges faced by when processing Big Data. This unit builds upon the second' year DATA2001 - 'Data Science - Big Data and Data Diversity' and correspondingly assumes a sound understanding of SQL and data analysis tasks.

The first part of this subject focuses on mechanisms for large-scale data management. It provides a deep understanding of the internal components of a data management platform. Topics include: physical data organization and disk-based index structures, query processing and optimisation, and database tuning.

The second part focuses on the large-scale management of big data in a distributed architecture. Topics include: distributed and replicated databases, information retrieval, data stream processing, and web-scale data processing.

The unit will be of interest to students seeking an introduction to data management tuning, disk-based data structures and algorithms, and information retrieval. It will be valuable to those pursuing such careers as Software Engineers, Data Engineers, Database Administrators, and Big Data Platform specialists.

ISYS3401
Information Technology Evaluation

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Tutorials **Prerequisites:** (INFO2110 OR ISYS2110) AND (INFO2120 OR ISYS2120) AND (ISYS2140 OR ISYS2160) **Assessment:** Through semester assessment (35%) and Final Exam (65%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Information Systems (IS) professionals in today's organisations are required to play leadership roles in change and development. Your success in this field will be aided by your being able to carry out research-based investigations using suitable methods and mastery over data collection and analysis to assist in managing projects and in decision making. Practical research skills are some of the most important assets you will need in your career.

This unit of study will cover important concepts and skills in practical research for solving and managing important problems. This will also provide you with the skills to undertake the capstone project in the IS project unit of study offered in Semester 2 or other projects. It will also provide hand-on experience of using Microsoft Excel and other tools to perform some of the quantitative analysis.

STAT3X23, STAT3X22, STAT3021, STAT3024 and DATA3406 are to be developed for offering in 2019.

Application and discipline-focussed units

ENVX3001
Environmental GIS

Credit points: 6 **Teacher/Coordinator:** A/Prof Inakwu Odeh **Session:** Semester 2 **Classes:** Three-day field trip, (two lectures and two practicals per week) **Prerequisites:** 6cp from (ENVI1003, AGEN1002) or 6cp from GEOS1XXX or 6cp from BIOL1XXX **Assessment:** One 15-minute presentation (10%), 3500wd prac report (35%), 1500wd report on trip excursion (15%), 2-hour exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is designed to impart knowledge and skills in spatial analysis and geographical information science (GISc) for decision-making in an environmental context. The lecture material will present several themes: principles of GISc, geospatial data sources and acquisition methods, processing of geospatial data and spatial statistics. Practical exercises will focus on learning geographical information systems (GIS) and how to apply them to land resource assessment, including digital terrain modelling, land-cover assessment, sub-catchment modelling, ecological applications, and soil quality assessment for decisions regarding sustainable land use and management. A three day field excursion during the mid-semester break will involve a day of GPS fieldwork at Arthursleigh University farm and two days in Canberra visiting various government agencies which research and maintain GIS coverages for Australia. By the end of this UoS, students should be able to: differentiate between spatial data and spatial information; source geospatial data from government and private agencies; apply conceptual models of spatial phenomena for practical decision-making in an environmental context; apply critical analysis of situations to apply the concepts of spatial analysis to solving environmental and land resource problems; communicate effectively results of GIS investigations through various means- oral, written and essay formats; and use a major GIS software package such as ArcGIS.

Textbooks

Burrough, P.A. and McDonnell, R.A. 1998. Principles of Geographic Information Systems. Oxford University Press: Oxford.

Clarke, K. C. 2003. Getting Started With Geographic Information Systems. 4th Edition. Prentice Hall: Upper Saddle River, New Jersey.

ENVX3002
Statistics in the Natural Sciences

Credit points: 6 **Teacher/Coordinator:** Dr Floris Van Ogtrop **Session:** Semester 1 **Classes:** one 2-hour workshop per week, one 3-hour computer practical per week **Prerequisites:** ENVX2001 or BIOM2001 or STAT2X12 or BIOL2X22 or DATA2002 or QBIO2001 **Assessment:** One exam during the exam period (50%), five assessment tasks (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Interdisciplinary Unit

This unit of study is designed to introduce students to the analysis of data they may face in their future careers, in particular data that are not well behaved. The data may be non-normal, there may be missing observations, they may be correlated in space and time or too numerous to analyse with standard models. The unit is presented in an applied context with an emphasis on correctly analysing authentic datasets, and interpreting the ouput. It begins with the analysis and design experiments based on the general linear model. In the second part, students will learn about the generalisation of the general linear model to accommodate non-normal data with a particular emphasis on the binomial and poisson distributions. In the third part linear mixed models will be introduced which provide the means to analyse datasets that do not meet the assumptions of independent and equal errors, for example data that is correlated in space and time. The units ends with an introduction to machine learning and predictive modelling. A key feature of the unit is using R to develop coding skills that are become essential in science for processing and analysing datasets of ever increasing size.

AMED3002
Interrogating Biomedical and Health Data

Credit points: 6 **Teacher/Coordinator:** Prof Jean Yang **Session:** Semester 1 **Classes:** face to face 5 hrs/week; online 2 hrs/week; individual and/or group work 3-6 hrs/week **Assumed knowledge:** A Exploratory data analysis, sampling, simple linear regression, t-tests, confidence intervals and chi-squared goodness of fit tests, familiar with basic coding, basic linear algebra. Additional information for BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit. **Assessment:** in-semester exam, assignments, presentation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

Biotechnological advances have given rise to an explosion of original and shared public data relevant to human health. These data, including the monitoring of expression levels for thousands of genes and proteins simultaneously, together with multiple databases on biological systems, now promise exciting, ground-breaking discoveries in complex diseases. Critical to these discoveries will be our ability to unravel and extract information from these data. In this unit, you will develop analytical skills required to work with data obtained in the medical and diagnostic sciences. You will explore clinical data using powerful, state of the art methods and tools. Using real data sets, you will be guided in the application of modern data science techniques to interrogate, analyse and represent the data, both graphically and numerically. By analysing your own real data, as well as that from large public resources you will learn and apply the methods needed to find information on the relationship between genes and disease. Leveraging expertise from multiple sources by working in team-based collaborative learning environments, you will develop knowledge and skills that will enable you to play an active role in finding meaningful solutions to difficult problems, creating an important impact on our lives.

QBUS3810
Actuarial Risk Analytics

Credit points: 6 **Session:** Semester 1 **Classes:** 1x 2hr lecture and 1x 1hr tutorial per week **Prerequisites:** QBUS2810 or DATA2002 or ECMT2110 **Prohibitions:** ECMT3180 **Assessment:** assignment 1 (10%), assignment 2 (10%), assignment 3 (10%), mid-semester exam (15%), group assignment (15%), final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Everyone working in business needs to understand and manage risk. This unit provides the basic knowledge and tools needed to do this. It includes material on the risk management strategies that every business needs, as well as specific quantitative and statistical techniques for evaluating risk. Through this unit students learn how different aspects of risk management fit together (like Value-at-Risk (VaR) and tail-VaR calculations, Monte-Carlo simulation, extreme value theory, individual and collective risk models, credibility theory and credit scoring).

Ecology and Evolutionary Biology

Study in Ecology and Evolutionary Biology is offered by the School of Life and Environmental Science. Units of study in this major are mostly available at standard and advanced level.

About the major

Ecology and evolution are important concepts that underlie a broad range of the biological sciences. Ecology investigates the processes that govern the biological interactions between individuals and that operate on ecosystem scales. Evolution is a unifying theme that explains the patterns we observe in the natural world, ranging from genomes to the diversification of life through time.

The fields of Ecology and Evolution intersect at multiple levels and are critically relevant to real-world challenges, including wildlife conservation.

In this major you will learn about evolutionary and ecological processes and how these influence the population dynamics of animals, plants, and other organisms. This knowledge forms the basis for the effective management and conservation of biodiversity, ecosystems, and habitats.

Requirements for completion

A major in Ecology and Evolutionary Biology requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level core units
(iii)18 credit points of 3000-level core units
(iv)6 credit points of 3000-level selective units

A minor in Wildlife Conservation is available and articulates to this major.

First year

The core units in first year Biology, Life and Evolution (BIOL1XX6) and From Molecules to Ecosystems (BIOL1XX7), provide students with an understanding of the concepts that are central to Ecology and Evolutionary Biology. These units will provide a broader context within which these concepts can be interpreted, including the scientific framework, hypothesis testing, and experimental design. First year Biology units also provide sufficient background in (bio)chemistry for this major.

Second year

In the second year, Biology Experimental Design and Analysis (BIOL2X22) provides students with sufficient background to design complex ecological and evolutionary experiments in the field, including multifactorial experiments, and to analyse and interpret their data. Ecology and Conservation (BIOL2X24) builds on the broad introduction to Ecology and Evolutionary Biology in the first year.

Third year

In the third year there will be dedicated units on Ecology (BIOL3X07), Evolutionary Biology (BIOL3X33), and Australian Biodiversity and Systematics (BIOL3X34). Selective units include the field units Marine Field Ecology (BIOL3008) and Terrestrial Field Ecology (BIOL3009). For those students who need an on-campus experience, units include Animal Ecological Physiology (BIOL3X45) and Animal Behaviour (BIOL3X46). Throughout, there will be emphasis on experimental design and analysis, building on the material taught in the second year. In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours

Requirements for Honours in the area of Ecology and Evolutionary Biology: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Ecology and Evolutionary Biology will be able to:

1. Use biological language to discuss, explain and apply ecological and evolutionary processes and their role in wildlife conservation.
2. Independently identify and interpret ecological and evolutionary literature.
3. Use statistical tools and concepts to analyse and interpret ecological and evolutionary data.
4. Describe and explain the meaning of ecological and evolutionary experimental results within the context of the current literature.
5. Communicate the objectives and hypotheses being tested in experimental investigations.
6. Create coherent arguments in oral presentations and written reports using evidence from experiments and the literature.
7. Analyse the effectiveness of species conservation strategies and conflicts from multiple perspectives.
8. Analyse conservation issues using ecological and evolutionary principles from individual species to global populations and communities.

Ecology and Evolutionary Biology

BIOL3033 and BIOL3034 are to be developed for offering in 2019.			

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
Selective			
BIOL3008 **Marine Field Ecology** *This unit of study is not available in 2018*	6	**P** 12 credit points of Intermediate BIOL, or (6 credit points of Intermediate BIOL and (MBLG2072 or MBLG2972)) **N** BIOL3908 or BIOL2028 or BIOL2928 *Note: Department permission required for enrolment* *This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.*	Intensive July
BIOL3908 **Marine Field Ecology (Advanced)** *This unit of study is not available in 2018*	6	**P** Distinction average in either- 12cp Intermediate BIOL, or (6cp Intermediate BIOL and(MBLG2072 or MBLG2972)) **N** BIOL3008 or BIOL2028 or BIOL2928 *Note: Department permission required for enrolment* *This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.*	Intensive July
BIOL3009 **Terrestrial Field Ecology**	6	**P** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3909 or BIOL2009 or BIOL2909 *Note: Department permission required for enrolment* *This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.*	Intensive July
BIOL3909 **Terrestrial Field Ecology (Advanced)**	6	**P** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3009 or BIOL2009 or BIOL2909 *Note: Department permission required for enrolment* *This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered. This unit is not offered from 2019.*	Intensive July
BIOL3045 **Animal Ecological Physiology**	6	**P** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3945 or BIOL3011 or BIOL3911 or BIOL3012 or BIOL3912	Semester 1
BIOL3046 **Animal Behaviour**	6	**P** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3946 or BIOL3025 or BIOL3925	Semester 1
BIOL3946 **Animal Behaviour (Advanced)**	6	**P** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3046 or BIOL3025 or BIOL3925 *Note: Department permission required for enrolment*	Semester 1
BIOL3020 and AVBS3004 to be developed for offering in 2019.			

Wildlife Conservation Minor*

A minor in Wildlife Conservation requires 36 credit points from this table including:

(i) 12 credit points of 1000-level core units

(ii) 12 credit points of 2000-level core units

(iii) 6 credit points of 3000 level core units

(iv) 6 credit points of 3000-level selective units

*The Wildlife Conservation minor articulates to the Ecology and Evolutionary Biology major

Units of study

The units of study are listed below:

Ecology and Evolutionary Biology

ECOLOGY AND EVOLUTIONARY BIOLOGY*

Advanced coursework and projects will be available in 2020 for students who complete this major.

Ecology and Evolutionary Biology major

A major in Ecology and Evolutionary Biology requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level core units (iii) 18 credit points of 3000-level core units (iv) 6 credit points of 3000-level selective units *The Wildlife Conservation minor articulates to the Ecology and Evolutionary Biology major

Units of study

The units of study are listed below.

1000-level units of study

Core

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

Bromham, L 2015, An Introduction to Molecular Evolution and Phylogenetics, Oxford University Press.

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

BIOL1997

From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

2000-level units of study

Core

BIOL2022

Biology Experimental Design and Analysis

Credit points: 6 **Teacher/Coordinator:** A/Prof Clare McArthur **Session:** Semester 2 **Classes:** Two lectures per week and one 3-hour practical per week. **Prerequisites:** 6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5) **Prohibitions:** BIOL2922 or BIOL3006 or BIOL3906 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** Practical reports/presentations (60%), one 2-hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides foundational skills essential for doing research in biology and for critically judging the research of others. We consider how biology is practiced as a quantitative, experimental and theoretical science. We focus on the underlying principles and practical skills you need to explore questions and test hypotheses, particularly where background variation (error) is inherently high. In so doing, the unit provides you with an understanding of how biological research is designed, analysed and interpreted using statistics. Lectures focus on sound experimental and statistical principles, using examples in ecology and other fields of biology to demonstrate concepts. In the practical sessions, you will design and perform, analyse (using appropriate statistical tools) and interpret your own experiments to answer research questions in topics relevant to your particular interest. This unit of study provides a suitable foundation for senior biology units of study.

Textbooks

Required: Ruxton, G. and Colegrave, N. 2016. Experimental design for the life sciences. 4th Ed. Oxford
University Press
Recommended: Quinn, G. P. and M. J. Keough. 2002. Experimental Design and Data Analysis for Biologists. 1st Ed. Cambridge University Press, Cambridge.
Recommended: Field, A. 2013. Discovering statistics using SPSS. 4th Ed. SAGE Publications, London.

BIOL2922

Biol Experimental Design and Analysis Adv

Credit points: 6 **Teacher/Coordinator:** A/Prof Clare McArthur **Session:** Semester 2 **Classes:** Two lectures per week and one 3-hour practical per week. **Prerequisites:** [An annual average mark of at least 70 in the previous year] and [6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5)] **Prohibitions:** BIOL2022 or BIOL3006 or BIOL3906 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** Practical reports/presentations (60%), one 2-hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The content of BIOL2922 will be based on BIOL2022 but qualified students will participate in alternative components at a more advanced level. The content and nature of these components may vary from year to year.

BIOL2024
Ecology and Conservation

Credit points: 6 **Teacher/Coordinator:** Prof Peter Banks **Session:** Semester 2 **Classes:** Two lectures and one 3-hour practical per week. **Prohibitions:** BIOL2924 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** Practical reports/presentations (50%), one 2-hour exam (50%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study examines the ecological principles driving the major ecosystems of the world and ecological processes behind the world's major conservation issues. It aims to develop in students the core foundations for an understanding of Ecology and its application in conservation. Lectures will focus on the ecology of the major terrestrial and marine biomes of the world. Application of ecological theory and methods to practical conservation problems will be integrated throughout the unit of study. Practical sessions will provide hands-on experience in ecological sampling and data handling to understand the ecology of marine and terrestrial environments, as well as ecological simulations to understand processes. This unit of study provides a suitable foundation for senior biology units of study.

3000-level units of study

Core

BIOL3007
Ecology

Credit points: 6 **Teacher/Coordinator:** A/Prof Dieter Hochuli **Session:** Semester 2 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3907 **Assessment:** One 2-hour exam, group presentations, one essay, one project report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit explores the dynamics of ecological systems, and considers the interactions between individual organisms and populations, organisms and the environment, and ecological processes. Lectures are grouped around four dominant themes: Interactions, Evolutionary Ecology, The Nature of Communities, and Conservation and Management. Emphasis is placed throughout on the importance of quantitative methods in ecology, including sound planning and experimental designs, and on the role of ecological science in the conservation, management, exploitation and control of populations. Relevant case studies and examples of ecological processes are drawn from marine, freshwater and terrestrial systems, with plants, animals, fungi and other life forms considered as required. Students will have some opportunity to undertake short term ecological projects, and to take part in discussions of important and emerging ideas in the ecological literature.

Textbooks
Begon M, Townsend CR, Harper JL (2005) Ecology, From individuals to ecosystems. Wiley-Blackwell.

BIOL3907
Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Dieter Hochuli **Session:** Semester 2 **Classes:** Two lectures per week, weekly tutorial and 3-hour practical per week **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3007 **Assessment:** One 2-hour exam, presentations, one essay, one project report (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit has the same objectives as BIOL3007 Ecology, and is suitable for students who wish to pursue certain aspects in greater depth. Entry is restricted, and selection is made from the applicants on the basis of their previous performance. Students taking this unit of study participate in alternatives to some elements of the standard course and will be encouraged to pursue the objectives by more independent means in a series of research tutorials. Specific details of this unit of study and assessment will be announced in meetings with students in week 1 of semester 2. This unit of study may be taken as part of the BSc (Advanced) program.

Textbooks
As for BIOL3007

BIOL3033 and BIOL3034 are to be developed for offering in 2019.

Selective

BIOL3008
Marine Field Ecology

Credit points: 6 **Teacher/Coordinator:** A/Prof Ross Coleman **Session:** Intensive July **Classes:** Intensive 8-day field course held in the pre-semester break. **Prerequisites:** 12 credit points of Intermediate BIOL, or (6 credit points of Intermediate BIOL and (MBLG2072 or MBLG2972)) **Prohibitions:** BIOL3908 or BIOL2028 or BIOL2928 **Assessment:** Discussion groups, research project proposal, biodiversity survey report, data analysis and checking, research project report (100%). **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.

This field course provides a practical introduction to the experimental analysis of marine populations and assemblages. Students gain experience using a range of intertidal sampling techniques and develop a detailed understanding of the logical requirements necessary for manipulative ecological field experiments. No particular mathematical or statistical skills are required for this subject. Group experimental research projects in the field are the focus of the unit during the day, with lectures and discussion groups about the analysis of experimental data and current issues in experimental marine ecology occurring in the evening.

Textbooks
No textbook is prescribed but Coastal Marine Ecology of Temperate Australia. Eds. Underwood, A.J. & Chapman, M.G. 1995. University of New South Wales Press, provides useful background reading.

BIOL3908
Marine Field Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Ross Coleman. **Session:** Intensive July **Classes:** One 8-day field course held in the pre-semester break, plus four 1-hour tutorials during semester 2. **Prerequisites:** Distinction average in either- 12cp Intermediate BIOL, or (6cp Intermediate BIOL and(MBLG2072 or MBLG2972)) **Prohibitions:** BIOL3008 or BIOL2028 or BIOL2928 **Assessment:** Discussion groups, research project proposal, biodiversity report, data analysis and checking, research project report (100%). **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.

This unit has the same objectives as Marine Field Ecology BIOL3008, and is suitable for students wishing to pursue certain aspects of marine field ecology in a greater depth. Entry is restricted and selection is made from applicants on the basis of past performance. Students taking this unit of study will be expected to take part in a number of additional tutorials after the field course on advanced aspects of experimental design and analysis and will be expected to incorporate these advanced skills into their analyses and project reports. This unit may be taken as part of the BSc(Advanced).

Textbooks

As for BIOL 3008.

BIOL3009
Terrestrial Field Ecology

Credit points: 6 **Teacher/Coordinator:** Prof Glenda Wardle **Session:** Intensive July **Classes:** Note: One 6-day field trip held in the pre-semester break and four 4-hour practical classes during weeks 1-4 of semester 2 **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3909 or BIOL2009 or BIOL2909 **Assessment:** Discussions and quiz (10%), research project proposal and brief presentation (10%), sampling project report (20%), specimen collection (10%), research project report (50%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.

This intensive field-based course provides practical experience in terrestrial ecology suited to a broad range of careers in ecology, environmental consulting and wildlife management. Students learn a broad range of ecological sampling techniques and develop a detailed understanding of the logical requirements necessary for manipulative ecological field experiments. The field work takes place in native forest and incorporates survey techniques for plants, small mammals and invertebrates and thus provides a good background for ecological consulting work and an introduction into large-scale project management. Students attend a week-long field course and participate in a large-scale research project as well as conducting their own research project. Emphasis is placed on critical thinking in the context of environmental management and technical skills are developed in the area of data handling and analysis, report writing and team work. Invited experts contribute to the lectures and discussions on issues relating to the ecology, conservation and management of Australia's terrestrial flora and fauna.

BIOL3909
Terrestrial Field Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Glenda Wardle **Session:** Intensive July **Classes:** One 6-day field trip held in the pre-semester break and four 4-hour practical classes during weeks 1-4 of semester 2 **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3009 or BIOL2009 or BIOL2909 **Assessment:** Discussions and quiz (10%), research project proposal and brief presentation (10%), sampling project report (20%), sample and data processing (10%), research project report (50%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered. This unit is not offered from 2019.

This unit has the same objectives as BIOL3009 Terrestrial Field Ecology, and is suitable for students who wish to pursue certain aspects in greater depth. Entry is restricted, and selection is made from applicants on the basis of previous performance. Students taking this unit of study will complete an individual research project on a topic negotiated with a member of staff. It is expected that much of the data collection will be completed during the field trip but some extra time may be needed during semester 2. Specific details of this unit of study and assessment will be announced in meetings with students at the beginning of the unit. This unit of study may be taken as part of the BSc (Advanced) program.

BIOL3045
Animal Ecological Physiology

Credit points: 6 **Teacher/Coordinator:** Prof Frank Seebacher **Session:** Semester 1 **Classes:** Two lectures and three practicals per week **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3945 or BIOL3011 or BIOL3911 or BIOL3012 or BIOL3912 **Assessment:** Two practical reports (20% and 40% of total marks, respectively), one 1.5-hour exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Animal Ecological Physiology is a conceptually based unit of study that covers physiological interactions between organisms and their environments. The unit explores evolutionary processes that allow animals to persist in variable environments. These concepts are essential to understanding biodiversity and ecological function of animal populations, and how these are likely to change under future climate change. The unit will be suitable for those with an interest in zoology, as well as students with a particular interest in ecology and evolution. There is a strong focus on experimental biology and incorporating theory into practical classes, during which students design their own experiments. Good working knowledge of statistical analyses is assumed. The unit provides essential skills for conducting and presenting research, and for critical evaluation of published research.

BIOL3046
Animal Behaviour

Credit points: 6 **Teacher/Coordinator:** Prof Ashley Ward **Session:** Semester 1 **Classes:** Two lectures and one 3-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3946 or BIOL3025 or BIOL3925 **Assessment:** Practical reports, one 2-hour exam (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The unit will provide a broad overview of the scientific study of animal behaviour. It will consider mechanistic and functional explanations of animal behaviour across contexts including kin selection and altruism, sociality, foraging, aggression and competition, sexual selection and mate choice, the behaviour of predators and prey, and communication and signalling. The information presented and discussed in this unit will reflect the most up-to-date research in each aspect of the field of animal behaviour. Practical sessions are closely aligned with the lecture material and will foster the development of key skills by providing hands-on experience of experimental design, data collection and analysis.

Textbooks

Davies, Krebs, West: An Introduction to Behavioural Ecology, 4th edition, Wiley-Blackwell.

BIOL3946
Animal Behaviour (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Ashley Ward **Session:** Semester 1 **Classes:** Two lectures and one 3-hour practical per week. **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3046 or BIOL3025 or BIOL3925 **Assessment:** Practical reports, one 2-hour exam (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

The content will be based on the standard unit BIOL3046 but qualified students will participate in alternative components at a more advanced level. The unit will provide a broad overview of the scientific study of animal behaviour. It will consider mechanistic and functional explanations of animal behaviour across contexts including kin selection and altruism, sociality, foraging, aggression and competition, sexual selection and mate choice, the behaviour of predators and prey, and communication and signalling. The information presented and discussed in this unit will reflect the most up-to-date research in each aspect of the field of animal behaviour. Practical sessions are closely aligned with the lecture material and will foster the development of key skills by providing hands-on experience of experimental design, data collection and analysis.

Textbooks

BIOL3020 and AVBS3004 to be developed for offering in 2019.

Wildlife Conservation Minor*

A minor in Wildlife Conservation requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level core units (iii) 6 credit points of 3000 level core units(iv) 6 credit points of 3000-level selective units*The Wildlife Conservation minor articulates to the Ecology and Evolutionary Biology major

Units of study

The units of study are listed below:

1000-level units of study

Core

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

BIOL1906
Life and Evolution (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1 **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 **Assumed knowledge:** 85 or above in HSC Biology or equivalent. **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals.

Life and Evolution (Advanced) has the same overall structure as BIOL1006 but material is discussed in greater detail and at a more advanced level. Students enrolled in BIOL1906 participate in a research project with a focus on developing skills in critical evaluation, experimental design, data analysis and communication.

Textbooks
Please see unit outline on LMS

BIOL1996
Life and Evolution (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Mark de Bruyn **Session:** Semester 1 **Classes:** Lectures as per BIOL1906; one 3-hour practical per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), practical reports (25%), seminar presentation (15%), lab note book (5%), prelaboratory quizzes (5%) **Practical field work:** null **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, and proteins) to whole ecosystems in which myriad species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. The practical work syllabus for BIOL1996 is different from that of BIOL1906 (Advanced) and consists of a special project-based laboratory.

Textbooks
Please see unit outline on LMS
Bromham, L 2015, An Introduction to Molecular Evolution and Phylogenetics, Oxford University Press.

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

2000-level units of study

Core

BIOL2022
Biology Experimental Design and Analysis

Credit points: 6 **Teacher/Coordinator:** A/Prof Clare McArthur **Session:** Semester 2 **Classes:** Two lectures per week and one 3-hour practical per week. **Prerequisites:** 6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5) **Prohibitions:** BIOL2922 or BIOL3006 or BIOL3906 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** Practical reports/presentations (60%), one 2-hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides foundational skills essential for doing research in biology and for critically judging the research of others. We consider how biology is practiced as a quantitative, experimental and theoretical science. We focus on the underlying principles and practical skills you need to explore questions and test hypotheses, particularly where background variation (error) is inherently high. In so doing, the unit provides you with an understanding of how biological research is designed, analysed and interpreted using statistics. Lectures focus on sound experimental and statistical principles, using examples in ecology and other fields of biology to demonstrate concepts. In the practical sessions, you will design and perform, analyse (using appropriate statistical tools) and interpret your own experiments to answer research questions in topics relevant to your particular interest. This unit of study provides a suitable foundation for senior biology units of study.

BIOL2024
Ecology and Conservation

Credit points: 6 **Teacher/Coordinator:** Prof Peter Banks **Session:** Semester 2 **Classes:** Two lectures and one 3-hour practical per week. **Prohibitions:** BIOL2924 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** Practical reports/presentations (50%), one 2-hour exam (50%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study examines the ecological principles driving the major ecosystems of the world and ecological processes behind the world's major conservation issues. It aims to develop in students the core foundations for an understanding of Ecology and its application in conservation. Lectures will focus on the ecology of the major terrestrial and marine biomes of the world. Application of ecological theory and methods to practical conservation problems will be integrated throughout the unit of study. Practical sessions will provide hands-on experience in ecological sampling and data handling to understand the ecology of marine and terrestrial environments, as well as ecological simulations to understand processes. This unit of study provides a suitable foundation for senior biology units of study.

BIOL3007
Ecology

Credit points: 6 **Teacher/Coordinator:** A/Prof Dieter Hochuli **Session:** Semester 2 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3907 **Assessment:** One 2-hour exam, group presentations, one essay, one project report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit explores the dynamics of ecological systems, and considers the interactions between individual organisms and populations, organisms and the environment, and ecological processes. Lectures are grouped around four dominant themes: Interactions, Evolutionary Ecology, The Nature of Communities, and Conservation and Management. Emphasis is placed throughout on the importance of quantitative methods in ecology, including sound planning and experimental designs, and on the role of ecological science in the conservation, management, exploitation and control of populations. Relevant case studies and examples of ecological processes are drawn from marine, freshwater and terrestrial systems, with plants, animals, fungi and other life forms considered as required. Students will have some opportunity to undertake short term ecological projects, and to take part in discussions of important and emerging ideas in the ecological literature.

BIOL3907
Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Dieter Hochuli **Session:** Semester 2 **Classes:** Two lectures per week, weekly tutorial and 3-hour practical per week **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3007 **Assessment:** One 2-hour exam, presentations, one essay, one project report (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit has the same objectives as BIOL3007 Ecology, and is suitable for students who wish to pursue certain aspects in greater depth. Entry is restricted, and selection is made from the applicants on the basis of their previous performance. Students taking this unit of study participate in alternatives to some elements of the standard course and will be encouraged to pursue the objectives by more independent means in a series of research tutorials. Specific details of this unit of study and assessment will be announced in meetings with students in week 1 of semester 2. This unit of study may be taken as part of the BSc (Advanced) program.

Textbooks

As for BIOL3007

BIOL3034 is to be developed for offering in 2019.

Environmental Science

Study in the discipline of Environmental Science is jointly offered by the School of Geosciences and School of Life and Environmental Science. Units of study in this major are mostly available at standard and advanced level.

About the program

In the 21st century the demand on the earth's resources is placing the world's future on a non-sustainable course, where there is ongoing degradation of natural resources and diminishing biodiversity, and planetary cycles related to climate are reaching points of irreversible change. James Martin states that it is the 'young people who collectively, will be responsible for the greatest transition in human history. We must teach young people to understand this century and play its complex game'.

The environmental science program will provide students with the understanding and skills they need to find solutions to environmental problems. Students in the environmental science program will develop the knowledge and skills to find solutions to complex environmental problems. In this program students will develop the technical laboratory and field skills to measure, monitor and analyse environmental problems and to integrate this information with spatial data to propose management solutions.

Students will develop a strong multi-disciplinary scientific understanding of regional, national and global environmental issues. Taken in combination with a major in Environmental Studies or another disciplinary major (i.e. Chemistry, Biology, Biochemistry and Molecular Biology and Microbiology) students will contribute to solving contemporary global issues and sustaining life on earth in this "make or break" century. Students will also have pathways to teach Earth and Environmental Studies and continue to Masters level in Sustainability and Science.

Requirements for completion

A program in Environmental Science requires 60 credit points, consisting of:

(i)12 credit points of 2000-level core units
(ii)A 48 credit point major in Environmental Science

A major in Environmental Science requires 48 credit points:

(i)6 credit points of 1000-level core units
(ii)6 credit points of 1000-level selective units
(iii)12 credit points of 2000-level core units
(iv)18 credit points of 3000-level core units
(v)6 credit points of 3000-level selective units

First year

CHEM1XX1 and 6 credit points from a selection of GEOS1X01 and ENVI1003.

Second year

Core for major: BIOL2032, ENSC2001.
Core for program: GEOS2X16, SOIL2005.

The second year provides the breadth of knowledge in environmental science with units related to biodiversity, soil, landscapes and water. This is complemented in a unit related to the measurement and monitoring of environmental properties in the field and lab, and development of skills in the associated data analytics.

Third year

ENVI3XXX, GEOS3X19, ENVX3001 and 6 credit points from a selection of GEOS3102, LWSC3007, SOIL3011, AVBS3004.

The third year provides further breadth and depth with units in physical geography and climate. Data analytic skills are further developed with a unit related to the analysis of spatial data – crucial for all environmental management issues. Students will also have the opportunity to choose electives in a specialist area of interest from wildlife, energy, soil or water.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Environmental Science: completion of 24 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Environmental Science will be able to:

Demonstrate broad and coherent knowledge of:

1. Natural and managed environments at various scales, interdependencies between human societies and these environments
2. Key sustainability challenges for natural and managed environments, and their drivers
3. Complexity, including holistic systems thinking

Demonstrate understanding of the core and applied sciences underpinning environmental systems, including:

1. Disciplinary and interdisciplinary approaches to identifying, measuring and analysing materials, patterns and processes relevant to contemporary environmental challenges
2. The core sciences in the context of natural and managed environments
3. Different sub-disciplines relevant to natural and managed environments, with a depth of understanding in one
4. The process of environmental decision making, which requires understanding of their own and others' values, knowledge, perspectives and interests
5. The relevant regulatory and policy contexts that enable environmental sciences.

Demonstrate cognitive, technical and communication skills by:

1. Collecting, accurately recording, analysing, interpreting and reporting data
2. Critically evaluating and synthesising data and information from a range of relevant sources and disciplines
3. Selecting and applying appropriate and/or theoretical techniques or tools in order to conduct an investigation
4. Working both independently and collaboratively
5. Communicating with diverse groups in various contexts using a range of written, oral and visual means

Demonstrate ethical professional, public and personal conduct by having capacity to:

1. Reflect on and direct their own learning and practice in the context of the environment
2. Participate constructively in decision-making consistent with regulatory frameworks and principles of sustainable development.

Major core			
BIOL2032 **Australian Wildlife Biology**	6	**N** ANSC2005	Semester 2
ENSC2001 **Environmental Monitoring**	6	**A** Understanding of scientific principles and concepts including biodiversity, human impacts on the environment, properties of substances (e.g., acidity, alkalinity, solvents) and basic knowledge of statistics. **N** AGCH3033	Semester 1
3000-level units of study			
Core			
ENVX3001 **Environmental GIS**	6	**P** 6cp from (ENVI1003, AGEN1002) or 6cp from GEOS1XXX or 6cp from BIOL1XXX	Semester 2
GEOS3X19 and ENVI3XXX are to be developed for offering in 2019.			
Selective			
GEOS3102 **Global Energy and Resources**	6	**P** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **N** GEOS3802 or GEOS3003 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917 or GEOS3903	Semester 1
LWSC3007 **Advanced Hydrology and Modelling**	6	**P** LWSC2002	Semester 1
SOIL3011 and AVBS3004 are to be developed for offering in 2019.			

Environmental Science

ENVIRONMENTAL SCIENCE

Advanced coursework and projects will be available in 2020 for students who complete this major.

Environmental Science program

A program in Environmental Science requires 60 credit points from this table including: (i) 12 credit points of 2000-level core units (ii) A 48 credit point major in Environmental Science

Environmental Science major

This major is only available to students enrolled in the Environmental Science program.A major in Environmental Science requires 48 credit points from this table including: (i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level selective units (iii) 12 credit points of 2000-level core units (iv) 18 credit points of 3000-level core units (v) 6 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Core

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic

orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

Selective

GEOS1001
Earth, Environment and Society

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1901 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This is the gateway unit of study for Human Geography, Physical Geography, Environmental Studies and Geology. Its objective is to introduce the big questions relating to the origins and current state of the planet: climate change, environment, landscape formation, and the growth of the human population. During the semester you will be introduced to knowledge, theories and debates about how the world's physical and human systems operate. The first module investigates the evolution of the planet through geological time, with a focus on major Earth systems such as plate tectonics and mantle convection and their interaction with the atmosphere, hydrosphere, biosphere and human civilisations. The second module presents Earth as an evolving and dynamic planet, investigating global environmental change, addressing climate variability and human impacts on the natural environment and the rate at which these changes occur and how they have the potential to dramatically affect the way we live. Finally, the third module, focuses on human-induced challenges to Earth's future. This part of the unit critically analyses the relationships between people and their environments, with central consideration to debates on population change, resource use and the policy contexts of climate change mitigation and adaptation.

GEOS1901
Earth, Environment and Society Advanced

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1001 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Advanced students will complete the same core lecture material as for GEOS1001, but will be required to carry out more challenging practical assignments.

ENVI1003
Global Challenges: Food, Water, Climate

Credit points: 6 **Teacher/Coordinator:** A/Prof Stephen Cattle **Session:** Semester 2 **Classes:** Two lectures per week, 2hour tutorial/computer lab per week, two-day weekend field trip **Assessment:** One 2-hour exam (50%), field trip report (15%), tutorial presentation (20%), GIS reports (15%) **Practical field work:** Computer practicals and two day field trip **Mode of delivery:** Normal (lecture/lab/tutorial) day

In the 21st century the population of the world will increase both in size and its expectation in terms of food, energy and consumer demands. Against this demand we have a planet in crisis where natural resources are degraded, biodiversity is diminishing and planetary cycles related to climate are reaching points of irreversible change. Management of our precious natural resources is a balancing act between production and conservation as always, but now we have to do this against a background of potential large scale changes in climate. In this unit students will gain an understanding of the key environmental challenges of the 21st century; namely food security, climate change, water security, biodiversity protection, ecosystems services and soil security. In the second half using Australian case studies we will explore how we manage different agro-ecosystems within their physical constraints around water, climate and soil, while considering linkages with the global environmental challenges. Management now, in the past and the future will be considered, with an emphasis on food production. This unit is recommended unit for students interested in gaining a broad overview of the environmental challenges of the 21st century, both globally and within Australia.

2000-level units of study

Program core

GEOS2116
Earth Surface Processes

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x3-hr practical (lab/computer) sessions each week **Prohibitions:** GEOS2916 or GEOG2321 **Assessment:** practical and field assignments, final exam **Practical field work:** 3-5 day field trip **Mode of delivery:** Normal (lecture/lab/tutorial) day

The surface of the planet on which you live is the product of a balance between tectonic forces and numerous agents of erosion. The landscapes in which you live and work, and from which you draw resources, are therefore the legacy of many processes operating synchronously over long time periods. It is also true that Earth's landscapes are dynamic, and constantly changing around you in response to climate, tectonics and patterns of life. The sustainable management of landscapes is strongly dependent upon an awareness of those processes and the ways that they constrain human-environment interactions. In Earth Surface Processes, you will learn how landscapes are produced, and what this means for contemporary land use. Lectures by experts in physical geography, geology, soil science and environmental science will introduce you to the planetary and regional-scale controls on landforms and landscape dynamics, and the nature and distribution of major Australian landscape types. Focussed around 'hands on' field and laboratory-based tasks, students will gain essential practical, analytical and interpretive skills in the analysis of landscapes and earth surface processes that shape them. This is a unit for anyone wanting to better understand the planet on which they live.

Textbooks

Allen, P.A., 2009. Earth surface processes. John Wiley and Sons. Scitech, 551.3 72 Sharma, V.K., 2010. Introduction to process geomorphology. CRC Press. Scitech, 551.41 113

GEOS2916
Earth Surface Processes (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x3-hr practical (lab/computer) sessions each week **Prerequisites:** Annual average mark of at least 70 **Prohibitions:** GEOS2116 or GEOG2321 **Assessment:** practical and research assignments, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

The surface of the planet on which you live is the product of a balance between tectonic forces and numerous agents of erosion. The landscapes in which you live and work, and from which you draw resources, are therefore the legacy of many processes operating synchronously over long time periods. It is also true that Earth's landscapes are dynamic, and constantly changing around you in response to climate, tectonics and patterns of life. The sustainable management of landscapes is strongly dependent upon an awareness of those processes and the ways that they constrain human-environment interactions. In the Advanced mode of Earth Surface Processes, you will learn how landscapes are produced, and what this means for contemporary land use. Lectures by experts in physical geography, geology, soil science and environmental science will introduce you to the planetary and regional-scale controls on landforms and landscape dynamics, and the nature and distribution of major Australian landscape types. Focussed around 'hands on' field and laboratory-based tasks, students will gain essential practical, analytical and interpretive skills in the analysis of landscapes and earth surface processes that shape them. The Advanced mode of Earth Surface Processes challenges you to create new knowledge, and provides a higher level of academic rigour. You will take part in a series of small-group practical exercises that will develop your skills in research design and execution, and will provide you with a greater depth of understanding in core aspects of geomorphology. The Advanced mode will culminate in a research-focussed Advanced Assignment. This is a unit for anyone wanting to better understand the planet on which they live, and who may wish to develop higher-level analytical and research skills in geomorphology and landscape analysis.

SOIL2005
Soil and Water: Earth's Life Support Systems

Credit points: 6 **Teacher/Coordinator:** Prof Balwant Singh **Session:** Semester 1 **Classes:** Lectures: 3 hours per week; lab: 3 hours per week for 10 weeks **Prohibitions:** SOIL2003 or LWSC2002 **Assessment:** Field excursion: attendance and creative assessment (5%), the attendance at the excursion is complusory to get any mark for this assessment task; quiz: (10%); written assignment: modelling assessment including modelling (15%); laboratory report: group oral presentation and written assignment (20%); final exam: final written exam (50%) **Practical field work:** Approximately eight hours working field at Cobbitty Farm Wk 0 (Friday, 2 March 2018) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Soil and water are the two most essential natural resources on the Earth's surface which influence all forms of terrestrial life. This unit of study is designed to introduce students to the fundamental properties and processes of soil and water that affect food security and sustain ecosystems. These properties and processes are part of the grounding principles that underpin crop and animal production, nutrient and water cycling, and environmental sustainability. You will participate in a field excursion to examine soils in a landscape to develop knowledge and understanding of soil properties, water storage, water movement and cycling of organic carbon and nutrients in relation to food production and ecosystem functioning. At the end of this unit you will be able to articulate and quantify the factors and processes that determine the composition and behaviour of soil, composition of water, soil water storage and the movement of water on the land surface. You will also be able to describe the most important properties of soil and water for food production and sustaining ecosystem functions and link this to human and climatic factors. The field excursion, report and laboratory/computer exercises have been designed to develop communication, team work and collaborative efforts.

Major core

BIOL2032
Australian Wildlife Biology

Credit points: 6 **Teacher/Coordinator:** Dr Catherine Herbert **Session:** Semester 2 **Classes:** Three lectures; one 2-hour tutorial or practical session each week **Prohibitions:** ANSC2005 **Assessment:** Quizzes, presentation assignment, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Australia is home to a broad diversity of vertebrate wildlife species, many of which are unique to the Australian environment, having evolved in isolation from other large land-masses for millions of years. This unit examines the diversity of Australian reptiles, amphibians, birds and mammals (including all three mammalian lineages; monotremes, marsupials and eutherian mammals). We focus on the unique anatomical, physiological and behavioural adaptations that have enabled our wildlife to survive and thrive within varied Australian ecosystems. We also examine how the uniqueness of our wildlife is also one of its greatest challenges, being naÂ¿ve to the new threats that are present in our rapidly changing environments. At the end of this unit you should have an appreciation of the diversity and uniqueness of Australian wildlife; be able to determine the links between form and function in wildlife and understand the significance of these functional adaptations in relation to ecological challenges. You will also have an understanding of the interactions between humans and wildlife, and how the unique characteristics of our wildlife also make them vulnerable to threats within the rapidly changing Australian environment. Students will also develop enhanced scientific literacy and communication skills through tutorial activities and assessment tasks.

Textbooks

No text book requirements. Recommended reading throughout semester provided by each lecture relevant to their class content. Relevant scientific papers will be uploaded to LMS

ENSC2001
Environmental Monitoring

Credit points: 6 **Teacher/Coordinator:** Prof Feike Dijkstra **Session:** Semester 1 **Classes:** One 2-hour lecture per week; one 3-hour computer/laboratory practical per week; one 1-hour tutorial every other week **Prohibitions:** AGCH3033 **Assumed knowledge:** Understanding of scientific principles and concepts including biodiversity, human impacts on the environment, properties of substances (e.g., acidity, alkalinity, solvents) and basic knowledge of statistics. **Assessment:** Group presentation (10%), quiz (10%), lab reports (30%), final exam (50%) **Practical field work:** Two half-day field trips **Mode of delivery:** Normal (lecture/lab/tutorial) day

Human population growth is causing irreversible change to almost all environments on earth. The extent of human change has been so great that a new geological epoch, the anthropocene, has been defined. Global warming, the introduction of pollutants and excessive use of nutrients are stressors affecting the biodiversity and resilience of ecosystems, and pose threats to human and environmental health. These human impacts carefully need to be monitored to guide appropriate management of urban, natural and agricultural systems. In this unit you will learn about transport pathways of pollutants, bioaccumulation, environmental toxicology (e.g., LD50 values), environmental monitoring and remediation techniques. Through lectures, laboratories and group work, concepts and methods of environmental monitoring will be illustrated and discussed including findings from the latest research. You will participate in structured practical exercises and field trips where you will apply sampling techniques, use bio-indicators and diversity indices to monitor ecosystem functioning. You will interpret the results and assess what the implications are for the ecological functioning and sustainable management of the environment. These hands-on exercises will be complemented with case-studies to guide you in critically analysing and evaluating environmental monitoring data. By taking this unit, you will acquire the necessary skills and knowledge in monitoring sites impacted by human activity.

Textbooks

Artiola, Pepper, and Brusseau. 2004. Environmental Monitoring and Characterization. Elsevier Academic Press.

3000-level units of study

Core

ENVX3001
Environmental GIS

Credit points: 6 **Teacher/Coordinator:** A/Prof Inakwu Odeh **Session:** Semester 2 **Classes:** Three-day field trip, (two lectures and two practicals per week) **Prerequisites:** 6cp from (ENVI1003, AGEN1002) or 6cp from GEOS1XXX or 6cp from BIOL1XXX **Assessment:** One 15-minute presentation (10%), 3500wd prac report (35%), 1500wd report on trip excursion (15%), 2-hour exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is designed to impart knowledge and skills in spatial analysis and geographical information science (GISc) for decision-making in an environmental context. The lecture material will present several themes: principles of GISc, geospatial data sources and acquisition methods, processing of geospatial data and spatial statistics. Practical exercises will focus on learning geographical information systems (GIS) and how to apply them to land resource assessment, including digital terrain modelling, land-cover assessment, sub-catchment modelling, ecological applications, and soil quality assessment for decisions regarding sustainable land use and management. A three day field excursion during the mid-semester break will involve a day of GPS fieldwork at Arthursleigh University farm and two days in Canberra visiting various government agencies which research and maintain GIS coverages for Australia. By the end of this UoS, students should be able to: differentiate between spatial data and spatial information; source geospatial data from government and private agencies; apply conceptual models of spatial phenomena for practical decision-making in an environmental context; apply critical analysis of situations to apply the concepts of spatial analysis to solving environmental and land resource problems; communicate effectively results of GIS investigations through various means- oral, written and essay formats; and use a major GIS software package such as ArcGIS.

GEOS3X19 and ENVI3XXX are to be developed for offering in 2019.

Selective

GEOS3102
Global Energy and Resources

Credit points: 6 **Teacher/Coordinator:** A/Prof Derek Wyman, Prof Dietmar Müller **Session:** Semester 1 **Classes:** Two 1-hour lectures and one 2-hour tutorial/practicals per week. **Prerequisites:** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **Prohibitions:** GEOS3802 or GEOS3003 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917 or GEOS3903 **Assessment:** One 2-hour exam, practical and reports (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit examines the processes that form energy and mineral resources, outlines the characteristics of major fossil fuel and metal ore deposits and introduces the principles that underpin exploration strategies used to discover and develop geological resources. The unit will focus on a variety of topics including: coal; petroleum formation and migration, hydrocarbon traps and maturation; precious metal, base metal and gemstone deposit types; and exploration strategies. An integrated approach will relate tectonic processes through time to the formation of fossil fuel and mineral provinces. Practical exercises will introduce students to the techniques used to identify economically viable geological resources using a variety of exercises based on actual examples of resource exploration drawn from both the petroleum and minerals industry.

LWSC3007
Advanced Hydrology and Modelling

Credit points: 6 **Teacher/Coordinator:** A/Prof Willem Vervoort (Coordinator), Dr Floris Van Ogtrop **Session:** Semester 1 **Classes:** 2-hour lecture per week, 3-hour practical per week **Prerequisites:** LWSC2002 **Assessment:** Four practical assessments and reports (50%), take-home exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study is designed to allow students to examine advanced hydrological modeling focusing on catchment level responses and uncertainty. Students will learn how to develop their own simulation model of catchment hydrological processes in R and using SWAT and review the possibilities and impossibilities of using simulation models for catchment management. Students will further investigate landuse change impacts and climate change impacts the variability in hydrological responses. At the end of this unit, students will be able to calibrate and evaluate a catchment model, articulate advantages and disadvantages of using simulation models for catchment management, justify the choice of a simulation model for a particular catchment management problem, identify issues in relation to uncertainty in water quality and quantity The students will gain research and inquiry skills through research based assignments, information literacy and communication skills through laboratory reports and a presentation and personal and intellectual autonomy through working in groups.

SOIL3011 and AVBS3004 are to be developed for offering in 2019.

Environmental Studies

Study in the discipline of Environmental Studies is offered by the School of Geosciences in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

Environmental Studies is the examination of the social, economic and regulatory contexts that surround the management and monitoring of environmental and ecosystem health.

Environmental Studies incorporates the study of both social and bio-physical phenomena within their regulatory and policy frameworks, and is therefore inherently multi-disciplinary. It provides students with an understanding of the governance frames in which their professional careers in the environment sector will operate. It encapsulates the fundamental aspects of sustainability, environmental assessment, law, ethics, development, energy use, economics and politics. Consequently, the ENVI units are complementary to studies in the physical and natural science disciplines as well as social science disciplines.

Requirements for completion

A major in Environmental Studies requires 48 credit points, consisting of:

(i)6 credit points of 1000-level earth and life sciences units
(ii)6 credit points of 1000-level selective units
(iii)6 credit points of 2000-level core units
(iv)6 credit points of 2000-level selective units
(v)12 credit points of 3000-level core units
(vi)6 credit points of 3000-level selective units
(vii)6 credit points of 3000-level urban and South-East Asian context units

A minor in Environmental Studies is available and articulates to this major.

First year

The Environmental Studies major and minor is designed to be of value to students working across a range of disciplines in the life and environmental sciences. The first year is built around foundational units in biology and geosciences, with selective options in biology, chemistry, geosciences and environmental economics. These units provide a solid foundation for specialisation in later years.

Second year

In the second year, students are required to take GEOS2X21 as the core unit. This provides an essential conceptual framework for understanding interactions between humans and the rest of the earth system that is of value in at 3000-level. Selective options in environmental politics, resource economics, and natural hazards provide a broad, multi-disciplinary platform for understanding and critically analysing complex environmental and development issues.

Third year

In the third year of the Environmental Studies major, students are exposed to common legislative, normative, and procedural aspects of professional practice in the environmental and life sciences (ENVI3X11 and ENVI3X12). Selective units in energy (ENVI3114), environmental management and sustainability (GEOS3X14 and GEOS3X20), resource economics (ECOS3013) and field skills (GEOS3X53) provide a range of options to complement core training, strengthen specialisations, or compliment other majors/minors.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework

The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000 level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Environmental Studies: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Environmental Studies will be able to:

1. Understand fundamental concepts and methods in natural and social sciences and their application to environmental issues;
2. Understand contemporary Australian regulatory and policy frameworks with respect to the natural environment and natural resources
3. Integrate and apply perspectives on complex environmental issues from the natural sciences, social sciences and humanities
4. Appreciate the ethical and broader contextual nature of environmental issues
5. Demonstrate proficiency in analytical methods and critical thinking, written and oral communication skills needed to conduct high-level work as an interdisciplinary scholar and/or professional.

This requirement may be varied and students should consult the unit of study coordinator.*	Semester 2
ECOS3013 **Environmental Economics**	6	**P** AREC2003 or RSEC2031 or ECOS2001 or ECOS2901	Semester 2
Urban and South-East Asian context units			
GEOS3520 **Urban Citizenship and Sustainability**	6	**P** 24 credit points of Intermediate units of study, including 6 credit points from the following (GEOS2112 or GEOS2912 or GEOS2123 or GEOS2923 or GEOS2115 or GEOS2915 or GEOS2121 or GEOS2921 or SOILS2002 or LWSC2002) **N** GEOS3920	Semester 1
GEOS3920 **Urban Citizenship and Sustainability (Adv)**	6	**P** Distinction average in 24 credit points of Intermediate units of study including 6 credit points from one of the following units: GEOS2112, GEOS2912, GEOS2123, GEOS2923, GEOS2115, GEOS2915, GEOS2121, GEOS2921, SOIL2002, LWSC2002 **N** GEOS3520	Semester 1
GEOS3053 **Southeast Asia Field School**	6	**P** 6 credit points of Intermediate units of study in Geography. **N** GEOG3201 or GEOS3953 *Note: Department permission required for enrolment* *Students must contact the unit coordinator no later than September in the year before taking this unit.*	Intensive July
GEOS3953 **Southeast Asia Field School (Adv)**	6	**P** 6 credit points of Intermediate units of study in Geography. **N** GEOS3053 *Note: Department permission required for enrolment* *Students must contact the unit coordinator no later than September in the year before taking this unit.*	Intensive July

Environmental Studies

ENVIRONMENTAL STUDIES

Advanced coursework and projects will be available in 2020 for students who complete this major.

Environmental Studies major

A major in Environmental Studies requires 48 credit points from this table including:(i) 6 credit points of 1000-level earth and life sciences units (ii) 6 credit points of 1000-level selective units(iii) 6 credit points of 2000-level core units(iv) 6 credit points of 2000-level selective units(v) 12 credit points of 3000-level core units (vi) 6 credit points of 3000-level selective units(vii) 6 credit points of 3000 level urban and South-East Asian context units

Environmental Studies minor

A minor in Environmental Studies requires 36 credit points from this table including:(i) 6 credit points of 1000-level earth and life sciences units (ii) 6 credit points of 1000-level selective units(iii) 6 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units (v) 12 credit points of 3000-level urban and South-East Asian context units

Units of study

The units of study are listed below.

1000-level units of study

Earth and life sciences units

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

BIOL1906
Life and Evolution (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1 **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 **Assumed knowledge:** 85 or above in HSC Biology or equivalent. **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals.

Life and Evolution (Advanced) has the same overall structure as BIOL1006 but material is discussed in greater detail and at a more advanced level. Students enrolled in BIOL1906 participate in a research project with a focus on developing skills in critical evaluation, experimental design, data analysis and communication.

GEOS1001
Earth, Environment and Society

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1901 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This is the gateway unit of study for Human Geography, Physical Geography, Environmental Studies and Geology. Its objective is to introduce the big questions relating to the origins and current state of the planet: climate change, environment, landscape formation, and the growth of the human population. During the semester you will be introduced to knowledge, theories and debates about how the world's physical and human systems operate. The first module investigates the evolution of the planet through geological time, with a focus on major Earth systems such as plate tectonics and mantle convection and their interaction with the atmosphere, hydrosphere, biosphere and human civilisations. The second module presents Earth as an evolving and dynamic planet, investigating global environmental change, addressing climate variability and human impacts on the natural environment and the rate at which these changes occur and how they have the potential to dramatically affect the way we live. Finally, the third module, focuses on human-induced challenges to Earth's future. This part of the unit critically analyses the relationships between people and their environments, with central consideration to debates on population change, resource use and the policy contexts of climate change mitigation and adaptation.

GEOS1901
Earth, Environment and Society Advanced

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1001 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Advanced students will complete the same core lecture material as for GEOS1001, but will be required to carry out more challenging practical assignments.

Selective

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

CHEM1011

Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111

Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911

Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991

Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

ENVI1003
Global Challenges: Food, Water, Climate

Credit points: 6 **Teacher/Coordinator:** A/Prof Stephen Cattle **Session:** Semester 2 **Classes:** Two lectures per week, 2hour tutorial/computer lab per week, two-day weekend field trip **Assessment:** One 2-hour exam (50%), field trip report (15%), tutorial presentation (20%), GIS reports (15%) **Practical field work:** Computer practicals and two day field trip **Mode of delivery:** Normal (lecture/lab/tutorial) day

In the 21st century the population of the world will increase both in size and its expectation in terms of food, energy and consumer demands. Against this demand we have a planet in crisis where natural resources are degraded, biodiversity is diminishing and planetary cycles related to climate are reaching points of irreversible change. Management of our precious natural resources is a balancing act between production and conservation as always, but now we have to do this against a background of potential large scale changes in climate. In this unit students will gain an understanding of the key environmental challenges of the 21st century; namely food security, climate change, water security, biodiversity protection, ecosystems services and soil security. In the second half using Australian case studies we will explore how we manage different agro-ecosystems within their physical constraints around water, climate and soil, while considering linkages with the global environmental challenges. Management now, in the past and the future will be considered, with an emphasis on food production. This unit is recommended unit for students interested in gaining a broad overview of the environmental challenges of the 21st century, both globally and within Australia.

GEOS1002
Introductory Geography

Credit points: 6 **Teacher/Coordinator:** A/Prof Kurt Iveson, Dr Dan Penny **Session:** Semester 2 **Classes:** One 2 hour lecture per week and eight 2 hour practicals during semester. **Prohibitions:** GEOS1902 or GEOG1001 or GEOG1002 **Assessment:** One 2 hour exam, one 2000 word essay, two online quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides a geographical perspective on the ways in which people interact with each other and the physical world, focussing on the processes that generate spatial variation and difference. Students will consider the development and characteristics of natural environments across the globe, and will explore how these environments both constrain, and are influenced by, humans. In the process, they will learn about the biophysical, political, economic, cultural and urban geographies that shape contemporary global society. Each of these themes will be discussed with reference to key examples, in order to understand the ways in which the various processes (both physical and human) interact. The unit of study is designed to attract and interest students who wish to pursue geography as a major within their undergraduate degree, but also has relevance to students who wish to learn how to think geographically about the contemporary world.

GEOS1902
Introductory Geography (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Kurt Iveson, Dr Dan Penny **Session:** Semester 2 **Classes:** One 2 hour lecture per week and 8 2 hour practicals per semester, plus independent group work. **Prohibitions:** GEOS1002 or GEOG1001 or GEOG1002 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** One 2 hour exam, one 1000 word essay, two online quizzes, one practical report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Advanced students will complete the same core lecture material as for GEOS1002, but will be required to carry out more challenging practical assignments.

AGEC1006
Economic Environment of Agriculture

Credit points: 6 **Session:** Semester 2 **Classes:** 2x1hr lectures/week, 1x1hr tutorial/week **Prohibitions:** AGEC1003 or AGEC1004 **Assumed knowledge:** HSC Mathematics **Assessment:** 1x2hr exam (55%) and 1x50 min mid-semester exam (25%) and workshop papers (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study is designed to give an understanding of some basic economic principles and to introduce the characteristics of the economic environment in which Australian agriculture operates. Topics to be covered include the structure, nature and history of the agricultural industries in Australia; agricultural adjustment in the world economy; introductory principles of production economics and farm management; elementary price theory and the factors affecting the demand, supply and prices of agricultural commodities.

Textbooks

HE Drummond and JW Goodwin, Agricultural Economics, 3rd edn (Prentice-Hall, 2011)

2000-level units of study

Core

GEOS2121
Environmental and Resource Management

Credit points: 6 **Teacher/Coordinator:** Dr Sophie Webber **Session:** Semester 2 **Classes:** Two hour lecture; one hour tutorial per week **Prerequisites:** 6 credit points of first year Geosciences units or ECOP1001 or ECOP1002 **Prohibitions:** GEOS2921 **Assessment:** One exam, one essay, one report, tutorial attendance (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

We are in the midst of an unprecedented global ecological and climatological crisis, and consequently need to transform our social, political and economic systems. This crisis Â¿ its causes, its effects, and its solutions Â¿ are geographically unevenly distributed and situated. Therefore, this unit of study uses geographical concepts to consider what has caused this global crisis, how we should think about the relations and interactions between humans and their environments, and what some strategies are for managing our environment and resources to negotiate this predicament. Using examples focused in Australia, Asia, and the Pacific region, students will learn how to integrate environmental, economic, political, social and cultural considerations and perspectives, and how to evaluate environmental and resource management policies and ideas.

GEOS2921
Environmental and Resource Management (Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Sophie Webber **Session:** Semester 2 **Classes:** Two hour lecture; one hour tutorial per week **Prerequisites:** A mark of 75 in a 6 credit point Junior Geosciences unit of study or a mark of 75 in ECOP1001 or ECOP1002 **Prohibitions:** GEOS2121 **Assessment:** One exam, one essay, one report, tutorial attendance (100%) **Practical field work:** Seminar, maximum of four hours **Mode of delivery:** Normal (lecture/lab/tutorial) day

Advanced students will receive the same core lecture materials as for GEOS2121 but have a separate seminar and are required to complete alternative written work.

Selective

GOVT2228
Environmental Politics

Credit points: 6 **Session:** Semester 2 **Classes:** 1x2hr lecture/week, 1x1hr tutorial/week **Prerequisites:** 12 Junior credit points in Government and International Relations or 12 credit points at 1000 level in Politics or International Relations **Prohibitions:** GOVT2208 **Assessment:** 1x1000wd Short Essay (20%), 1x2000wd Major Essay (40%), 1x1.5hr Examination (30%), 1xTutorial participation (10%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Environmental issues pose increasingly difficult challenges to our societies. What is the nature of these challenges? Where have they come from? How have political institutions adapted to them, at the national and international levels? What further changes might be necessary to better meet them? How might these changes come about? What effects might they have on the future of politics? This unit of study will engage these kinds of questions as an introduction to some theoretical and practical dimensions of environmental politics.

AREC2003
Concepts in Enviro and Resource Economics

Credit points: 6 **Session:** Semester 1 **Classes:** 1x2hr lecture/week, 1x1hr tutorial/week **Prerequisites:** ECON1001 or ECON1040 or AREC1006 or AGEC1102 **Assessment:** 1x50min Mid-semster test (20%), 2x1000wd Assignments (30%), 1x2hr Final Exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit builds on the concepts in microeconomics to provide insights into efficient and sustainable resource management. The primary focus of this unit is analytical. Emphasis is placed on the importance of property rights structures, cost-effective regulations and dynamic considerations in managing natural resource stocks and environmental assets. Some introductory material on economic valuation of environmental assets and benefit cost analysis is included.

GEOS2111
Natural Hazards: a GIS Approach

Credit points: 6 **Teacher/Coordinator:** A/Prof Dale Dominey-Howes **Session:** Semester 1 **Classes:** Two hour lecture; two hour practical/tute/lab **Prerequisites:** 6 credit points of Junior Geosciences units **Prohibitions:** GEOS2911 **Assessment:** One 2 hour exam, three reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Staff will organize a non-compulsory half-day weekend field excursion to explore local Sydney hazards for interested students.

The unit provides an essential framework for understanding the environmental response to short- and long-term geologic, oceanic and atmospheric processes. This Unit of Study introduces students to a variety of natural phenomena that affect society with impact levels ranging from nuisance to disastrous. The discussion of each hazard focuses on: (1) the process mechanics, (2) hazards and risk, and (3) methods for mitigation. Geographic Information Systems (GIS) are used by scientists, planners, policy-makers and the insurance industry alike to address many issues relating to natural hazards. This Unit of Study will introduce students to the major concepts relating to GIS and provide practical experience in the application of GIS techniques to hazard mapping, risk assessment and mitigation.

GEOS2911
Natural Hazards: A GIS Approach (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Dale Dominey-Howes **Session:** Semester 1 **Classes:** Two hour lecture; two hour practical/tute/lab **Prerequisites:** A mark of 75 in a 6 credit point Junior Geosciences unit of study **Prohibitions:** GEOS2111 **Assessment:** One 2 hour exam, three reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Staff will organize a non-compulsory half-day weekend field excursion to explore local Sydney hazards for interested students.

This unit has the same objectives as GEOS2111 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance to date. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives.

Core

ENVI3111
Environmental Law and Ethics

Credit points: 6 **Teacher/Coordinator:** Dr Josephine Gillespie **Session:** Semester 1 **Classes:** One 2 hour lecture and one 1 hour tutorial per week. **Prerequisites:** 12 credit points of Intermediate units **Prohibitions:** ENVI3911 **Assessment:** Essays, in-class tests, tutorials, exam (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Environmental regulation and governance plays an important role in regulating human impacts on the environment. This unit provides an introduction to environmental regulation. We investigate key environmental issues through an examination of environmental policies, legislation and case law at a variety of scales (international, national and state/local). The ethics component helps students develop thoughtful and informed positions on issues in environmental ethics. The aim of this Unit is to enable students to understand the broad principles of environmental law and ethics and to apply this understanding to contemporary environmental problems.

ENVI3911
Environmental Law and Ethics (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Josephine Gillespie **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Distinction average across 12 credit points of Intermediate units **Prohibitions:** ENVI3111 **Assessment:** Essays, tutorial attendance, exam (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This advanced unit of study will cover the same core lecture material as for ENVI3111, but students will be required to carry out more challenging practical assignments based on a fieldtrip activity.

ENVI3112
Environmental Assessment

Credit points: 6 **Teacher/Coordinator:** Prof Phil McManus **Session:** Semester 2 **Classes:** One 2-hour lecture per week and one 2-hour tutorial/practical per week. **Prerequisites:** (GEOS2121 or GEOS2921) and 6 credit points of Intermediate units **Prohibitions:** ENVI3912 **Assessment:** Literature review, group report, presentation, exam (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study focuses on environmental impact assessment as part of environmental planning. It seeks to establish a critical understanding of environmental planning and the tools available to improve environmental outcomes. The unit of study addresses the theory and practice of environmental impact statements (EIS) and environmental impact assessment processes (EIA) from scientific, economic, social and cultural value perspectives. Emphasis is placed on gaining skills in group work and in writing and producing an assessment report, which contains logically ordered and tightly structured argumentation that can stand rigorous scrutiny by political processes, the judiciary, the public and the media.

ENVI3912
Environmental Assessment (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Phil McManus **Session:** Semester 2 **Classes:** One 2-hour lecture per week and one 2-hour tutorial/practical per week. **Prerequisites:** Distinction average in ((GEOS2121 or GEOS2921) and 6 credit points of Intermediate units) **Prohibitions:** ENVI3112 **Assessment:** Research project, group report, presentation, exam (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Supervised research project equivalent to the Literature Review in ENVI3112

This advanced unit of study will cover the same core lecture, tutorial and group practical material as for ENVI3112. The difference in the Advanced unit of study is that students will be required to write a 3000-word essay that is worth 40% of their semester marks, rather than writing a literature review. The essay will explore the more theoretical and conceptual debates within impact assessment.

Selective

ENVI3114
Energy and the Environment

Credit points: 6 **Teacher/Coordinator:** Dr Arne Geschke **Session:** Semester 2 **Classes:** 2-hour lecture and 1 hour seminar per week; field trips **Prerequisites:** 12 credit points of Intermediate units **Prohibitions:** ENVI3001 or PHYS3600 **Assumed knowledge:** Junior Physics units or Intermediate Environmental Science units **Assessment:** Essay, comprehensive diary/notes from lectures, and presentation (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit covers many aspects of energy and the environment: energy resources and use; electrical power generation including fossil fuelled and alternate methods; environmental impacts of energy use and power generation including greenhouse gas emissions; transportation and pollution; energy management in buildings; solar thermal energy, photovoltaics, wind power and nuclear energy; embodied energy and net emissions analysis and, importantly, socio-economic and political issues related to energy provision.

GEOS3014
GIS in Coastal Management

Credit points: 6 **Teacher/Coordinator:** Dr Eleanor Bruce **Session:** Semester 2 **Classes:** 2x1 hour lectures and 1x3h practical/week **Prerequisites:** Either 12 credit points of Intermediate Geoscience units or [(GEOS2115, GEOS2915) and (BIOL2018 or BIOL2918 or BIOL2024 or BIOL2924 or BIOL2028 or BIOL2928)] **Prohibitions:** GEOS3914 or MARS3104 **Assessment:** One 2 hour exam, two project reports, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Coastal Management is about how scientific knowledge is used to support policy formulation and planning decisions in coastal environments. The course links coastal science to policy and practice in management of estuaries, beaches and the coastal ocean. The principles are exemplified through specific issues, such as coastal erosion, pollution, and impacts of climate-change. The issues are dealt with in terms of how things work in nature, and how the issues are handled through administrative mechanisms. These mechanisms involve planning strategies like Marine Protected Areas and setback limits on civil development in the coastal zone. The coastal environments and processes that are more relevant to coastal management including: rocky coasts; beaches, barriers and dunes; and coral reefs will also be introduced. At a practical level, the link between science and coastal management is given substance through development and use of 'decision-support models'. These models involve geocomputing methods that entail application of simulation models, remotely sensed information, and Geographic Information Systems (GIS). The course therefore includes both principles and experience in use of these methods to address coastal-management issues. (It thus also involves extensive use of computers.) Although the focus is on the coast, the principles and methods have broader relevance to environmental management in particular, and to problem-solving in general. That is, the course has vocational relevance in examining how science can be exploited to the benefit of society and nature conservation.

GEOS3914
GIS in Coastal Management (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Eleanor Bruce **Session:** Semester 2 **Classes:** Two hours of lectures, one 3 hour practical per week comprising one 1 hour practical demonstration and one 2 hour practical **Prerequisites:** Distinction average in either 12 credit points of Intermediate Geoscience units or [(GEOS2115 or GEOS2915) and (BIOL2018 or BIOL2918 or BIOL2024 or BIOL2924 or BIOL2028 or BIOL2928)]. **Prohibitions:** GEOS3014 or MARS3104 **Assessment:** One 2 hour exam, project work, two practical-based project reports, fortnightly progress quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: A distinction average in prior Geography, Geology or Marine Science units of study is normally required for admission. This requirement may be varied and students should consult the unit of study coordinator.

Advanced students will complete the same core lecture material as for GEOS3014 but will carry out more challenging projects, practicals, assignments and tutorials.

ECOS3013
Environmental Economics

Credit points: 6 **Session:** Semester 2 **Classes:** 1x2hr lecture/week, 1x1hr tutorial/week **Prerequisites:** AREC2003 or RSEC2031 or ECOS2001 or ECOS2901 **Assessment:** 1x1500wd Essay (25%), 1hr Mid-semester test (25%), 1x2hr Final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The natural environment is invariably affected by production and consumption in our modern economy. In particular, environmental outcomes are important in the presence of market failures (externalities and public goods). This unit focuses on developing a student's detailed understanding of the economic techniques used by policymakers to address environmental issues. These techniques include: Pigovian taxes and subsidies; regulation with asymmetric information; marketable permits; pricing contributions for public goods; optimal damages; and the allocation of property-rights and market failures.

Urban and South-East Asian context units

GEOS3520
Urban Citizenship and Sustainability

Credit points: 6 **Teacher/Coordinator:** A/Prof Kurt Iveson **Session:** Semester 1 **Classes:** 2 hour lecture and 1 hour tutorial per week, six 2 hours practical sessions. **Prerequisites:** 24 credit points of Intermediate units of study, including 6 credit points from the following (GEOS2112 or GEOS2912 or GEOS2123 or GEOS2923 or GEOS2115 or GEOS2915 or GEOS2121 or GEOS2921 or SOILS2002 or LWSC2002) **Prohibitions:** GEOS3920 **Assessment:** One 2hr exam, one 2000w essay, one 2000w group-based prac report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Cities are now the predominant home for humanity. More than half of the world's population reside in cities. The contemporary growth of cities, however, is attached to profound political questions about what it means to be urban, and what 'being urban' means for the planet. This Unit of Study provides grounding to these crucial questions. In the first half of the semester, lectures address the question: are cities sustainable? Why or why not? And for whom? This focus addresses utopian visions for cities, urban history, ecological footprint analysis, bioregionalism, transport options, urban form and urban policy, with reference to sustainable futures and the role of custodianship. During the second half of the semester, lectures address the question: what does it mean to be a 'citizen', and what has this got to do with cities and different approaches to urban sustainability? This includes consideration of historical and contemporary configurations of citizenship. Case studies illustrate ways in which new forms of citizenship are produced through struggles over rights to the city and the urban environment. Through the semester a practicals program enables students to develop urban-based research projects.

GEOS3920
Urban Citizenship and Sustainability (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Kurt Iveson **Session:** Semester 1 **Classes:** 2 hour lecture and 2 hour tutorial per week **Prerequisites:** Distinction average in 24 credit points of Intermediate units of study including 6 credit points from one of the following units: GEOS2112, GEOS2912, GEOS2123, GEOS2923, GEOS2115, GEOS2915, GEOS2121, GEOS2921, SOIL2002, LWSC2002 **Prohibitions:** GEOS3520 **Assessment:** One 2hr exam, one 2000w essay, one 2000w group-based prac report. **Mode of delivery:** Normal (lecture/lab/tutorial) day

GEOS3920 has the same thematic content as GEOS3520 however with elements taught at an Advanced level

GEOS3053
Southeast Asia Field School

Credit points: 6 **Teacher/Coordinator:** Dr Jeff Neilson **Session:** Intensive July **Classes:** 3 pre-departure classes during Semester 1, up to three weeks in-country intensive involving lectures, fieldwork and field-based methods training, readings and small group discussions **Prerequisites:** 6 credit points of Intermediate units of study in Geography. **Prohibitions:** GEOG3201 or GEOS3953 **Assessment:** Group participation, one consolidation report, one exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: Students must contact the unit coordinator no later than September in the year before taking this unit.

The unit of study can be taken only with prior permission from the unit of study coordinator. It constitutes a Field School run over a two to three week period in July, prior to the commencement of the second semester. In 2016, the Field School will be held in Indonesia. In other years it may be held in mainland Southeast Asia. The Field School focuses on three main themes; rural social, environmental and economic change; regional economic integration and its local effects; regional environmental change and natural resources governance. The Field School is run in close association with local universities, whose staff and students participate in some components of the course. Places are limited, and students interested in the 2016 Field School should indicate expression of interest to Dr Jeff Neilson by 26th September 2015.

GEOS3953
Southeast Asia Field School (Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Jeff Neilson **Session:** Intensive July **Classes:** 3 pre-departure classes during Semester 1, up to three weeks in-country intensive involving lectures, fieldwork and field-based methods training, readings and small group discussions **Prerequisites:** 6 credit points of Intermediate units of study in Geography. **Prohibitions:** GEOS3053 **Assessment:** Group participation, one consolidation report, one exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: Students must contact the unit coordinator no later than September in the year before taking this unit.

The unit of study can be taken only with prior permission from the unit of study coordinator. Financial Mathematics and Statistics

Study in the discipline of Financial Mathematics and Statistics is offered by the School of Mathematics and Statistics in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

Financial mathematics and statistics is designed to meet the needs of a particularly popular area of employment for our mathematics graduates. Mathematics is the foundation of the financial world. It allows investors, traders and bankers to make optimal decisions and to distribute risk in a rational way. The mathematics behind finance is, however, not simple and relies heavily on ideas from statistics and the mathematical theory of random events.

Financial Mathematics and Statistics will give you a broad introduction to the methods and ideas of mathematical finance and will prepare you for employment in the financial sector or for honours and further study in the field.

Requirements for completion

A major in Financial Mathematics and Statistics requires 48 credit points, consisting of:

(i)12 credit points of 1000 level units according to the following rules:

- (a)6 credit points of calculus units; 3 credit points of linear algebra units and 3 credit points of statistics units; or
- (b)3 credit points of calculus units; 3 credit points of linear algebra units and 6 credit points of data science units

(ii)12 credit points of 2000-level core units
(iii)12 credit points of 3000-level interdisciplinary project and core units
(iv)6 credit points of 3000-level statistical modelling units
(v)6 credit points of 3000-level mathematical modelling units

A minor in Financial Mathematics and Statistics is available and articulates to this major.

First year

MATH1021/1921/1931, MATH1023/1923/1933 and MATH1002/1902, and either MATH1005/1905 or DATA1001.

The first year units provide a strong foundation for further learning and a broad introduction to the Mathematical Sciences. MATH1021/1921/1931 and MATH1023/1923/1933 extend your knowledge of calculus and introduce you to calculus of several variables and mathematical modelling with differential equations. MATH1002/1902 introduces you to linear algebra, including matrices and their applications. MATH1005/1905 and DATA1001 both introduce you to working with data.

Second year

Core: MATH2070/2970 and STAT2011/2911

The second year units provide core specialist knowledge and skills in Financial Mathematics and Statistics. STAT2011/2911 provides foundational knowledge of random processes and probability while MATH2070/2970 introduces you to mathematical optimisation and the foundations of financial mathematics.

Third year

MATH3970/MATH3070 and STAT3021 and a 3000-level project unit and a selection of 6 credit points from MATH3979, MATH3076/3976, STAT3023 and STAT3022/3922

In your third year you must take the designated project unit. You must also take MATH3970/3070 which introduces you to the world of financial derivatives and STAT3021 which gives you the tools to understand highly variable financial markets. The fourth unit at third year level can be chosen from a selection of MATH and STAT units depending on your particular interests.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework

The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours

Students who complete a major in Financial Mathematics and Statistics may go on to honours in either Applied Mathematics or Statistics, depending on their interests and the units that they have chosen in their third year. Both Applied Mathematics and Statistics honours require 24 credit points of coursework and 24 credit points of project work.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Financial Mathematics and Statistics will be able to:

1. Construct logical, clearly presented and justified arguments incorporating deductive reasoning.
2. Understand principles and concepts of a broad range of fundamental areas in mathematics and statistics with a particular focus on optimisation, risk analysis and stochastic processes.
3. Formulate and model practical and abstract problems in mathematical terms using a variety of methods.
4. Apply mathematical principles, concepts, techniques and technology to solve practical and abstract problems and interpret results critically with particular focus on problems that arise in the context of the financial sector.
5. Appropriately interpret information communicated in mathematical or statistical form.
6. Appropriately present information, reasoning and conclusions in a variety of modes, to diverse audiences (expert and non-expert).

MATH3076 **Mathematical Computing**	6	**P** 12 credit points of MATH2XXX and 6 credit points from (MATH1021 or MATH1001 or MATH1023 or MATH1003 or MATH19X1 or MATH19X3 or MATH1906 or MATH1907) **N** MATH3976 or MATH3016 or MATH3916	Semester 1
MATH3976 **Mathematical Computing (Advanced)**	6	**P** 12 credit points of MATH2XXX and [6 credit points from (MATH1923 or MATH1903 or MATH1933 or MATH1907), or a mark of 65 or above in (MATH1023 or MATH1003)] **N** MATH3076 or MATH3016 or MATH3916	Semester 1
MATH3979 to be developed for offering in 2019.			
Statistical modelling units			
STAT3023, STAT3022 and STAT3922 to be developed for offering in 2019.			
Minor core			
MATH3X70 to be developed for offering in 2019.			

Financial Mathematics and Statistics

FINANCIAL MATHEMATICS AND STATISTICS

Advanced coursework and projects will be available in 2020 for students who complete this major.

Financial Mathematics and Statistics major

A major in Financial Mathematics and Statistics requires 48 credit points from this table including:(i) 12 credit points of 1000 level units according to the following rules: (a) 6 credit points of calculus units; 3 credit points of linear algebra units and 3 credit points of statistics units; or(b) 3 credit points of calculus units; 3 credit points of linear algebra units and 6 credit points of data science units(ii) 12 credit points of 2000-level core units (iii) 12 credit points of 3000-level interdisciplinary project and core units (iv) 6 credit points of 3000-level statistical modelling units(v) 6 credit points of 3000-level mathematical modelling units

Financial Mathematics and Statistics minor

A minor in Financial Mathematics and Statistics requires 36 credit points from this table including:(i) 12 credit points of 1000 level units according to the following rules: (a) 3 credit points of 1000-level calculus units; 3 credit points of multivariable calculus units; 3 credit points of linear algebra units and 3 credit points of statistics units; or(b) 6 credit points of data science units; 3 credit points of calculus units and 3 credit points of linear algebra units(ii) 12 credit points of 2000-level core units(iii) 6 credit points of 3000-level core units(iv) 6 credit points of 3000-level statistical modelling units

Units of study

The units of study are listed below.

1000-level units of study

Calculus units

MATH1021
Calculus Of One Variable

Credit points: 3 **Session:** Semester 1 **Classes:** 2x1-hr lectures; 1x1-hr tutorial per week **Prohibitions:** MATH1011 or MATH1901 or MATH1906 or MATH1111 or ENVX1001 or MATH1001 or MATH1921 or MATH1931 **Assumed knowledge:** HSC Mathematics Extension 1. Students who have not completed HSC Extension 1 Mathematics (or equivalent) are strongly advised to take the Extension 1 Mathematics Bridging Course (offered in February). **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Calculus is a discipline of mathematics that finds profound applications in science, engineering, and economics. This unit investigates differential calculus and integral calculus of one variable and the diverse applications of this theory. Emphasis is given both to the theoretical and foundational aspects of the subject, as well as developing the valuable skill of applying the mathematical theory to solve practical problems. Topics covered in this unit of study include complex numbers, functions of a single variable, limits and continuity, differentiation, optimisation, Taylor polynomials, Taylor's Theorem, Taylor series, Riemann sums, and Riemann integrals.

Textbooks
As set out in the Junior Mathematics Handbook.

MATH1921
Calculus Of One Variable (Advanced)

Credit points: 3 **Session:** Semester 1 **Classes:** 2x1-hr lectures; and 1x1-hr tutorial per week **Prohibitions:** MATH1001 or MATH1011 or MATH1906 or MATH1111 or ENVX1001 or MATH1901 or MATH1021 or MATH1931 **Assumed knowledge:** (HSC Mathematics Extension 2) OR (Band E4 in HSC Mathematics Extension 1) or equivalent. **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Calculus is a discipline of mathematics that finds profound applications in science, engineering, and economics. This unit investigates differential calculus and integral calculus of one variable and the diverse applications of this theory. Emphasis is given both to the theoretical and foundational aspects of the subject, as well as developing the valuable skill of applying the mathematical theory to solve practical problems. Topics covered in this unit of study include complex numbers, functions of a single variable, limits and continuity, differentiation, optimisation, Taylor polynomials, Taylor's Theorem, Taylor series, Riemann sums, and Riemann integrals. Additional theoretical topics included in this advanced unit include the Intermediate Value Theorem, Rolle's Theorem, and the Mean Value Theorem.

Textbooks
As set out in the Junior Mathematics Handbook

MATH1931
Calculus Of One Variable (SSP)

Credit points: 3 **Session:** Semester 1 **Classes:** 2x1-hr lectures; 1x1-hr seminar; and 1x1-hr tutorial per week **Prohibitions:** MATH1001 or MATH1011 or MATH1901 or MATH1111 or ENVX1001 or MATH1906 or MATH1021 or MATH1921 **Assumed knowledge:** Band E4 in HSC Mathematics Extension 2 or equivalent. **Assessment:** exam, quizzes, assignments, seminar participation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: Enrolment is by invitation only.

The Mathematics Special Studies Program is for students with exceptional mathematical aptitude, and requires outstanding performance in past mathematical studies. Students will cover the material of MATH1921 Calculus of One Variable (Adv), and attend a weekly seminar covering special topics on available elsewhere in the Mathematics and Statistics program.

Multivariable calculus units

MATH1023
Multivariable Calculus and Modelling

Credit points: 3 **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x1-hr tutorial per week **Prohibitions:** MATH1013 or MATH1903 or MATH1907 or MATH1003 or MATH1923 or MATH1933 **Assumed knowledge:** HSC Mathematics Extension 1. Students who have not completed HSC Extension 1 Mathematics (or equivalent) are strongly advised to take the Extension 1 Mathematics Bridging Course (offered in February). **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Calculus is a discipline of mathematics that finds profound applications in science, engineering, and economics. This unit investigates multivariable differential calculus and modelling. Emphasis is given both to the theoretical and foundational aspects of the subject, as well as developing the valuable skill of applying the mathematical theory to solve practical problems. Topics covered in this unit of study include mathematical modelling, first order differential equations, second order differential equations, systems of linear equations, visualisation in 2 and 3 dimensions, partial derivatives, directional derivatives, the gradient vector, and optimisation for functions of more than one variable.

MATH1933
Multivariable Calculus and Modelling (SSP)

Credit points: 3 **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x1-hr seminar; and 1x1-hr tutorial per week **Prohibitions:** MATH1003 or MATH1903 or MATH1013 or MATH1907 or MATH1023 or MATH1923 **Assumed knowledge:** Band E4 in HSC Mathematics Extension 2 or equivalent. **Assessment:** exam, quizzes, assignments, seminar participation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: Enrolment is by invitation only.

The Mathematics Special Studies Program is for students with exceptional mathematical aptitude, and requires outstanding performance in past mathematical studies. Students will cover the material of MATH1923 Multivariable Calculus and Modelling (Adv), and attend a weekly seminar covering special topics on available elsewhere in the Mathematics and Statistics program.

Statistics units

MATH1005
Statistical Thinking with Data

Credit points: 3 **Session:** Semester 2, Summer Main, Winter Main **Classes:** Lectures 2 hrs/week; Practical 1 hr/week **Prohibitions:** MATH1015 or MATH1905 or STAT1021 or STAT1022 or ECMT1010 or ENVX1001 or ENVX1002 or BUSS1020 **Assumed knowledge:** HSC Mathematics. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

In a data-rich world, global citizens need to problem solve with data, and evidence based decision-making is essential is every field of research and work.

This unit equips you with the foundational statistical thinking to become a critical consumer of data. You will learn to think analytically about data and to evaluate the validity and accuracy of any conclusions drawn. Focusing on statistical literacy, the unit covers foundational statistical concepts, including the design of experiments, exploratory data analysis, sampling and tests of significance.

Textbooks

Freedman, Pisani and Purves, Statistics, Norton, 2007

MATH1905
Statistical Thinking with Data (Advanced)

Credit points: 3 **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1005 or MATH1015 or STAT1021 or STAT1022 or ECMT1010 or ENVX1001 or ENVX1002 or BUSS1020 **Assumed knowledge:** (HSC Mathematics Extension 2) OR (90 or above in HSC Mathematics Extension 1) or equivalent **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit is designed to provide a thorough preparation for further study in mathematics and statistics. It is a core unit of study providing three of the twelve credit points required by the Faculty of Science as well as a Junior level requirement in the Faculty of Engineering. This Advanced level unit of study parallels the normal unit MATH1005 but goes more deeply into the subject matter and requires more mathematical sophistication.

Textbooks

As set out in the Junior Mathematics Handbook

MATH1015
Biostatistics

Credit points: 3 **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1005 or MATH1905 or STAT1021 or STAT1022 or ECMT1010 or BIOM1003 or ENVX1001 or ENVX1002 or BUSS1020 **Assumed knowledge:** HSC Mathematics. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

MATH1015 is designed to provide a thorough preparation in statistics for students in the Biological and Medical Sciences. It offers a comprehensive introduction to data analysis, probability and sampling, inference including t-tests, confidence intervals and chi-squared goodness of fit tests.

Textbooks

As set out in the Junior Mathematics Handbook

Linear algebra units

MATH1002
Linear Algebra

Credit points: 3 **Session:** Semester 1, Summer Main **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1012 or MATH1014 or MATH1902 **Assumed knowledge:** HSC Mathematics or MATH1111. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

MATH1002 is designed to provide a thorough preparation for further study in mathematics and statistics. It is a core unit of study providing three of the twelve credit points required by the Faculty of Science as well as a Junior level requirement in the Faculty of Engineering.

This unit of study introduces vectors and vector algebra, linear algebra including solutions of linear systems, matrices, determinants, eigenvalues and eigenvectors.

Textbooks

As set out in the Junior Mathematics Handbook

MATH1902
Linear Algebra (Advanced)

Credit points: 3 **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1002 or MATH1012 or MATH1014 **Assumed knowledge:** (HSC Mathematics Extension 2) OR (90 or above in HSC Mathematics Extension 1) or equivalent **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit is designed to provide a thorough preparation for further study in mathematics and statistics. It is a core unit of study providing three of the twelve credit points required by the Faculty of Science as well as a Junior level requirement in the Faculty of Engineering. It parallels the normal unit MATH1002 but goes more deeply into the subject matter and requires more mathematical sophistication.

Textbooks

As set out in the Junior Mathematics Handbook

Data science units

DATA1001
Foundations of Data Science

Credit points: 6 **Teacher/Coordinator:** Dr Di Warren **Session:** Semester 1, Semester 2 **Classes:** lecture 3 hrs/week; computer tutorial 2 hr/week **Prohibitions:** MATH1005 or MATH1905 or MATH1015 or MATH1115 or ENVX1001 or ENVX1002 or ECMT1010 or BUSS1020 or STAT1021 **Assessment:** assignments, quizzes, presentation, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

DATA1001 is a foundational unit in the Data Science major. The unit focuses on developing critical and statistical thinking skills for all students. Does mobile phone usage increase the incidence of brain tumours? What is the public's attitude to shark baiting following a fatal attack? Statistics is the science of decision making, essential in every industry and undergirds all research which relies on data. Students will use problems and data from the physical, health, life and social sciences to develop adaptive problem solving skills in a team setting. Taught interactively with embedded technology, DATA1001 develops critical thinking and skills to problem-solve with data. It is the prerequisite for DATA2002.

Textbooks

Statistics, Fourth Edition, Freedman Pisani Purves

2000-level units of study

Core

MATH2070
Optimisation and Financial Mathematics

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** (MATH1X21 or MATH1011 or MATH1931 or MATH1X01 or MATH1906) and (MATH1014 or MATH1X02) **Prohibitions:** MATH2010 or MATH2033 or MATH2933 or MATH2970 or ECMT3510 **Assumed knowledge:** MATH1X23 or MATH1933 or MATH1X03 or MATH1907 **Assessment:** One 2 hour exam, assignments, quiz, project (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students may enrol in both MATH2070 and MATH3075 in the same semester

Problems in industry and commerce often involve maximising profits or minimising costs subject to constraints arising from resource limitations. The first part of this unit looks at programming problems and their solution using the simplex algorithm; nonlinear optimisation and the Kuhn Tucker conditions.

The second part of the unit deals with utility theory and modern portfolio theory. Topics covered include: pricing under the principles of expected return and expected utility; mean-variance Markowitz portfolio theory, the Capital Asset Pricing Model, log-optimal portfolios and the Kelly criterion; dynamical programming. Some understanding of probability theory including distributions and expectations is required in this part.

Theory developed in lectures will be complemented by computer laboratory sessions using MATLAB. Minimal computing experience will be required.

MATH2970
Optimisation and Financial Mathematics Adv

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week (lectures given in common with MATH2070). **Prerequisites:** [MATH19X1 or MATH1906 or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH1902 or (a mark of 65 or above in MATH1002)] **Prohibitions:** MATH2010 or MATH2033 or MATH2933 or MATH2070 or ECMT3510 **Assumed knowledge:** MATH19X3 or MATH1907 or a mark of 65 or above in MATH1003 or MATH1023 **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students may enrol in both MATH2970 and MATH3975 in the same semester

The content of this unit of study parallels that of MATH2070, but students enrolled at Advanced level will undertake more advanced problem solving and assessment tasks, and some additional topics may be included.

STAT2011
Probability and Estimation Theory

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory week. **Prerequisites:** (MATH1X21 or MATH1931 or MATH1X01 or MATH1906 or MATH1011) and (MATH1XX5 or STAT1021 or ECMT1010 or BUSS1020) **Prohibitions:** STAT2901 or STAT2001 or STAT2911 **Assessment:** One 2 hour exam, assignments and/or quizzes, and computer practical reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides an introduction to univariate techniques in data analysis and the most common statistical distributions that are used to model patterns of variability. Common discrete random models like the binomial, Poisson and geometric, continuous models including the normal and exponential will be studied along with elementary regression models. The method of moments and maximum likelihood techniques for fitting statistical distributions to data will be explored. The unit will have weekly computer classes where candidates will learn to use a statistical computing package to perform simulations and carry out computer intensive estimation techniques like the bootstrap method.

STAT2911
Probability and Statistical Models (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** [MATH19X3 or MATH1907 or (a mark of 65 in MATH1023 or MATH1003)] and [MATH1905 or MATH1904 or (a mark of 65 in MATH1005 or ECMT1010 or BUSS1020)] **Prohibitions:** STAT2001 or STAT2901 or STAT2011 **Assessment:** One 2 hour exam, assignments and/or quizzes, and computer practical reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is essentially an advanced version of STAT2011, with an emphasis on the mathematical techniques used to manipulate random variables and probability models. Common distributions including the Poisson, normal, beta and gamma families as well as the bivariate normal are introduced. Moment generating functions and convolution methods are used to understand the behaviour of sums of random variables. The method of moments and maximum likelihood techniques for fitting statistical distributions to data will be explored. The notions of conditional expectation and prediction will be covered as will be distributions related to the normal: chi^2, t and F. The unit will have weekly computer classes where candidates will learn to use a statistical computing package to perform simulations and carry out computer intensive estimation techniques like the bootstrap method.

3000-level units of study

Interdisciplinary project and major core units

MATH3070, MATH3970, STAT3021 to be developed for offering in 2019.

Mathematical modelling units

MATH3076
Mathematical Computing

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour laboratory per week. **Prerequisites:** 12 credit points of MATH2XXX and 6 credit points from (MATH1021 or MATH1001 or MATH1023 or MATH1003 or MATH19X1 or MATH19X3 or MATH1906 or MATH1907) **Prohibitions:** MATH3976 or MATH3016 or MATH3916 **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides an introduction to Fortran 95/2003 programming and numerical methods. Topics covered include computer arithmetic and computational errors, systems of linear equations, interpolation and approximation, solution of nonlinear equations, quadrature, initial value problems for ordinary differential equations and boundary value problems.

MATH3976
Mathematical Computing (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** 12 credit points of MATH2XXX and [6 credit points from (MATH1923 or MATH1903 or MATH1933 or MATH1907), or a mark of 65 or above in (MATH1023 or MATH1003)] **Prohibitions:** MATH3076 or MATH3016 or MATH3916 **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

See entry for MATH3076 Mathematical Computing.

MATH3979 to be developed for offering in 2019.

Statistical modelling units

STAT3023, STAT3022 and STAT3922 to be developed for offering in 2019.

Minor core

MATH3X70 to be developed for offering in 2019.

Food and Agribusiness

About the program

The Food and Agribusiness stream will equip you with a solid grounding in the underpinning science of food products and processes, combined with studies of the business or economics environment that drive commercial processes and decisions.

The stream will develop your analytical, problem-solving and research skills, as well as contextual knowledge of food and agribusiness, with a strong emphasis on industry relevance and engagement. There is a high demand in the food and agribusiness sector for tertiary graduates to enter skilled employment and support productivity, research and innovation. The Food and Agribusiness stream offers a good foundation for such roles.

Requirements for completion

The Food and Agribusiness stream is 156 credit points, consisting of:

(i)6 credit points of 1000-level degree core units
(ii)6 credit points of 2000-level degree core units
(iii)A 96 credit point program in Food and Agribusiness
(iv)A major from Table S in one of the following: Economics, Economic Policy, Agricultural and Resource Economics, Financial Economics, Econometrics, Accounting, Banking, Business Analytics, Business Information Systems, Business Law, Finance, Industrial Relations and Human Resource Management, International Business, Management or Marketing

The program in Food and Agribusiness requires 96 credit points, consisting of:

(i)6 credit points of 1000-level program core units
(ii)6 credit points of 2000-level program core units
(iii)24 credit points of 4000-level core units
(iv)6 credit points of 4000-level internship units
(v)6 credit points of 4000-level advanced coursework units
(vi)A 48 credit point major in Food Science

First year

Core to Food Science Major: BIOL1XX7, CHEM1XX1
Core to Program: ENVI1003
Core to Stream: ENVX1002

The first year of Food and Agribusiness includes fundamental studies in biology, chemistry, statistics, and business or economics. The program core unit will help to situate your studies in the context of global challenges in sustainable food and resource management.

Students also complete electives and 1000-level units towards their Table S major.

Second year

Core to Major: AGEN2002, BCMB2X01
Core to Program: ITLS2000
Core to Stream: ENVX2001

The second year of Food and Agribusiness includes studies in food science and supply chain management. You undertake further studies in statistics and your business or economics major. In addition, you study biochemistry and molecular biology, which links food to human health and nutrition.

Students also complete electives and 2000-level units towards their Table S major.

Third year

Core to Major: AGEN3004, AGCH3025, AGEN3001, AGEN3XXX

The third year of Food and Agribusiness includes studies in food processing, food chemistry and biochemistry, food product development, and food quality and safety.

Students also complete electives and 3000-level units towards their Table S major.

Fourth year

Core to Program: AFNR4101 (12cp), AFNR4102 (12cp), FOOD4XX1, FOOD4XX2

The fourth year of Food and Agribusiness includes a major research project completed as a 12cp unit per semester over two semesters. You also undertake an industry internship, advanced food science coursework, and complete your business or economics major.

Honours
Requirements for Honours in the area of Food and Agribusiness: completion of 24 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Food and Agribusiness will be able to:

1. Demonstrate knowledge of the core sciences in the context of food science.
2. Understand how knowledge from food science is integrated and applied in industry practices.
3. Demonstrate broad knowledge of commerce in the food and agribusiness context, with specialist knowledge in one area.
4. Demonstrate basic knowledge of agriculture and social science as they apply in food and agribusiness value chains.
5. Explain the role and relevance of food and agribusiness in society.
6. Understand the major biophysical, economic, social and policy drivers that underpin and influence food production, management and business practices.
7. Understand how information is adopted and the context within which value chain actors make decisions.
8. Identify contemporary issues and opportunities in food and agribusiness.
9. Gather, critically evaluate and synthesise information from a range of relevant sources and disciplines.
10. Select and apply appropriate and/or theoretical techniques or tools in order to conduct an investigation.
11. Collect, accurately record, analyse, interpret and report data.
12. Understand methods of effective two-way written and verbal communication with different audiences.
13. Communicate with a range of audiences using a variety of modes.
14. Be independent and self-directed learners.
15. Work effectively, responsibly and safely in an individual and team context.
16. Demonstrate knowledge of the regulatory frameworks relevant to food and agribusiness.
17. Practise ethical conduct.

Units of study

The units of study are listed below.

1000-level units of study

Degree core

ENVX1002
Introduction to Statistical Methods

Credit points: 6 **Teacher/Coordinator:** A/Prof Thomas Bishop **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, one 1-hour tutorial per week, one 2-hour computer practical per week **Prohibitions:** ENVX1001 **Assessment:** One exam during the exam period (50%), three reports (10% each), ten online quizzes (2% each) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams

This is an introductory statistics unit for students in the agricultural, life and environmental sciences. It provides the foundation for statistics and data science skills that are needed for a career in science and for further study in applied statistics and data science. In the first portion of the unit the emphasis is on describing data using statistical and graphical summaries, and probability models. In the second part the focus is on formal hypothesis testing on experimental data using statistical tests. The final part of the unit is on finding patterns in biological and environmental data, through the use of linear and non-linear functions. In the practicals the emphasis is on applying theory to analysing real datasets using the spreadsheet package Excel and the statistical software package R. A key feature of the unit is using R to develop coding skills that are become essential in science for processing and analysing datasets of ever increasing size.

Textbooks

No textbooks are recommended but useful reference books are:

- Quinn GP, Keough MJ (2002) 'Experimental design and data analysis for biologists.' (Cambridge University Press: Cambridge, UK).

Program core

ENVI1003
Global Challenges: Food, Water, Climate

Credit points: 6 **Teacher/Coordinator:** A/Prof Stephen Cattle **Session:** Semester 2 **Classes:** Two lectures per week, 2hour tutorial/computer lab per week, two-day weekend field trip **Assessment:** One 2-hour exam (50%), field trip report (15%), tutorial presentation (20%), GIS reports (15%) **Practical field work:** Computer practicals and two day field trip **Mode of delivery:** Normal (lecture/lab/tutorial) day

In the 21st century the population of the world will increase both in size and its expectation in terms of food, energy and consumer demands. Against this demand we have a planet in crisis where natural resources are degraded, biodiversity is diminishing and planetary cycles related to climate are reaching points of irreversible change. Management of our precious natural resources is a balancing act between production and conservation as always, but now we have to do this against a background of potential large scale changes in climate. In this unit students will gain an understanding of the key environmental challenges of the 21st century; namely food security, climate change, water security, biodiversity protection, ecosystems services and soil security. In the second half using Australian case studies we will explore how we manage different agro-ecosystems within their physical constraints around water, climate and soil, while considering linkages with the global environmental challenges. Management now, in the past and the future will be considered, with an emphasis on food production. This unit is recommended unit for students interested in gaining a broad overview of the environmental challenges of the 21st century, both globally and within Australia.

2000-level units of study

Degree core

ENVX2001
Applied Statistical Methods

Credit points: 6 **Teacher/Coordinator:** Dr Floris Van Ogtrop **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, one 3-hour computer practical per week **Prerequisites:** [6cp from (ENVX1001 or ENVX1002 or BIOM1003 or MATH1011 or MATH1015 or DATA1001)] OR [3cp from (MATH1XX1 or MATH1906 or MATH1XX3 or MATH1907) and an additional 3cp from (MATH1XX5)] **Assessment:** One exam during the exam period (50%),three reports (10% each), ten online quizzes (2% each) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Available as a degree core unit only in the Agriculture, Animal and Veterinary Bioscience, and Food and Agribusiness streams

This unit builds on introductory 1st year statistics units and is targeted towards students in the agricultural, life and environmental sciences. It consists of two parts and presents, in an applied manner, the statistical methods that students need to know for further study and their future careers. In the first part the focus is on designed studies including both surveys and formal experimental designs. Students will learn how to analyse and interpret datasets collected from designs from more than than 2 treatment levels, multiple factors and different blocking designs. In the second part the focus is on finding patterns in data. In this part the students will learn to model relationships between response and predictor variables using regression, and find patterns in datasets with many variables using principal components analysis and clustering. This part provides the foundation for the analysis of big data. In the practicals the emphasis is on applying theory to analysing real datasets using the statistical software package R. A key feature of the unit is using R to develop coding skills that are become essential in science for processing and analysing datasets of ever increasing size.

ITLS2000
Managing Food and Beverage Supply Chains

Credit points: 6 **Session:** Semester 2 **Classes:** 1 x 3 hr seminar/tutorial per week **Prohibitions:** AGEN2003 or AGEN1005 **Assessment:** tutorial quiz (10%), individual assignement (35%), group project report (15%), group project presentation (10%), final 2hr exam (30%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The food and beverage sector is one of the key economic activities in virtually all countries in the world today. When it comes to logistics and supply chain management within this sector, there is a level of complexity, not frequently found in other industries. This includes the need to consider products bulkiness, perishability and seasonality, coupled with potential additional infrastructure requirements in respect of temperature-controlled storage and transport. As a consequence, there is a higher imperative to have a well-designed end-to-end supply chain. Equally, it is important to understand issues from the perspectives of the various actors in food and beverage supply chains including farms, processing units, wholesalers / distributors, and retailers. Overarching the structuring of any food and beverage supply chain will be consideration of issues such as perishability, quality and risk. Further, for a supply chain to be effective and efficient consideration also needs to be given to the support functions of information management, use of technology, and financial reporting. In today's world, companies compete on supply chains. Those who have the ability to establish a distinctive supply chain and create it as a strategic asset will therefore emerge as industry leaders.

4000-level units of study

Core

AFNR4101
Research Project A

Credit points: 12 **Teacher/Coordinator:** Prof Budiman Minasny **Session:** Semester 1 **Classes:** No formal classes, approximately 18 hours per week **Prerequisites:** 144 credit points of level 1000-3000 units of study **Assessment:** Research proposal, literature review. **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit aims to develop a student's ability to undertake a major research project in an area of specialization. The unit builds on theoretical and applied knowledge gained across most of the units of study undertaken throughout their degree program. This unit is a corequisite with AFNR4102 and each student will work with an academic supervisor in an area of specialization and develop a well defined research project to be executed. The research project is undertaken to advance the students ability to build well-developed research skills, a strong analytical capacity, and the ability to provide high quality research results demonstrating a sound grasp of the research question. Working with an academic supervisor students will develop their ability to define a research project including the producing of testable hypotheses, identifying existing knowledge from reviewing the literature and the design and execution of a research strategy towards solving the research question. Students will build on their previous research and inquiry skills through sourcing a wide range of knowledge to solve the research problem and enhance their intellectual and personal autonomy by means of the development of experimental programs. Students will improve their written and planning skills by composing a research project proposal and the writing of a comprehensive literature review.

AFNR4102
Research Project B

Credit points: 12 **Teacher/Coordinator:** Prof Budiman Minasny **Session:** Semester 2 **Classes:** No formal classes, approximately 18 hours per week **Prerequisites:** AFNR4101 **Assessment:** Oral presentation, research paper, poster. **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is a continuation of the major research project initiated in AFNR4101 and continues to build on theoretical and applied knowledge gained across most of the units of study undertaken throughout their degree program. Working with their academic supervisor in the area of specialization the student will continue to pursue the defined research project towards presenting final results and conclusions. The research results are presented in a format of a research paper as submitted to a research journal. The research paper and corrected literature review is combined and presented together as a thesis. Students will continue to build their research skills, develop strong analytical capacity, demonstrate a sound grasp of the topic, and an ability to interpret results in a broad framework. Working with an academic supervisor students will develop their ability to produce results of high quality, draw reliable conclusions and identify future areas avenues of research. Students will build on their previous research and inquiry skills through sourcing a wide range of knowledge to solve the research problem and enhance their intellectual and personal autonomy by means of the managing the research program. Students will improve their communication skills through oral presentation of their research findings, the production of a poster detailing their research findings and the writing of a research paper.

Internship units

FOOD4XX1 to be developed for offering in 2020.

Advanced coursework units

FOOD4XX2 to be developed for offering in 2020.

Food Science

About the major

The Food Science major will equip you with knowledge and skills relevant to the food and agribusiness sector, with a focus on the underpinning science of food products and processes. The major will develop analytical, problem-solving and research skills, with food industry as the context. The interdisciplinary and applied nature of the major will also provide you with transferable skills that are complementary with many other fields of study in the life and environmental sciences.

Requirements for completion

A major in Food Science requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level core units
(iii)24 credit points of 3000-level core units

A minor in Food Science is available and articulates to this major.

First year

Core: BIOL1XX7 and CHEM1XX1.

The first year of Food Science includes fundamental studies in biology and chemistry.

Second year

Core: AGEN2002 and BCMB2X01 (MEDS2003 for students enrolled in medical science stream).

The second year of Food Science includes studies in food science and in biochemistry and molecular biology, which links food to human health and nutrition.

Third year

Core: AGEN3004, AGCH3025, AGEN3001, AGEN3XXX.

The third year of Food Science includes studies in food processing, food chemistry and biochemistry, food product development, and food quality and safety.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Food Science: completion of 24 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Food Science will be able to:

- Demonstrate knowledge of the core sciences in the context of food science.
- Understand how knowledge from food science is integrated and applied in industry practices.
- Demonstrate basic knowledge of agriculture, business and social science as they apply in food and agribusiness value chains.
- Explain the role and relevance of food and agribusiness in society.
- Understand the major biophysical, economic, social and policy drivers that underpin and influence food production, management and business practices.
- Understand how information is adopted and the context within which value chain actors make decisions.
- Identify contemporary issues and opportunities in food and agribusiness.
- Gather, critically evaluate and synthesise information from a range of relevant sources and disciplines.
- Select and apply appropriate and/or theoretical techniques or tools in order to conduct an investigation.
- Collect, accurately record, analyse, interpret and report data.
- Understand methods of effective two-way written and verbal communication with different audiences.
- Communicate with a range of audiences using a variety of modes.
- Be independent and self-directed learners.
- Work effectively, responsibly and safely in an individual and team context.
- Demonstrate knowledge of the regulatory frameworks relevant to food and agribusiness.
- Practise ethical conduct.

FOOD SCIENCE			
Advanced coursework and projects will be available in 2020 for students who complete this major.			
Food Science major			
A major in Food Science requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 6 credit points of 2000-level food science units (iii) 6 credit points of 2000-level biochemistry units (iv) 24 credit points of 3000-level core units			
Food Science minor			
A minor in Food Science requires 36 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 6 credit points of 2000-level food science units (iii) 6 credit points of 2000-level biochemistry units (iv) 12 credit points of 3000-level core units			
Units of study			
The units of study are listed below.			
1000-level units of study			
Core			
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2
CHEM1111 **Chemistry 1A**	6	**A** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 *Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1 Semester 2 Summer Main
CHEM1011 **Fundamentals of Chemistry 1A**	6	**A** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 *Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1
CHEM1911 **Chemistry 1A (Advanced)**	6	**A** 80 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 *Note: Department permission required for enrolment*	Semester 1
CHEM1991 **Chemistry 1A (Special Studies Program)**	6	**A** 90 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 *Note: Department permission required for enrolment*	Semester 1
2000-level units of study			
Food science units			
AGEN2002 **Fresh Produce Management**	6	**A** HSC level Mathematics and Biology and CHEM1XX1 or CHEM1XX2 or CHEM1903 or CHEM1904 **P** 6cp from (BIOL1XXX or AGEN1004 or MBLG1XX1)	Semester 1

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
Biochemistry units			
BCMB2001 **Biochemistry and Molecular Biology**	6	**P** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901	Semester 1
BCMB2901 **Biochemistry and Molecular Biology (Advanced)**	6	**P** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2001	Semester 1
MEDS2003 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream.).			
3000-level units of study			
Major core			
AGEN3004 **Food Processing and Value Adding**	6	**P** 6cp from (CHEM1XXX or AGEN1004 or AGEN1006) and 6cp from (BIOL1XXX or MBLG1XXX)	Semester 1
AGCH3025 **Chemistry and Biochemistry of Foods**	6	**A** 6cp from (BCHM2XXX or BCMB2XXX or CHEM2XXX or AVBS2005) **N** AFNR5102 or AGCH3017 or AGCH3024	Semester 1
AGEN3001 **Food Product Development**	6	**A** 6cp from (BIOL1XXX, MBLG1XXX) and 6cp from CHEM1XXX **P** 6cp from AGEN3004	Intensive August
AGEN3XXX to be developed for offering in 2019.			
Minor core			
AGEN3004 **Food Processing and Value Adding**	6	**P** 6cp from (CHEM1XXX or AGEN1004 or AGEN1006) and 6cp from (BIOL1XXX or MBLG1XXX)	Semester 1
AGCH3025 **Chemistry and Biochemistry of Foods**	6	**A** 6cp from (BCHM2XXX or BCMB2XXX or CHEM2XXX or AVBS2005) **N** AFNR5102 or AGCH3017 or AGCH3024	Semester 1

Food Science

FOOD SCIENCE

Advanced coursework and projects will be available in 2020 for students who complete this major.

Food Science major

A major in Food Science requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 6 credit points of 2000-level food science units(iii) 6 credit points of 2000-level biochemistry units (iv) 24 credit points of 3000-level core units

Food Science minor

A minor in Food Science requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 6 credit points of 2000-level food science units(iii) 6 credit points of 2000-level biochemistry units(iv) 12 credit points of 3000-level core units

Units of study

The units of study are listed below.

1000-level units of study

Core

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Textbooks
Please see unit outline on LMS

BIOL1907
From Molecules to Ecosystems (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Pauline Ross **Session:** Semester 2 **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1007 or BIOL1997 **Assumed knowledge:** 85 or above in HSC Biology or equivalent **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . This unit of study has the same overall structure as BIOL1007 but material is discussed in greater detail and at a more advanced level. The content and nature of these components may vary from year to year.

Textbooks
Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

Please see unit outline on LMS

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

2000-level units of study

Food science units

AGEN2002
Fresh Produce Management

Credit points: 6 **Teacher/Coordinator:** Dr Rosalind Deaker **Session:** Semester 1 **Classes:** Two 1-hour lectures per week **Prerequisites:** 6cp from (BIOL1XXX or AGEN1004 or MBLG1XX1) **Assumed knowledge:** HSC level Mathematics and Biology and CHEM1XX1 or CHEM1XX2 or CHEM1903 or CHEM1904 **Assessment:** Three practical reports (15% each), one group presentation (15%), one end of semester exam (40%) **Practical field work:** Two field trips, six practical sessions per semester **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study covers some fundamental concepts in food science with a particular emphasis on post-harvest management of fresh produce. Students will critically examine the science underpinning management and handling of fresh food products. The unit primarily addresses the challenges of maintaining quality, extending shelf life and improving safety of fresh perishable produce by examining relevant industrial practices and technologies.. Students will develop practical skills and integrate knowledge of physiology, technology and economics of fresh produce management to determine optimal storage and handling conditions for maximum quality, shelf life, safety and ultimately consumer experience. The majority of examples will be drawn from fruits and vegetables, dairy, eggs, meat and seafood products. Industry quality assurance schemes and government regulations will be examined, with particular reference to food safety. The students will gain research, inquiry and communication skills through a research-based group project, an oral presentation and laboratory reports. Personal and intellectual autonomy will be developed through group and individual work.

Biochemistry units

BCMB2001
Biochemistry and Molecular Biology

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 1 **Classes:** Three lectures/tutorials per week ; one 4-hour practical session per fortnight **Prerequisites:** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **Prohibitions:** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901 **Assessment:** Assignments, skills-based assessment, quizzes, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Without cells, life as we know it would not exist. These dynamic assemblies, packed with biological molecules are constantly in action. But how do cells work? Why is the food that you eat so important for cellular function? How is information transmitted from generation to generation? And, what happens as a result of disease or genetic mutation? In this unit of study you will learn how cells work at the molecular level, with an emphasis on human biochemistry and molecular biology. We will focus initially on cellular metabolism and how cells extract and store energy from fuels like fats and carbohydrates, how the use of fuels is modulated in response to exercise, starvation and disease, and how other key metabolites are processed. Then we will explore how genetic information is regulated in eukaryotes, including replication, transcription and translation, and molecular aspects of the cell cycle, mitosis and meiosis. Our practicals, along with other guided and online learning sessions will introduce you to widely applied and cutting edge tools that are essential for modern biochemistry and molecular biology. By the end of this unit you will be equipped with foundational skills and knowledge to support your studies in the life and medical sciences.

Textbooks

Lehninger Principles of Biochemistry 7th edition (2016) David L. Nelson Michael M. Cox Macmillan (ISBN-10: 1-4641-2611-9; ISBN-13: 978-1-4641-2611-6)

BCMB2901
Biochemistry and Molecular Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 1 **Classes:** Three 1-hour lectures/tutorials per week; one 4-hour practical per fortnight **Prerequisites:** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **Prohibitions:** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2001 **Assessment:** Assignments, quiz, skills-based assessment, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Without cells, life as we know it would not exist. These dynamic assemblies, packed with biological molecules are constantly in action. But how do cells work? Why is the food that you eat so important for cellular function? How is information transmitted from generation to generation? And, what happens as a result of disease or genetic mutation? In this unit of study you will learn how cells work at the molecular level, with an emphasis on human biochemistry and molecular biology. We will focus initially on cellular metabolism and how cells extract and store energy from fuels like fats and carbohydrates, how the use of fuels is modulated in response to exercise, starvation and disease, and how other key metabolites are processed. Then we will explore how genetic information is regulated in eukaryotes, including replication, transcription and translation, and molecular aspects of the cell cycle, mitosis and meiosis. The advanced laboratory component will provide students with an authentic research laboratory experience while in the theory component, current research topics will be presented in a problem-based format through dedicated advanced tutorial sessions. This material will be assessed by creative student-centered activities supported by eLearning platforms.

Textbooks

Lehninger Principles of Biochemistry 7th edition (2016) David L. Nelson Michael M. Cox Macmillan (ISBN-10: 1-4641-2611-9; ISBN-13: 978-1-4641-2611-6)

MEDS2003 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream.).

3000-level units of study

Major core

AGEN3004
Food Processing and Value Adding

Credit points: 6 **Teacher/Coordinator:** Dr Kim-Yen Phan-Thien **Session:** Semester 1 **Classes:** Two 1-hour lectures per week **Prerequisites:** 6cp from (CHEM1XXX or AGEN1004 or AGEN1006) and 6cp from (BIOL1XXX or MBLG1XXX) **Assessment:** Two individual assignments (10% + 20%), one group processing report (20%), one group oral presentations (10%), one 2-hour final exam (40%) **Practical field work:** One 3-hour practical or excursion per week **Mode of delivery:** Normal (lecture/lab/tutorial) day

From the grinding of grains to the drying of meats, humans have been processing their food since the dawn of civilisation. Over the decades, many traditional processing methods have become industrialised, while new processing technologies have emerged, quietly revolutionising our food systems, diets and cultures. In this unit of study, students examine the biochemical and physicochemical transformations that occur in food materials during processing and how processing parameters affect the fulfilment of food quality, shelf-life, and safety objectives. The unit is roughly organised into modules on (1) processing to modify food structure; (2) processing for preservation; and value-adding, focused on (3) healthier food and (4) fermentation as interesting case studies in food processing.The unit will include lectures, laboratory sessions, group work and visits to food processing facilities.

No prescribed textbooks

AGCH3025
Chemistry and Biochemistry of Foods

Credit points: 6 **Teacher/Coordinator:** Dr Thomas Roberts (Coordinator), Prof Les Copeland **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, one 4-hour practical fortnightly **Prohibitions:** AFNR5102 or AGCH3017 or AGCH3024 **Assumed knowledge:** 6cp from (BCHM2XXX or BCMB2XXX or CHEM2XXX or AVBS2005) **Assessment:** One 2-hour exam (40%) and six lab reports (6x10%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study aims to give students an understanding of the properties of food constituents, and the interactions between these constituents during food processing, storage and digestion. The unit will develop an understanding of the relationship between form and functionality of constituents and the concept of fitness-for-purpose (i.e., quality) in converting agricultural products into foods. Students will gain an appreciation of the relationship between chemical composition and properties of macroconstituents (carbohydrates, proteins, lipids) and microconstituents (vitamins, minerals, antioxidants, flavour and anti-nutritional chemicals) and their functions in plant- and animal-based foods. The material presented in lectures and practical classes will enable students to develop research and inquiry skills and an analytical approach in understanding the biochemistry of foods, food processing and storage. On completing this unit, students will be able to describe the chemical and biochemical properties of major food constituents, and demonstrate an understanding of the functionality of these constituents in food processing and nutrition. Students will have gained experience in laboratory techniques used in industry for the analysis of some food products, and information literacy and communication skills from the preparation of practical reports.

Textbooks

Lecture and laboratory notes will be made available through Blackboard. There is no recommended textbook.

AGEN3001
Food Product Development

Credit points: 6 **Teacher/Coordinator:** Dr Kim-Yen Phan-Thien **Session:** Intensive August **Classes:** Intensive Unit - twelve 4-hour workshops over four weeks **Prerequisites:** 6cp from AGEN3004 **Assumed knowledge:** 6cp from (BIOL1XXX, MBLG1XXX) and 6cp from CHEM1XXX **Assessment:** One individual assignment (20%), one group project report (60%), one group presentation (20%) **Practical field work:** Six practical sessions **Mode of delivery:** Normal (lecture/lab/tutorial) day

In this unit of study, students will gain a theoretical and practical understanding of the development of novel food products using traditional and novel food ingredients. Students will examine processes in market trend analysis, product innovation, prototype development, product testing and the formal presentation of a new product. They will develop practical skills in product research and development through a group design project that will require application of product development principles and integration of knowledge regarding product specifications, ingredient interactions and food processing. Product quality, functionality, shelf-life, safety, nutritional and health implications are key considerations in the design process. This is an intensive unit taught as a series of workshops over the first four weeks of semester. It is designed to be taken as one of the final core units in the food science major of the BFoodAgrib as it integrates learnings from across the program and offers a great platform for exploration of product development ideas, that could potentially be expanded in 4th year research projects.

Genetics and Genomics

About the major

Genetics and Genomics will provide you with knowledge that can be applied to improving our understanding of evolution (past and present) and of many aspects of the biology of all living organisms.

This knowledge can also be applied to the development of novel biotechnology products, to improving the health of humans and animals, to forensics, to the conservation and management of plants and animals, to the diagnosis and control of pests, parasites and harmful micro-organisms, and to improving the means by which plants and animals can sustain the feeding and clothing of humanity.

Genetics is the science of biological inheritance and variation. Its fundamental principles are embraced by genomics, molecular genetics, 'Mendelian' genetics, epigenetics, cytogenetics, population genetics, and quantitative genetics.

Genomics is a relatively new discipline that has been developed through the need for geneticists and genome scientists to manipulate very large data sets determined by biological inheritance through DNA.

Requirements for completion

A major in Genetics and Genomics requires 48 credit points, consisting of:

(i)12 credit points of 1000-level selective units
(ii)12 credit points of 2000-level selective units
(iii)18 credit points of 3000-level core units
(iv)6 credit points of 3000-level selective units

A minor in Genetics and Genomics is available and articulates to this major.

First year

12 credit points from a selection of: CHEM1XX1, BIOL1XX6, BIOL1XX7, BIOL1XX8 (Medical Science stream students can alternatively complete MEDS1X01).

Second year

12 credit points from a selection of: GEGE2X01, BCMB2X01, QBIO2001. Medical Science stream students select from: GEGE2X01, MEDS2003, QBIO2001. Animal and Veterinary Bioscience stream students select from: GEGE2X01, AVBS2005, QBIO2001.

All students are encouraged to enrol in GEGE2X01.

Third year

BCHM3X92, BIOL3X18, GEGE3X04 and 6 credit points from a selection of QBIO3X01, BIOL3033

Most students with an interest in genetics and genomics will work in a field related to medical genomics or bioinformatics or will be interested to apply their understanding of evolutionary genetics to solving genomics problems in the field of conservation biology. The major structure for genetics and genomics enables students to follow either of these options.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Genetics and Genomics: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Example pathways

For a career in Medical Genomics for students from Medical Sciences: First Year: CHEM1XX1, MEDS1X01; Second Year: GEGE2X01, MEDS2003 Third Year: BCHM3X92; BIOL3X18; GEGE3X04; QBIO3X01.

For a career in Bioinformatics for students from Animal and Veterinary Biosciences: First Year: BIOL1XX6, BIOL1XX7; Second Year: GEGE2X01, VETS2005 Third Year: BCHM3X92; BIOL3X18; GEGE3X04; QBIO3X01.

For a career in Wildlife Conservation Genomics for students from Biological Sciences: First Year: CHEM1XX1, BIOL1XX7; Second Year: GEGE2X01, BCMB2001 Third Year: BCHM3X92; BIOL3X18; GEGE3X04; BIOL3033.

For a career in Quantitative Genetics and Animal Breeding for students from Agricultural Science: First Year: CHEM1XX1, BIOL1XX7; Second Year: GEGE2X01, BCMB2001 Third Year: BCHM3X92; BIOL3X18; GEGE3X04; QBIO3X01.

Learning Outcomes

Students who graduate from Genetics and Genomics will be able to:

1. Understand the genetics of populations.
2. Understand genomic structure and organisation of the genome.
3. Understand the relationship between genotype and phenotype for simple and complex traits.
4. Understand the relationship between DNA sequence, RNA transcription and translation of proteins.
5. Use skills in management and analysis of genomic data.
6. Understand the application of genomic biotechnologies.
7. Map genes associated with complex and simply inherited phenotypes.

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating

genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

Bromham, L 2015, An Introduction to Molecular Evolution and Phylogenetics, Oxford University Press.

BIOL1008
Human Biology

Credit points: 6 **Teacher/Coordinator:** Dr Osu Lilje **Session:** Semester 1, Summer Main **Classes:** Lectures; six 3-hour practical sessions; six workshops and tutorials; students encouraged to spend 1-2 hours per week accessing online resources **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Written and oral presentation, quiz, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences.

2000-level units of study

Selective

BCMB2001
Biochemistry and Molecular Biology

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 1 **Classes:** Three lectures/tutorials per week ; one 4-hour practical session per fortnight **Prerequisites:** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **Prohibitions:** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901 **Assessment:** Assignments, skills-based assessment, quizzes, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Without cells, life as we know it would not exist. These dynamic assemblies, packed with biological molecules are constantly in action. But how do cells work? Why is the food that you eat so important for cellular function? How is information transmitted from generation to generation? And, what happens as a result of disease or genetic mutation? In this unit of study you will learn how cells work at the molecular level, with an emphasis on human biochemistry and molecular biology. We will focus initially on cellular metabolism and how cells extract and store energy from fuels like fats and carbohydrates, how the use of fuels is modulated in response to exercise, starvation and disease, and how other key metabolites are processed. Then we will explore how genetic information is regulated in eukaryotes, including replication, transcription and translation, and molecular aspects of the cell cycle, mitosis and meiosis. Our practicals, along with other guided and online learning sessions will introduce you to widely applied and cutting edge tools that are essential for modern biochemistry and molecular biology. By the end of this unit you will be equipped with foundational skills and knowledge to support your studies in the life and medical sciences.

Textbooks

Lehninger Principles of Biochemistry 7th edition (2016) David L. Nelson Michael M. Cox Macmillan (ISBN-10: 1-4641-2611-9; ISBN-13: 978-1-4641-2611-6)

BCMB2901
Biochemistry and Molecular Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 1 **Classes:** Three 1-hour lectures/tutorials per week; one 4-hour practical per fortnight **Prerequisites:** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **Prohibitions:** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2001 **Assessment:** Assignments, quiz, skills-based assessment, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Without cells, life as we know it would not exist. These dynamic assemblies, packed with biological molecules are constantly in action. But how do cells work? Why is the food that you eat so important for cellular function? How is information transmitted from generation to generation? And, what happens as a result of disease or genetic mutation? In this unit of study you will learn how cells work at the molecular level, with an emphasis on human biochemistry and molecular biology. We will focus initially on cellular metabolism and how cells extract and store energy from fuels like fats and carbohydrates, how the use of fuels is modulated in response to exercise, starvation and disease, and how other key metabolites are processed. Then we will explore how genetic information is regulated in eukaryotes, including replication, transcription and translation, and molecular aspects of the cell cycle, mitosis and meiosis. The advanced laboratory component will provide students with an authentic research laboratory experience while in the theory component, current research topics will be presented in a problem-based format through dedicated advanced tutorial sessions. This material will be assessed by creative student-centered activities supported by eLearning platforms.

QBIO2001
Molecular Systems Biology

Credit points: 6 **Teacher/Coordinator:** Prof David James (Coordinator), Dr Mark Larance **Session:** Semester 2 **Classes:** Two 1-hour lectures; one 3-hour practical session on a weekly basis **Assumed knowledge:** Metabolism, protein synthesis, gene regulation, quantitative and statistical skills **Assessment:** One 3-hour final exam (50%), three 45-minute quizzes (20%), one 5-minute presentation (10%), laboratory assessment and practical book (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Experimental approaches to the study of biological systems are shifting from hypothesis driven to hypothesis generating research. Large scale experiments at the molecular scale are producing enormous quantities of data ("Big Data") that need to be analysed to derive significant biological meaning. For example, monitoring the abundance of tens of thousands of proteins simultaneously promises ground-breaking discoveries. In this unit, you will develop specific analytical skills required to work with data obtained in the biological and medical sciences. The unit covers quantitative analysis of biological systems at the molecular scale including modelling and visualizing patterns using differential equations, experimental design and data types to understand disease aetiology. You will also use methods to model cellular systems including metabolism, gene regulation and signalling. The practical program will enable you to generate data analysis workflows, and gain a deep understanding of the statistical, informatics and modelling tools currently being used in the field. To leverage multiple types of expertise, the computer lab-based practical component of this unit will be predominantly a team-based collaborative learning environment. Upon completion of this unit, you will have gained skills to find meaningful solutions to difficult biological and disease-related problems with the potential to change our lives.

GEGE2001
Genetics and Genomics

Credit points: 6 **Teacher/Coordinator:** Prof Peter Sharp **Session:** Semester 1, Semester 2 **Classes:** Two lectures; one 3-hour practical session; and one peer assisted study session on a weekly basis **Prohibitions:** GENE2002 or MBLG2972 or GEGE2901 or MBLG2072 **Assumed knowledge:** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **Assessment:** Assignments, quizzes, presentation, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

The era of genomics has revolutionised our approach to biology. Recent breakthroughs in genetics and genomic technologies have led to improvements in human and animal health, in breeding and selection of economically important organisms and in the curation and care of wild species and complex ecosystems. In this unit, students will investigate/describe ways in which modern biology uses genetics and genomics to study life, from the unicellular through to complex multicellular organisms and their interactions in communities and ecosystems. This unit includes a solid foundation in classical Mendelian genetics and its extensions into quantitative and population genetics. It also examines how our ability to sequence whole genomes has changed our capacities and our understanding of biology. Links between DNA, phenotype and the performance of organisms and ecosystems will be highlighted. The unit will examine the profound insights that modern molecular techniques have enabled in the fields of developmental biology, gene regulation, population genetics and molecular evolution.

GEGE2901
Genetics and Genomics (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Peter Sharp **Session:** Semester 1, Semester 2 **Classes:** Two lectures; one 3-hour practical session; and one peer assisted study session on a weekly basis **Prerequisites:** Annual average mark of at least 70 **Prohibitions:** GENE2002 or MBLG2072 or GEGE2001 or MBLG2972 **Assumed knowledge:** Mendellian genetics, mechanisms of evolution, molecular and chromosomal bases of inheritance, and gene regulation and expression. **Assessment:** Assignments, quizzes, presentation, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

The era of genomics has revolutionised our approach to biology. Recent breakthroughs in genetics and genomic technologies have led to improvements in human and animal health, in breeding and selection of economically important organisms and in the curation and care of wild species and complex ecosystems. In this unit, students will investigate/describe ways in which modern biology uses genetics and genomics to study life, from the unicellular through to complex multicellular organisms and their interactions in communities and ecosystems. This unit includes a solid foundation in classical Mendelian genetics and its extensions into quantitative and population genetics. It also examines how our ability to sequence whole genomes has changed our capacities and our understanding of biology. Links between DNA, phenotype and the performance of organisms and ecosystems will be highlighted. The unit will examine the profound insights that modern molecular techniques have enabled in the fields of developmental biology, gene regulation, population genetics and molecular evolution. The Advanced mode of Genetics and Genomics will provide you with challenge and a higher level of academic rigour. You will have the opportunity to plan and carry out a project that will develop your skills in contemporary genetics/molecular biology techniques and will provide you with a greater depth of disciplinary understanding. The Advanced mode will culminate in a written report and in an oral presentation where you will discuss a recent breakthrough that has been enabled by the use of modern genetics and genomics technologies. This is a unit for anyone wanting to better understand the how genetics has shaped the earth and how it will shape the future.

TBA

MEDS2003 and AVBS2005 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

3000-level units of study

Major core

BCHM3092
Proteomics and Functional Genomics

Credit points: 6 **Teacher/Coordinator:** Prof Stuart Cordwell, Jill Johnston **Session:** Semester 2 **Classes:** Two 1-hour lectures per week and one 3-hour practical per week. **Prerequisites:** [12cp from (BCHM2X71 or BCHM2X72 or BCMB2X01 or BCMB2X02 or DATA2002 or ENVX2001 or BIOL2X22 or MBLG2X71 or QBIO2001)] OR [BMED2401 and BMED2405 and 6cp from (BCHM2X71 or BCMB2X02 or MBLG2X71)] **Prohibitions:** BCHM3992 **Assessment:** One 2.5-hour exam (theory and theory of prac 70%), in-semester (practical work and assignments 30%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit of study will focus on the high throughput methods for the analysis of gene structure and function (genomics) and the analysis of proteins (proteomics), which are at the forefront of discovery in the biomedical sciences. The course will concentrate on the hierarchy of gene-protein-structure-function through an examination of modern technologies built on the concepts of genomics versus molecular biology, and proteomics versus biochemistry. Technologies to be examined include DNA sequencing, nucleic acid and protein microarrays, two-dimensional gel electrophoresis of proteins, uses of mass spectrometry for high throughput protein identification, isotope tagging for quantitative proteomics, high-performance liquid chromatography, high-throughput functional assays, affinity chromatography and modern methods for database analysis. Particular emphasis will be placed on how these technologies can provide insight into the molecular basis of changes in cellular function under both physiological and pathological conditions as well as how they can be applied to biotechnology for the discovery of biomarkers, diagnostics, and therapeutics. The practical component is designed to complement the lecture course and will provide students with experience in a wide range of techniques used in proteomics and genomics.

BCHM3992
Proteomics and Functional Genomics (Adv)

Credit points: 6 **Teacher/Coordinator:** Prof Stuart Cordwell, Jill Johnston **Session:** Semester 2 **Classes:** Two 1-hour lectures per week and one 3-hour practical per fortnight. **Prerequisites:** [An average mark of 75 or above in 12cp from (BCHM2X71 or BCHM2X72 or BCMB2X01 or BCMB2X02 or DATA2002 or ENVX2001 or BIOL2X22 or MBLG2X71 or QBIO2001)] OR [BMED2401 and a mark of 75 or above in BMED2405 and a mark of 75 or above in 6cp from (BCHM2X71 or BCMB2X02 or MBLG2X71)] **Prohibitions:** BCHM3092 **Assessment:** One 2.5-hour exam (theory and theory of prac 70%), in-semester (practical work and assignments 30%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit of study will focus on the high throughput methods for the analysis of gene structure and function (genomics) and the analysis of proteins (proteomics) which are at the forefront of discovery in the biomedical sciences. The course will concentrate on the hierarchy of gene-protein-structure-function through an examination of modern technologies built on the concepts of genomics versus molecular biology, and proteomics versus biochemistry. The practical component is designed to complement the lecture course and will provide students with experience in a wide range of techniques used in proteomics and genomics.

The lecture component of this unit of study is the same as BCHM3092. Qualified students will attend seminars/practical classes in which more sophisticated topics in proteomics and genomics will be covered.

BIOL3018
Gene Technology and Genomics

Credit points: 6 **Teacher/Coordinator:** A/Prof Mary Byrne **Session:** Semester 1 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** (MBLG2X72 or GEGE2X01 or GENE2002) and 6cp from (MBLG2X71 or BCMB2XXX or QBIO2001 or IMMU2XXX or BIOL2XXX) **Prohibitions:** BIOL3918 **Assessment:** One 2-hour exam (60%), assignments (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

A unit of study with lectures, practicals and tutorials on the application of recombinant DNA technology and the genetic manipulation of prokaryotic and eukaryotic organisms. Lectures cover the applications of molecular genetics in biotechnology and consider the regulation, impact and implications of genetic engineering and genomics. Topics include biological sequence data and databases, comparative genomics, the cloning and expression of foreign genes in bacteria, yeast, animal and plant cells, novel human and animal therapeutics and vaccines, new diagnostic techniques for human and veterinary disease, and the genetic engineering of animals and plants. Practical work may include nucleic acid isolation and manipulation, gene cloning and PCR amplification, DNA sequencing and bioinformatics, immunological detection of proteins, and the genetic transformation and assay of plants.

BIOL3918
Gene Technology and Genomics (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Mary Byrne **Session:** Semester 1 **Classes:** Two 1-hour lectures and one 3-hour practical per week. **Prerequisites:** An average mark of 75 or above in [(MBLG2X72 or GEGE2X01 or GENE2002) and (MBLG2X71 or BCMB2XXX or QBIO2001 or IMMU2XXX or BIOL2XXX)] **Prohibitions:** BIOL3018 **Assessment:** One 2-hour exam (60%), assignments (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Qualified students will participate in alternative components of BIOL3018 Gene Technology and Genomics. The content and nature of these components may vary from year to year.

GEGE3X04 to be developed for offering in 2019.

Major selective

BIOL3033 and QBIO3X01 to be developed for offering in 2019.

Minor selective

BCHM3092
Proteomics and Functional Genomics

Credit points: 6 **Teacher/Coordinator:** Prof Stuart Cordwell, Jill Johnston **Session:** Semester 2 **Classes:** Two 1-hour lectures per week and one 3-hour practical per week. **Prerequisites:** [12cp from (BCHM2X71 or BCHM2X72 or BCMB2X01 or BCMB2X02 or DATA2002 or ENVX2001 or BIOL2X22 or MBLG2X71 or QBIO2001)] OR [BMED2401 and BMED2405 and 6cp from (BCHM2X71 or BCMB2X02 or MBLG2X71)] **Prohibitions:** BCHM3992 **Assessment:** One 2.5-hour exam (theory and theory of prac 70%), in-semester (practical work and assignments 30%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

GEGE3X04 to be developed for offering in 2019.

Geography

Study in the discipline of Geography is offered by the School of Geosciences in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

Geography is the study of earth as the home of people. As the need to find solutions to issues of environmental degradation and sustainability, population change and globalisation have become more challenging, the skills and knowledge of geographers have come to the forefront.

Through a geography major, you will study the interactions between earth, environment and society. This involves consideration of such issues as climate change, population growth, hazards and environmental management. You will have the opportunity to go on field trips to overseas locations and to rural and urban parts of Australia, and participate in tutorial debates about such issues as global inequality and poverty. You will also engage in computer-based analysis of geographic data, and on-line discussion boards and interactive education techniques.

Requirements for completion

A major in Geography requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)6 credit points of 2000-level core units
(iii)6 credit points of 2000-level selective units
(iv)12 credit points of 3000-level core units
(v)6 credit points of 3000-level set 1 units
(vi)6 credit points of 3000-level set 2 units

A minor in Geography is available and articulates to this major.

First year

GEOS1X01 and GEOS1X02 provide an introduction to the study of Geography, and to the social and biophysical phenomena that are the objects of geographical inquiry. These units provide an introduction to the conceptual frameworks within which contemporary geographers work, and provide a platform for specialisation within the discipline in later years.

Second year

GEOS2X21 provides all students in the Geography major and minor with the essential concepts that frame interactions between humans and other components of the earth system. In addition, students may choose from a range of units that support specialisation in human geography (GEOS2X23) or physical geography (GEOS2X16, GEOS2X11, GEOS2X15).

Third year

The third year in the Geography major and minor provides you with training in methods and practice of contemporary geographical inquiry, and explores in detail the concepts that frame them. In addition to the core units (GEOS3X33 and GEOS3X19), selective units in human (GEOS3X30, GEOS3X24, GEOS3X53) and physical geography (GEOS3X09, GEOS3X14, GEOS3X03) allow you to complete your specialisation within Geography.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours

Requirements for Honours in the area of Geography: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Example pathways

Human Geography Pathway (major)
GEOS1X01, GEOS1X02
GEOS2X23, GEOS2X21
GEOS3X19, GEOS3X33, GEOS3X20 and/or GEOS3X24, and GEOS3X53

Physical Geography Pathway (major)
GEOS1X01, GEOS1X02
GEOS2X11 and/or GEOS2115, GEOS2X21 and GEOS2X16
GEOS3X19, GEOS3X33, GEOS3X09 and/or GEOS3X14 and/or GEOS3X03

Learning Outcomes

Students who graduate from Geography will be able to:

1. Demonstrate a coherent geographical understanding of trends, processes and impacts that shape Australian and other environments and/or societies at different spatial and temporal scales
2. Recognise the deeply co-constitutive nature of social and biophysical phenomena
3. Demonstrate an awareness of the importance of multi- and trans-disciplinarity in the study of contemporary environmental and social issues
4. Demonstrate an understanding of Geography as an academic discipline, including awareness of its concepts, history, and principal subfields, whilst acknowledging the contested, provisional and situated nature of geographical understanding
5. Use various tools to interpret, generate and analyse quantitative (particularly spatial) and qualitative data, with specific competencies in Geographical Information Systems
6. Apply geographical thought creatively, critically and appropriately to specific spaces, places and/or environments
7. Recognise, evaluate and synthesise various views, arguments and sources of knowledge pertinent to solving environmental and social problems
8. Resolve geographical questions by ethical means, applying evidence-based knowledge and appropriate research techniques, including those associated with field work
9. Communicate geographical perspectives and knowledge effectively to specialist and non-specialist audiences using appropriately selected written, oral and visual means
10. Contribute effectively as a member or leader of diverse teams working in geographical or multidisciplinary contexts
11. Reflect on and direct their intellectual and professional development as geographers.

Geography

GEOGRAPHY

Advanced coursework and projects will be available in 2020 for students who complete this major.

Geography major

A major in Geography requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units (ii) 6 credit points of 2000-level core units (iii) 6 credit points of 2000-level selective units(iv) 12 credit points of 3000-level core units(v) 6 credit points of 3000-level set 1 units(vi) 6 credit points of 3000-level set 2 units

Geography minor

A minor in Geography requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 6 credit points of 2000-level core units (iii) 6 credit points of 2000-level selective units (iv) 12 credit points of 3000-level core units

Units of study

The units of study are listed below.

1000-level units of study

Core

GEOS1001
Earth, Environment and Society

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1901 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This is the gateway unit of study for Human Geography, Physical Geography, Environmental Studies and Geology. Its objective is to introduce the big questions relating to the origins and current state of the planet: climate change, environment, landscape formation, and the growth of the human population. During the semester you will be introduced to knowledge, theories and debates about how the world's physical and human systems operate. The first module investigates the evolution of the planet through geological time, with a focus on major Earth systems such as plate tectonics and mantle convection and their interaction with the atmosphere, hydrosphere, biosphere and human civilisations. The second module presents Earth as an evolving and dynamic planet, investigating global environmental change, addressing climate variability and human impacts on the natural environment and the rate at which these changes occur and how they have the potential to dramatically affect the way we live. Finally, the third module, focuses on human-induced challenges to Earth's future. This part of the unit critically analyses the relationships between people and their environments, with central consideration to debates on population change, resource use and the policy contexts of climate change mitigation and adaptation.

GEOS1002
Introductory Geography

Credit points: 6 **Teacher/Coordinator:** A/Prof Kurt Iveson, Dr Dan Penny **Session:** Semester 2 **Classes:** One 2 hour lecture per week and eight 2 hour practicals during semester. **Prohibitions:** GEOS1902 or GEOG1001 or GEOG1002 **Assessment:** One 2 hour exam, one 2000 word essay, two online quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides a geographical perspective on the ways in which people interact with each other and the physical world, focussing on the processes that generate spatial variation and difference. Students will consider the development and characteristics of natural environments across the globe, and will explore how these environments both constrain, and are influenced by, humans. In the process, they will learn about the biophysical, political, economic, cultural and urban geographies that shape contemporary global society. Each of these themes will be discussed with reference to key examples, in order to understand the ways in which the various processes (both physical and human) interact. The unit of study is designed to attract and interest students who wish to pursue geography as a major within their undergraduate degree, but also has relevance to students who wish to learn how to think geographically about the contemporary world.

GEOS1901
Earth, Environment and Society Advanced

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1001 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Advanced students will complete the same core lecture material as for GEOS1001, but will be required to carry out more challenging practical assignments.

GEOS1902
Introductory Geography (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Kurt Iveson, Dr Dan Penny **Session:** Semester 2 **Classes:** One 2 hour lecture per week and 8 2 hour practicals per semester, plus independent group work. **Prohibitions:** GEOS1002 or GEOG1001 or GEOG1002 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** One 2 hour exam, one 1000 word essay, two online quizzes, one practical report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Advanced students will complete the same core lecture material as for GEOS1002, but will be required to carry out more challenging practical assignments.

2000-level units of study

Core

GEOS2121
Environmental and Resource Management

Credit points: 6 **Teacher/Coordinator:** Dr Sophie Webber **Session:** Semester 2 **Classes:** Two hour lecture; one hour tutorial per week **Prerequisites:** 6 credit points of first year Geosciences units or ECOP1001 or ECOP1002 **Prohibitions:** GEOS2921 **Assessment:** One exam, one essay, one report, tutorial attendance (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

We are in the midst of an unprecedented global ecological and climatological crisis, and consequently need to transform our social, political and economic systems. This crisis Â¿ its causes, its effects, and its solutions Â¿ are geographically unevenly distributed and situated. Therefore, this unit of study uses geographical concepts to consider what has caused this global crisis, how we should think about the relations and interactions between humans and their environments, and what some strategies are for managing our environment and resources to negotiate this predicament. Using examples focused in Australia, Asia, and the Pacific region, students will learn how to integrate environmental, economic, political, social and cultural considerations and perspectives, and how to evaluate environmental and resource management policies and ideas.

GEOS2921
Environmental and Resource Management (Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Sophie Webber **Session:** Semester 2 **Classes:** Two hour lecture; one hour tutorial per week **Prerequisites:** A mark of 75 in a 6 credit point Junior Geosciences unit of study or a mark of 75 in ECOP1001 or ECOP1002 **Prohibitions:** GEOS2121 **Assessment:** One exam, one essay, one report, tutorial attendance (100%) **Practical field work:** Seminar, maximum of four hours **Mode of delivery:** Normal (lecture/lab/tutorial) day

Advanced students will receive the same core lecture materials as for GEOS2121 but have a separate seminar and are required to complete alternative written work.

Selective

GEOS2116
Earth Surface Processes

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x3-hr practical (lab/computer) sessions each week **Prohibitions:** GEOS2916 or GEOG2321 **Assessment:** practical and field assignments, final exam **Practical field work:** 3-5 day field trip **Mode of delivery:** Normal (lecture/lab/tutorial) day

The surface of the planet on which you live is the product of a balance between tectonic forces and numerous agents of erosion. The landscapes in which you live and work, and from which you draw resources, are therefore the legacy of many processes operating synchronously over long time periods. It is also true that Earth's landscapes are dynamic, and constantly changing around you in response to climate, tectonics and patterns of life. The sustainable management of landscapes is strongly dependent upon an awareness of those processes and the ways that they constrain human-environment interactions. In Earth Surface Processes, you will learn how landscapes are produced, and what this means for contemporary land use. Lectures by experts in physical geography, geology, soil science and environmental science will introduce you to the planetary and regional-scale controls on landforms and landscape dynamics, and the nature and distribution of major Australian landscape types. Focussed around 'hands on' field and laboratory-based tasks, students will gain essential practical, analytical and interpretive skills in the analysis of landscapes and earth surface processes that shape them. This is a unit for anyone wanting to better understand the planet on which they live.

Textbooks

Allen, P.A., 2009. Earth surface processes. John Wiley and Sons. Scitech, 551.3 72 Sharma, V.K., 2010. Introduction to process geomorphology. CRC Press. Scitech, 551.41 113

GEOS2916
Earth Surface Processes (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x3-hr practical (lab/computer) sessions each week **Prerequisites:** Annual average mark of at least 70 **Prohibitions:** GEOS2116 or GEOG2321 **Assessment:** practical and research assignments, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

The surface of the planet on which you live is the product of a balance between tectonic forces and numerous agents of erosion. The landscapes in which you live and work, and from which you draw resources, are therefore the legacy of many processes operating synchronously over long time periods. It is also true that Earth's landscapes are dynamic, and constantly changing around you in response to climate, tectonics and patterns of life. The sustainable management of landscapes is strongly dependent upon an awareness of those processes and the ways that they constrain human-environment interactions. In the Advanced mode of Earth Surface Processes, you will learn how landscapes are produced, and what this means for contemporary land use. Lectures by experts in physical geography, geology, soil science and environmental science will introduce you to the planetary and regional-scale controls on landforms and landscape dynamics, and the nature and distribution of major Australian landscape types. Focussed around 'hands on' field and laboratory-based tasks, students will gain essential practical, analytical and interpretive skills in the analysis of landscapes and earth surface processes that shape them. The Advanced mode of Earth Surface Processes challenges you to create new knowledge, and provides a higher level of academic rigour. You will take part in a series of small-group practical exercises that will develop your skills in research design and execution, and will provide you with a greater depth of understanding in core aspects of geomorphology. The Advanced mode will culminate in a research-focussed Advanced Assignment. This is a unit for anyone wanting to better understand the planet on which they live, and who may wish to develop higher-level analytical and research skills in geomorphology and landscape analysis.

GEOS2111
Natural Hazards: a GIS Approach

Credit points: 6 **Teacher/Coordinator:** A/Prof Dale Dominey-Howes **Session:** Semester 1 **Classes:** Two hour lecture; two hour practical/tute/lab **Prerequisites:** 6 credit points of Junior Geosciences units **Prohibitions:** GEOS2911 **Assessment:** One 2 hour exam, three reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Staff will organize a non-compulsory half-day weekend field excursion to explore local Sydney hazards for interested students.

The unit provides an essential framework for understanding the environmental response to short- and long-term geologic, oceanic and atmospheric processes. This Unit of Study introduces students to a variety of natural phenomena that affect society with impact levels ranging from nuisance to disastrous. The discussion of each hazard focuses on: (1) the process mechanics, (2) hazards and risk, and (3) methods for mitigation. Geographic Information Systems (GIS) are used by scientists, planners, policy-makers and the insurance industry alike to address many issues relating to natural hazards. This Unit of Study will introduce students to the major concepts relating to GIS and provide practical experience in the application of GIS techniques to hazard mapping, risk assessment and mitigation.

GEOS2115
Oceans, Coasts and Climate Change

Credit points: 6 **Teacher/Coordinator:** Prof Dietmar Müller, A/Prof Jody Webster, A.Prof Ana Vila-Concejo **Session:** Intensive July, Semester 1 **Classes:** Twenty-five 1 hour lectures, three 1 hour workshops, eight 2 hour practical classes. **Prerequisites:** 24 credit points from Junior Units of Study **Prohibitions:** GEOS2915 or MARS2006 **Assumed knowledge:** GEOG1001 or GEOL1001 or GEOL1002 or GEOS1003 or GEOS1903 or ENVI1002 or GEOL1902 or GEOL1501 **Assessment:** Lab reports (60%), one 2-hour exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study introduces core concepts about how the formation of ocean basins and their influence on climate govern the development of coasts and continental margins. These concepts provide a framework for understanding the geographic variation of coasts, continental shelves and sediment accumulations in the deep ocean. Ocean-basin evolution is explained in terms of movements within the Earth's interior and how these movements determine the geometry of ocean basins, and their alpine counterparts, which interact with the global circulation of the ocean and atmosphere. This interaction plays a key role in marine sedimentation and controls the environmental conditions responsible for the development of coral reefs and other ecosystems. The Unit of Study systematically outlines how these factors have played out to produce, by gradual change, the coasts we see today, as well as the less familiar deposits hidden beneath the sea and coastal lands. The Unit thereby outlines how knowledge of responses to climate change in the past allow us to predict environmental responses to accelerated climate change occurring now and in the future due to the industrial greenhouse effect, but places these responses into perspective against the geological record. Overall therefore, the Unit aims to provide familiarity with fundamental phenomena central to the study of marine geoscience and environmental impacts, introduced through process-oriented explanations. The Unit of Study is structured around GIS-based practical sessions and problem-based project work, for which lectures provide the theoretical background.

GEOS2123

The Geography of Cities and Regions

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, A/Prof Kurt Iveson **Session:** Semester 1 **Classes:** One hour tutorial per week **Prerequisites:** 6 credit points of first year Geosciences units. **Prohibitions:** GEOS2923 **Assessment:** Written reports (20%), exam (40%), field report (20%), GIS project (20%) **Practical field work:** Two hours on average, including fieldtrips within Sydney **Mode of delivery:** Normal (lecture/lab/tutorial) day

How can we understand the ways that cities and regions change over time, and how these processes shape people's lives? This Unit of Study provides conceptual and practical material for exploring these questions. A program of lectures and tutorials in complemented by close study of Sydney, using GIS (census and satellite imagery) and a series of walking tours to different parts of the city. Assessment is tailored to projects in which students are required to integrate conceptual ideas about cities and regions with GIS mapping and field observations.

GEOS2911

Natural Hazards: A GIS Approach (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Dale Dominey-Howes **Session:** Semester 1 **Classes:** Two hour lecture; two hour practical/tute/lab **Prerequisites:** A mark of 75 in a 6 credit point Junior Geosciences unit of study **Prohibitions:** GEOS2111 **Assessment:** One 2 hour exam, three reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Staff will organize a non-compulsory half-day weekend field excursion to explore local Sydney hazards for interested students.

This unit has the same objectives as GEOS2111 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance to date. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives.

GEOS2923

The Geography of Cities and Regions (Adv)

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, A/Prof Kurt Iveson **Session:** Semester 1 **Classes:** Two hour lecture; one hour tutorial per week **Prerequisites:** A mark of 75 or above in 6 credit points of first year Geosciences units. **Prohibitions:** GEOS2123 **Assessment:** Written reports (20%), exam (40%), field report (20%), GIS project (20%) **Practical field work:** Two hours on average, including fieldtrips within Sydney **Mode of delivery:** Normal (lecture/lab/tutorial) day

GEOS2923 has the same thematic content as GEOS2123 however with elements taught at an Advanced level.

3000-level units of study

Core

GEOS3333

Geographical Concepts, Skills and Methods

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard **Session:** Semester 2 **Classes:** 2 hour lecture, 1 hour tutorials per week **Prerequisites:** 24 credit points of Intermediate units of study, including 6 credit points from following (GEOS2112 or GEOS2912 or GEOS2123 or GEOS2923 or GEOS2115 or GEOS2915 or GEOS2121 or GEOS2921 or SOIL2002 or LWSC2002) **Prohibitions:** GEOS3933 **Assumed knowledge:** Basic knowledge of ARC GIS software. **Assessment:** Two 1 hr in-class exams (50%), active participation in fieldwork and classes (25%), one 2000w fieldwork report (25%) **Practical field work:** Approximately 13 hours of fieldwork per semester **Mode of delivery:** Normal (lecture/lab/tutorial) day

GEOS3333 is designed to be the 'capstone' for a Major in Geography. Its aim is to bring together the core concepts within the discipline; connect these to methodological practices, and further develop the field-based skills associated with geographical research. Reflecting the straddle of the discipline across the natural and social sciences, this unit draws on a wide diversity of material to impart key insights about the essential qualities of 'doing Geography'. This includes (i) a weekly lecture program which addresses three thematic concerns of Geography (human-environment interactions; spatial relations; and politics, policy and practice) using examples from the natural and social science perspectives at global, national and local scales; (ii) a two-hour prac class each week which introduces key methods (relevant to both the natural and social science parts of the discipline) and which leads to a major research proposal exercise; and (iii) 24 hours fieldwork through the semester, which can take the form either of a three-day field trip to rural NSW or three separate day-trips within Sydney. GEOS3333 is one of two compulsory units for the Geography Major (the other is GEOS3053) and is highly recommended for students contemplating Honours in Geography.

GEOS3933

Geog. Concepts, Skills and Methods (Adv)

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard **Session:** Semester 2 **Classes:** 1 lecture, 2 tutorials per week **Prerequisites:** Distinction average in 24 credit points of Intermediate units of study including 6 credit points from one of the following units: GEOS2112, GEOS2912, GEOS2123, GEOS2923, GEOS2115, GEOS2915, GEOS2121, GEOS2921, SOIL2002, LWSC2002. **Prohibitions:** GEOS3333 **Assumed knowledge:** Basic knowledge of ARC GIS software. **Assessment:** One 2hr exam, one practical report, one 2000w fieldwork report (100%) **Practical field work:** 24 hours of fieldwork per semester **Mode of delivery:** Normal (lecture/lab/tutorial) day

GEOS3933 has the same thematic content as GEOS3333 however with elements taught at an Advanced level.

GEOS3X19 to be developed for offering in 2019.

Set 1 units

GEOS3009

Coastal Environments and Processes

Credit points: 6 **Teacher/Coordinator:** A/Prof Jody Webster, A/Prof Ana Vila-Concejo, Dr Tristan Salles **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 3 hour practical per week; weekend excursion. **Prerequisites:** (6 credit points of Intermediate Geoscience units) and (6 further credit points of Intermediate Geoscience or 6 credit points of Physics or Mathematics or Information Technology or Engineering units) or ((MARS2005 or MARS2905) and (MARS2006 or MARS2906)) **Prohibitions:** GEOS3909 or MARS3003 or MARS3105 **Assessment:** One 2 hour exam, research reports and an online quiz (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this course is to introduce students to a variety of Coastal Environments and the major processes which control the morphodynamic evolution of these systems. The course offers a unique opportunity of learning the full spectrum of marine sedimentary environments from siliciclastic, temperate, highly urbanised and impacted estuarine ecosytems to carbonate, tropical, pristine and undeveloped/protected coastal and continental margin environments. The course is divided in three sections: Section A covers the basic morphodynamics and processes impacting carbonate-dominated coastal and continental margin environments. The focus is on carbonate reefal and margin systems and their geologic and biologic responses to past, present and future environmental changes; Section B covers the basic morphodynamics of temperate and tropical coasts, including beach morphodynamics and basic knowledge on waves and currents; Section C consolidates all concepts learnt in the previous sections by applying them to numerical modelling.

There is a compulsory weekend fieldtrip to the NSW coast to study beach morphodynamics and fieldwork techniques. Depending on the year, there may be a voluntary fieldtrip to a coral reef environment, for example, The University of Sydney One Tree Island Research Station.

List of selected readings provided online.

GEOS3909
Coastal Environments and Processes (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Jody Webster **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 3 hour practical per week; weekend excursion **Prerequisites:** Distinction average in (6 credit points of Intermediate Geoscience units) and (6 further credit points of Intermediate Geoscience or 6 credit points of Physics, Mathematics, Information Technology or Engineering units) or ((MARS2005 or MARS2905) and (MARS2006 or MARS2906)) **Prohibitions:** GEOS3009 or MARS3003 or MARS3105 **Assessment:** One 2 hour exam, research reports and an online quiz (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: A distinction average in prior Geography or Geology units is normally required for admission. This requirement may be varied and students should consult the unit of study coordinator.

Advanced students will complete the same core lecture material as for GEOS3009 but will carry out more challenging projects, practicals, assignments and tutorials.

GEOS3520
Urban Citizenship and Sustainability

Credit points: 6 **Teacher/Coordinator:** A/Prof Kurt Iveson **Session:** Semester 1 **Classes:** 2 hour lecture and 1 hour tutorial per week, six 2 hours practical sessions. **Prerequisites:** 24 credit points of Intermediate units of study, including 6 credit points from the following (GEOS2112 or GEOS2912 or GEOS2123 or GEOS2923 or GEOS2115 or GEOS2915 or GEOS2121 or GEOS2921 or SOILS2002 or LWSC2002) **Prohibitions:** GEOS3920 **Assessment:** One 2hr exam, one 2000w essay, one 2000w group-based prac report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Cities are now the predominant home for humanity. More than half of the world's population reside in cities. The contemporary growth of cities, however, is attached to profound political questions about what it means to be urban, and what 'being urban' means for the planet. This Unit of Study provides grounding to these crucial questions. In the first half of the semester, lectures address the question: are cities sustainable? Why or why not? And for whom? This focus addresses utopian visions for cities, urban history, ecological footprint analysis, bioregionalism, transport options, urban form and urban policy, with reference to sustainable futures and the role of custodianship. During the second half of the semester, lectures address the question: what does it mean to be a 'citizen', and what has this got to do with cities and different approaches to urban sustainability? This includes consideration of historical and contemporary configurations of citizenship. Case studies illustrate ways in which new forms of citizenship are produced through struggles over rights to the city and the urban environment. Through the semester a practicals program enables students to develop urban-based research projects.

GEOS3920
Urban Citizenship and Sustainability (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Kurt Iveson **Session:** Semester 1 **Classes:** 2 hour lecture and 2 hour tutorial per week **Prerequisites:** Distinction average in 24 credit points of Intermediate units of study including 6 credit points from one of the following units: GEOS2112, GEOS2912, GEOS2123, GEOS2923, GEOS2115, GEOS2915, GEOS2121, GEOS2921, SOIL2002, LWSC2002 **Prohibitions:** GEOS3520 **Assessment:** One 2hr exam, one 2000w essay, one 2000w group-based prac report. **Mode of delivery:** Normal (lecture/lab/tutorial) day

GEOS3920 has the same thematic content as GEOS3520 however with elements taught at an Advanced level

GEOS3524
Global Development and Livelihoods

Credit points: 6 **Teacher/Coordinator:** Dr Jeff Neilson **Session:** Semester 1 **Classes:** 2 lectures, 1 tutorial per week **Prerequisites:** 24 credit points of Intermediate units of study including 6 credit points of Intermediate Geoscience **Prohibitions:** GEOS3924 or GEOS2112 or GEOS2912 **Assessment:** Two 1hr exams, one 2000w essay, Tutorial participation, Discussion papers (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides students with grounding in core theories and frameworks used in Geography to account for the social, spatial and economic unevenness in global development. During the first half of the semester, we focus on questions relating to who are the winners and losers from contemporary patterns of global economic change. This includes the analysis of relevant conceptual approaches to understand processes of global development and inequality (including comparative advantage, global value chain theory, developmentalism, structuralism, neo-liberalism, and post-development). Then, in the second half of the semester, we adopt a livelihoods approach to better understand these broader processes from the perspective of individuals, households and communities. In general, issues are tailored to themes being played out in Asia-Pacific countries. Students are expected to participate in a variety of practical class exercises throughout the semester. This unit provides a feeder-unit into the Southeast Asia Field School.

GEOS3924
Global Development and Livelihoods (Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Jeff Neilson **Session:** Semester 1 **Classes:** 2 lectures, 1 tutorial per week **Prerequisites:** 24 credit points of Intermediate units of study, including a distinction in 6 credit points of Intermediate Geoscience **Prohibitions:** GEOS3524 or GEOS2112 or GEOS2912 **Assessment:** Two 1hr exams, one 2000w essay, Tutorial participation, Discussion papers (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

GEOS3924 has the same thematic content as GEOS3524 however with elements taught at an Advanced level.

Set 2 units

GEOS3014
GIS in Coastal Management

Credit points: 6 **Teacher/Coordinator:** Dr Eleanor Bruce **Session:** Semester 2 **Classes:** 2x1 hour lectures and 1x3h practical/week **Prerequisites:** Either 12 credit points of Intermediate Geoscience units or [(GEOS2115, GEOS2915) and (BIOL2018 or BIOL2918 or BIOL2024 or BIOL2924 or BIOL2028 or BIOL2928)] **Prohibitions:** GEOS3914 or MARS3104 **Assessment:** One 2 hour exam, two project reports, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Coastal Management is about how scientific knowledge is used to support policy formulation and planning decisions in coastal environments. The course links coastal science to policy and practice in management of estuaries, beaches and the coastal ocean. The principles are exemplified through specific issues, such as coastal erosion, pollution, and impacts of climate-change. The issues are dealt with in terms of how things work in nature, and how the issues are handled through administrative mechanisms. These mechanisms involve planning strategies like Marine Protected Areas and setback limits on civil development in the coastal zone. The coastal environments and processes that are more relevant to coastal management including: rocky coasts; beaches, barriers and dunes;

and coral reefs will also be introduced. At a practical level, the link between science and coastal management is given substance through development and use of 'decision-support models'. These models involve geocomputing methods that entail application of simulation models, remotely sensed information, and Geographic Information Systems (GIS). The course therefore includes both principles and experience in use of these methods to address coastal-management issues. (It thus also involves extensive use of computers.) Although the focus is on the coast, the principles and methods have broader relevance to environmental management in particular, and to problem-solving in general. That is, the course has vocational relevance in examining how science can be exploited to the benefit of society and nature conservation.

GEOS3914
GIS in Coastal Management (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Eleanor Bruce **Session:** Semester 2 **Classes:** Two hours of lectures, one 3 hour practical per week comprising one 1 hour practical demonstration and one 2 hour practical **Prerequisites:** Distinction average in either 12 credit points of Intermediate Geoscience units or [(GEOS2115 or GEOS2915) and (BIOL2018 or BIOL2918 or BIOL2024 or BIOL2924 or BIOL2028 or BIOL2928)]. **Prohibitions:** GEOS3014 or MARS3104 **Assessment:** One 2 hour exam, project work, two practical-based project reports, fortnightly progress quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: A distinction average in prior Geography, Geology or Marine Science units of study is normally required for admission. This requirement may be varied and students should consult the unit of study coordinator.

Advanced students will complete the same core lecture material as for GEOS3014 but will carry out more challenging projects, practicals, assignments and tutorials.

GEOS3103
Environmental and Sedimentary Geology

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny (Coordinator), Dr. Adriana Dutkiewicz **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour tutorial/practical class per week **Prerequisites:** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **Prohibitions:** GEOS3803 **Assumed knowledge:** (GEOS1003 or GEOS1903) **Assessment:** One 2 hour exam, practical reports and quizes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Sediments and sedimentary rocks cover most of the Earth's surface, record much of the Earth's geological and climatic history and host important resources such as petroleum, coal, water and mineral ores. The aim of this unit is to provide students with the skills required to examine, describe and interpret sediments and sedimentary rocks for a variety of different purposes. Specific foci of the unit will be the identification of the recent or ancient environment in which sedimentary materials were deposited, the environmental controls which produce sedimentary structures, and the processes that control the production, movement and storage of sediment bodies. On completion of this unit students will be familiar with the natural processes that produce and modify sediments across a range of environments at the Earth's surface, including fluvial, aeolian, lacustrine, marginal marine and deep marine environments. The various controls on the sedimentary record such as climate and sea-level change, as well as diagenesis and geochemical cycles will also be discussed. Practical exercises will require students to examine global datasets, and determine the properties and significance of sediments and sedimentary rocks. The course is relevant to students interested in petroleum or mineral exploration, environmental and engineering geology as well as marine geoscience.

Textbooks

Course notes will be available from the Copy Centre and an appropriate set of reference texts will be placed on special reserve in the library.

GEOS3803
Environmental and Sedimentary Geology(Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny (Coordinator), Dr. Adriana Dutkiewicz **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour tutorial/practical class per week. **Prerequisites:** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **Prohibitions:** GEOS3103 **Assumed knowledge:** (GEOS1003 or GEOS1903) **Assessment:** One 2 hour exam, practical, field reports and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.

This unit has the same objectives as GEOS3103 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance at the time of enrolment. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. Specific details for this unit of study will be announced in meetings with students in week 1 of semester.

Textbooks

Course notes will be available from the Copy Centre and appropriate set of reference texts will be placed on special reserve in the library.

GEOS3053
Southeast Asia Field School

Credit points: 6 **Teacher/Coordinator:** Dr Jeff Neilson **Session:** Intensive July **Classes:** 3 pre-departure classes during Semester 1, up to three weeks in-country intensive involving lectures, fieldwork and field-based methods training, readings and small group discussions **Prerequisites:** 6 credit points of Intermediate units of study in Geography. **Prohibitions:** GEOG3201 or GEOS3953 **Assessment:** Group participation, one consolidation report, one exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: Students must contact the unit coordinator no later than September in the year before taking this unit.

The unit of study can be taken only with prior permission from the unit of study coordinator. It constitutes a Field School run over a two to three week period in July, prior to the commencement of the second semester. In 2016, the Field School will be held in Indonesia. In other years it may be held in mainland Southeast Asia. The Field School focuses on three main themes; rural social, environmental and economic change; regional economic integration and its local effects; regional environmental change and natural resources governance. The Field School is run in close association with local universities, whose staff and students participate in some components of the course. Places are limited, and students interested in the 2016 Field School should indicate expression of interest to Dr Jeff Neilson by 26th September 2015.

GEOS3953
Southeast Asia Field School (Adv)

Geology and Geophysics

Study in the discipline of Geology and Geophysics is offered by the School of Geosciences in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

A major in Geology and Geophysics provides an interdisciplinary and integrative context for understanding the surface and internal planetary processes that determine how the earth functions as a system. Global climate change, an increasing population and shrinking mineral and energy resources have heightened our sense of dependence on our earth's complex natural systems and increased our need to understand the dynamic relationships between the continents and oceans that provide the physical habitat for the earth's various ecosystems, as well as the resources our modern society needs.

This major will provide you with an understanding of the origin of our planet, its evolution across geological time through the complex interaction between its internal geodynamic, plate tectonics, surface processes and biological processes. This major will equip you with the expertise necessary for possible employment in areas of sustainable exploration and management of our natural, mineral and energy resources. You will gain observational, analytical, computational, and communication skills transferable to a broad range of industries including education, insurance and banking.

Requirements for completion

A major in Geology and Geophysics requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level core units
(iii)12 credit points of 3000-level core units
(iv)12 credit points of 3000-level selective units

A minor in Geology and Geophysics is available and articulates to this major.

First year

GEOS1X01 and GEOS1X03 provide a foundational understanding of the earth system, its history and dynamics, concepts of geological time, and core concepts that underpin the discipline of Geology. You will examine a range of themes and issues relative to the future of our planet, learn about the origin and fate of common earth materials and how to identify and interpret them. You will develop expertise in spatial and numerical analysis and in the use of tools for representing and interpreting geology and geological processes.

Second year

GEOS2X14 and GEOS2X24 both build on foundational concepts from first year, and provide a comprehensive understanding of composition, evolution and dynamics of the earth's crust. GEOS2X14 will explore tectonic and geodynamic processes in the deep earth's crust, and consider the implications of these processes for the mineralogy, petrology and geochemistry of magmatic systems and associated mineral deposits. GEOS2X24 introduces students to the surface processes involved in the formation of sedimentary rocks in various sedimentary environments, as well as the techniques we use to determine their ages, environments of deposition and tectonic evolution. Students will learn major fossil groups, methods of stratigraphic age determination, and how the earth's upper crust is deformed.

Third year

GEOS3X08 and GEOS3X01 are the core units at the 3000-level, proving a conceptual framework for professional practice in geology, resource exploration, and related fields. GEOS3X08 draws together learning outcomes from the 1000 and 2000-levels and applies them in the context of field geology including field mapping, rock identification, structural analyses, laboratory-based analyses, and the use of numerical tools and models. In GEOS3X01 students learn about the forces that drive the deformation and differentiation of the Earth's crust and that of mineralized systems, through tectonic processes, metamorphic processes and partial melting. In addition to these core units, students may choose from a selection of units that provide 3000-level training in specialist areas of geological research and practice, ranging from the geological context of hydrocarbons, ores, and other valuable minerals, to commonly-used geophysical methods, to exploration of the Earth's interior and how to model its landscapes.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework

The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours

Requirements for Honours in the area of Geology and Geophysics: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Geology and Geophysics will be able to:

1. Understand geology and geophysics in the broader context of Earth system science.
2. Identify key Earth systems and articulate the interaction between chemical, physical and biological processes that govern the co-evolution of life and Earth
3. Demonstrate a comprehensive understanding of the Earth structure, its internal and external dynamics and evolution
4. Collect, record, compile, process, critically evaluate analyse and interpret, qualitative and quantitative geological, geochemical and geophysical data in order to construct robust and verifiable models and assess scientific arguments
5. Integrate a range of geological, geochemical and geophysical methods and approaches, with computational resources to address and model geological phenomena at a variety of scales in space and time;
6. Use a range of techniques, competently communicate the rationale for scientific endeavours, methods and approaches
7. Work competently, confidently, ethically and safely in field or laboratory, and in the context of interdisciplinary and multicultural environment
8. Demonstrate a familiarity with the legislative, regulatory and normative context in which resources industries operate.

Geology and Geophysics

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
GEOLOGY AND GEOPHYSICS			
Advanced coursework and projects will be available in 2020 for students who complete this major.			
Geology and Geophysics major			
A major in Geology and Geophysics requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 12 credit points of 2000-level core units (iii) 12 credit points of 3000-level core units (iv) 12 credit points of 3000-level selective units			
Geology and Geophysics minor			
A minor in Geology and Geophysics requires 36 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 12 credit points of 2000-level core units (iii) 12 credit points of 3000-level core units			
Units of study			
The units of study are listed below.			
1000-level units of study			
Core			
GEOS1001 **Earth, Environment and Society**	6	**N** GEOS1901 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001	Semester 1
GEOS1003 **Introduction to Geology**	6	**N** GEOS1903 or GEOL1002 or GEOL1902 or GEOL1501	Semester 2 Summer Main
GEOS1901 **Earth, Environment and Society Advanced**	6	**A** (ATAR 90 or above) or equivalent **N** GEOS1001 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 *Note: Department permission required for enrolment*	Semester 1
GEOS1903 **Introduction to Geology (Advanced)**	6	**A** (ATAR 90 or above) or equivalent **N** GEOS1003 or GEOL1002 or GEOL1902 *Note: Department permission required for enrolment*	Semester 2
2000-level units of study			
Core			
GEOS2114 **Volcanoes, Hot Rocks and Minerals**	6	**P** A minimum of one unit of study from the following (GEOG1001, GEOL1001, GEOL1002, GEOS1003, GEOS1903, ENVI1002, GEOL1902, GEOL1501), and 24 credit points of Junior Science units of study. **N** GEOL2111 or GEOL2911 or GEOS2914 *An optional volcano field study trip to New Zealand's North Island in February is available for up to 20 students. Extra costs apply. Contact with the School in the preceding November or December is advisable to secure a place on the trip.*	Semester 1
GEOS2124 **Fossils and Tectonics**	6	**P** 24cp of 1000-level units of study, including (GEOS1003 or GEOS1903) and (GEOS2114 or GEOS2914) **N** GEOL2123 or GEOL2124 or GEOS2924	Semester 2
GEOS2914 **Volcanoes, Hot Rocks and Minerals Adv**	6	**P** 24 credit points of Junior Science units of study and Distinction in (GEOL1002 or GEOS1002 or ENVI1002 or GEOL1501 or GEOL1902 or GEOS1902 or GEOS1003 or GEOS1903). **N** GEOS2114 or GEOL2001 *An optional volcano field study trip to New Zealand's North Island in February is available for up to 20 students. Extra costs apply. Contact with the School is the preceding November or December is advisable to secure a place on the trip.*	Semester 1
GEOS2924 **Fossils and Tectonics (Advanced)**	6	**P** A mark of 75 or above in [(GEOS1003 or GEOS1903) or (GEOS2114 or GEOS2914)] **N** GEOL2123 or GEOL2124 or GEOS2124	Semester 2
3000-level units of study			
Core			
GEOS3008 **Field Geology**	6	**P** GEOS2124 or GEOS2924 **N** GEOL3103 or GEOS3908 *Note: Department permission required for enrolment*	Intensive July

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
GEOS3908 **Field Geology (Adv)**	6	**P** Credit or greater in (GEOS2124 or GEOS2924) **N** GEOS3008 *Note: Department permission required for enrolment*	Intensive July
GEOS3101 **Earth's Structure and Evolution**	6	**P** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **N** GEOS3801 or GEOS3003 or GEOS3903 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917	Semester 1
GEOS3801 **Earth's Structure and Evolutions (Adv)**	6	**P** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **N** GEOS3101 or GEOS3003 or GEOS3903 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917 *Prerequisites: Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.*	Semester 1
Selective			
GEOS3102 **Global Energy and Resources**	6	**P** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **N** GEOS3802 or GEOS3003 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917 or GEOS3903	Semester 1
GEOS3103 **Environmental and Sedimentary Geology**	6	**A** (GEOS1003 or GEOS1903) **P** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **N** GEOS3803	Semester 2
GEOS3104 **Geophysical Methods**	6	**P** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **N** GEOS3804 or GEOS3003 or GEOS3006 or GEOS3016 or GEOS3017 or GEOS3903 or GEOS3906 or GEOS3916 or GEOS3917 or GEOS3004	Semester 2
GEOS3802 **Global Energy and Resources (Adv)**	6	**P** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **N** GEOS3102 or GEOS3003 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917 or GEOS3903 *Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.*	Semester 1
GEOS3803 **Environmental and Sedimentary Geology(Adv)**	6	**A** (GEOS1003 or GEOS1903) **P** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **N** GEOS3103 *Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.*	Semester 2
GEOS3804 **Geophysical Methods (Advanced)**	6	**P** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **N** GEOS3104 or GEOS3003 or GEOS3006 or GEOS3016 or GEOS3017 or GEOS3903 or GEOS3906 or GEOS3916 or GEOS3917 *Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.*	Semester 2

Geology and Geophysics

GEOLOGY AND GEOPHYSICS

Advanced coursework and projects will be available in 2020 for students who complete this major.

Geology and Geophysics major

A major in Geology and Geophysics requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level core units (iii) 12 credit points of 3000-level core units(iv) 12 credit points of 3000-level selective units

Geology and Geophysics minor

A minor in Geology and Geophysics requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level core units(iii) 12 credit points of 3000-level core units

Units of study

The units of study are listed below.

1000-level units of study

Core

GEOS1001
Earth, Environment and Society

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1901 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This is the gateway unit of study for Human Geography, Physical Geography, Environmental Studies and Geology. Its objective is to introduce the big questions relating to the origins and current state of the planet: climate change, environment, landscape formation, and the growth of the human population. During the semester you will be introduced to knowledge, theories and debates about how the world's physical and human systems operate. The first module investigates the evolution of the planet through geological time, with a focus on major Earth systems such as plate tectonics and mantle convection and their interaction with the atmosphere, hydrosphere, biosphere and human civilisations. The second module presents Earth as an evolving and dynamic planet, investigating global environmental change, addressing climate variability and human impacts on the natural environment and the rate at which these changes occur and how they have the potential to dramatically affect the way we live. Finally, the third module, focuses on human-induced challenges to Earth's future. This part of the unit critically analyses the relationships between people and their environments, with central consideration to debates on population change, resource use and the policy contexts of climate change mitigation and adaptation.

GEOS1003
Introduction to Geology

Credit points: 6 **Teacher/Coordinator:** A/Prof Tom Hubble **Session:** Semester 2, Summer Main **Classes:** Two 1 hour lectures and one 3 hour practical per week **Prohibitions:** GEOS1903 or GEOL1002 or GEOL1902 or GEOL1501 **Assessment:** One 2 hour exam, quizzes, tests, practical reports, field report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this unit of study is to examine the chemical and physical processes involved in mineral formation, the interior of the Earth, surface features, sedimentary environments, volcanoes, and metamorphism. Lectures and laboratory sessions on mountain building processes and the formation of mineral deposits will lead to an understanding of the forces controlling the geology of our planet. Processes such as weathering, erosion and nature of sedimentary environments are related to the origin of the Australian landscape. In addition to laboratory classes there is a one-day excursion to the western Blue Mountains and Lithgow to examine geological objects in their setting.

Textbooks

The recommended text is is Christiansen, E. H., and Hamblin, W. K. (2015). Dynamic earth: An introduction to physical geology. Burlington, MA: Jones and Bartlett Learning.

GEOS1901
Earth, Environment and Society Advanced

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1001 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Advanced students will complete the same core lecture material as for GEOS1001, but will be required to carry out more challenging practical assignments.

GEOS1903
Introduction to Geology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Tom Hubble **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour practical per week, field classes. **Prohibitions:** GEOS1003 or GEOL1002 or GEOL1902 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** One 2 hour exam, tests, quizzes, practical reports, field report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit has the same objectives as GEOS1003 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their ATAR or UAI and/or their university performance at the time of enrolment. Students that elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. This unit may be taken as part of the BSc (Advanced).

Textbooks

The recommended text is Christiansen, E. H., and Hamblin, W. K. (2015). Dynamic earth: An introduction to physical geology. Burlington, MA: Jones and Bartlett Learning.

2000-level units of study

Core

GEOS2114
Volcanoes, Hot Rocks and Minerals

Credit points: 6 **Teacher/Coordinator:** A/Prof Derek Wyman, A/Prof Patrice Rey **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 3 hour practical per week. **Prerequisites:** A minimum of one unit of study from the following (GEOG1001, GEOL1001, GEOL1002, GEOS1003, GEOS1903, ENVI1002, GEOL1902, GEOL1501), and 24 credit points of Junior Science units of study. **Prohibitions:** GEOL2111 or GEOL2911 or GEOS2914 **Assessment:** One 2 hour exam, practical reports, field trip report, group presentation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: An optional volcano field study trip to New Zealand's North Island in February is available for up to 20 students. Extra costs apply. Contact with the School in the preceding November or December is advisable to secure a place on the trip.

This unit of study relates plate tectonics to a) volcanoes and magma systems that create them; b) the formation of precious metal and gemstone ores; and c) an understanding of how Earth's materials (minerals, rocks, rock formations, lithospheric plates etc.) respond to stresses and the forces that deform them. Methods of analysis involve studies at the microscopic scale (performed on thin sections) and the mesoscopic scale performed on hand specimens and outcrops. The unit includes a day field trip to study an extinct volcano in NSW. Practical work includes independent study of igneous systems, rocks and minerals employing both microscope-based techniques and computer modelling.

GEOS2124
Fossils and Tectonics

Credit points: 6 **Teacher/Coordinator:** A/Prof Patrice Rey (Coordinator), Dr Adriana Dutkiewicz **Session:** Semester 2 **Classes:** Two 1 hour lectures plus one 2 hour practical each week. **Prerequisites:** 24cp of 1000-level units of study, including (GEOS1003 or GEOS1903) and (GEOS2114 or GEOS2914) **Prohibitions:** GEOL2123 or GEOL2124 or GEOS2924 **Assessment:** One 2 hour exam, practical reports, field report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The unit aims to convey how fossils, stratigraphic and structural data are used together to determine ages and environments and the deformation history of rock layers. It covers an introduction to historical geology and the evolution of the major fossils groups. Methods of stratigraphic age determination include litho-, bio-, chemo-, magneto-stratigraphy, as well as radiometric geochronology and the stratigraphic characteristics of the main geological time intervals. Structural methods are focused on brittle deformation in the upper crust and sediments. Students will gain familiarity with the most important fossil groups and how to identify them, and with the most important types of faults and folds. The formation of fossil fuels such as coal, oil and gas will also be covered in an earth history and resource exploration context. The simultaneous use of fossils, stratigraphy and structure to unravel the geological history of a set of exposed rock layers is demonstrated during a field excursion to Yass.

Textbooks

Class notes for the stratigraphy and fossils part will be available for purchase from The University Copy Centre.
The following textbooks will be used for the structural geology component:
- Van der Pluijm, B.A., and S. Marshak, 2004: Earth Structure: An Introduction to Structural Geology and Tectonics, 656p. W.W. Norton and Company, Inc, ISBN: 0-393-92467-X.
- Haakon Fossen, 2010. Structural Geology. 2010. Cambridge University Press, 480 p. ISBN: 9780521516648

GEOS2914
Volcanoes, Hot Rocks and Minerals Adv

Credit points: 6 **Teacher/Coordinator:** A/Prof Derek Wyman, A/Prof Patrice Rey, Dr Nicolas Flament **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 3 hour practical per week. **Prerequisites:** 24 credit points of Junior Science units of study and Distinction in (GEOL1002 or GEOS1002 or ENVI1002 or GEOL1501 or GEOL1902 or GEOS1902 or GEOS1003 or GEOS1903). **Prohibitions:** GEOS2114 or GEOL2001 **Assessment:** One 2 hour exam, practical reports, field trip report, group presentation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: An optional volcano field study trip to New Zealand's North Island in February is available for up to 20 students. Extra costs apply. Contact with the School is the preceding November or December is advisable to secure a place on the trip.

This unit has the same objectives as GEOS2114 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance to date. Students that elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. This unit may be taken as part of the BSc (Advanced).

Textbooks

No required textbook. Course notes available.

GEOS2924
Fossils and Tectonics (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Patrice Rey (Coordinator), Dr Adriana Dutkiewicz **Session:** Semester 2 **Classes:** Two 1 hour lectures plus one 2 hour practical each week. **Prerequisites:** A mark of 75 or above in [(GEOS1003 or GEOS1903) or (GEOS2114 or GEOS2914)] **Prohibitions:** GEOL2123 or GEOL2124 or GEOS2124 **Assessment:** One 2 hour exam, practical reports, field report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit has the same objectives as GEOS2124 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance to date. Students that elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. This unit may be taken as part of the BSc (Advanced).

Textbooks

The same as for GEOS2124.

3000-level units of study

Core

GEOS3008
Field Geology

Credit points: 6 **Teacher/Coordinator:** Prof Geoffrey Clarke **Session:** Intensive July **Classes:** 14 days of field work (weeks 1-7) **Prerequisites:** GEOS2124 or GEOS2924 **Prohibitions:** GEOL3103 or GEOS3908 **Assessment:** The field work will be assessed by written reports (up to 10 pages in total), field exercises and practical tests (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit is an essential component of the Geology and Geophysics major. Students will undertake a range of exercises, including: the field mapping and the analysis of geological objects in the field, in weakly to complexly deformed sedimentary and volcanic sequences; the field investigations of mineral deposits and their relationships to host rocks; and the practical application of geophysical methods in field mapping. The field course complements other subject areas in Geology and Geophysics and will give students experience in the field identification of rocks and minerals, regional geology, stratigraphy, structure and rock relationships. The educational objectives of the excursion involve concentrated learning met in two compulsory one-day workshops and the field excursion. Due to the nature of the exercises, there are no alternatives to attending the excursion and workshops, and students must attend and satisfactorily complete all components of the unit to pass. Students will be required to pay the cost of transport and hostel-style accommodation during fieldwork, which may involve camping. All participants need be physically capable of completing day walks at remote locations in central Australia, have previously discussed with the School any personal health and safety issues that could affect their participation in remote area fieldwork, and must submit a signed student travel form that includes up-to-date emergency contact details. In addition, it expected that students will have attained competency in HLTFA311A Apply First Aid (or equivalent) through a registered training organization.

GEOS3908
Field Geology (Adv)

Credit points: 6 **Teacher/Coordinator:** Prof Geoffrey Clarke **Session:** Intensive July **Classes:** 14 days of fieldwork. **Prerequisites:** Credit or greater in (GEOS2124 or GEOS2924) **Prohibitions:** GEOS3008 **Assessment:** Written reports and field exercises (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit has the same objectives as GEOS3008 and is suitable for students who wish to pursue aspects of the subject in greater depth.

Entry is restricted and selection is made from the applicants on the basis of their performance at the time of enrolment. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. Specific details for this unit of study will be announced in meetings with students in week prior to the field camp which is usually in the break between semester 1 and 2. This unit of study may be taken as part of the BSc (Advanced).

GEOS3101
Earth's Structure and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Patrice Rey **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 3 hour tutorial/practical class per week, and a 3-day excursion. **Prerequisites:** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **Prohibitions:** GEOS3801 or GEOS3003 or GEOS3903 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917 **Assessment:** One 2 hour exam, practical and field reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The Earth's crust and upper mantle, or lithosphere, are a consequence of dynamic and thermal processes operating since the beginning of the Archaean. This unit focuses on information and techniques that enable an understanding of these processes. The main topics presented in this unit include: the formation and evolution of oceanic and continental lithosphere; tectonic deformation, magmatism and metamorphism at plate boundaries; and the mesoscopic and microscopic analysis of igneous and metamorphic rocks. Practical classes and field exercises are designed to enable students to competently and independently identify the common crystalline rocks in hand-specimen; and to gather and interpret the structural field data which enables the determination of the structural style and deformational history presented in particular tectonic settings. The concepts and content presented in this unit are generally considered to be essential knowledge for geologists and geophysicists and provide a conceptual framework for their professional practice. Students wishing to specialise in the field and become professional geologists will normally need to expand upon the knowledge gained from this unit and either complete an honours project or progress to postgraduate coursework in this field.

GEOS3801
Earth's Structure and Evolutions (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Patrice Rey **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 3 hour tutorial/practical class per week. **Prerequisites:** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **Prohibitions:** GEOS3101 or GEOS3003 or GEOS3903 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917 **Assessment:** One 2 hour exam, practical and field reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Prerequisites: Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.

This unit has the same objectives as GEOS3101 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance at the time of enrolment. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. Specific details for this unit of study will be announced in meetings with students in week 1 of semester.

Selective

GEOS3102
Global Energy and Resources

Credit points: 6 **Teacher/Coordinator:** A/Prof Derek Wyman, Prof Dietmar Müller **Session:** Semester 1 **Classes:** Two 1-hour lectures and one 2-hour tutorial/practicals per week. **Prerequisites:** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **Prohibitions:** GEOS3802 or GEOS3003 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917 or GEOS3903 **Assessment:** One 2-hour exam, practical and reports (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit examines the processes that form energy and mineral resources, outlines the characteristics of major fossil fuel and metal ore deposits and introduces the principles that underpin exploration strategies used to discover and develop geological resources. The unit will focus on a variety of topics including: coal; petroleum formation and migration, hydrocarbon traps and maturation; precious metal, base metal and gemstone deposit types; and exploration strategies. An integrated approach will relate tectonic processes through time to the formation of fossil fuel and mineral provinces. Practical exercises will introduce students to the techniques used to identify economically viable geological resources using a variety of exercises based on actual examples of resource exploration drawn from both the petroleum and minerals industry.

GEOS3103
Environmental and Sedimentary Geology

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny (Coordinator), Dr. Adriana Dutkiewicz **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour tutorial/practical class per week **Prerequisites:** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **Prohibitions:** GEOS3803 **Assumed knowledge:** (GEOS1003 or GEOS1903) **Assessment:** One 2 hour exam, practical reports and quizes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Sediments and sedimentary rocks cover most of the Earth's surface, record much of the Earth's geological and climatic history and host important resources such as petroleum, coal, water and mineral ores. The aim of this unit is to provide students with the skills required to examine, describe and interpret sediments and sedimentary rocks for a variety of different purposes. Specific foci of the unit will be the identification of the recent or ancient environment in which sedimentary materials were deposited, the environmental controls which produce sedimentary structures, and the processes that control the production, movement and storage of sediment bodies. On completion of this unit students will be familiar with the natural processes that produce and modify sediments across a range of environments at the Earth's surface, including fluvial, aeolian, lacustrine, marginal marine and deep marine environments. The various controls on the sedimentary record such as climate and sea-level change, as well as diagenesis and geochemical cycles will also be discussed. Practical exercises will require students to examine global datasets, and determine the properties and significance of sediments and sedimentary rocks. The course is relevant to students interested in petroleum or mineral exploration, environmental and engineering geology as well as marine geoscience.

Textbooks

Course notes will be available from the Copy Centre and an appropriate set of reference texts will be placed on special reserve in the library.

GEOS3104
Geophysical Methods

Credit points: 6 **Teacher/Coordinator:** Prof Dietmar Muller (co-ordinator), A/Prof Patrice Rey, Dr Tristan Salles, Dr Gilles Brocard **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour practical class per week. **Prerequisites:** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **Prohibitions:** GEOS3804 or GEOS3003 or GEOS3006 or GEOS3016 or GEOS3017 or GEOS3903 or GEOS3906 or GEOS3916 or GEOS3917 or GEOS3004 **Assessment:** One 2 hour exam (50%), practical work (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit introduces the common geophysical methods used to investigate the interior and dynamics of the Earth and focuses on the techniques used for mineral and hydrocarbon exploration. On completion of this unit students will have developed a thorough understanding of the common geophysical methods utilised in industry and academia. They will be able to evaluate and critically assess most forms of geophysical data as well as actively participate in geophysical exploration. The course will provide the students with the computational skills to process different types of geophysical data and link them to simulations of Earth processes through time, especially focussing on linking deep Earth and surface processes, such as subsidence/uplift and erosion/sedimentation. The unit is aimed at students with interests in land-based and marine exploration, plate tectonics, internal earth structure/dynamics, and near-surface investigations of groundwater resources and environmental pollution. Students wishing to specialise in the field and become professional geophysicists will need to expand upon the geophysics knowledge gained from this unit and either complete an honours project or progress to postgraduate coursework in this field.

GEOS3802
Global Energy and Resources (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Derek Wyman, Prof Dietmar Müller **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 3 hour tutorial/practical class per week **Prerequisites:** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **Prohibitions:** GEOS3102 or GEOS3003 or GEOS3004 or GEOS3904 or GEOS3006 or GEOS3906 or GEOS3017 or GEOS3917 or GEOS3903 **Assessment:** One 2 hour exam, practical and field reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.

This unit has the same objectives as GEOS3102 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance at the time of enrolment. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. Specific details for this unit of study will be announced in meetings with students in week 1 of semester.

GEOS3803
Environmental and Sedimentary Geology(Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny (Coordinator), Dr. Adriana Dutkiewicz **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour tutorial/practical class per week. **Prerequisites:** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **Prohibitions:** GEOS3103 **Assumed knowledge:** (GEOS1003 or GEOS1903) **Assessment:** One 2 hour exam, practical, field reports and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.

This unit has the same objectives as GEOS3103 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance at the time of enrolment. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. Specific details for this unit of study will be announced in meetings with students in week 1 of semester.

Textbooks

Course notes will be available from the Copy Centre and appropriate set of reference texts will be placed on special reserve in the library.

GEOS3804
Geophysical Methods (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Dietmar Müller (co-ordinator), A/Prof Patrice Rey, Dr Tristan Salles, Dr Gilles Brocard **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour practical class per week. **Prerequisites:** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **Prohibitions:** GEOS3104 or GEOS3003 or GEOS3006 or GEOS3016 or GEOS3017 or GEOS3903 or GEOS3906 or GEOS3916 or GEOS3917 **Assessment:** One 2 hour exam, practical work (100%) **Practical field work:** Geophysical Field Prac (details to be announced) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.

This unit has the same objectives as GEOS3104 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance at the time of enrolment. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independant work to meet unit objectives. Specific details for this unit of study will be announced in meetings with students in week 1 of semester.

Health

Study in the Health stream and major is offered by the Discipline of Behavioural and Social Sciences in Health at the Faculty of Health Sciences. Units of study are interdisciplinary and offered at the standard level.

About the stream

A stream in Health will equip you with a comprehensive understanding of health and health systems at the local, national, and global levels. Through our active, real-world learning approaches, your ability to navigate the complexity of health in different sociocultural, political and economic contexts will be nurtured and refined. You will develop core skills in critical thinking, complex problem solving, communication and empathy. The major provides you with a strong foundation in health and healthcare, while giving you the flexibility for in-depth study in particular areas of health of interest to you.

Requirements for completion

The Health stream requires 60 credit points, consisting of:

(i)6 credit points of 1000-level core units
(ii)6 credit points of 1000-level selective units
(iii)A 48 credit point major in Health

A major in Health requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level core units
(iii)6 credit points of 3000-level research units
(iv)6 credit points of 3000-level interdisciplinary project units
(v)6 credit points of 3000-level disciplinary project units
(vi)6 credit points of 3000-level selective units

First year

Core to Major: HSBH1012 and HSBH1013
Core to Stream: PSYC1002 and 6 credit points from a selection of: BIOL1XX6, BIOL1XX7, BIOL1XX8

Second year

Core: HSBH2007 and HSBH2009

In second year, we build on your understanding of health, the healthcare systems in Australia and abroad, and the people in health. These units introduce you to health research and eHealth innovations. You will have more in-depth discussions and case studies around knowledge creation in health, and how technology impacts our health, and can be used to enhance health. This understanding will support you in being effective in the eHealth-enabled healthcare environment that you will be working in.

Third year

Students must select 6 credit points of 3000-level research units, 6 credit points of 3000-level interdisciplinary project units, 6 credit points of 3000-level disciplinary project units and 6 credit points of 3000-level selective units. Details of selectives available can be found in the unit of study tables for the Health major

These third year units are designed to provide you with the flexibility to choose to study the areas of health that interest you in greater depth. In your third year you must take four 3000-level units consisting of at least one senior research unit, one unit with a disciplinary project, and one unit with an interdisciplinary unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework

The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Health: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Health will be able to:

1. Develop evidence-based, ethical and innovative solutions to health problems at the individual, national and global scales that are sensitive to the specific needs, perspectives and worldview of that individual or community.
2. Advocate for improvements in health through synthesis of evidence, critical reflection and analysis, and awareness of the sociocultural factors which affect health decisions.
3. Enhance our current understanding of health and health systems through research and enquiry.
4. Communicate effectively with and to others from different backgrounds and at different life stages using a variety of tools, media and strategies appropriate to that audience.
5. Work collaboratively and effectively in interdisciplinary teams
6. Act ethically and with cultural sensitivity in their interactions with others and approaches to designing, implementing and evaluating health solutions.

Health

HEALTH

Advanced coursework and projects will be available in 2020 for students who complete this major.

Health stream

The Health stream is 60 credit points, consisting of:(i) 6 credit points of 1000-level core units(ii) 6 credit points of 1000-level selective units (iii) A 48 credit point major in Health*Note that while it is not required, Human Movement is available as a second major or minor only to students enrolled in the Health stream.

Health major

This major is only available as a Table A major to students enrolled in the Health stream.A major in Health requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 12 credit points of 2000-level core units (iii) 6 credit points of 3000-level research units (iv) 6 credit points of 3000-level interdisciplinary project units (v) 6 credit points of 3000-level disciplinary project units (vi) 6 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Stream core

PSYC1002
Psychology 1002

Credit points: 6 **Session:** Semester 2, Summer Main **Classes:** Three 1 hour lectures and one 1 hour tutorial per week, plus 1 hour per week of additional web-based (self-paced) material related to the tutorial. **Assessment:** One 2.5hr exam, one 1000 word research report, multiple tutorial tests, experimental participation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This unit is also offered in the Sydney Summer School. For more information consult the web site: http://sydney.edu.au/summer/

Psychology 1002 is a further general introduction to the main topics and methods of psychology, and it is the basis for advanced work as well as being of use to those not proceeding with the subject. Psychology 1002 covers the following areas: neuroscience; human mental abilities; learning and motivation; visual perception; cognitive processes; abnormal psychology.

This unit is also offered in the Sydney Summer School. For more information consult the web site:

http://sydney.edu.au/summer_school/

BIOL1008
Human Biology

Credit points: 6 **Teacher/Coordinator:** Dr Osu Lilje **Session:** Semester 1, Summer Main **Classes:** Lectures; six 3-hour practical sessions; six workshops and tutorials; students encouraged to spend 1-2 hours per week accessing online resources **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Written and oral presentation, quiz, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences.

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

Bromham, L 2015, An Introduction to Molecular Evolution and Phylogenetics, Oxford University Press.

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit

will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

Textbooks
Please see unit outline on LMS

Major core

HSBH1012
Introduction to Health and Health Care

Credit points: 6 **Session:** Semester 1 **Classes:** 2-hr lecture/week, 1-hr tutorial/week **Assessment:** seminar presentation (20%), essay (35%), 1 x 2-hr exam (45%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will develop students' broad understanding of the different approaches to health (e.g. biomedical, psychological, sociological). This would include understanding the different factors which impact health; how different approaches may lead to different strategies for developing and evaluating health solutions; and different ways of measuring health. Students are then enabled to consider how these different approaches to health are reflected in health systems both locally and internationally. Students would explore the different healthcare systems and engage with current and future challenges for health systems and health policy in Australia and abroad.

Textbooks
Readings will be drawn from a variety of journals, government reports and textbooks. The reading list will be available to students through the unit of study outline and learning management system

HSBH1013
Society and Health

Credit points: 6 **Session:** Semester 2 **Classes:** 2-hr lecture/week, 1-hr tutorial/week **Assessment:** short answer assessments (30%), presentation (20%), 1 x 2-hr exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

In considering how health is delivered, students will explore people involved in health. This includes the breadth of the health workforce (both paid and unpaid) and health consumers. Students will examine the social determinants of health and the meaning of health for different populations. Embedded in this unit will be considerations of ethics and legal concerns, cultural awareness and interdisciplinarity.

Textbooks
Readings will be drawn from a variety of journals, government reports and textbooks. The reading list will be available to students through the unit of study outline and learning management system.

2000-level units of study

Major Core

HSBH2007
Research Methods in Health

Credit points: 6 **Teacher/Coordinator:** Dr Rowena Forsyth **Session:** Semester 1 **Classes:** 1x2-hr lecture/week, 1x1-hr tutorial/week **Prerequisites:** HSBH1006 and HSBH1008 and HSBH1009 **Prohibitions:** BACH2140 or HSBH1007 **Assessment:** Written group assignment (30%), written individual assignment (20%), 1x2-hr exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The unit of study introduces students to the design and evaluation of research questions relating to health. Drawing on both qualitative and quantitative research methods, students will be introduced to key concepts relating to methodology; research design and research method.

HSBH2009
Innovations in eHealth

Credit points: 6 **Session:** Semester 2 **Classes:** 2-hr lecture/week, 1-hr tutorial/week **Prohibitions:** HSBH1010 **Assumed knowledge:** HSBH1012, HSBH1013 **Assessment:** reflection task (20%), health design project (30%), skills modules (10%), job application/eportfolio (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Digital technologies are changing the health landscape from consumers having access to Dr Google to clinicians using virtual reality as part of treatment. This unit of study explores the impact of digital technologies on our health and wellbeing and includes consideration of how these devices and software interact with the healthcare system, affect attitudes towards health and healthcare providers, and change the discussions about health ethics, and health equity. Students will engage in practical, hands-on learning experience and complete authentic assessments such as designing innovations, creating an ePortfolio, and applying for a job.

Textbooks

Readings will be drawn from a variety of journals, government reports, and textbooks. The reading list will be available to students through the unit of study outline and learning management system

3000-level units of study

Research units

HSBH3005
Evidence Based Health Care

Credit points: 6 **Teacher/Coordinator:** Dr Grace Spencer **Session:** Semester 2 **Classes:** 1x2-hr lecture/week, 1x1-hr tutorial/week **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** PICO framework (40%), critical apprisal essay (40%) and impact statement (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Evidence-based health care is the conscientious use of current best evidence in making decisions about the care of individuals or the delivery of health services. This unit will introduce you to evidence based health care by developing your understanding of knowledge and evidence, and critical appraisal skills to inform your decision making in health care policy and practice.

Textbooks

Hoffman, T., Bennett, S. and Del Mar, C. (2013). Evidence-based practice across the health professions (2nd ed.). Chatswood: Elsevier.

HSBH3018
Quantitative Research Methods in Health

Credit points: 6 **Teacher/Coordinator:** Dr Tatjana Seizova-Cajic **Session:** Semester 1 **Classes:** 1x2-hr lecture/week, 1x1-hr tutorial or laboratory session/week **Prerequisites:** HSBH1007 or HSBH2007 **Prohibitions:** PSYC2012 or SCLG3603 **Assessment:** Group presentation (10%), In-class quiz (20%), 1000wd report (20%) and end semester exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit teaches about the research process from development of a research question to study design, quantitative data analysis, and interpretation of outcomes in the context of theory and practical applications. You will learn about concepts and logic that apply to quantitative research in general, with an emphasis on issues and types of studies most relevant in health research. As either an individual or group exercise, you will perform most aspects of the research process using examples given to you or created by you, and will receive comprehensive feedback along the way. The unit will prepare you to critically evaluate research findings in your future career, and to engage in further research training should you wish to do so. Skills you are expected to develop include succinct academic writing, simple data analysis using SPSS, and developing ideas in the context of teamwork.

Textbooks

Field, A. (2013). Discovering statistics using IBM SPSS statistics: And sex, drugs and rock 'n' roll (4th ed.). Los Angeles: Sage.
Portney, L. G., and Watkins, M. P. (2009). Foundations of clinical research: Applications to practice (3rd ed.). Essex, England: Pearson Education Limited.

HSBH3019
Qualitative Research Methods in Health

Credit points: 6 **Teacher/Coordinator:** A/Prof Jennifer Smith-Merry **Session:** Semester 2 **Classes:** 1x2-hr Workshop/week, 1x1-hr tutorial/week **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Prohibitions:** SCLG2602 or BACH4056 **Assessment:** 750wd research report (20%),2000wd research report (50%) and end semester take-home exam (30%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study has three aims: to build on core units of study offered in First Year and Second Year to provide critical appraisal skills in reading and utilising qualitative research related to health behaviour and health care; to understand the theoretical orientation of contemporary qualitative health research methods; and to develop skills in undertaking qualitative research methods. With a focus on applying critical and theoretical knowledge, the unit has a practical orientation and students will gain experience in techniques of observation, document analysis, in-depth interviewing and focus group interviews.

HSBH3024
Designing a Research Project

Credit points: 6 **Teacher/Coordinator:** Dr Vanessa Lee **Session:** Semester 2 **Classes:** 1 x 2-hr workshop, and 1x1-hr online and practical activities/week **Prerequisites:** (HSBH1006 AND (HSBH1007 OR HSBH2007) AND HSBH1008 AND HSBH1009) OR ((BACH1161 OR HSBH1003) AND HSBH1007) **Assessment:** ethics assignment 1500 wds (30%), oral presentation (20%), research proposal 2000 wds (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is designed to assist students understand the principles of writing a research proposal, applicable for either project planning or evaluation within health or for further research (e.g., Honours). Students will be introduced to the key components of preparing and writing up a proposal: purpose of the research and question(s) to be addressed; reviewing existing literature on the topic; deciding on a research methodology and methods used to collect data; proposing an approach for data analysis; identifying ethical issues and working through the process of applying for ethics approval; providing a clear plan and timeline for each stage of the research. At the completion of this unit, students will have undertaken an ethics application, planned, orally presented and written up a research proposal. This unit of study is recommended for students who wish to undertake Honours after completion of the pass degree.

Interdisciplinary project units

HSBH3003
Health Service Strategy and Policy

Credit points: 6 **Teacher/Coordinator:** A/Prof Kate O'Loughlin **Session:** Semester 2 **Classes:** 1x2-hr lectures/week, 1-hr tutorial/week **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** Tutorial activities (10%), online quizzes (15%), 2000wd report (35%) and 1.5hr exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study offers students an insight into the larger picture of how a nation sets priorities for health services. The importance of evidence-based health policy development in planning health services and strategies for increasing the cost-effectiveness of delivering health services will be covered. Students will gain skills in health service needs assessment, measuring cost-effectiveness, macroeconomic evaluation of health services and systems, and health equity assessment. It is envisaged that students will develop a capacity to understand the concept of health policy and its relevance to the delivery of health care services and to take a problem-oriented approach to analysing and evaluating current policy provisions and strategies in the Australian context.

HSBH3004
Health, Ethics and the Law

Credit points: 6 **Teacher/Coordinator:** A/Prof Jennifer Smith-Merry **Session:** Semester 1 **Classes:** 1x2-hr lectures/week, 1-hr tutorial/week **Prerequisites:** 48 credit points of units **Assessment:** Mid-semester exam (20%), research report (40%) and final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study focuses on ethics and law in relation to the Australian health system. Fundamental ethical principles applied to ethical issues in health and health research are covered. Medico-legal aspects of health and health services will be explored. Particular areas of focus include mental health, health complaints, reproductive technologies, the start and end of life, disability, public health and genetic technology. Students will develop their own ethical thinking and an understanding of professionally acceptable behaviours appropriate to practice in a wide range of health professions. Learning is interactive and scenarios are used to develop ethical thinking. Students get to write a research report on an ethical and legal issue of their choosing.

Textbooks

Kerridge, I., Lowe, M., and Stewart, C. (2013). Ethics and law for the health professions. Leichardt: The Federation Press.

HSBH3011
Rural Health

Credit points: 6 **Teacher/Coordinator:** Dr Krestina Amon **Session:** Semester 1 **Classes:** Distance education/intensive on-campus mode. Web-based learning, Week 1 lecture (2hrs) on campus with mandatory attendance. All other materials asynchronous online. **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** Attendance at timetabled lecture and online participation (25%), group assignment 3000 words (30%), individual research assignment 2000 words (45%) **Mode of delivery:** Distance education/intensive on campus

This unit introduces students to a range of practice and research issues in rural health care. Topics covered include: the nature and variety of rural settings; special populations and cultural safety; rural health needs and access to health services; relevant models of health service delivery; and the rural health workforce and inter-professional practice.

HSBH3012
FHS Abroad

Credit points: 6 **Teacher/Coordinator:** Dr Elizabeth Dylke **Session:** Semester 1, Semester 2 **Classes:** Full-day briefing session, half-day debriefing session. **Prerequisites:** Successful completion of all 1st year units in an undergraduate FHS degree **Assessment:** Pre-departure research (30%), field diary (20%), report (40%) and presentation (10%). **Practical field work:** 4-6 weeks working with a community-based organisation in a developing country. **Mode of delivery:** Field experience

Note: Students interested in participating must obtain permission from their course director before enrolling in FHS Abroad. Some degrees require participants have a minimum credit average.

Cultural practices, disease patterns and healthcare systems are vastly different in different countries around the globe. This unit provides students with the opportunity to gain international experience in a health services setting in a developing country. Students will participate in a 4-6 week health or care placement with a community-based organisation in South or Southeast Asia. Countries where students can be placed include Vietnam, Cambodia, India and the Philippines. As part of the unit, you will be expected to participate in local development programs, live within the community that you are visiting, and document and reflect on key health and development issues facing local populations. The unit will require you to demonstrate cultural sensitivity and an ability to adapt to new environments, a capacity for critical reflection and awareness of complex global health and development issues.

HSBH3013
FHS Indigenous Communities

Credit points: 6 **Teacher/Coordinator:** Dr Josephine Gwynn **Session:** Semester 2 **Classes:** 1x2-hr introduction session (to be completed before enrolment), 5x2-hr workshops,1x2-hr debriefing session, and online learning activities **Prerequisites:** Successful completion of all 1st year units in an undergraduate FHS degree **Assessment:** Pre-fieldwork preparation paper 1000wd (30%), participation and contribution to on-line learning activities and discussion (10%), Fieldwork critical reflection report (60%) **Practical field work:** approximately 4 weeks working in an Indigenous community **Mode of delivery:** Field experience

This unit provides theoretical and practical knowledge about relevant models of community development in Aboriginal communities in New South Wales. Students will gain experience in working with Aboriginal communities in a health services setting, participating in an approximately 4 week placement in a local Aboriginal community. Students participate in a community identified development project and will document and report on their experiences in working with the local Aboriginal community. Students will be required to demonstrate project management skills including time management and reporting abilities. Students are required to attend briefing and debriefing activities and complete on-line learning activities in addition to their field experience.

HSBH3016
Individual and Societal Ageing

Credit points: 6 **Teacher/Coordinator:** A/Prof Kate O'Loughlin **Session:** Semester 2 **Classes:** 2x1-hr lecture, 1x1-hr tutorial/week **Prerequisites:** BACH1161 or HSBH1003 or HSBH1008 **Assessment:** 1500wd essay (30%), tutorial and online activities (30%) and 1hr exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Bachelor of Health Sciences students must have completed 24 credit points of HSBH junior units for enrolment into this unit. All other students must have completed 48 credit points.

This unit offers students an insight into the challenges and opportunities associated with population ageing and what is required to meet the needs of the increasing numbers of older people and those who will interact with them. It addresses the social and individual dimensions of ageing, health and well-being and the transitions that occur in later life. There will be an emphasis on the policy and practice implications of an ageing society and the role of various public and private providers (government, health care practitioners, family, voluntary) in providing services and care to older people. Students will be expected to develop a critical understanding of the issues related to ageing and the life course and gain an understanding of initiatives and policy debates relating to population ageing and quality of life of older people, their families and carers.

REHB3064
Alcohol and Drug Misuse Rehabilitation

Credit points: 6 **Teacher/Coordinator:** Dr Rodd Rothwell **Session:** Semester 1 **Classes:** Online **Prerequisites:** (HSBH1006, (HSBH1007 or HSBH2007), HSBH1008, HSBH1009) or 48 credit points of previous study. **Prohibitions:** REHB3061 **Assessment:** Short answer test (20%), Essay 2500 words (40%), 2 x online MCQ tests (40%) **Mode of delivery:** Distance education

Note: Students must have completed 48 credit points to enrol in this unit

This unit introduces students to issues relating to a major public health problem: the misuse of alcohol and other addictive drugs. The unit introduces students to two major aspects of this area: issues relating to the development of health prevention/health promotion policy, covering the philosophies of harm minimisation and zero tolerance; approaches to rehabilitation and treatment of those overusing both alcohol and other drugs. The unit commences with an analysis of public health policy approaches to the rehabilitation and treatment of people overusing alcohol and other harmful drugs. Students will be required to undertake an exercise involving an analysis of the effectiveness of the two major policy approaches to the problem of drug overuse and abuse: harm reduction and zero tolerance. They will be required to examine the evidence supporting these two approaches to public health policy. In the second part of the unit students will study the major therapeutic approaches to treatment and rehabilitation. This will include familiarisation with Alcoholics Anonymous, clinically based approaches including transactional analysis and other group therapy oriented approaches, the various behavioural therapies, therapeutic communities, methadone maintenance, needle exchange and recent trails in safe injection facilities. They will become familiar with the nature of services offered, the role of the various health professionals in these services and the nature of effective treatment and rehabilitation outcomes.

HSBH3026 to be developed for offering in 2019.

Disciplinary project units

HSBH3001
Health and Indigenous Populations

Credit points: 6 **Teacher/Coordinator:** Dr Vanessa Lee **Session:** Semester 1, Semester 2 **Classes:** 1x2-hr lecture/week, 1x1-hr tutorial/week. **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009) or (BACH1161 or HSBH1003) **Assessment:** On line quizzes (20%), Case study report 1500wd (40%), Critique diary 1500wd (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this unit of study is to provide students with the necessary tools to work with Aboriginal and Torres Strait Islander people and communities for equitable health service delivery. It explores the post-colonial impact and the policies that have contibuted to the adverse health outcomes that we see in the Aboriginal and Torres Strait Islander population of contemporary Australia today. The unit of study will also provide students with avenues of Best Practice in closing the gap between Indigenous and non-Indigenous people, for effective health service delivery.

HSBH3003
Health Service Strategy and Policy

Credit points: 6 **Teacher/Coordinator:** A/Prof Kate O'Loughlin **Session:** Semester 2 **Classes:** 1x2-hr lectures/week, 1-hr tutorial/week **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** Tutorial activities (10%), online quizzes (15%), 2000wd report (35%) and 1.5hr exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study offers students an insight into the larger picture of how a nation sets priorities for health services. The importance of evidence-based health policy development in planning health services and strategies for increasing the cost-effectiveness of delivering health services will be covered. Students will gain skills in health service needs assessment, measuring cost-effectiveness, macroeconomic evaluation of health services and systems, and health equity assessment. It is envisaged that students will develop a capacity to understand the concept of health policy and its relevance to the delivery of health care services and to take a problem-oriented approach to analysing and evaluating current policy provisions and strategies in the Australian context.

HSBH3004
Health, Ethics and the Law

Credit points: 6 **Teacher/Coordinator:** A/Prof Jennifer Smith-Merry **Session:** Semester 1 **Classes:** 1x2-hr lectures/week, 1-hr tutorial/week **Prerequisites:** 48 credit points of units **Assessment:** Mid-semester exam (20%), research report (40%) and final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study focuses on ethics and law in relation to the Australian health system. Fundamental ethical principles applied to ethical issues in health and health research are covered. Medico-legal aspects of health and health services will be explored. Particular areas of focus include mental health, health complaints, reproductive technologies, the start and end of life, disability, public health and genetic technology. Students will develop their own ethical thinking and an understanding of professionally acceptable behaviours appropriate to practice in a wide range of health professions. Learning is interactive and scenarios are used to develop ethical thinking. Students get to write a research report on an ethical and legal issue of their choosing.

Textbooks

Kerridge, I., Lowe, M., and Stewart, C. (2013). Ethics and law for the health professions. Leichardt: The Federation Press.

HSBH3009
International Health

Credit points: 6 **Teacher/Coordinator:** Dr Zakia Hossain **Session:** Semester 2 **Classes:** 1x2-hour lecture/week, 1x1-hr face-to-face/on-line tutorial/week **Prerequisites:** 48 credit points of units **Prohibitions:** BACH3128 **Assessment:** Online activities (Blog and MCQs) (40%); Tutorial attendance and presentation (20%); and Briefing Paper 1500wd (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit examines theoretical and practical issues confronting global health professionals and practitioners, especially in low resource settings. The unit introduces students to: a) historical, political and economic forces that influence the health of populations around the world and contribute to international health inequities; b) global health crisis (emerging infectious disease; chronic disease and disability) facing both developed and developing countries and its impact; and, c) international health practices, including key actors and initiatives, as well as challenges and strategies for working in post-colonial and cross-cultural contexts. The unit provides students with an understanding of health determinants and interventions in international contexts, with a particular emphasis on low-resource settings. Examples of topics covered include health, poverty and inequality, globalisation and trade, foreign aid and development assistance. The unit also provides an introductory overview of contemporary international health challenges such as food security, humanitarian crises and climate change. Students will undertake an in-depth study of a global health issue, exploring the context in which it emerged and the forces that propel it, and advocate for actions to improve the issue in a specific local context and population group.

HSBH3011
Rural Health

Credit points: 6 **Teacher/Coordinator:** Dr Krestina Amon **Session:** Semester 1 **Classes:** Distance education/intensive on-campus mode. Web-based learning, Week 1 lecture (2hrs) on campus with mandatory attendance. All other materials asynchronous online. **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** Attendance at timetabled lecture and online participation (25%), group assignment 3000 words (30%), individual research assignment 2000 words (45%) **Mode of delivery:** Distance education/intensive on campus

This unit introduces students to a range of practice and research issues in rural health care. Topics covered include: the nature and variety of rural settings; special populations and cultural safety; rural health needs and access to health services; relevant models of health service delivery; and the rural health workforce and inter-professional practice.

HSBH3012
FHS Abroad

Credit points: 6 **Teacher/Coordinator:** Dr Elizabeth Dylke **Session:** Semester 1, Semester 2 **Classes:** Full-day briefing session, half-day debriefing session. **Prerequisites:** Successful completion of all 1st year units in an undergraduate FHS degree **Assessment:** Pre-departure research (30%), field diary (20%), report (40%) and presentation (10%). **Practical field work:** 4-6 weeks working with a community-based organisation in a developing country. **Mode of delivery:** Field experience

Note: Students interested in participating must obtain permission from their course director before enrolling in FHS Abroad. Some degrees require participants have a minimum credit average.

Cultural practices, disease patterns and healthcare systems are vastly different in different countries around the globe. This unit provides students with the opportunity to gain international experience in a health services setting in a developing country. Students will participate in a 4-6 week health or care placement with a community-based organisation in South or Southeast Asia. Countries where students can be placed include Vietnam, Cambodia, India and the Philippines. As part of the unit, you will be expected to participate in local development programs, live within the community that you are visiting, and document and reflect on key health and development issues facing local populations. The unit will require you to demonstrate cultural sensitivity and an ability to adapt to new environments, a capacity for critical reflection and awareness of complex global health and development issues.

HSBH3013
FHS Indigenous Communities

Credit points: 6 **Teacher/Coordinator:** Dr Josephine Gwynn **Session:** Semester 2 **Classes:** 1x2-hr introduction session (to be completed before enrolment), 5x2-hr workshops,1x2-hr debriefing session, and online learning activities **Prerequisites:** Successful completion of all 1st year units in an undergraduate FHS degree **Assessment:** Pre-fieldwork preparation paper 1000wd (30%), participation and contribution to on-line learning activities and discussion (10%), Fieldwork critical reflection report (60%) **Practical field work:** approximately 4 weeks working in an Indigenous community **Mode of delivery:** Field experience

This unit provides theoretical and practical knowledge about relevant models of community development in Aboriginal communities in New South Wales. Students will gain experience in working with Aboriginal communities in a health services setting, participating in an approximately 4 week placement in a local Aboriginal community. Students participate in a community identified development project and will document and report on their experiences in working with the local Aboriginal community. Students will be required to demonstrate project management skills including time management and reporting abilities. Students are required to attend briefing and debriefing activities and complete on-line learning activities in addition to their field experience.

HSBH3015
Mental Health Rehabilitation

Credit points: 6 **Teacher/Coordinator:** A/Prof Lynda Matthews **Session:** Semester 1 **Classes:** Online **Prerequisites:** (HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009) or (48 credit points of previous study with a miminum of 24 from Intermediate units of study) **Assessment:** 2x online assessments (20%) ,1x2000wd essay (50%) and participation (30%) **Mode of delivery:** Online

Note: Students must have completed at least 48 credit points to enrol in this UoS

Poor mental health poses a major challenge to our society, and health care professionals, among others, are charged with 'making a difference'. To do so, they need to be equipped with the most up-to-date knowledge of effective mental health approaches and interventions. This unit will overview major mental health conditions and significant social, philosophical, and historical influences on health care service delivery and reform to provide a context for contemporary rehabilitation practice. Students will be introduced to the goals, values and guiding principles of psychiatric rehabilitation and to practices that aim to address the culture of stigma and low expectations by society of people with mental health conditions. Rehabilitation interventions that have demonstrated efficacy in promoting recovery by reducing obstacles to participation for people with mental health conditions will be examined. Local and international research underpinning best practice in rehabilitation management and service delivery will be reviewed and consumer perspectives and experiences explored.

HSBH3016
Individual and Societal Ageing

Credit points: 6 **Teacher/Coordinator:** A/Prof Kate O'Loughlin **Session:** Semester 2 **Classes:** 2x1-hr lecture, 1x1-hr tutorial/week **Prerequisites:** BACH1161 or HSBH1003 or HSBH1008 **Assessment:** 1500wd essay (30%), tutorial and online activities (30%) and 1hr exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Bachelor of Health Sciences students must have completed 24 credit points of HSBH junior units for enrolment into this unit. All other students must have completed 48 credit points.

This unit offers students an insight into the challenges and opportunities associated with population ageing and what is required to meet the needs of the increasing numbers of older people and those who will interact with them. It addresses the social and individual dimensions of ageing, health and well-being and the transitions that occur in later life. There will be an emphasis on the policy and practice implications of an ageing society and the role of various public and private providers (government, health care practitioners, family, voluntary) in providing services and care to older people. Students will be expected to develop a critical understanding of the issues related to ageing and the life course and gain an understanding of initiatives and policy debates relating to population ageing and quality of life of older people, their families and carers.

HSBH3018
Quantitative Research Methods in Health

Credit points: 6 **Teacher/Coordinator:** Dr Tatjana Seizova-Cajic **Session:** Semester 1 **Classes:** 1x2-hr lecture/week, 1x1-hr tutorial or laboratory session/week **Prerequisites:** HSBH1007 or HSBH2007 **Prohibitions:** PSYC2012 or SCLG3603 **Assessment:** Group presentation (10%), In-class quiz (20%), 1000wd report (20%) and end semester exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit teaches about the research process from development of a research question to study design, quantitative data analysis, and interpretation of outcomes in the context of theory and practical applications. You will learn about concepts and logic that apply to quantitative research in general, with an emphasis on issues and types of studies most relevant in health research. As either an individual or group exercise, you will perform most aspects of the research process using examples given to you or created by you, and will receive comprehensive feedback along the way. The unit will prepare you to critically evaluate research findings in your future career, and to engage in further research training should you wish to do so. Skills you are expected to develop include succinct academic writing, simple data analysis using SPSS, and developing ideas in the context of teamwork.

Textbooks

Portney, L. G., and Watkins, M. P. (2009). Foundations of clinical research: Applications to practice (3rd ed.). Essex, England: Pearson Education Limited.

HSBH3022
Health Promotion: Principles and Practice

Credit points: 6 **Teacher/Coordinator:** Dr Justin McNab **Session:** Semester 1 **Classes:** 1x2-hr workshop/week **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** 1x1500wd essay (40%), 1x 15 min group oral presentation (10%) and 1x 2000wd project plan (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study introduces students to the key theories, principles and frameworks underpinning health promotion. Students will critically examine individual and socio-ecological approaches, models of community participation, and settings approaches. Students will develop an appreciation that effective health promotion involves actions that are aimed, not only at increasing the knowledge and skills of individuals, but also actions to strengthen community action and to create living and working environments that support health. Students will develop knowledge in the application of health promotion programs in diverse populations and settings, including Indigenous, culturally and linguistically diverse (CALD) and rural groups. Students will consider how health promotion fits within the broader health context, and the ways in which health promotion practitioners work collaboratively with communities, work places, schools, government and other health professionals to improve the health of populations. The theoretical and applied skills that students develop will prepare students for careers in health promotion practice and research.

HSBH3023
BHS Work Integrated Learning Placement

Credit points: 6 **Teacher/Coordinator:** Dr Elizabeth Bourne **Session:** Semester 2 **Classes:** 1 full day workshop prior to and 1 full day workshop at end of placement; online and/or face to face tutorial support during placement **Prerequisites:** (BIOL1001 OR BIOL1003) AND (PSYC1001 OR PSYC1002) AND at least 12cp from the list of BHlthSci senior units of study AND at least 24cp of units of study from the second major **Prohibitions:** HSBH3012, HSBH3013, CSCD3090 **Assumed knowledge:** Introductory neuroscience **Assessment:** compliance checking (pass/fail); attendance at briefing and debriefing activities (pass/fail); attendance at 10 full days or 20 half days of placement (pass/fail); project plan (10%); on-line forum (10%); reflective report (10%); project report (50%); presentation (10%); and supervisorÂ¿s evaluation (10%) **Practical field work:** work integrated learning placement (1 day/week or 2 half-days/week for 10 weeks, negotiated with the placement site) **Mode of delivery:** Professional practice

Note: Eligible students will require permission from the Course Director to enrol in this unit of study. Enrolment will be subject to availability of suitable placements.

This Work Integrated Learning placement will be offered to high achieving BHthSci students (other than students doing the Hearing and Speech major or the BHS/MNursing dual degree) and will take place in settings aligned with their second major. The placement will be preceded and concluded by briefing and debriefing workshops on campus, with the placement occurring part-time over a maximum of 10 weeks in university approved workplaces. Learning activities and assessment tasks will support the development of graduate attributes, work-readiness and employability skills for students.

HSBH3024
Designing a Research Project

Credit points: 6 **Teacher/Coordinator:** Dr Vanessa Lee **Session:** Semester 2 **Classes:** 1 x 2-hr workshop, and 1x1-hr online and practical activities/week **Prerequisites:** (HSBH1006 AND (HSBH1007 OR HSBH2007) AND HSBH1008 AND HSBH1009) OR ((BACH1161 OR HSBH1003) AND HSBH1007) **Assessment:** ethics assignment 1500 wds (30%), oral presentation (20%), research proposal 2000 wds (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is designed to assist students understand the principles of writing a research proposal, applicable for either project planning or evaluation within health or for further research (e.g., Honours). Students will be introduced to the key components of preparing and writing up a proposal: purpose of the research and question(s) to be addressed; reviewing existing literature on the topic; deciding on a research methodology and methods used to collect data; proposing an approach for data analysis; identifying ethical issues and working through the process of applying for ethics approval; providing a clear plan and timeline for each stage of the research. At the completion of this unit, students will have undertaken an ethics application, planned, orally presented and written up a research proposal. This unit of study is recommended for students who wish to undertake Honours after completion of the pass degree.

Selective

HSBH3001
Health and Indigenous Populations

Credit points: 6 **Teacher/Coordinator:** Dr Vanessa Lee **Session:** Semester 1, Semester 2 **Classes:** 1x2-hr lecture/week, 1x1-hr tutorial/week. **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009) or (BACH1161 or HSBH1003) **Assessment:** On line quizzes (20%), Case study report 1500wd (40%), Critique diary 1500wd (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this unit of study is to provide students with the necessary tools to work with Aboriginal and Torres Strait Islander people and communities for equitable health service delivery. It explores the post-colonial impact and the policies that have contibuted to the adverse health outcomes that we see in the Aboriginal and Torres Strait Islander population of contemporary Australia today. The unit of study will also provide students with avenues of Best Practice in closing the gap between Indigenous and non-Indigenous people, for effective health service delivery.

HSBH3003
Health Service Strategy and Policy

Credit points: 6 **Teacher/Coordinator:** A/Prof Kate O'Loughlin **Session:** Semester 2 **Classes:** 1x2-hr lectures/week, 1-hr tutorial/week **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** Tutorial activities (10%), online quizzes (15%), 2000wd report (35%) and 1.5hr exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study offers students an insight into the larger picture of how a nation sets priorities for health services. The importance of evidence-based health policy development in planning health services and strategies for increasing the cost-effectiveness of delivering health services will be covered. Students will gain skills in health service needs assessment, measuring cost-effectiveness, macroeconomic evaluation of health services and systems, and health equity assessment. It is envisaged that students will develop a capacity to understand the concept of health policy and its relevance to the delivery of health care services and to take a problem-oriented approach to analysing and evaluating current policy provisions and strategies in the Australian context.

HSBH3004
Health, Ethics and the Law

Credit points: 6 **Teacher/Coordinator:** A/Prof Jennifer Smith-Merry **Session:** Semester 1 **Classes:** 1x2-hr lectures/week, 1-hr tutorial/week **Prerequisites:** 48 credit points of units **Assessment:** Mid-semester exam (20%), research report (40%) and final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study focuses on ethics and law in relation to the Australian health system. Fundamental ethical principles applied to ethical issues in health and health research are covered. Medico-legal aspects of health and health services will be explored. Particular areas of focus include mental health, health complaints, reproductive technologies, the start and end of life, disability, public health and genetic technology. Students will develop their own ethical thinking and an understanding of professionally acceptable behaviours appropriate to practice in a wide range of health professions. Learning is interactive and scenarios are used to develop ethical thinking. Students get to write a research report on an ethical and legal issue of their choosing.

Textbooks

Kerridge, I., Lowe, M., and Stewart, C. (2013). Ethics and law for the health professions. Leichardt: The Federation Press.

HSBH3005
Evidence Based Health Care

Credit points: 6 **Teacher/Coordinator:** Dr Grace Spencer **Session:** Semester 2 **Classes:** 1x2-hr lecture/week, 1x1-hr tutorial/week **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** PICO framework (40%), critical apprisal essay (40%) and impact statement (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Evidence-based health care is the conscientious use of current best evidence in making decisions about the care of individuals or the delivery of health services. This unit will introduce you to evidence based health care by developing your understanding of knowledge and evidence, and critical appraisal skills to inform your decision making in health care policy and practice.

Textbooks

Hoffman, T., Bennett, S. and Del Mar, C. (2013). Evidence-based practice across the health professions (2nd ed.). Chatswood: Elsevier.

HSBH3009
International Health

Credit points: 6 **Teacher/Coordinator:** Dr Zakia Hossain **Session:** Semester 2 **Classes:** 1x2-hour lecture/week, 1x1-hr face-to-face/on-line tutorial/week **Prerequisites:** 48 credit points of units **Prohibitions:** BACH3128 **Assessment:** Online activities (Blog and MCQs) (40%); Tutorial attendance and presentation (20%); and Briefing Paper 1500wd (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit examines theoretical and practical issues confronting global health professionals and practitioners, especially in low resource settings. The unit introduces students to: a) historical, political and economic forces that influence the health of populations around the world and contribute to international health inequities; b) global health crisis (emerging infectious disease; chronic disease and disability) facing both developed and developing countries and its impact; and, c) international health practices, including key actors and initiatives, as well as challenges and strategies for working in post-colonial and cross-cultural contexts. The unit provides students with an understanding of health determinants and interventions in international contexts, with a particular emphasis on low-resource settings. Examples of topics covered include health, poverty and inequality, globalisation and trade, foreign aid and development assistance. The unit also provides an introductory overview of contemporary international health challenges such as food security, humanitarian crises and climate change. Students will undertake an in-depth study of a global health issue, exploring the context in which it emerged and the forces that propel it, and advocate for actions to improve the issue in a specific local context and population group.

HSBH3010
Health and Lifelong Disability

Credit points: 6 **Teacher/Coordinator:** Dr Zakia Hossain **Session:** Semester 2 **Classes:** 1x2-hr lecture/week, 1x1-hr tutorial/week. **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** Tutorial activities(20%), essay 2000wd (35%) and case study (45%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study explores the roles and responsibilities of health professionals who work with children, adolescents and adults with lifelong disabilities, and their families. Using an inter-professional case-based curriculum, students will examine the nature of lifelong disability; factors which affect the participation of persons with lifelong disability in everyday life activities including education, leisure, and employment; and strategies for increasing their participation in these activities. Students will be supported to critique research literature, to examine the roles and responsibilities of allied health professionals in the context of working with persons with lifelong disability, and to develop practical strategies for interacting and working collaboratively and successfully with children, adolescents, and adults with lifelong disabilities, their families and fellow professionals. It is expected that through a combination of face-to-face teaching and online learning activities, this unit will assist students in preparing to work with individuals with lifelong disabilities in a range of workplace settings.

HSBH3011
Rural Health

Credit points: 6 **Teacher/Coordinator:** Dr Krestina Amon **Session:** Semester 1 **Classes:** Distance education/intensive on-campus mode. Web-based learning, Week 1 lecture (2hrs) on campus with mandatory attendance. All other materials asynchronous online. **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** Attendance at timetabled lecture and online participation (25%), group assignment 3000 words (30%), individual research assignment 2000 words (45%) **Mode of delivery:** Distance education/intensive on campus

This unit introduces students to a range of practice and research issues in rural health care. Topics covered include: the nature and variety of rural settings; special populations and cultural safety; rural health needs and access to health services; relevant models of health service delivery; and the rural health workforce and inter-professional practice.

HSBH3012
FHS Abroad

Credit points: 6 **Teacher/Coordinator:** Dr Elizabeth Dylke **Session:** Semester 1, Semester 2 **Classes:** Full-day briefing session, half-day debriefing session. **Prerequisites:** Successful completion of all 1st year units in an undergraduate FHS degree **Assessment:** Pre-departure research (30%), field diary (20%), report (40%) and presentation (10%). **Practical field work:** 4-6 weeks working with a community-based organisation in a developing country. **Mode of delivery:** Field experience

Note: Students interested in participating must obtain permission from their course director before enrolling in FHS Abroad. Some degrees require participants have a minimum credit average.

Cultural practices, disease patterns and healthcare systems are vastly different in different countries around the globe. This unit provides students with the opportunity to gain international experience in a health services setting in a developing country. Students will participate in a 4-6 week health or care placement with a community-based organisation in South or Southeast Asia. Countries where students can be placed include Vietnam, Cambodia, India and the Philippines. As part of the unit, you will be expected to participate in local development programs, live within the community that you are visiting, and document and reflect on key health and development issues facing local populations. The unit will require you to demonstrate cultural sensitivity and an ability to adapt to new environments, a capacity for critical reflection and awareness of complex global health and development issues.

HSBH3013
FHS Indigenous Communities

Credit points: 6 **Teacher/Coordinator:** Dr Josephine Gwynn **Session:** Semester 2 **Classes:** 1x2-hr introduction session (to be completed before enrolment), 5x2-hr workshops,1x2-hr debriefing session, and online learning activities **Prerequisites:** Successful completion of all 1st year units in an undergraduate FHS degree **Assessment:** Pre-fieldwork preparation paper 1000wd (30%), participation and contribution to on-line learning activities and discussion (10%), Fieldwork critical reflection report (60%) **Practical field work:** approximately 4 weeks working in an Indigenous community **Mode of delivery:** Field experience

This unit provides theoretical and practical knowledge about relevant models of community development in Aboriginal communities in New South Wales. Students will gain experience in working with Aboriginal communities in a health services setting, participating in an approximately 4 week placement in a local Aboriginal community. Students participate in a community identified development project and will document and report on their experiences in working with the local Aboriginal community. Students will be required to demonstrate project management skills including time management and reporting abilities. Students are required to attend briefing and debriefing activities and complete on-line learning activities in addition to their field experience.

HSBH3015
Mental Health Rehabilitation

Credit points: 6 **Teacher/Coordinator:** A/Prof Lynda Matthews **Session:** Semester 1 **Classes:** Online **Prerequisites:** (HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009) or (48 credit points of previous study with a miminum of 24 from Intermediate units of study) **Assessment:** 2x online assessments (20%) ,1x2000wd essay (50%) and participation (30%) **Mode of delivery:** Online

Note: Students must have completed at least 48 credit points to enrol in this UoS

Poor mental health poses a major challenge to our society, and health care professionals, among others, are charged with 'making a difference'. To do so, they need to be equipped with the most up-to-date knowledge of effective mental health approaches and interventions. This unit will overview major mental health conditions and significant social, philosophical, and historical influences on health care service delivery and reform to provide a context for contemporary rehabilitation practice. Students will be introduced to the goals, values and guiding principles of psychiatric rehabilitation and to practices that aim to address the culture of stigma and low expectations by society of people with mental health conditions. Rehabilitation interventions that have demonstrated efficacy in promoting recovery by reducing obstacles to participation for people with mental health conditions will be examined. Local and international research underpinning best practice in rehabilitation management and service delivery will be reviewed and consumer perspectives and experiences explored.

HSBH3016
Individual and Societal Ageing

Credit points: 6 **Teacher/Coordinator:** A/Prof Kate O'Loughlin **Session:** Semester 2 **Classes:** 2x1-hr lecture, 1x1-hr tutorial/week **Prerequisites:** BACH1161 or HSBH1003 or HSBH1008 **Assessment:** 1500wd essay (30%), tutorial and online activities (30%) and 1hr exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Bachelor of Health Sciences students must have completed 24 credit points of HSBH junior units for enrolment into this unit. All other students must have completed 48 credit points.

This unit offers students an insight into the challenges and opportunities associated with population ageing and what is required to meet the needs of the increasing numbers of older people and those who will interact with them. It addresses the social and individual dimensions of ageing, health and well-being and the transitions that occur in later life. There will be an emphasis on the policy and practice implications of an ageing society and the role of various public and private providers (government, health care practitioners, family, voluntary) in providing services and care to older people. Students will be expected to develop a critical understanding of the issues related to ageing and the life course and gain an understanding of initiatives and policy debates relating to population ageing and quality of life of older people, their families and carers.

HSBH3018
Quantitative Research Methods in Health

Credit points: 6 **Teacher/Coordinator:** Dr Tatjana Seizova-Cajic **Session:** Semester 1 **Classes:** 1x2-hr lecture/week, 1x1-hr tutorial or laboratory session/week **Prerequisites:** HSBH1007 or HSBH2007 **Prohibitions:** PSYC2012 or SCLG3603 **Assessment:** Group presentation (10%), In-class quiz (20%), 1000wd report (20%) and end semester exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit teaches about the research process from development of a research question to study design, quantitative data analysis, and interpretation of outcomes in the context of theory and practical applications. You will learn about concepts and logic that apply to quantitative research in general, with an emphasis on issues and types of studies most relevant in health research. As either an individual or group exercise, you will perform most aspects of the research process using examples given to you or created by you, and will receive comprehensive feedback along the way. The unit will prepare you to critically evaluate research findings in your future career, and to engage in further research training should you wish to do so. Skills you are expected to develop include succinct academic writing, simple data analysis using SPSS, and developing ideas in the context of teamwork.

HSBH3019
Qualitative Research Methods in Health

Credit points: 6 **Teacher/Coordinator:** A/Prof Jennifer Smith-Merry **Session:** Semester 2 **Classes:** 1x2-hr Workshop/week, 1x1-hr tutorial/week **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Prohibitions:** SCLG2602 or BACH4056 **Assessment:** 750wd research report (20%),2000wd research report (50%) and end semester take-home exam (30%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study has three aims: to build on core units of study offered in First Year and Second Year to provide critical appraisal skills in reading and utilising qualitative research related to health behaviour and health care; to understand the theoretical orientation of contemporary qualitative health research methods; and to develop skills in undertaking qualitative research methods. With a focus on applying critical and theoretical knowledge, the unit has a practical orientation and students will gain experience in techniques of observation, document analysis, in-depth interviewing and focus group interviews.

HSBH3022
Health Promotion: Principles and Practice

Credit points: 6 **Teacher/Coordinator:** Dr Justin McNab **Session:** Semester 1 **Classes:** 1x2-hr workshop/week **Prerequisites:** HSBH1006 and (HSBH1007 or HSBH2007) and HSBH1008 and HSBH1009 **Assessment:** 1x1500wd essay (40%), 1x 15 min group oral presentation (10%) and 1x 2000wd project plan (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study introduces students to the key theories, principles and frameworks underpinning health promotion. Students will critically examine individual and socio-ecological approaches, models of community participation, and settings approaches. Students will develop an appreciation that effective health promotion involves actions that are aimed, not only at increasing the knowledge and skills of individuals, but also actions to strengthen community action and to create living and working environments that support health. Students will develop knowledge in the application of health promotion programs in diverse populations and settings, including Indigenous, culturally and linguistically diverse (CALD) and rural groups. Students will consider how health promotion fits within the broader health context, and the ways in which health promotion practitioners work collaboratively with communities, work places, schools, government and other health professionals to improve the health of populations. The theoretical and applied skills that students develop will prepare students for careers in health promotion practice and research.

HSBH3023
BHS Work Integrated Learning Placement

Credit points: 6 **Teacher/Coordinator:** Dr Elizabeth Bourne **Session:** Semester 2 **Classes:** 1 full day workshop prior to and 1 full day workshop at end of placement; online and/or face to face tutorial support during placement **Prerequisites:** (BIOL1001 OR BIOL1003) AND (PSYC1001 OR PSYC1002) AND at least 12cp from the list of BHlthSci senior units of study AND at least 24cp of units of study from the second major **Prohibitions:** HSBH3012, HSBH3013, CSCD3090 **Assumed knowledge:** Introductory neuroscience **Assessment:** compliance checking (pass/fail); attendance at briefing and debriefing activities (pass/fail); attendance at 10 full days or 20 half days of placement (pass/fail); project plan (10%); on-line forum (10%); reflective report (10%); project report (50%); presentation (10%); and supervisorÂ¿s evaluation (10%) **Practical field work:** work integrated learning placement (1 day/week or 2 half-days/week for 10 weeks, negotiated with the placement site) **Mode of delivery:** Professional practice

Note: Eligible students will require permission from the Course Director to enrol in this unit of study. Enrolment will be subject to availability of suitable placements.

This Work Integrated Learning placement will be offered to high achieving BHthSci students (other than students doing the Hearing and Speech major or the BHS/MNursing dual degree) and will take place in settings aligned with their second major. The placement will be preceded and concluded by briefing and debriefing workshops on campus, with the placement occurring part-time over a maximum of 10 weeks in university approved workplaces. Learning activities and assessment tasks will support the development of graduate attributes, work-readiness and employability skills for students.

HSBH3024
Designing a Research Project

Credit points: 6 **Teacher/Coordinator:** Dr Vanessa Lee **Session:** Semester 2 **Classes:** 1 x 2-hr workshop, and 1x1-hr online and practical activities/week **Prerequisites:** (HSBH1006 AND (HSBH1007 OR HSBH2007) AND HSBH1008 AND HSBH1009) OR ((BACH1161 OR HSBH1003) AND HSBH1007) **Assessment:** ethics assignment 1500 wds (30%), oral presentation (20%), research proposal 2000 wds (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is designed to assist students understand the principles of writing a research proposal, applicable for either project planning or evaluation within health or for further research (e.g., Honours). Students will be introduced to the key components of preparing and writing up a proposal: purpose of the research and question(s) to be addressed; reviewing existing literature on the topic; deciding on a research methodology and methods used to collect data; proposing an approach for data analysis; identifying ethical issues and working through the process of applying for ethics approval; providing a clear plan and timeline for each stage of the research. At the completion of this unit, students will have undertaken an ethics application, planned, orally presented and written up a research proposal. This unit of study is recommended for students who wish to undertake Honours after completion of the pass degree.

REHB3064
Alcohol and Drug Misuse Rehabilitation

Credit points: 6 **Teacher/Coordinator:** Dr Rodd Rothwell **Session:** Semester 1 **Classes:** Online **Prerequisites:** (HSBH1006, (HSBH1007 or HSBH2007), HSBH1008, HSBH1009) or 48 credit points of previous study. **Prohibitions:** REHB3061 **Assessment:** Short answer test (20%), Essay 2500 words (40%), 2 x online MCQ tests (40%) **Mode of delivery:** Distance education

Note: Students must have completed 48 credit points to enrol in this unit

This unit introduces students to issues relating to a major public health problem: the misuse of alcohol and other addictive drugs. The unit introduces students to two major aspects of this area: issues relating to the development of health prevention/health promotion policy, covering the philosophies of harm minimisation and zero tolerance; approaches to rehabilitation and treatment of those overusing both alcohol and other drugs. The unit commences with an analysis of public health policy approaches to the rehabilitation and treatment of people overusing alcohol and other harmful drugs. Students will be required to undertake an exercise involving an analysis of the effectiveness of the two major policy approaches to the problem of drug overuse and abuse: harm reduction and zero tolerance. They will be required to examine the evidence supporting these two approaches to public health policy. In the second part of the unit students will study the major therapeutic approaches to treatment and rehabilitation. This will include familiarisation with Alcoholics Anonymous, clinically based approaches including transactional analysis and other group therapy oriented approaches, the various behavioural therapies, therapeutic communities, methadone maintenance, needle exchange and recent trails in safe injection facilities. They will become familiar with the nature of services offered, the role of the various health professionals in these services and the nature of effective treatment and rehabilitation outcomes.

History and Philosophy of Science

Study in the discipline of History and Philosophy of Science is offered by the School of History and Philosophy and Science in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

A major in History and Philosophy of Science (HPS) will allow you to enrich and deepen your knowledge of science and its place in modern society. The study of HPS also allows you to stand back from the specialised concerns of other subjects by gaining a broader perspective on what science is, how it acquired its current form, how it fits into contemporary society, and to analyse the ramifications of scientific developments in a social, cultural, and ethical perspective.

Graduates emerge with an ability to identify and examine the conceptual and social dimensions of science and technology in an historical perspective using a variety of scholarly techniques. History and Philosophy of Science is a valuable field of study for any career requiring an understanding of science, with particular relevance for careers in government or industry that require addressing and managing complex problems.

Requirements for completion

A major in History and Philosophy of Science requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level core units
(iii)24 credit points of 3000-level core units

A minor in History and Philosophy of Science is available and articulates to this major.

First year

Core: HPSC1X00 Bioethics and HPSC1X01 What is this thing called Science?

Second year

Core: HPSC2X00 The Birth of Modern Science and HPSC2011 Science Ethics and Society

Third year

Core: HPSC3002 History and Philosophy of the Biomedical Sciences, HPSC3016 The Scientific Revolution, HPSC3108 History and Philosophy of the Physical Sciences, HPSC3023 History and Philosophy of Psychology and Psychiatry.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of History and Philosophy of Science: completion of 24 credit points of project work and 24 credit points of coursework.

Honours units of study will be available in 2020.

Unit of History and Philosophy of Science
Level 3, Carslaw Building F07
University of Sydney NSW 2006

Learning Outcomes

Graduates emerge with an ability to identify and examine the conceptual and social dimensions of science and technology in an historical perspective using a variety of scholarly techniques. It is a valuable field of study for any career requiring an understanding of science, with particular relevance for careers in government or industry that require addressing and managing complex problems.

It is especially usefully for science students in that it allows reflective exploration of the practices and theories within various scientific fields. However, any student with a genuine interest in science will derive benefit from study in HPS.

Units of study

The units of study are listed below.

1000-level units of study

Core

HPSC1000
Bioethics

Credit points: 6 **Teacher/Coordinator:** Assoc. Professor Dominic Murphy **Session:** Intensive July, Semester 1, Summer Main **Classes:** Three 1 hour lectures and one 1 hour tutorial per week **Prohibitions:** HPSC1900 **Assessment:** 3 x 1,250 word papers and tutorial work **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This Junior unit of study is highly recommended to Intermediate and Senior Life Sciences students.

Science has given us nearly infinite possibilities for controlling life. Scientists probe the origins of life through research with stem cells and embryos. To unlock the secrets of disease, biomedicine conducts cruel experiments on animals. GM crops are presented as the answer to hunger. Organ transplantation is almost routine. The international traffic in human body parts and tissues is thriving. The concept of brain death makes harvesting organs ethically more acceptable. It may also result in fundamental changes in our ideas about life. Science has provided new ways of controlling and manipulating life and death. As a consequence, difficult ethical questions are raised in increasingly complex cultural and social environments. This course will discuss major issues in the ethics of biology and medicine, from gene modification to Dolly the sheep. This unit will be introductory, but a small number of topical issues will be studied in depth. No scientific background beyond Year 10 level will be assumed.

HPSC1001
What is this Thing Called Science?

Credit points: 6 **Teacher/Coordinator:** Prof Peter Godfrey-Smith **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x1-hr online study; and 1x1-hr tutorial per week **Prohibitions:** HPSC2101 or HPSC2901 or HPSC1901 **Assessment:** essays and online tasks **Mode of delivery:** Normal (lecture/lab/tutorial) day

What distinguishes creationism from evolutionary theory, or astrology from astronomy? Can we have good reason to believe that our current scientific theories represent the world "as it really is"? This course critically examines the most important attempts to describe the scientific method, to draw a line dividing science from non-science, and to justify the high status generally accorded to scientific knowledge. Views studied include Karl Popper's idea that scientific theories are falsifiable in principle, Thomas Kuhn's proposal that science consists of a series of paradigms separated by abrupt scientific revolutions, and claims by Feyerabend and others that there are no objective criteria by which science can be distinguished from pseudo-science. This unit of study also explores contemporary theories of evidence and explanation, the role of social values in science, sociological approaches to understanding science, and the nature of scientific change.

HPSC2100
The Birth of Modern Science

Credit points: 6 **Teacher/Coordinator:** Professor Ofer Gal **Session:** Semester 1, Summer Main **Classes:** Three 1 hour lectures, one 1 hour tutorial per week. **Prerequisites:** 24 credit points of Junior units of study **Prohibitions:** HPSC2900 **Assessment:** 4xquizzes (30%) and 6x100wd questions (30%) and 3x750wd essays (30%) and class participation (10%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Modern culture is a culture of science and modern science is the outcome of a historical process of 2,500 years. In this course we investigate how traditional knowledge gradually acquired the characteristics of 'science': the social structure, contents, values and methods we are familiar with. We will look at some primary chapters of this process, from antiquity to the end of the seventeenth century, and try to understand their implications to understanding contemporary science in its culture. Special emphasis will be given to the scientific revolution of the seventeenth century, which is often described as the most important period in the history of science and as one of the most vital stages in human intellectual history.

Science, Ethics and Society

Credit points: 6 **Teacher/Coordinator:** Dr Daniela Helbig **Session:** Semester 1 **Classes:** lecture 2hrs/ week; tutorial 1 hr/week **Prohibitions:** HPSC3107 **Assumed knowledge:** Students should be familiar will introductory material in Philosophy of Science, Ethics or Sociology. **Assessment:** assignments, quizzes, tutorial participation (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study investigates the place of science in society, the internal dynamics of science, and ethical issues within science and in relation to its application. The key idea in this course is that science is a social activity that can be studied like other social phenomena and behaviour. There are three components to this Unit of Study: an exploration of the motivations of scientists and how they can be described using cognitive and ethical rules; science and the media; and ethical issues that have become prominent because of recent developments in science.

3000-level units of study

Core

HPSC3002
Hist and Phil of the Biomedical Sciences

Credit points: 6 **Teacher/Coordinator:** Dr Daniela Helbig **Session:** Semester 2 **Classes:** Two 1 hour lectures and two 1 hour tutorials per week. **Prerequisites:** (HPSC2100 or HPSC2900) and (HPSC2101 or HPSC2901) **Assessment:** 2x300-400wd reports (25%) and 1xclass presentation (25%) and class questions (10%) and 1x2500-3000 wd essay (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Throughout the ages people have been born, have died, and in between have lived in various stages of sickness or health. In this unit of study we shall look at how these states of being were perceived in different times and places throughout history, while at the same time noting the increasing medicalisation of everyday life, together with the irony that the "miracles" of modern medicine appear to have created a generation of the "worried well". Using this historical perspective, we shall ask how perceptions of sickness, health and the related provision of health care have been intertwined with social, political and economic factors and, indeed still are today.

HPSC3016
The Scientific Revolution

Credit points: 6 **Teacher/Coordinator:** Prof Ofer Gal **Session:** Semester 2 **Classes:** Two 1 hour lectures and two 1 hour tutorials per week. Individual student consultation as required. **Prerequisites:** (HPSC2100 or HPSC2900) and (HPSC2101 or HPSC2901) **Assessment:** 10x150wd questions (40%) and 1x 3500wd essay (40%) and 1 x Experiment (10%) and Class Participation (10%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Modern Western science has a number of characteristics that distinguish it from other scientific cultures. It ascribes its tremendous success to sophisticated experiments and meticulous observation. It understands the universe in terms of tiny particles in motion and the forces between them. It is characterised by high- powered mathematical theorising and the rejection of any intention, value or purpose in Nature. Many of these characteristics were shaped in the 17th century, during the so-called scientific revolution. We will consider them from an integrated historical- philosophical perspective, paying special attention to the intellectual motivations of the canonical figures of this revolution and the cultural context in which they operated. Topics will include: experimentation and instrumentation, clocks, mechanistic philosophy, and the changing role of mathematics.

HPSC3108
Hist and Phil of the Physical Sciences

Credit points: 6 **Teacher/Coordinator:** Professor Dean Rickles **Session:** Semester 1 **Classes:** One 2-hour lecture and two 1-hour tutorials per week. **Prerequisites:** HPSC2101 or HPSC2901 **Assessment:** Four 1500-word essays (4x25%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study deals with a selection of contemporary debates in the history and philosophy of natural sciences. It covers four main themes: (1) the question of how evidence is gathered in the natural sciences and how it is (and/or other factors) go into confirming theories-we also consider what confirmation consists in (including an examination of Bayesianism). (2) Issues of modelling, representation, and measurement, including an analysis of the ways idealisation, approximation, and simulation are to be understood. (3) Models of scientific explanation, including recent work on laws, prediction, and causality. (4) issues of emergence and reduction, including the problems associated with defining such concepts - we also consider notions of simplicity and the impact of the sciences of complexity. The unit of study involves case studies from the natural sciences that allow students to apply their knowledge and test their understanding. Upon completion of the unit, students will have developed a range of skills that will allow them to explore the physical sciences with more critical attitude.

HPSC3023
Psychology and Psychiatry: History and Phil

Credit points: 6 **Teacher/Coordinator:** A/Prof Hans Pols and Dr Fiona Hibberd **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 2 hour tutorial per week. **Prerequisites:** (12 credit points of Intermediate HPSC units) OR (Credit or greater in an HPSC Intermediate unit) OR (12 Intermediate credit points in Psychology units) **Assumed knowledge:** HPSC2100 and HPSC2101 **Assessment:** 1x 2500wd essay (45%) and 1x2hr exam (45%) class participation (10%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Across the unit we examine one of the most interesting aspects of the history and philosophy of science. viz., the scientific practices and assumptions involved in making human beings an object of study. We will examine the ways in which psychologists and psychiatrists have investigated human nature, the kinds of experimental approaches they have developed to that end, the major controversies in this field, and the basic philosophical assumptions that have been made in the sciences of human nature. We investigate the developments of psychological theories and investigative methods as well as the development of psychiatric theory, treatment methods, and institutions.

Credit points: 6 **Teacher/Coordinator:** Professor Dean Rickles **Session:** Semester 1 **Classes:** One 2-hour lecture and two 1-hour tutorials per week. **Prerequisites:** HPSC2101 or HPSC2901 **Assessment:** Four 1500-word essays (4x25%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study deals with a selection of contemporary debates in the history and philosophy of natural sciences. It covers four main themes: (1) the question of how evidence is gathered in the natural sciences and how it is (and/or other factors) go into confirming theories-we also consider what confirmation consists in (including an examination of Bayesianism). (2) Issues of modelling, representation, and measurement, including an analysis of the ways idealisation, approximation, and simulation are to be understood. (3) Models of scientific explanation, including recent work on laws, prediction, and causality. (4) issues of emergence and reduction, including the problems associated with defining such concepts - we also consider notions of simplicity and the impact of the sciences of complexity. The unit of study involves case studies from the natural sciences that allow students to apply their knowledge and test their understanding. Upon completion of the unit, students will have developed a range of skills that will allow them to explore the physical sciences with more critical attitude.

HPSC3023
Psychology and Psychiatry: History and Phil

Credit points: 6 **Teacher/Coordinator:** A/Prof Hans Pols and Dr Fiona Hibberd **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 2 hour tutorial per week. **Prerequisites:** (12 credit points of Intermediate HPSC units) OR (Credit or greater in an HPSC Intermediate unit) OR (12 Intermediate credit points in Psychology units) **Assumed knowledge:** HPSC2100 and HPSC2101 **Assessment:** 1x 2500wd essay (45%) and 1x2hr exam (45%) class participation (10%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Across the unit we examine one of the most interesting aspects of the history and philosophy of science. viz., the scientific practices and assumptions involved in making human beings an object of study. We will examine the ways in which psychologists and psychiatrists have investigated human nature, the kinds of experimental approaches they have developed to that end, the major controversies in this field, and the basic philosophical assumptions that have been made in the sciences of human nature. We investigate the developments of psychological theories and investigative methods as well as the development of psychiatric theory, treatment methods, and institutions.

Human Movement

Study in the Discipline of Human Movement is offered by the Faculty of Health Sciences. The Human Movement major and minor are available to students in the Health stream as a second major or minor only.

About the major

A major in Human Movement integrates anatomical, physiological and biomechanical principles related to human movement and will equip you with a background to assist in health service roles and the conduct of research and analysis of data relevant to the study of human movement.

The Human Movement major provides a strong foundation for further graduate study in fields such as physiotherapy and medicine (subject to meeting eligibility criteria).

Requirements for completion

A major in Human Movement requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)18 credit points of 2000-level core units
(iii)12 credit points of 3000-level core units
(iv)6 credit points of 3000-level selective units

A minor in Human Movement is available and articulates to this major.

First year

BIOS1168 and BIOS1169 introduce functional musculoskeletal anatomy specifically designed for the study of human movement.

Second year

BIOS2170, BIOS2171, EXSS2XXX cover in depth study of various systems relevant to human movement including cardiovascular, respiratory, renal and nervous systems as well as how muscles adapt to use and disuse.

Third year

EXSS3XX2, EXSS3XX1 and 6 credit points from a selection of: EXSS3XX3, BIOS3065.

This suite of 3000 level units is designed to help you understand how one learns and controls movements, how to analyse movement, and how the body responds to exercise.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000 level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020

Honours
Requirements for Honours in the area of Human Movement: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Human Movement will be able to:

1. Demonstrate the ability to integrate the anatomical, physiological and biomechanical principles related to human movement.
2. Demonstrate the ability to identify and apply scientific, evidence-based approaches to the measurement and enhancement of human movement.
3. Demonstrate the ability to interpret findings and to solve problems in a range of human movement performance contexts.
4. Develop knowledge, skills and attitudes about human movement that are transferable across global contexts, employment sectors and people.
5. Communicate effectively using a variety of modalities and technologies.
6. Develop the necessary skills, attitudes and behaviours to provide responsible, ethical, socially acceptable practices.

Units of study

The units of study are listed below.

1000-level units of study

Core

BIOS1168
Functional Musculoskeletal Anatomy A

Credit points: 6 **Teacher/Coordinator:** Dr Cliffton Chan, Dr Joanna Diong **Session:** Semester 1, Semester 2 **Classes:** 2hr lectures, 2hr practical:tutorial/week **Prohibitions:** BIOS1136 or BIOS1159 or BIOS5090 **Assessment:** Mid semester practical exam (30%), end semester practical exam (30%), end semester exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Semester 1 Unit Coordinators are Dr Cliffton Chan and A/Prof Leslie Nicholson, Semester 2 unit coordinator is Dr Joanna Diong

This unit of study introduces the basic concepts in musculoskeletal anatomy prior to a more detailed study of the gross anatomical structure of the upper limb as it relates to functional activities. Students will also study the histological structure of musculoskeletal tissues and surface anatomy of the upper limb. Material will be presented in lectures, practical sessions and online. Students will also be expected to undertake some independent learning activities. This unit includes laboratory classes in which human cadavers are studied; attendance at such classes is compulsory.

BIOS1169
Functional Musculoskeletal Anatomy B

Credit points: 6 **Teacher/Coordinator:** Ms Jan Douglas-Morris **Session:** Semester 1, Semester 2 **Classes:** 2hr lectures, 2hr practical-tutorial/week **Prerequisites:** BIOS1168 **Prohibitions:** BIOS1139 or BIOS1144 or BIOS1160 **Assessment:** Online test (5%), mid-semester practical exam (30%), end-semester practical exam (25%), end-semester theory exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study examines the detailed gross, radiological and surface anatomy of the lower limb, trunk and neck. Included are the anatomical analyses of functional activities which involve the lower limb, back and neck. Material will be presented in lectures, practical and tutorial sessions and online. Students will also be expected to undertake some independent learning activities. This unit includes laboratory classes in which human cadavers are studied; attendance at such classes is compulsory.

2000-level units of study

Core

BIOS2170, BIOS2171 and EXSS2XXX to be developed for offering in 2019.

3000-level units of study

Major core

EXSS3XX2 and EXSS3XX1 to be developed for offering in 2019.

Major selective

BIOS3065
Anatomical Analysis of Exercise

Credit points: 6 **Teacher/Coordinator:** Assoc Prof Karen Ginn **Session:** Semester 2 **Classes:** 2hr lecture, 2hr practical, tutorial/week **Prerequisites:** BIOS1168 and BIOS1169 **Assessment:** Quizzes (3x10%), mid-semester exam (35%), end semester exam (35%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study will extend the student's knowledge of functional musculoskeletal anatomy by applying functional anatomy principles to the analysis of exercises. Relevant research and advanced knowledge of functional musculoskeletal anatomical concepts will be used to explore exercises designed to: strengthen and lengthen specific muscles; improve muscle coordination; develop dynamic stability; and prevent the development of muscle imbalances that may contribute to musculoskeletal injury. The application of musculoskeletal anatomy principles to increase exercise difficulty and variety will also be explored. This unit will include laboratory classes in which human cadavers are studied; attendance at such classes is strongly encouraged.

EXSS3XX3 to be developed for offering in 2019.

Minor selective

BIOS3065
Anatomical Analysis of Exercise

Credit points: 6 **Teacher/Coordinator:** Assoc Prof Karen Ginn **Session:** Semester 2 **Classes:** 2hr lecture, 2hr practical, tutorial/week **Prerequisites:** BIOS1168 and BIOS1169 **Assessment:** Quizzes (3x10%), mid-semester exam (35%), end semester exam (35%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study will extend the student's knowledge of functional musculoskeletal anatomy by applying functional anatomy principles to the analysis of exercises. Relevant research and advanced knowledge of functional musculoskeletal anatomical concepts will be used to explore exercises designed to: strengthen and lengthen specific muscles; improve muscle coordination; develop dynamic stability; and prevent the development of muscle imbalances that may contribute to musculoskeletal injury. The application of musculoskeletal anatomy principles to increase exercise difficulty and variety will also be explored. This unit will include laboratory classes in which human cadavers are studied; attendance at such classes is strongly encouraged.

EXSS3XX1 and EXSS3XX3 to be developed for offering in 2019.

Immunology

Study in Immunology is offered by the Discipline of Infectious Diseases and Immunology in the Sydney Medical School. Units of study in this minor are available at standard and advanced level.

About the minor

The immune system is an integrated network of cells and specialised organs that can respond to external and internal threats. It can be mobilized to protect humans from infections and cancer while simultaneously being the underlying mechanism of major acute and chronic pathologies.

The Immunology minor examines how it is that our immune system can be both the cause and the cure of disease in humans and animals. This is important, as an understanding of immunological and pathological mechanisms allows us to think about how our immune system can be manipulated to prevent and treat disease. This minor draws together studies in immunology, pathology, microbiology, biology, biochemistry, and physiology.

Studies in immunology are important because they are leading to advances in clinical medicine and clinical science, including helping develop new vaccines and immuno-therapies. In addition, immunological techniques are widely used in biology, endocrinology, microbiology, cell and molecular biology, neurobiology and genetics.

Requirements for completion

A minor in Immunology requires 36 credit points, consisting of:
(i)6 credit points of 1000-level core units
(ii)6 credit points of 1000-level selective units
(iii)6 credit points of 2000-level core units
(iv)6 credit points of 2000-level selective units
(v)12 credit points of 3000-level core units

First year

CHEM1XX1 and 6 credit points from a selection of BIOL1XX7 and BIOL1XX8 (MEDS1X01 is only available to students enrolled in the medical science stream).

Second year

IMMU2101 (MIMI2X02 in 2019) and 6 credit points from a selection of BCMB2X01 and IMMU2X11 (BMED2404, MEDS2004 and MEDS2003 only available to students enrolled in the medical science stream).

For Medical Science stream students: BMED2404 (MEDS2004 in 2019) and 6 credit points from a selection of MEDS2003 and IMMU2X11. Please note, BMED and MEDS units are only offered to Medical Science stream students.

Third year

Core: IMMU3102/3902 (IMMU3X11 in 2019), IMMU3202/3903 (IMMU3X12 in 2019).

In your third year you must take at least one designated project unit.

Contact and further information

Learning Outcomes

Students who graduate from Immunology will be able to:

1. Grasp the fundamentals of immunology and pathology and be able to apply these to a range of disease contexts
2. Understand how the cells and molecules of our immune system cooperate to keep us healthy and fight disease;
3. Understand the common generic pathophysiological responses to pathological stress in disease
4. Understand that our immune system can be both the cause and the cure of pathology in humans and animals;
5. Understand the cellular and molecular basis of the pathogenesis of a diverse range of human diseases;
6. Think about how our immune system can be manipulated to prevent and treat disease
7. Understand that immunology can be applied to the development of novel diagnostic pathology assays
8. Show competency in a range of valuable immunological and pathological techniques/skills
9. Apply immunological and pathological approaches to address a diverse range of pathological problems
10. Appreciate that various therapeutic approaches that target cells and molecules of our immune and other organ systems are leading to breakthroughs in human disease detection, treatment and management.

Immunology

Immunology minor

A minor in Immunology requires 36 credit points from this table including: (i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level selective units (iii) 6 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units (v) 12 credit points of 3000-level core units

Units of study

The relevant units of study are listed below.

1000-level units of study

Core

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

Selective

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

BIOL1008
Human Biology

Credit points: 6 **Teacher/Coordinator:** Dr Osu Lilje **Session:** Semester 1, Summer Main **Classes:** Lectures; six 3-hour practical sessions; six workshops and tutorials; students encouraged to spend 1-2 hours per week accessing online resources **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Written and oral presentation, quiz, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences.

2000-level units of study

Core

BMED2404
Microbes, Infection and Immunity

Credit points: 6 **Teacher/Coordinator:** Dr Jim Manos **Session:** Semester 2 **Classes:** Two lectures and one practical per week, two tutorials **Prerequisites:** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **Prohibitions:** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011 **Assessment:** One 2-hour theory exam (60%), in-semester assessments (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study begins by introducing the concepts of disease transmission, pathogenicity and virulence mechanisms of microbes. For a full understanding of the process of infection, the structure and function of pathogenic microorganisms is examined. How the body deals with injury and infection is discussed by exploring barriers to infection and host response once those barriers are breached. The body's response to such physical damage is dealt with in a series of lectures on wound healing, clotting and inflammation, and is complemented by discussion of the pharmacological basis of anti-inflammatory drugs. This is followed by a comprehensive discussion of molecular and cellular immune responses to pathogen invasion. In particular, this gives students an appreciation of the processing of antigens, the structure, production and diversity of antibodies, the operation of the complement system and mechanisms for recognition and destruction of invading microbes. The unit concludes with an overview of microbial diseases, the characteristics of causative agents, pathogenesis and symptoms as well as treatment and control and culminates with exploring current issues of antibiotic resistance, important emerging infections and vaccination strategies.

Practical classes illustrate and underpin the lecture content. Students will investigate normal flora, host defences and medically important microbes and will obtain experience in, and an understanding of, a range of techniques in bacteriology. In these practical sessions experience will be gained handling live, potentially pathogenic microbes.

Robbins Basic Pathology Kumar V, Abbas AK and Aster J Saunders, Philadelphia, 9th Edition, 2013

IMMU2101
Introductory Immunology

Credit points: 6 **Teacher/Coordinator:** Dr Umaimainthan Palendira **Session:** Semester 1 **Classes:** Two 1 hour lectures per week, one 2-3 hour tutorial or practical per week. **Prerequisites:** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **Prohibitions:** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XX1 **Assessment:** Progressive assessment: includes written, practical, oral and online based assessments (50%); Formal assessment: one 2 hour examination (50%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.

Our immune system not only protects us from viruses, bacteria, and parasites, it can prevent the growth of tumours. Sometimes our immune system can be the cause of diseases like multiple sclerosis, Type 1 diabetes and rheumatoid arthritis. If you are interested in studying how our immune system works to keep us alive, then Introductory Immunology is for you. This unit of study will provide an overview of the immune system and the essential features of immune responses. You will be treated to a lecture course delivered by cutting edge immunologists that begins with a study of immunology as a basic research science. This includes an introduction to the nature of the cells and molecules involved in the immune response. We build on this foundation by introducing the immunological principles underlying the eradication of infectious diseases, successful vaccination strategies, organ transplantation, combatting autoimmune diseases and treating cancer. The integrated tutorials will build on the lecture material as well as provide you with instructions on how to successfully locate and critically analyse scientific literature. The practical sessions will further illustrate particular concepts introduced in the lecture program and provide you with valuable exposure to a variety of very important immunological techniques.

MEDS2004 and MIMI2X02 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

Selective

BCMB2001
Biochemistry and Molecular Biology

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 1 **Classes:** Three lectures/tutorials per week ; one 4-hour practical session per fortnight **Prerequisites:** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **Prohibitions:** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901 **Assessment:** Assignments, skills-based assessment, quizzes, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Without cells, life as we know it would not exist. These dynamic assemblies, packed with biological molecules are constantly in action. But how do cells work? Why is the food that you eat so important for

cellular function? How is information transmitted from generation to generation? And, what happens as a result of disease or genetic mutation? In this unit of study you will learn how cells work at the molecular level, with an emphasis on human biochemistry and molecular biology. We will focus initially on cellular metabolism and how cells extract and store energy from fuels like fats and carbohydrates, how the use of fuels is modulated in response to exercise, starvation and disease, and how other key metabolites are processed. Then we will explore how genetic information is regulated in eukaryotes, including replication, transcription and translation, and molecular aspects of the cell cycle, mitosis and meiosis. Our practicals, along with other guided and online learning sessions will introduce you to widely applied and cutting edge tools that are essential for modern biochemistry and molecular biology. By the end of this unit you will be equipped with foundational skills and knowledge to support your studies in the life and medical sciences.

Textbooks

3000-level units of study

Core

IMMU3102
Molecular and Cellular Immunology

Credit points: 6 **Teacher/Coordinator:** A/Prof Carl Feng **Session:** Semester 2 **Classes:** Three 1 hour lectures, one tutorial and one 4-hour practical per fortnight. **Prerequisites:** IMMU2101 or (BMED2401 and BMED2404) **Prohibitions:** IMMU3902 **Assessment:** Formal examination (one 2 hour exam) and Progressive assessment including written, practical and oral based assessments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This study unit builds on the series of lectures that outlined the general properties of the immune system, effector lymphocytes and their functions, delivered in the core courses, IMMU2101 - Introductory Immunology and BMED2404 - Microbes, Infection and Immunity (formerly IMMU2001 and BMED2807). In this unit the molecular and cellular aspects of the immune system are investigated in detail. We emphasise fundamental concepts to provide a scientific basis for studies of the coordinated and regulated immune responses that lead to elimination of infectious organisms. Guest lectures from research scientists eminent in particular branches of immunological research are a special feature of the course. These provide challenging information from the forefront of research that will enable the student to become aware of the many components that come under the broad heading 'Immunology'. Three lectures (1 hour each) will be given each fortnight: 2 lectures in one week and one lecture the following week, for the duration of the course. This unit directly complements the unit 'Immunology in Human Disease IMMU3202' and students are very strongly advised to undertake these study units concurrently.

Textbooks

Abbas, AK, Lichtman, AH and Pillai, S. Cellular and Molecular Immunology 8th edition. 2015. Elsevier.

IMMU3902
Molecular and Cellular Immunology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Carl Feng **Session:** Semester 2 **Classes:** 3 lectures, 1 special seminar/tutorial (2 hours), 1 practical (4 hours) every 2 weeks. **Prerequisites:** A mark of 75 or above in IMMU2101 or (BMED2401 and a mark of 75 or above in BMED2404) **Prohibitions:** IMMU3102 **Assessment:** Formal examination (one 2 hour exam) and Progressive assessment including written, practical and oral based assessments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit is available to students who have performed well in Introductory Immunology (IMMU2101). Advanced students will complete the same core lecture material as students in IMMU3102 but carry out advanced level practical work and a series of specialized seminar based tutorial classes.

Textbooks

Textbooks Abbas, AK, Lichtman, AH and Pillai, S. Cellular and Molecular Immunology 8th edition. 2015. Elsevier.

Immunology in Human Disease

Credit points: 6 **Teacher/Coordinator:** A/Prof Allison Abendroth **Session:** Semester 2 **Classes:** Three 1 hour lectures, one tutorial and one 4 hour practical per fortnight. **Prerequisites:** IMMU2101 or (BMED2401 and BMED2404) **Prohibitions:** IMMU3903 **Assessment:** Formal examination (one 2 hour exam) and Progressive assessment including written, practical and oral based assessments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This study unit builds on the series of lectures that outlined the general properties of the immune system, effector lymphocytes and their functions, delivered in the core courses, IMMU2101 - Introductory Immunology and BMED2404 - Microbes, Infection and Immunity (formerly IMMU2001 and BMED2807). We emphasise fundamental concepts to provide a scientific basis for studies in clinical immunology; dysfunctions of the immune system e.g. autoimmune disease, immunodeficiencies, and allergy, and immunity in terms of host - pathogen interactions. This unit has a strong focus on significant clinical problems in immunology and the scientific background to these problems. The unit includes lectures from research scientists and clinicians covering areas such as allergy, immunodeficiency, autoimmune disease and transplantation. This course provides challenging information from the forefront of clinical immunology and helps the student develop an understanding of immune responses in human health and disease. Three lectures (1 hour each) will be given each fortnight: 2 lectures in one week and one lecture the following week, for the duration of the course. This unit directly complements the unit 'Molecular and Cellular Immunology IMMU3102' and students are very strongly advised to undertake these study units concurrently.

Textbooks

Abbas, AK, Lichtman, AH and Pillai, S. Cellular and Molecular Immunology 8th edition. 2015. Elsevier

IMMU3903
Immunology in Human Disease (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Allison Abendroth **Session:** Semester 2 **Classes:** 3 lectures,1 seminar/tutorial (2 hours) and1 practical (4 hours) every 2 weeks. **Prerequisites:** A mark of 75 or above in IMMU2101 or (BMED2401 and a mark of 75 or above in BMED2404) **Prohibitions:** IMMU3202 **Assessment:** Formal examination (one 2 hour exam) and Progressive assessment including written, practical and oral based assessments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit is available to students who have performed well in Introductory Immunology (IMMU2101). Advanced students will complete the same core lecture material as students in IMMU3202 but carry out advanced level practical work and a series of specialized seminar based tutorial classes.

Textbooks

Abbas, AK, Lichtman, AH and Pillai, S. Cellular and Molecular Immunology 8th edition. 2015. Elsevier

IMMU3X11 and IMMU3X12 to be developed for offering in 2019.

Immunology and Pathology

Study in Immunology and Pathology is offered by the Discipline of Infectious Diseases and Immunology and the Discipline of Pathology in the Sydney Medical School. Units of study in this major are available at standard and advanced level.

About the major

The immune system is an integrated network of cells and specialised organs that can respond to external and internal threats. It can be mobilized to protect humans from infections and cancer while simultaneously being the underlying mechanism of major acute and chronic pathologies.

The Immunology and Pathology major examines how it is that our immune system can be both the cause and the cure of disease in humans and animals. This is important, as an understanding of immunological and pathological mechanisms allows us to think about how our immune system can be manipulated to prevent and treat disease. This major draws together studies in immunology, pathology, microbiology, biology, biochemistry, and physiology.

Studies in immunology and pathology are important because they are leading to advances in clinical medicine and clinical science, including helping develop new vaccines and immuno-therapies. In addition, immunological techniques are widely used in biology, endocrinology, microbiology, cell and molecular biology, neurobiology and genetics.

Requirements for completion

A major in Immunology and Pathology requires 48 credit points, consisting of:

(i)6 credit points of 1000-level core units
(ii)6 credit points of 1000-level selective units
(iii)6 credit points of 2000-level core units
(iv)6 credit points of 2000-level selective units
(v)24 credit points of 3000-level core units

A minor in Immunology and a minor in Pathology are available and articulate to this major.

First year

CHEM1XX1 and 6 credit points from a selection of BIOL1XX7 and BIOL1XX8 (MEDS1X01 is only available to students enrolled in the medical science stream).

Second year

IMMU2101 (MIMI2X02 in 2019) and 6 credit points from a selection of BCMB2X01 and IMMU2X11.

For Medical Science stream students: BMED2404 (MEDS2004 in 2019) and 6 credit points from a selection of MEDS2003 and IMMU2X11. (BMED and MEDS units are only offered to Medical Science stream students.)

Third year

Core: IMMU3102/3902 (IMMU3X11 in 2019), IMMU3202/3903 (IMMU3X12 in 2019), CPAT3201 (PATH3X11 in 2019), CPAT3202 (PATH3X12 in 2019).

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours

Requirements for Honours in the areas of Immunology and Pathology: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Immunology and Pathology will be able to:

1. Have grasped the fundamentals of immunology and pathology and be able to apply these to a range of disease contexts
2. Understand how the cells and molecules of our immune system cooperate to keep us healthy and fight disease
3. Understand the common generic pathophysiological responses to pathological stress in disease
4. Understand that our immune system can be both the cause and the cure of pathology in humans and animals
5. Understand the cellular and molecular basis of the pathogenesis of a diverse range of human diseases
6. Think about how our immune system can be manipulated to prevent and treat disease
7. Understand that immunology can be applied to the development of novel diagnostic pathology assays
8. Be competent in a range of valuable immunological and pathological techniques/skills
9. Apply immunological and pathological approaches to address a diverse range of pathological problems
10. Appreciate that various therapeutic approaches that target cells and molecules of our immune and other organ systems are leading to breakthroughs in human disease detection, treatment and management.

IMMUNOLOGY AND PATHOLOGY			
Advanced coursework and projects will be available in 2020 for students who complete this major.			
Immunology and Pathology major			
A major in Immunology and Pathology requires 48 credit points from this table including: (i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level selective units (iii) 6 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units (v) 24 credit points of 3000-level core units			
Units of study			
The units of study are listed below.			
1000-level units of study			
Core			
CHEM1011 **Fundamentals of Chemistry 1A**	6	**A** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 *Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1
CHEM1111 **Chemistry 1A**	6	**A** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 *Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1 Semester 2 Summer Main
CHEM1911 **Chemistry 1A (Advanced)**	6	**A** 80 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 *Note: Department permission required for enrolment*	Semester 1
CHEM1991 **Chemistry 1A (Special Studies Program)**	6	**A** 90 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 *Note: Department permission required for enrolment*	Semester 1
Selective			
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2
BIOL1008 **Human Biology**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998	Semester 1 Summer Main
BIOL1908 **Human Biology (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1008 or BIOL1998 *Note: Department permission required for enrolment*	Semester 1
BIOL1998 **Human Biology (Special Studies Program)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1991 or BIOL1996 or MEDS1001 or MEDS1901 or BIOL1008 or BIOL1908 *Note: Department permission required for enrolment*	Semester 1
MEDS1001 **Human Biology**	6	**N** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1901	Semester 1

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
MEDS1901 **Human Biology (Advanced)**	6	**P** 85 or above in HSC Biology or equivalent **N** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1001 *Note: Department permission required for enrolment*	Semester 1
MEDS coded units of study are only available to students in the Medical Science stream.			
2000-level units of study			
Core			
BMED2404 **Microbes, Infection and Immunity**	6	**P** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **N** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011	Semester 2
IMMU2101 **Introductory Immunology**	6	**A** CHEM1XX1 **P** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **N** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.*	Semester 1
MEDS2004 and MIMI2X02 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).			
Selective			
BCMB2001 **Biochemistry and Molecular Biology**	6	**P** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901	Semester 1
BCMB2901 **Biochemistry and Molecular Biology (Advanced)**	6	**P** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2001	Semester 1
IMMU2X11 and MEDS2003 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).			
3000-level units of study			
Core			
IMMU3102 **Molecular and Cellular Immunology**	6	**P** IMMU2101 or (BMED2401 and BMED2404) **N** IMMU3902 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
IMMU3902 **Molecular and Cellular Immunology (Advanced)**	6	**P** A mark of 75 or above in IMMU2101 or (BMED2401 and a mark of 75 or above in BMED2404) **N** IMMU3102 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
IMMU3202 **Immunology in Human Disease**	6	**P** IMMU2101 or (BMED2401 and BMED2404) **N** IMMU3903 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
IMMU3903 **Immunology in Human Disease (Advanced)**	6	**P** A mark of 75 or above in IMMU2101 or (BMED2401 and a mark of 75 or above in BMED2404) **N** IMMU3202 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
CPAT3201 **Pathogenesis of Human Disease 1**	6	**A** Sound knowledge of biology through meeting pre-requisites **P** [12cp from (ANAT2XXX or BCHM2XXX or BCMB2X0X or BIOL2XXX or GEGE2X01 or IMMU2101 or MBLG2XXX or MICR2XXX or PCOL201X or PHSI2XXX)] or (BMED2403 and BMED2404) *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
CPAT3202 **Pathogenesis of Human Disease 2**	6	**A** Sound knowledge of biology through meeting pre-requisites **P** [12cp from (ANAT2XXX or BCHM2XXX or BCMB2X0X or BIOL2XXX or GEGE2X01 or IMMU2101 or MBLG2XXX or MICR2XXX or PCOL201X or PHSI2XXX)] or (BMED2403 and BMED2404) **C** CPAT3201 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
IMMU3X11, IMMU3X12, PATH3X11 and PATH3X12 to be developed for offering in 2019.			

Immunology minor

A minor in Immunology requires 36 credit points from this table including:

(i) 6 credit points of 1000-level core units

(ii) 6 credit points of 1000-level selective units

(iii) 6 credit points of 2000-level core units

(iv) 6 credit points of 2000-level selective units

(v) 12 credit points of 3000-level core units

Core			
CHEM1011 **Fundamentals of Chemistry 1A**	6	**A** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 *Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1
CHEM1111 **Chemistry 1A**	6	**A** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 *Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1 Semester 2 Summer Main
CHEM1911 **Chemistry 1A (Advanced)**	6	**A** 80 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 *Note: Department permission required for enrolment*	Semester 1
CHEM1991 **Chemistry 1A (Special Studies Program)**	6	**A** 90 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 *Note: Department permission required for enrolment*	Semester 1
Selective			
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2
BIOL1008 **Human Biology**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998	Semester 1 Summer Main
BIOL1908 **Human Biology (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1008 or BIOL1998 *Note: Department permission required for enrolment*	Semester 1

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
BIOL1998 **Human Biology (Special Studies Program)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1991 or BIOL1996 or MEDS1001 or MEDS1901 or BIOL1008 or BIOL1908 *Note: Department permission required for enrolment*	Semester 1
MEDS1001 **Human Biology**	6	**N** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1901	Semester 1
MEDS1901 **Human Biology (Advanced)**	6	**P** 85 or above in HSC Biology or equivalent **N** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1001 *Note: Department permission required for enrolment*	Semester 1
(MEDS coded units of study are only available to students in the Medical Science stream).			
2000-level units of study			
Core			
BMED2404 **Microbes, Infection and Immunity**	6	**P** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **N** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011	Semester 2
IMMU2101 **Introductory Immunology**	6	**A** CHEM1XX1 **P** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **N** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.*	Semester 1
MEDS2004 and MIMI2X02 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).			
Selective for Pathology minor			
BCMB2001 **Biochemistry and Molecular Biology**	6	**P** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901	Semester 1
BCMB2901 **Biochemistry and Molecular Biology (Advanced)**	6	**P** A mark of at least 70 from (BIOL1XX7 or MBLG1XX1) and CHEM1XX1 **N** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2001	Semester 1
IMMU2X11 and MEDS2003 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).			
3000-level units of study			
Core			
CPAT3201 **Pathogenesis of Human Disease 1**	6	**A** Sound knowledge of biology through meeting pre-requisites **P** [12cp from (ANAT2XXX or BCHM2XXX or BCMB2X0X or BIOL2XXX or GEGE2X01 or IMMU2101 or MBLG2XXX or MICR2XXX or PCOL201X or PHSI2XXX)] or (BMED2403 and BMED2404) *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
CPAT3202 **Pathogenesis of Human Disease 2**	6	**A** Sound knowledge of biology through meeting pre-requisites **P** [12cp from (ANAT2XXX or BCHM2XXX or BCMB2X0X or BIOL2XXX or GEGE2X01 or IMMU2101 or MBLG2XXX or MICR2XXX or PCOL201X or PHSI2XXX)] or (BMED2403 and BMED2404) **C** CPAT3201 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
PATH3X11 and PATH3X12 to be developed for offering in 2019.			

Immunology and Pathology

Immunology minor

A minor in Immunology requires 36 credit points from this table including: (i) 6 credit points of 1000-level core units (ii) 6 credit points of 1000-level selective units (iii) 6 credit points of 2000-level core units (iv) 6 credit points of 2000-level selective units (v) 12 credit points of 3000-level core units

Units of study

The relevant units of study are listed below.

1000-level units of study

Core

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

Selective

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Please see unit outline on LMS

BIOL1907
From Molecules to Ecosystems (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Pauline Ross **Session:** Semester 2 **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1007 or BIOL1997 **Assumed knowledge:** 85 or above in HSC Biology or equivalent **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . This unit of study has the same overall structure as BIOL1007 but material is discussed in greater detail and at a more advanced level. The content and nature of these components may vary from year to year.

Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

Please see unit outline on LMS

BIOL1008
Human Biology

Credit points: 6 **Teacher/Coordinator:** Dr Osu Lilje **Session:** Semester 1, Summer Main **Classes:** Lectures; six 3-hour practical sessions; six workshops and tutorials; students encouraged to spend 1-2 hours per week accessing online resources **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Written and oral presentation, quiz, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences.

This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences. The advanced unit has the same overall concepts as the mainstream unit but material is discussed in a manner that offers a greater level of challenge and academic rigour. Students enrolled in the advanced stream will participate in alternative components which may for example include guest lecturers from medical science industries. The nature of these components may vary from year to year.

MEDS coded units of study are only available to students in the Medical Science stream.

2000-level units of study

Core

BMED2404
Microbes, Infection and Immunity

Credit points: 6 **Teacher/Coordinator:** Dr Jim Manos **Session:** Semester 2 **Classes:** Two lectures and one practical per week, two tutorials **Prerequisites:** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **Prohibitions:** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011 **Assessment:** One 2-hour theory exam (60%), in-semester assessments (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study begins by introducing the concepts of disease transmission, pathogenicity and virulence mechanisms of microbes. For a full understanding of the process of infection, the structure and function of pathogenic microorganisms is examined. How the body deals with injury and infection is discussed by exploring barriers to infection and host response once those barriers are breached. The body's response to such physical damage is dealt with in a series of lectures on wound healing, clotting and inflammation, and is complemented by discussion of the pharmacological basis of anti-inflammatory drugs. This is followed by a comprehensive discussion of molecular and cellular immune responses to pathogen invasion. In particular, this gives students an appreciation of the processing of antigens, the structure, production and diversity of antibodies, the operation of the complement system and mechanisms for recognition and destruction of invading microbes. The unit concludes with an overview of microbial diseases, the characteristics of causative agents, pathogenesis and symptoms as well as treatment and control and culminates with exploring current issues of antibiotic resistance, important emerging infections and vaccination strategies.

Practical classes illustrate and underpin the lecture content. Students will investigate normal flora, host defences and medically important microbes and will obtain experience in, and an understanding of, a range of techniques in bacteriology. In these practical sessions experience will be gained handling live, potentially pathogenic microbes.

Textbooks

Robbins Basic Pathology Kumar V, Abbas AK and Aster J Saunders, Philadelphia, 9th Edition, 2013

IMMU2101
Introductory Immunology

Credit points: 6 **Teacher/Coordinator:** Dr Umaimainthan Palendira **Session:** Semester 1 **Classes:** Two 1 hour lectures per week, one 2-3 hour tutorial or practical per week. **Prerequisites:** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **Prohibitions:** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XX1 **Assessment:** Progressive assessment: includes written, practical, oral and online based assessments (50%); Formal assessment: one 2 hour examination (50%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.

Our immune system not only protects us from viruses, bacteria, and parasites, it can prevent the growth of tumours. Sometimes our immune system can be the cause of diseases like multiple sclerosis, Type 1 diabetes and rheumatoid arthritis. If you are interested in studying how our immune system works to keep us alive, then Introductory Immunology is for you. This unit of study will provide an overview of the immune system and the essential features of immune responses. You will be treated to a lecture course delivered by cutting edge immunologists that begins with a study of immunology as a basic research science. This includes an introduction to the nature of the cells and molecules involved in the immune response. We build on this foundation by introducing the immunological principles underlying the eradication of infectious diseases, successful vaccination strategies, organ transplantation, combatting autoimmune diseases and treating cancer. The integrated tutorials will build on the lecture material as well as provide you with instructions on how to successfully locate and critically analyse scientific literature. The practical sessions will further illustrate particular concepts introduced in the lecture program and provide you with valuable exposure to a variety of very important immunological techniques.

MEDS2004 and MIMI2X02 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

Selective

BCMB2001
Biochemistry and Molecular Biology

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 1 **Classes:** Three lectures/tutorials per week ; one 4-hour practical session per fortnight **Prerequisites:** 6cp of (BIOL1XX7 or MBLG1XXX) and 6cp of CHEM1XX1 **Prohibitions:** BCHM2072 or BCHM2972 or MBLG2071 or MBLG2971 or BMED2405 or BCMB2901 **Assessment:** Assignments, skills-based assessment, quizzes, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Without cells, life as we know it would not exist. These dynamic assemblies, packed with biological molecules are constantly in action. But how do cells work? Why is the food that you eat so important for

cellular function? How is information transmitted from generation to generation? And, what happens as a result of disease or genetic mutation? In this unit of study you will learn how cells work at the molecular level, with an emphasis on human biochemistry and molecular biology. We will focus initially on cellular metabolism and how cells extract and store energy from fuels like fats and carbohydrates, how the use of fuels is modulated in response to exercise, starvation and disease, and how other key metabolites are processed. Then we will explore how genetic information is regulated in eukaryotes, including replication, transcription and translation, and molecular aspects of the cell cycle, mitosis and meiosis. Our practicals, along with other guided and online learning sessions will introduce you to widely applied and cutting edge tools that are essential for modern biochemistry and molecular biology. By the end of this unit you will be equipped with foundational skills and knowledge to support your studies in the life and medical sciences.

3000-level units of study

Core

IMMU3102

Molecular and Cellular Immunology

Credit points: 6 **Teacher/Coordinator:** A/Prof Carl Feng **Session:** Semester 2 **Classes:** Three 1 hour lectures, one tutorial and one 4-hour practical per fortnight. **Prerequisites:** IMMU2101 or (BMED2401 and BMED2404) **Prohibitions:** IMMU3902 **Assessment:** Formal examination (one 2 hour exam) and Progressive assessment including written, practical and oral based assessments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This study unit builds on the series of lectures that outlined the general properties of the immune system, effector lymphocytes and their functions, delivered in the core courses, IMMU2101 - Introductory Immunology and BMED2404 - Microbes, Infection and Immunity (formerly IMMU2001 and BMED2807). In this unit the molecular and cellular aspects of the immune system are investigated in detail. We emphasise fundamental concepts to provide a scientific basis for studies of the coordinated and regulated immune responses that lead to elimination of infectious organisms. Guest lectures from research scientists eminent in particular branches of immunological research are a special feature of the course. These provide challenging information from the forefront of research that will enable the student to become aware of the many components that come under the broad heading 'Immunology'. Three lectures (1 hour each) will be given each fortnight: 2 lectures in one week and one lecture the following week, for the duration of the course. This unit directly complements the unit 'Immunology in Human Disease IMMU3202' and students are very strongly advised to undertake these study units concurrently.

Textbooks

Abbas, AK, Lichtman, AH and Pillai, S. Cellular and Molecular Immunology 8th edition. 2015. Elsevier.

IMMU3902

Molecular and Cellular Immunology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Carl Feng **Session:** Semester 2 **Classes:** 3 lectures, 1 special seminar/tutorial (2 hours), 1 practical (4 hours) every 2 weeks. **Prerequisites:** A mark of 75 or above in IMMU2101 or (BMED2401 and a mark of 75 or above in BMED2404) **Prohibitions:** IMMU3102 **Assessment:** Formal examination (one 2 hour exam) and Progressive assessment including written, practical and oral based assessments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit is available to students who have performed well in Introductory Immunology (IMMU2101). Advanced students will complete the same core lecture material as students in IMMU3102 but carry out advanced level practical work and a series of specialized seminar based tutorial classes.

Textbooks

Textbooks Abbas, AK, Lichtman, AH and Pillai, S. Cellular and Molecular Immunology 8th edition. 2015. Elsevier.

IMMU3202

Immunology in Human Disease

Credit points: 6 **Teacher/Coordinator:** A/Prof Allison Abendroth **Session:** Semester 2 **Classes:** Three 1 hour lectures, one tutorial and one 4 hour practical per fortnight. **Prerequisites:** IMMU2101 or (BMED2401 and BMED2404) **Prohibitions:** IMMU3903 **Assessment:** Formal examination (one 2 hour exam) and Progressive assessment including written, practical and oral based assessments (100%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This study unit builds on the series of lectures that outlined the general properties of the immune system, effector lymphocytes and their functions, delivered in the core courses, IMMU2101 - Introductory Immunology and BMED2404 - Microbes, Infection and Immunity (formerly IMMU2001 and BMED2807). We emphasise fundamental concepts to provide a scientific basis for studies in clinical immunology; dysfunctions of the immune system e.g. autoimmune disease, immunodeficiencies, and allergy, and immunity in terms of host - pathogen interactions. This unit has a strong focus on significant clinical problems in immunology and the scientific background to these problems. The unit includes lectures from research scientists and clinicians covering areas such as allergy, immunodeficiency, autoimmune disease and transplantation. This course provides challenging information from the forefront of clinical immunology and helps the student develop an understanding of immune responses in human health and disease. Three lectures (1 hour each) will be given each fortnight: 2 lectures in one week and one lecture the following week, for the duration of the course. This unit directly complements the unit 'Molecular and Cellular Immunology IMMU3102' and students are very strongly advised to undertake these study units concurrently.

IMMU3X11 and IMMU3X12 to be developed for offering in 2019.

Infectious Diseases

Study in Infectious Diseases is offered in partnership between the Discipline of Infectious Diseases and Immunology in the Sydney Medical School and the Discipline of Microbiology in the School of Life and Environmental Sciences in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

Infectious diseases occur as a result of interactions between microbial pathogens and their hosts. The Infectious Diseases major is a multidisciplinary pathway of study that emphasizes how infectious agents interact with human hosts at the molecular, cellular, individual patient and community levels to cause disease.

This major begins with developing an understanding of the relevance of infectious diseases within the concept of ‘One Health’ in which the multifactorial interrelationships between human, animal and environmental health are critical. Central is the context of microbes: bacteria, viruses, fungi and protists being beneficial for good health as well as effective causative agents of disease. The structural and functional cellular and molecular mechanisms that enable establishment and progression of infectious diseases are covered with a particular focus on pathogens: microbial virulence mechanisms; their capacity to evade the human response to injury and infection; their ability to cause tissue damage; their resistance to antimicrobial therapy and the development of new tools to control infectious agents. This progresses to explore patterns of incidence and the epidemiology of outbreaks of infectious diseases within communities.

Requirements for completion

A major in Infectious Diseases requires 48 credit points, consisting of:

(i)6 credit points of 1000-level core units
(ii)6 credit points of 1000-level selective units
(iii)12 credit points of 2000-level core units
(iv)24 credit points of 3000-level core units

A minor in Infectious Diseases is available and articulates to this major.

First year

BIOL1XX7 From Molecules to Ecosystems and 6 credit points from a selection of: CHEM1XX1 Chemistry or BIOL1XX8 or MEDS1X01 Human Biology (MEDS1X01 is only available to students enrolled in the Medical Science stream, students outside the Medical Science stream take BIOL1XX8).

Second year

IMMU2101 Immunology (MIMI2X02 in 2019) and MICR2X22 Microbes in Society OR for students enrolled in the Medical Science stream only: BMED2404 (MEDS2004 in 2019), BMED2405 (MEDS2003 in 2019).

Third year

Core: INFD3012, MICR3X11, VIRO3X01, VIRO3X02.

In your third year you must take at least one designated project unit.

The final year culminates with a focus on the interdisciplinary nature of the Infectious Diseases major by embracing study of microbial causative agents, outbreak epidemiology and host response. Central to this lies the impacts and outcomes of infection with microbial pathogens for humans and other hosts: animals and plants.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework

The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Infectious Diseases: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Infectious Diseases will be able to:

1. Describe the role of microbes as agents of disease, their function in the ecosphere, abundance and diversity
2. Define the key characteristics of the classes of microbes that distinguish them from each other
3. Perform culture, microscopy, diagnostic and molecular techniques used in the modern diagnostic microbiology and infectious diseases laboratory, and explain and critically evaluate the scientific principles behind these important infectious disease techniques
4. Have a detailed knowledge of microbial virulence mechanisms and their role in invasion, establishment and progression of infection
5. Know the major causes of important infectious diseases in the general community and hospital environments
6. Explain how infectious diseases emerge or re-emerge to impact human and global health
7. Explain the ways in which important microbial pathogens pose a challenge for public health
8. Be familiar with the measures that have been developed to control infectious agents and the conceptual basis of the control strategies
9. Critically evaluate the research literature dealing with pathogenic processes of infectious organisms and epidemiology and apply this knowledge to infectious disease research.

This unit is not offered from 2019.*	Semester 2
MICR2922 **Microbes in Society (Advanced)**	6	**A** CHEM1XXX and (MICR2X21 or MICR2024 or MICR2X31) **P** 6cp from (BIOL1XX7 or MBLG1XXX) and an additional 6cp from BIOL1XXX and a mark of 75 or above in 6cp from (BIOL1XXX or MBLG1XXX) **N** MICR2022 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *This unit is not available to BMedSc students. This unit is not offered from 2019.*	Semester 2
MIMI2X02, MEDS2003 and MEDS2004 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).			
3000-level units of study			
Major core			
INFD3012 **Infectious Diseases**	6	**P** BMED2401 and BMED2404 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
MICR3011 **Microbes in Infection**	6	**A** MICR2X21 or MICR2024 or MICR2X31 **P** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and 6cp from MICR2X22] OR [BMED2401 and BMED2404] **N** MICR3911 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
MICR3911 **Microbes in Infection (Advanced)**	6	**A** MICR2X21 or MICR2024 or MICR2X31 **P** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and a mark of 75 or above in MICR2X22] OR [BMED2401 and a mark of 75 or above in BMED2404] **N** MICR3011	Semester 1
VIRO3001 **Virology**	6	**A** Fundamental concepts of microorganisms, biomolecules and ecosystems **P** [6cp from (BIOL1XX7 or MBLGXXXX) and 6cp from (BCHM2XXX or BCMB2X01 or BIOL2XXX or GEGE2X01 or GENE2002 or IMMU2101 or MICR2XXX or PCOL2X0X or PHSI2X0X)] OR [BMED2401 and BMED2404] **N** VIRO3901 *Students are strongly advised to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002 or VIRO3902.BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
VIRO3901 **Virology (Advanced)**	6	**A** Fundamental concepts of microorganisms, biomolecules and ecosystems **P** [6cp from (BIOL1XX7 or MBLGXXXX) and a mark of 75 or above in 6cp from (BCHM2XXX or BCMB2X01 or BIOL2XXX or GEGE2X01 or GENE2002 or IMMU2101 or MICR2XXX or PCOL2X0X or PHSI2X0X)] OR [BMED2401 and a mark of 75 or above in BMED2404] **N** VIRO3001 *Students are strongly advised to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002 or VIRO3902.BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
VIRO3002 **Medical and Applied Virology**	6	**A** Fundamental concepts of microorganisms and biomolecules **P** [6cp from (BIOL1XX7, MBLGXXXX) and 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR [BMED2401 and BMED2404] **N** VIRO3902 *Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002.*	Semester 2
VIRO3902 **Medical and Applied Virology (Advanced)**	6	**A** Fundamental concepts of microorganisms and biomolecules **P** [6cp from (BIOL1XX7, MBLGXXXX) and a mark of 75 in 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR (BMED2401 and a mark of 75 in BMED2404) **N** VIRO3002 *Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3902.*	Semester 2
Minor core			
INFD3012 **Infectious Diseases**	6	**P** BMED2401 and BMED2404 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
MICR3011 **Microbes in Infection**	6	**A** MICR2X21 or MICR2024 or MICR2X31 **P** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and 6cp from MICR2X22] OR [BMED2401 and BMED2404] **N** MICR3911 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
MICR3911 **Microbes in Infection (Advanced)**	6	**A** MICR2X21 or MICR2024 or MICR2X31 **P** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and a mark of 75 or above in MICR2X22] OR [BMED2401 and a mark of 75 or above in BMED2404] **N** MICR3011	Semester 1

Virology Minor

A minor in Virology requires 36 credit points from this table including:

(i) 6 credit points of 1000-level core units

(ii) 6 credit points of 1000-level selective units

(iii) 12 credit points of 2000-level core units

(iv) 12 credit points of 3000-level core units

Units of study

The units of study for the Virology minor are listed below

1000-level units of study

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
Core			
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2
BIOL1997 **From Molecules to Ecosystems (SSP)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1907 *Note: Department permission required for enrolment*	Semester 2
Selective			
BIOL1008 **Human Biology**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998	Semester 1 Summer Main
BIOL1908 **Human Biology (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1008 or BIOL1998 *Note: Department permission required for enrolment*	Semester 1
BIOL1998 **Human Biology (Special Studies Program)**	6	**A** 90 or above in HSC Biology or equivalent **N** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1991 or BIOL1996 or MEDS1001 or MEDS1901 or BIOL1008 or BIOL1908 *Note: Department permission required for enrolment*	Semester 1
CHEM1011 **Fundamentals of Chemistry 1A**	6	**A** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 *Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1
CHEM1111 **Chemistry 1A**	6	**A** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 *Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1 Semester 2 Summer Main

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
CHEM1911 **Chemistry 1A (Advanced)**	6	**A** 80 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 *Note: Department permission required for enrolment*	Semester 1
CHEM1991 **Chemistry 1A (Special Studies Program)**	6	**A** 90 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 *Note: Department permission required for enrolment*	Semester 1
MEDS1001 **Human Biology**	6	**N** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1901	Semester 1
MEDS1901 **Human Biology (Advanced)**	6	**P** 85 or above in HSC Biology or equivalent **N** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1001 *Note: Department permission required for enrolment*	Semester 1
MEDS coded units of study are only available to students in the Medical Science stream.			
2000-level units of study			
Core			
BMED2404 **Microbes, Infection and Immunity**	6	**P** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **N** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011	Semester 2
BMED2405 **Gut and Nutrient Metabolism**	6	**P** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **N** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011	Semester 2
IMMU2101 **Introductory Immunology**	6	**A** CHEM1XX1 **P** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **N** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.*	Semester 1
MICR2022 **Microbes in Society**	6	**A** CHEM1XXX and (MICR2X21 or MICR2024 or MICR2X31) **P** 6cp from (BIOL1XX7 or MBLG1XXX) and an additional 6cp from BIOL1XXX **N** MICR2922 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *This unit is not available to BMedSc students. This unit is not offered from 2019.*	Semester 2
MICR2922 **Microbes in Society (Advanced)**	6	**A** CHEM1XXX and (MICR2X21 or MICR2024 or MICR2X31) **P** 6cp from (BIOL1XX7 or MBLG1XXX) and an additional 6cp from BIOL1XXX and a mark of 75 or above in 6cp from (BIOL1XXX or MBLG1XXX) **N** MICR2022 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 *This unit is not available to BMedSc students. This unit is not offered from 2019.*	Semester 2
MIMI2X02, MEDS2003 and MEDS2004 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).			
3000-level units of study			
Core			
VIRO3001 **Virology**	6	**A** Fundamental concepts of microorganisms, biomolecules and ecosystems **P** [6cp from (BIOL1XX7 or MBLGXXXX) and 6cp from (BCHM2XXX or BCMB2X01 or BIOL2XXX or GEGE2X01 or GENE2002 or IMMU2101 or MICR2XXX or PCOL2X0X or PHSI2X0X)] OR [BMED2401 and BMED2404] **N** VIRO3901 *Students are strongly advised to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002 or VIRO3902.BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
VIRO3901 **Virology (Advanced)**	6	**A** Fundamental concepts of microorganisms, biomolecules and ecosystems **P** [6cp from (BIOL1XX7 or MBLGXXXX) and a mark of 75 or above in 6cp from (BCHM2XXX or BCMB2X01 or BIOL2XXX or GEGE2X01 or GENE2002 or IMMU2101 or MICR2XXX or PCOL2X0X or PHSI2X0X)] OR [BMED2401 and a mark of 75 or above in BMED2404] **N** VIRO3001 *Students are strongly advised to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002 or VIRO3902.BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
VIRO3002 **Medical and Applied Virology**	6	**A** Fundamental concepts of microorganisms and biomolecules **P** [6cp from (BIOL1XX7, MBLGXXXX) and 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR [BMED2401 and BMED2404] **N** VIRO3902 *Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002.*	Semester 2
VIRO3902 **Medical and Applied Virology (Advanced)**	6	**A** Fundamental concepts of microorganisms and biomolecules **P** [6cp from (BIOL1XX7, MBLGXXXX) and a mark of 75 in 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR (BMED2401 and a mark of 75 in BMED2404) **N** VIRO3002 *Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3902.*	Semester 2

Infectious Diseases

INFECTIOUS DISEASES

Advanced coursework and projects will be available in 2020 for students who complete this major.

Infectious Diseases major

A major in Infectious Diseases requires 48 credit points from this table including:(i) 6 credit points of 1000-level core units(ii) 6 credit points of 1000-level selective units(iii) 12 credit points of 2000-level core units(iv) 24 credit points of 3000-level core units

Infectious Diseases minor

A minor in Infectious Diseases requires 36 credit points from this table including:(i) 6 credit points of 1000-level core units(ii) 6 credit points of 1000-level selective units(iii) 12 credit points of 2000-level core units (iv) 12 credit points of 3000-level core units

Units of study

The units of study are listed below.

1000-level units of study

Core

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Textbooks
Please see unit outline on LMS

BIOL1907
From Molecules to Ecosystems (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Pauline Ross **Session:** Semester 2 **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1007 or BIOL1997 **Assumed knowledge:** 85 or above in HSC Biology or equivalent **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . This unit of study has the same overall structure as BIOL1007 but material is discussed in greater detail and at a more advanced level. The content and nature of these components may vary from year to year.

Textbooks
Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

Selective

BIOL1008
Human Biology

Credit points: 6 **Teacher/Coordinator:** Dr Osu Lilje **Session:** Semester 1, Summer Main **Classes:** Lectures; six 3-hour practical sessions; six workshops and tutorials; students encouraged to spend 1-2 hours per week accessing online resources **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Written and oral presentation, quiz, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences.

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

MEDS1001
Human Biology

Credit points: 6 **Teacher/Coordinator:** Prof Philip Poronnik **Session:** Semester 1 **Classes:** this unit of study will involve between 5-6 hours of face-to-face activities run on the camperdown campus, these contact hours will comprise lectures; six 3-hour practical sessions; six workshops and tutorials **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1901 **Assessment:** Written and oral communication, quiz, practical and workshop reports, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the medical sciences suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology and medical sciences. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in the medical sciences.

This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences. The advanced unit has the same overall concepts as the mainstream unit but material is discussed in a manner that offers a greater level of challenge and academic rigour. Students enrolled in the advanced stream will participate in alternative components which may for example include guest lecturers from medical science industries. The nature of these components may vary from year to year.

MEDS coded units of study are only available to students in the Medical Science stream.

2000-level units of study

Core

BMED2404
Microbes, Infection and Immunity

Credit points: 6 **Teacher/Coordinator:** Dr Jim Manos **Session:** Semester 2 **Classes:** Two lectures and one practical per week, two tutorials **Prerequisites:** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **Prohibitions:** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011 **Assessment:** One 2-hour theory exam (60%), in-semester assessments (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study begins by introducing the concepts of disease transmission, pathogenicity and virulence mechanisms of microbes. For a full understanding of the process of infection, the structure and function of pathogenic microorganisms is examined. How the body deals with injury and infection is discussed by exploring barriers to infection and host response once those barriers are breached. The body's response to such physical damage is dealt with in a series of lectures on wound healing, clotting and inflammation, and is complemented by discussion of the pharmacological basis of anti-inflammatory drugs. This is followed by a comprehensive discussion of molecular and cellular immune responses to pathogen invasion. In particular, this gives students an appreciation of the processing of antigens, the structure, production and diversity of antibodies, the operation of the complement system and mechanisms for recognition and destruction of invading microbes. The unit concludes with an overview of microbial diseases, the characteristics of causative agents, pathogenesis and symptoms as well as treatment and control and culminates with exploring current issues of antibiotic resistance, important emerging infections and vaccination strategies.

Practical classes illustrate and underpin the lecture content. Students will investigate normal flora, host defences and medically important microbes and will obtain experience in, and an understanding of, a range of techniques in bacteriology. In these practical sessions experience will be gained handling live, potentially pathogenic microbes.

BMED2405
Gut and Nutrient Metabolism

Credit points: 6 **Teacher/Coordinator:** A/Prof Charles Collyer **Session:** Semester 2 **Classes:** Two lectures and one tutorial or one practical session per week **Prerequisites:** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **Prohibitions:** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011 **Assessment:** One 2-hour theory exam (60%), five in-semester assignments/assessments (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study examines in detail the anatomy of the gastrointestinal tract, from the oral cavity to anal canal, and includes the liver, gallbladder and pancreas. This is complemented by description of the specialised cells in the gastrointestinal tract, followed by discussion of the transport mechanisms employed to absorb nutrients, and consideration of control systems used to regulate activity of the digestive process. The role of intestinal microflora in the gastrointestinal tract, contributing to both beneficial digestion and absorption of nutrients, as well as to pathogenic disruption, is also discussed. The fate of the macronutrients (carbohydrate, fat and protein) is then considered in terms of their uptake, disposal and reassembly into storage fuels and cellular structures. The biochemical pathways involved in the extraction of energy from the macronutrient fuels are then covered. Examples of these metabolic processes are provided by considering fuel selection during starvation and in diabetes. Finally, pharmacokinetics and pharmacogenomics are explored, with discussion of the metabolism and absorption of drugs including detoxification and excretion of xenobiotic compounds. Practical classes give students extensive experience with inspection of the gastrointestinal system at both the cellular and gross anatomical levels, and in theassay of biochemicals such as glucose. These sessions are designed to nurture observation, data analysis, record keeping and report writing skills.

IMMU2101
Introductory Immunology

Credit points: 6 **Teacher/Coordinator:** Dr Umaimainthan Palendira **Session:** Semester 1 **Classes:** Two 1 hour lectures per week, one 2-3 hour tutorial or practical per week. **Prerequisites:** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **Prohibitions:** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XX1 **Assessment:** Progressive assessment: includes written, practical, oral and online based assessments (50%); Formal assessment: one 2 hour examination (50%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.

Our immune system not only protects us from viruses, bacteria, and parasites, it can prevent the growth of tumours. Sometimes our immune system can be the cause of diseases like multiple sclerosis, Type 1 diabetes and rheumatoid arthritis. If you are interested in studying how our immune system works to keep us alive, then Introductory Immunology is for you. This unit of study will provide an overview of the immune system and the essential features of immune responses. You will be treated to a lecture course delivered by cutting edge immunologists that begins with a study of immunology as a basic research science. This includes an introduction to the nature of the cells and molecules involved in the immune response. We build on this foundation by introducing the immunological principles underlying the eradication of infectious diseases, successful vaccination strategies, organ transplantation, combatting autoimmune diseases and treating cancer. The integrated tutorials will build on the lecture material as well as provide you with instructions on how to successfully locate and critically analyse scientific literature. The practical sessions will further illustrate particular concepts introduced in the lecture program and provide you with valuable exposure to a variety of very important immunological techniques.

MICR2022
Microbes in Society

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 2 **Classes:** Two 1-hour lectures per week, plus an additional four 1-hour tutorials per semester. Eleven 3-hour practicals per semester **Prerequisites:** 6cp from (BIOL1XX7 or MBLG1XXX) and an additional 6cp from BIOL1XXX **Prohibitions:** MICR2922 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XXX and (MICR2X21 or MICR2024 or MICR2X31) **Assessment:** Theory (60%): One 2-hour theory exam; Practical (40%): continuous assessment in practicals, two assignments, one quiz, one practical exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This unit is not available to BMedSc students. This unit is not offered from 2019.

Pathogenic microbes cause infectious diseases of humans, animals and plants, and inflict enormous suffering and economic losses. Beneficial microbes are important contributors to food production, agriculture, biotechnology, and environmental processes. The aims of MICR2022/2922 are to explore the impacts and applications of microbes in human society and in the environment at large, and to teach skills and specialist knowledge in several key areas of microbiology. Medical Microbiology lectures will cover bacterial, viral, and fungal pathogens, and will introduce the concepts of epidemiology, transmission, pathogenicity, virulence factors, host/parasite relationships, host defences, prevention of disease, and antibiotic types, functions, and resistance. Lecture topics in other areas include Food (preservation, spoilage, poisoning, industrial context), Industrial (fermentation, traditional and recombinant products, bioprospecting), Environmental (nutrient cycles, atmosphere, wastewater, pollution, biodegradation) and Agricultural (nitrogen fixation, plant pathogens, biocontrol) microbiology. The laboratory sessions are integrated with the lecture series and are designed to give students practical experience in isolating, identifying and manipulating live potentially pathogenic microorganisms.

Textbooks

Willey et al. Prescott's Microbiology. 10th edition. McGraw-Hill. 2016.

MICR2922
Microbes in Society (Advanced)

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 2 **Classes:** Two 1-hour lectures per week, plus an additional four 1-hour tutorials, three 1-hour seminars and eleven 3-hour practicals per semester **Prerequisites:** 6cp from (BIOL1XX7 or MBLG1XXX) and an additional 6cp from BIOL1XXX and a mark of 75 or above in 6cp from (BIOL1XXX or MBLG1XXX) **Prohibitions:** MICR2022 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XXX and (MICR2X21 or MICR2024 or MICR2X31) **Assessment:** Theory (60%): One 2-hour theory exam; Practical (40%): continuous assessment in practicals, one assignment, one quiz, one practical exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This unit is not available to BMedSc students. This unit is not offered from 2019.

This unit of study is based on MICR2022. A science communication exercise is unique to MICR2922 and consists of three small group sessions exploring how recent advances in microbiology are communicated to the wider public. This advanced component replaces one assignment exercise from the practical class and is assessed as short essay. The content and nature of this component is based on recent publications with potential high impact for society.

Willey et al. Prescott's Microbiology. 10th edition. McGraw-Hill. 2016.

MIMI2X02, MEDS2003 and MEDS2004 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

3000-level units of study

Major core

INFD3012
Infectious Diseases

Credit points: 6 **Teacher/Coordinator:** A/Prof Jamie Triccas **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 4 hour practical class per week. **Prerequisites:** BMED2401 and BMED2404 **Assessment:** Formal examination (60%): one 2 hour exam. Progressive assessment (40%): includes tutorial case presentation, mid-semester quiz and practical assessment. **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

Infectious diseases occur as a result of interactions between a host and a microbial parasite. This unit of study will explain how infectious agents interact with human hosts at the molecular, cellular, individual patient and community levels to cause diseases and how the hosts attempt to combat these infections. The unit will be taught by the discipline of Infectious Diseases and Immunology of the Department of Medicine within the Central Clinical School, Faculty of Medicine with involvement of associated clinical and research experts who will contribute lectures and theme sessions on their own special interests. The unit will integrate lectures with clinical case studies and hands-on practical sessions to provide students with current knowledge of infectious diseases.

Infectious Diseases: Pathogenesis, Prevention and Case Studies. Edited by Shetty et al. Wiley-Blackwell 2009. ISBN 9781405135436.

MICR3011
Microbes in Infection

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, eight 3-hour practical sessions and three 2-hour clinical tutorials per semester **Prerequisites:** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and 6cp from MICR2X22] OR [BMED2401 and BMED2404] **Prohibitions:** MICR3911 **Assumed knowledge:** MICR2X21 or MICR2024 or MICR2X31 **Assessment:** Theory (60%): One 2-hour exam; Practical (40%): case study: worksheet, lab work, presentation;

one quiz; one 1-hour theory of prac exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit is designed to further develop an interest in, and understanding of, medical microbiology from the introduction in Intermediate Microbiology. Through an examination of microbial structure, virulence, body defences and pathogenesis, the process of acquisition and establishment of disease is covered. The unit is divided into three themes: 1. Clinical Microbiology: host defences, infections, virulence mechanisms; 2. Public health microbiology: epidemiology, international public health, transmission, water and food borne outbreaks; 3. Emerging and re-emerging diseases: the impact of societal change with respect to triggering new diseases and causing the re-emergence of past problems, which are illustrated using case studies. The practical component is designed to enhance students' practical skills and to complement the lecture series. In these practical sessions experience will be gained handling live, potentially pathogenic microbes. Clinical tutorial sessions underpin and investigate the application of the material covered in the practical classes.

MICR3911
Microbes in Infection (Advanced)

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 1 **Classes:** Two 1-hour lectures per week including six 1-hour tutorials, eight 3-hour practical sessions and three 2-hour clinical tutorials per semester. **Prerequisites:** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and a mark of 75 or above in MICR2X22] OR [BMED2401 and a mark of 75 or above in BMED2404] **Prohibitions:** MICR3011 **Assumed knowledge:** MICR2X21 or MICR2024 or MICR2X31 **Assessment:** Theory (60%): One 1.5-hour exam (45%), one essay, one in-semester exam; Practical (40%): case study: worksheet, lab work, presentation; quiz; one 1-hour theory of prac exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is available to students who have performed well in Intermediate Microbiology. This unit is designed to further develop an interest in, and understanding of, medical microbiology from the introduction in Intermediate Microbiology. Through an examination of microbial structure, virulence, body defences and pathogenesis, the process of acquisition and establishment of disease is covered. The unit is divided into three themes: 1. Clinical Microbiology: host defences, infections, virulence mechanisms; 2. Public health microbiology: epidemiology, international public health, transmission, water and food borne outbreaks; 3. Emerging and re-emerging diseases: the impact of societal change with respect to triggering new diseases and causing the re-emergence of past problems, which are illustrated using case studies. The unique aspect of this advanced unit that differentiates it from the mainstream unit is six tutorial style sessions that replace six mainstream lectures in the theme 'Emerging and re-emerging diseases'. These dedicated research-led interactive advanced sessions support self-directed learning and involve discussion around specific topics that will vary from year to year. Nominated research papers and reviews in the topic area will be explored with supported discussion of the relevance to and impact of the work on current thinking around emergence of microbial disease. The focus will be on microbial change that lies critically at the centre of understanding the reasons for the emergence of new diseases and challenges in an era of significant scientific ability to diagnose and treat infection. The practical component is identical to the mainstream unit and is designed to enhance students' practical skills and to complement the lectures. In these practical sessions experience will be gained handling live, potentially pathogenic microbes. Clinical tutorial sessions underpin and investigate the application of the material covered in the practical classes.

VIRO3001
Virology

Credit points: 6 **Teacher/Coordinator:** Dr Tim Newsome **Session:** Semester 1 **Classes:** 26 1-hour lectures, seven 4-hour practical classes, one 2-hour tutorial **Prerequisites:** [6cp from (BIOL1XX7 or MBLGXXXX) and 6cp from (BCHM2XXX or BCMB2X01 or BIOL2XXX or GEGE2X01 or GENE2002 or IMMU2101 or MICR2XXX or PCOL2X0X or PHSI2X0X)] OR [BMED2401 and BMED2404] **Prohibitions:** VIRO3901 **Assumed knowledge:** Fundamental concepts of microorganisms, biomolecules and ecosystems **Assessment:** Pre-class assessment for practical classes: (5 x 1%), continuous assessment for practical classes: (3 x 2%), project assessment for practical classes: (7%), presentation on virology-themed research literature: (7%), theory of practical exam: (15%) (30 minutes), theory exam (60%) (120 minutes). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students are strongly advised to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002 or VIRO3902.BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

Viruses are some of the simplest biological machinery known yet they are also the etiological agents for some of the most important human diseases. New technologies that have revolutionised the discovery of viruses are also revealing a hitherto unappreciated abundance and diversity in the ecosphere, and a wider role in human health and disease. Developing new gene technologies have enabled the use of viruses as therapeutic agents, in novel vaccine approaches, gene delivery and in the treatment of cancer. This unit of study is designed to introduce students who have a basic understanding of molecular biology to the rapidly evolving field of virology. Viral infection in plant and animal cells and bacteria is covered by an examination of virus structure, genomes, gene expression and replication. Building upon these foundations, this unit progresses to examine host-virus interactions, pathogenesis, cell injury, the immune response and the prevention and control of infection and outbreaks. The structure and replication of sub-viral agents: viroids and prions, and their role in disease are also covered. The practical component provides hands-on experience in current diagnostic and research techniques such as molecular biology, cell culture, serological techniques, immunofluorescence and immunoblot analyses and is designed to enhance the students' practical skills and complement the lecture series. In these practical sessions experience will be gained handling live, potentially pathogenic microbes. Tutorials cover a range of topical issues and provide a forum for students to develop their communication and critical thinking skills. The unit will be taught by the Discipline of Microbiology within the School of Life and Environmental Sciences with the involvement of the Discipline of Infectious Diseases and Immunology within the Sydney Medical School.

Textbooks

Knipe and Howley. Fields Virology. 6th edition 2013. Available freely as an electronic resource from the University of Sydney library.

VIRO3901
Virology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Tim Newsome **Session:** Semester 1 **Classes:** 29 1-hour lectures, seven 4-hour practical classes, four 1-hour tutorials **Prerequisites:** [6cp from (BIOL1XX7 or MBLGXXXX) and a mark of 75 or above in 6cp from (BCHM2XXX or BCMB2X01 or BIOL2XXX or GEGE2X01 or GENE2002 or IMMU2101 or MICR2XXX or PCOL2X0X or PHSI2X0X)] OR [BMED2401 and a mark of 75 or above in BMED2404] **Prohibitions:** VIRO3001 **Assumed knowledge:** Fundamental concepts of microorganisms, biomolecules and ecosystems **Assessment:** Pre-class assessment for practical classes: (5 x 1%), continuous assessment for practical classes: (3 x 2%), project assessment for practical classes: (7%), individual presentation on virology-themed research literature: (7%), theory of practical exam: (15%) (30 minutes), theory exam: (60%) (120 minutes) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students are strongly advised to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002 or VIRO3902.BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit is available to students who have performed well in Intermediate Microbiology and is based on VIRO3001 with additional lectures related to the research interests in the Discipline. Consequently, the unit of study content may change from year to year. Viruses are some of the simplest biological machinery known yet they are also the etiological agents for some of the most important human diseases. New technologies that have revolutionised the discovery of viruses are also revealing a hitherto unappreciated abundance and diversity in the ecosphere, and a wider role in human health and disease. Developing new gene technologies have enabled the use of viruses as therapeutic agents, in novle vaccine approaches, gene delivery and in the treatment of cancer. This unit of study is designed to introduce students who have a basic understanding of molecular biology to the rapidly evolving field of virology. Viral infection in plant and animal cells and bacteria is covered by an examination of virus structure, genomes, gene expression and replication. Building upon these foundations, this unit progresses to examine host-virus interactions, pathogenesis, cell injury, the immune response and the prevention and control of infection and outbreaks. The structure and replication of sub-viral agents: viroids and prions, and their role in disease are also covered. The practical component provides hands-on experience in current diagnostic and research techniques such as molecular biology, cell culture, serological techniques, immunofluroescence and immunoblot analyses and is designed to enhance the students' practical skills and complement the lecture series. In these practical sessions experience will be gained handling live, potentially pathogenic microbes. Advanced lectures cover cutting-edge research in the field of virology in small group discussions and presentations that provide a forum for students to develop their communication and critical thinking skills. The unit will be taught by the Discipline of Microbiology within the School of Life and Environmental Sciences with the involvement of the Discipline of Infectious Diseases and Immunology within the Sydney Medical School.

Textbooks

Knipe and Howley. Fields Virology. 6th edition 2013. Available freely as an electronic resource from the University of Sydney library.

VIRO3002
Medical and Applied Virology

Credit points: 6 **Teacher/Coordinator:** A/Prof Barry Slobedman **Session:** Semester 2 **Classes:** Two 1-hour lectures per week **Prerequisites:** [6cp from (BIOL1XX7, MBLGXXXX) and 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR [BMED2401 and BMED2404] **Prohibitions:** VIRO3902 **Assumed knowledge:** Fundamental concepts of microorganisms and biomolecules **Assessment:** One 2-hour exam covering lecture material, one 2-hour theory of practical exam, written assignment and oral presentation (100%) **Practical field work:** One 4 hour practical session per week, in most weeks of semester. Practical session slots are also used for oral presentations. **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002.

This unit of study explores diseases in human caused by viruses, with focus on the way viruses infect individual patients and spread in the community, and how virus infections are diagnosed, treated and/or prevented. Host/Virus interactions will also be described with a focus on the viral mechanisms that have evolved to combat and/or evade host defence systems. These features will be used to explain the symptoms, spread and control of the most medically important viruses that cause serious disease in humans . The unit will be taught by the Discipline of Infectious Diseases and Immunology within the Sydney Medical School with the involvement of associated clinical and research experts who will contribute lectures on their own special interests and with contributions from the Discipline of Microbiology. In the practical classes students will have the opportunity to develop their skills in performing methods currently used in diagnostic and research laboratories such as molecular analysis of viral genomes, immunofluorescent staining of viral antigens, cell culture and the culture of viruses.

Textbooks

Knipe and Howley. Fields Virology. 6th edition 2013. Available freely as an electronic resource from the University of Sydney library.

VIRO3902
Medical and Applied Virology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Barry Slobedman **Session:** Semester 2 **Classes:** Two 1 hour lectures per week, and one interactive 2-hour tutorials (approx 6 in total, including for oral presentations) **Prerequisites:** [6cp from (BIOL1XX7, MBLGXXXX) and a mark of 75 in 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR (BMED2401 and a mark of 75 in BMED2404) **Prohibitions:** VIRO3002 **Assumed knowledge:** Fundamental concepts of microorganisms and biomolecules **Assessment:** One 2-hour exam covering lecture material, one 2-hour theory of practical exam, written assignment, oral presentation and tutorial participation (100%) **Practical field work:** One 4 hour practical session per week, in most weeks of semester. **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3902.

This unit is based on the VIRO3002 course with inclusion of tutorials, including with leading research medical virologists, enabling students to gain additional experience with cutting edge virology research. The content of this unit may change from year to year based on research interests within the department.

Knipe and Howley. Fields Virology. 6th edition 2013. Available freely as an electronic resource from the University of Sydney library.

Minor core

INFD3012
Infectious Diseases

Credit points: 6 **Teacher/Coordinator:** A/Prof Jamie Triccas **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 4 hour practical class per week. **Prerequisites:** BMED2401 and BMED2404 **Assessment:** Formal examination (60%): one 2 hour exam. Progressive assessment (40%): includes tutorial case presentation, mid-semester quiz and practical assessment. **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

Infectious diseases occur as a result of interactions between a host and a microbial parasite. This unit of study will explain how infectious agents interact with human hosts at the molecular, cellular, individual patient and community levels to cause diseases and how the hosts attempt to combat these infections. The unit will be taught by the discipline of Infectious Diseases and Immunology of the Department of Medicine within the Central Clinical School, Faculty of Medicine with involvement of associated clinical and research experts who will contribute lectures and theme sessions on their own special interests. The unit will integrate lectures with clinical case studies and hands-on practical sessions to provide students with current knowledge of infectious diseases.

Textbooks

Infectious Diseases: Pathogenesis, Prevention and Case Studies. Edited by Shetty et al. Wiley-Blackwell 2009. ISBN 9781405135436.

MICR3011
Microbes in Infection

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 1 **Classes:** Two 1-hour lectures per week, eight 3-hour practical sessions and three 2-hour clinical tutorials per semester **Prerequisites:** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and 6cp from MICR2X22] OR [BMED2401 and BMED2404] **Prohibitions:** MICR3911 **Assumed knowledge:** MICR2X21 or MICR2024 or MICR2X31 **Assessment:** Theory (60%): One 2-hour exam; Practical (40%): case study: worksheet, lab work, presentation; one quiz; one 1-hour theory of prac exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.

This unit is designed to further develop an interest in, and understanding of, medical microbiology from the introduction in Intermediate Microbiology. Through an examination of microbial structure, virulence, body defences and pathogenesis, the process of acquisition and establishment of disease is covered. The unit is divided into three themes: 1. Clinical Microbiology: host defences, infections, virulence mechanisms; 2. Public health microbiology: epidemiology, international public health, transmission, water and food borne outbreaks; 3. Emerging and re-emerging diseases: the impact of societal change with respect to triggering new diseases and causing the re-emergence of past problems, which are illustrated using case studies. The practical component is designed to enhance students' practical skills and to complement the lecture series. In these practical sessions experience will be gained handling live, potentially pathogenic microbes. Clinical tutorial sessions underpin and investigate the application of the material covered in the practical classes.

MICR3911
Microbes in Infection (Advanced)

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 1 **Classes:** Two 1-hour lectures per week including six 1-hour tutorials, eight 3-hour practical sessions and three 2-hour clinical tutorials per semester. **Prerequisites:** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and a mark of 75 or above in MICR2X22] OR [BMED2401 and a mark of 75 or above in BMED2404] **Prohibitions:** MICR3011 **Assumed knowledge:** MICR2X21 or MICR2024 or MICR2X31 **Assessment:** Theory (60%): One 1.5-hour exam (45%), one essay, one in-semester exam; Practical (40%): case study: worksheet, lab work, presentation; quiz; one 1-hour theory of prac exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is available to students who have performed well in Intermediate Microbiology. This unit is designed to further develop an interest in, and understanding of, medical microbiology from the introduction in Intermediate Microbiology. Through an examination of microbial structure, virulence, body defences and pathogenesis, the process of acquisition and establishment of disease is covered. The unit is divided into three themes: 1. Clinical Microbiology: host defences, infections, virulence mechanisms; 2. Public health microbiology: epidemiology, international public health, transmission, water and food borne outbreaks; 3. Emerging and re-emerging diseases: the impact of societal change with respect to triggering new diseases and causing the re-emergence of past problems, which are illustrated using case studies. The unique aspect of this advanced unit that differentiates it from the mainstream unit is six tutorial style sessions that replace six mainstream lectures in the theme 'Emerging and re-emerging diseases'. These dedicated research-led interactive advanced sessions support self-directed learning and involve discussion around specific topics that will vary from year to year. Nominated research papers and reviews in the topic area will be explored with supported discussion of the relevance to and impact of the work on current thinking around emergence of microbial disease. The focus will be on microbial change that lies critically at the centre of understanding the reasons for the emergence of new diseases and challenges in an era of significant scientific ability to diagnose and treat infection. The practical component is identical to the mainstream unit and is designed to enhance students' practical skills and to complement the lectures. In these practical sessions experience will be gained handling live, potentially pathogenic microbes. Clinical tutorial sessions underpin and investigate the application of the material covered in the practical classes.

Virology Minor

A minor in Virology requires 36 credit points from this table including: (i) 6 credit points of 1000-level core units(ii) 6 credit points of 1000-level selective units (iii) 12 credit points of 2000-level core units(iv) 12 credit points of 3000-level core units

Units of study

The units of study for the Virology minor are listed below

1000-level units of study

Core

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Please see unit outline on LMS

BIOL1907
From Molecules to Ecosystems (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Pauline Ross **Session:** Semester 2 **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1007 or BIOL1997 **Assumed knowledge:** 85 or above in HSC Biology or equivalent **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . This unit of study has the same overall structure as BIOL1007 but material is discussed in greater detail and at a more advanced level. The content and nature of these components may vary from year to year.

Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

Selective

BIOL1008
Human Biology

Credit points: 6 **Teacher/Coordinator:** Dr Osu Lilje **Session:** Semester 1, Summer Main **Classes:** Lectures; six 3-hour practical sessions; six workshops and tutorials; students encouraged to spend 1-2 hours per week accessing online resources **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or MEDS1001 or MEDS1901 or BIOL1908 or BIOL1998 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Written and oral presentation, quiz, skills-based assessment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences.

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

MEDS1001
Human Biology

Credit points: 6 **Teacher/Coordinator:** Prof Philip Poronnik **Session:** Semester 1 **Classes:** this unit of study will involve between 5-6 hours of face-to-face activities run on the camperdown campus, these contact hours will comprise lectures; six 3-hour practical sessions; six workshops and tutorials **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1901 **Assessment:** Written and oral communication, quiz, practical and workshop reports, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the medical sciences suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology and medical sciences. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in the medical sciences.

This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences. The advanced unit has the same overall concepts as the mainstream unit but material is discussed in a manner that offers a greater level of challenge and academic rigour. Students enrolled in the advanced stream will participate in alternative components which may for example include guest lecturers from medical science industries. The nature of these components may vary from year to year.

2000-level units of study

Core

BMED2404
Microbes, Infection and Immunity

Credit points: 6 **Teacher/Coordinator:** Dr Jim Manos **Session:** Semester 2 **Classes:** Two lectures and one practical per week, two tutorials **Prerequisites:** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **Prohibitions:** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011 **Assessment:** One 2-hour theory exam (60%), in-semester assessments (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study begins by introducing the concepts of disease transmission, pathogenicity and virulence mechanisms of microbes. For a full understanding of the process of infection, the structure and function of pathogenic microorganisms is examined. How the body deals with injury and infection is discussed by exploring barriers to infection and host response once those barriers are breached. The body's response to such physical damage is dealt with in a series of lectures on wound healing, clotting and inflammation, and is complemented by discussion of the pharmacological basis of anti-inflammatory drugs. This is followed by a comprehensive discussion of molecular and cellular immune responses to pathogen invasion. In particular, this gives students an appreciation of the processing of antigens, the structure, production and diversity of antibodies, the operation of the complement system and mechanisms for recognition and destruction of invading microbes. The unit concludes with an overview of microbial diseases, the characteristics of causative agents, pathogenesis and symptoms as well as treatment and control and culminates with exploring current issues of antibiotic resistance, important emerging infections and vaccination strategies.

Practical classes illustrate and underpin the lecture content. Students will investigate normal flora, host defences and medically important microbes and will obtain experience in, and an understanding of, a range of techniques in bacteriology. In these practical sessions experience will be gained handling live, potentially pathogenic microbes.

BMED2405
Gut and Nutrient Metabolism

Credit points: 6 **Teacher/Coordinator:** A/Prof Charles Collyer **Session:** Semester 2 **Classes:** Two lectures and one tutorial or one practical session per week **Prerequisites:** 30 credit points from [12cp from CHEM1XXX and 12cp from MATH1XXX and 12cp from (BIOL1XXX, MBLG1XXX)] **Prohibitions:** ANAT2008 or ANAT2010 or ANAT2011 or ANAT2910 or BCHM2072 or BCHM2972 or BIOL2006 or BIOL2016 or BIOL2906 or BIOL2916 or BMED2807 or BMED2904 or IMMU2101 or MICR2021 or MICR2022 or MICR2921 or MICR2922 or NUTR2911 or NUTR2912 or PCOL2011 **Assessment:** One 2-hour theory exam (60%), five in-semester assignments/assessments (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study examines in detail the anatomy of the gastrointestinal tract, from the oral cavity to anal canal, and includes the liver, gallbladder and pancreas. This is complemented by description of the specialised cells in the gastrointestinal tract, followed by discussion of the transport mechanisms employed to absorb nutrients, and consideration of control systems used to regulate activity of the digestive process. The role of intestinal microflora in the gastrointestinal tract, contributing to both beneficial digestion and absorption of nutrients, as well as to pathogenic disruption, is also discussed. The fate of the macronutrients (carbohydrate, fat and protein) is then considered in terms of their uptake, disposal and reassembly into storage fuels and cellular structures. The biochemical pathways involved in the extraction of energy from the macronutrient fuels are then covered. Examples of these metabolic processes are provided by considering fuel selection during starvation and in diabetes. Finally, pharmacokinetics and pharmacogenomics are explored, with discussion of the metabolism and absorption of drugs including detoxification and excretion of xenobiotic compounds. Practical classes give students extensive experience with inspection of the gastrointestinal system at both the cellular and gross anatomical levels, and in theassay of biochemicals such as glucose. These sessions are designed to nurture observation, data analysis, record keeping and report writing skills.

IMMU2101
Introductory Immunology

Credit points: 6 **Teacher/Coordinator:** Dr Umaimainthan Palendira **Session:** Semester 1 **Classes:** Two 1 hour lectures per week, one 2-3 hour tutorial or practical per week. **Prerequisites:** BIOL1XX8 or BIOL1XX7 or BIOL1XX3 or BIOL1XX2 or MEDS1X01 or MBLG1XX1 **Prohibitions:** BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XX1 **Assessment:** Progressive assessment: includes written, practical, oral and online based assessments (50%); Formal assessment: one 2 hour examination (50%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This is a prerequisite unit of study for IMMU3102, IMMU3202, IMMU3902 and IMMU3903. The completion of 6 credit points of MBLG units of study is highly recommended.

Our immune system not only protects us from viruses, bacteria, and parasites, it can prevent the growth of tumours. Sometimes our immune system can be the cause of diseases like multiple sclerosis, Type 1 diabetes and rheumatoid arthritis. If you are interested in studying how our immune system works to keep us alive, then Introductory Immunology is for you. This unit of study will provide an overview of the immune system and the essential features of immune responses. You will be treated to a lecture course delivered by cutting edge immunologists that begins with a study of immunology as a basic research science. This includes an introduction to the nature of the cells and molecules involved in the immune response. We build on this foundation by introducing the immunological principles underlying the eradication of infectious diseases, successful vaccination strategies, organ transplantation, combatting autoimmune diseases and treating cancer. The integrated tutorials will build on the lecture material as well as provide you with instructions on how to successfully locate and critically analyse scientific literature. The practical sessions will further illustrate particular concepts introduced in the lecture program and provide you with valuable exposure to a variety of very important immunological techniques.

MICR2022
Microbes in Society

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 2 **Classes:** Two 1-hour lectures per week, plus an additional four 1-hour tutorials per semester. Eleven 3-hour practicals per semester **Prerequisites:** 6cp from (BIOL1XX7 or MBLG1XXX) and an additional 6cp from BIOL1XXX **Prohibitions:** MICR2922 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XXX and (MICR2X21 or MICR2024 or MICR2X31) **Assessment:** Theory (60%): One 2-hour theory exam; Practical (40%): continuous assessment in practicals, two assignments, one quiz, one practical exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This unit is not available to BMedSc students. This unit is not offered from 2019.

Pathogenic microbes cause infectious diseases of humans, animals and plants, and inflict enormous suffering and economic losses. Beneficial microbes are important contributors to food production, agriculture, biotechnology, and environmental processes. The aims of MICR2022/2922 are to explore the impacts and applications of microbes in human society and in the environment at large, and to teach skills and specialist knowledge in several key areas of microbiology. Medical Microbiology lectures will cover bacterial, viral, and fungal pathogens, and will introduce the concepts of epidemiology, transmission, pathogenicity, virulence factors, host/parasite relationships, host defences, prevention of disease, and antibiotic types, functions, and resistance. Lecture topics in other areas include Food (preservation, spoilage, poisoning, industrial context), Industrial (fermentation, traditional and recombinant products, bioprospecting), Environmental (nutrient cycles, atmosphere, wastewater, pollution, biodegradation) and Agricultural (nitrogen fixation, plant pathogens, biocontrol) microbiology. The laboratory sessions are integrated with the lecture series and are designed to give students practical experience in isolating, identifying and manipulating live potentially pathogenic microorganisms.

MICR2922
Microbes in Society (Advanced)

Credit points: 6 **Teacher/Coordinator:** Helen Agus **Session:** Semester 2 **Classes:** Two 1-hour lectures per week, plus an additional four 1-hour tutorials, three 1-hour seminars and eleven 3-hour practicals per semester **Prerequisites:** 6cp from (BIOL1XX7 or MBLG1XXX) and an additional 6cp from BIOL1XXX and a mark of 75 or above in 6cp from (BIOL1XXX or MBLG1XXX) **Prohibitions:** MICR2022 or BMED2401 or BMED2402 or BMED2403 or BMED2404 or BMED2405 or BMED2406 or BMED2801 or BMED2802 or BMED2803 or BMED2804 or BMED2805 or BMED2806 or BMED2807 or BMED2808 **Assumed knowledge:** CHEM1XXX and (MICR2X21 or MICR2024 or MICR2X31) **Assessment:** Theory (60%): One 2-hour theory exam; Practical (40%): continuous assessment in practicals, one assignment, one quiz, one practical exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: This unit is not available to BMedSc students. This unit is not offered from 2019.

This unit of study is based on MICR2022. A science communication exercise is unique to MICR2922 and consists of three small group sessions exploring how recent advances in microbiology are communicated to the wider public. This advanced component replaces one assignment exercise from the practical class and is assessed as short essay. The content and nature of this component is based on recent publications with potential high impact for society.

MIMI2X02, MEDS2003 and MEDS2004 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

3000-level units of study

Core

VIRO3001
Virology

Credit points: 6 **Teacher/Coordinator:** Dr Tim Newsome **Session:** Semester 1 **Classes:** 26 1-hour lectures, seven 4-hour practical classes, one 2-hour tutorial **Prerequisites:** [6cp from (BIOL1XX7 or MBLGXXXX) and 6cp from (BCHM2XXX or BCMB2X01 or BIOL2XXX or GEGE2X01 or GENE2002 or IMMU2101 or MICR2XXX or PCOL2X0X or PHSI2X0X)] OR [BMED2401 and BMED2404] **Prohibitions:** VIRO3901 **Assumed knowledge:** Fundamental concepts of microorganisms, biomolecules and ecosystems **Assessment:** Pre-class assessment for practical classes: (5 x 1%), continuous assessment for practical classes: (3 x 2%), project assessment for practical classes: (7%), presentation on virology-themed research literature: (7%), theory of practical exam: (15%) (30 minutes), theory exam (60%) (120 minutes). **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students are strongly advised to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002 or VIRO3902.BMedSc degree students: You must have *successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*

Viruses are some of the simplest biological machinery known yet they are also the etiological agents for some of the most important human diseases. New technologies that have revolutionised the discovery of viruses are also revealing a hitherto unappreciated abundance and diversity in the ecosphere, and a wider role in human health and disease. Developing new gene technologies have enabled the use of viruses as therapeutic agents, in novel vaccine approaches, gene delivery and in the treatment of cancer. This unit of study is designed to introduce students who have a basic understanding of molecular biology to the rapidly evolving field of virology. Viral infection in plant and animal cells and bacteria is covered by an examination of virus structure, genomes, gene expression and replication. Building upon these foundations, this unit progresses to examine host-virus interactions, pathogenesis, cell injury, the immune response and the prevention and control of infection and outbreaks. The structure and replication of sub-viral agents: viroids and prions, and their role in disease are also covered. The practical component provides hands-on experience in current diagnostic and research techniques such as molecular biology, cell culture, serological techniques, immunofluorescence and immunoblot analyses and is designed to enhance the students' practical skills and complement the lecture series. In these practical sessions experience will be gained handling live, potentially pathogenic microbes. Tutorials cover a range of topical issues and provide a forum for students to develop their communication and critical thinking skills. The unit will be taught by the Discipline of Microbiology within the School of Life and Environmental Sciences with the involvement of the Discipline of Infectious Diseases and Immunology within the Sydney Medical School.

VIRO3002
Medical and Applied Virology

Credit points: 6 **Teacher/Coordinator:** A/Prof Barry Slobedman **Session:** Semester 2 **Classes:** Two 1-hour lectures per week **Prerequisites:** [6cp from (BIOL1XX7, MBLGXXXX) and 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR [BMED2401 and BMED2404] **Prohibitions:** VIRO3902 **Assumed knowledge:** Fundamental concepts of microorganisms and biomolecules **Assessment:** One 2-hour exam covering lecture material, one 2-hour theory of practical exam, written assignment and oral presentation (100%) **Practical field work:** One 4 hour practical session per week, in most weeks of semester. Practical session slots are also used for oral presentations. **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002.

This unit of study explores diseases in human caused by viruses, with focus on the way viruses infect individual patients and spread in the community, and how virus infections are diagnosed, treated and/or prevented. Host/Virus interactions will also be described with a focus on the viral mechanisms that have evolved to combat and/or evade host defence systems. These features will be used to explain the symptoms, spread and control of the most medically important viruses that cause serious disease in humans . The unit will be taught by the Discipline of Infectious Diseases and Immunology within the Sydney Medical School with the involvement of associated clinical and research experts who will contribute lectures on their own special interests and with contributions from the Discipline of Microbiology. In the practical classes students will have the opportunity to develop their skills in performing methods currently used in diagnostic and research laboratories such as molecular analysis of viral genomes, immunofluorescent staining of viral antigens, cell culture and the culture of viruses.

Textbooks

Knipe and Howley. Fields Virology. 6th edition 2013. Available freely as an electronic resource from the University of Sydney library.

VIRO3902
Medical and Applied Virology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Barry Slobedman **Session:** Semester 2 **Classes:** Two 1 hour lectures per week, and one interactive 2-hour tutorials (approx 6 in total, including for oral presentations) **Prerequisites:** [6cp from (BIOL1XX7, MBLGXXXX) and a mark of 75 in 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR (BMED2401 and a mark of 75 in BMED2404) **Prohibitions:** VIRO3002 **Assumed knowledge:** Fundamental concepts of microorganisms and biomolecules **Assessment:** One 2-hour exam covering lecture material, one 2-hour theory of practical exam, written assignment, oral presentation and tutorial participation (100%) **Practical field work:** One 4 hour practical session per week, in most weeks of semester. **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3902.

This unit is based on the VIRO3002 course with inclusion of tutorials, including with leading research medical virologists, enabling students to gain additional experience with cutting edge virology research. The content of this unit may change from year to year based on research interests within the department.

Information Systems

The School of Information Technologies aims to teach fundamental principles and practical skills in IT, and to establish the foundations for an entire career. Units of study in Information Systems major are available at standard and advanced level.

About the major

Information Systems is the study of people and organisations in order to determine and deliver solutions that meet their technological needs. Hence Information Systems deals with the following type of issues: strategic planning, system development, system implementation, operational management, end-user needs and education.

Information Systems study is related to Computer Science but the crucial distinction is that Information Systems is about making computer systems work to optimise the productivity and efficiency of organisations, whereas much of Computer Science is about developing software technologies to solve problems, which can improve quality of life and enhance delivery of service.

The school's research in Information Systems encompasses natural language processing, IT economics, social networking analysis, ontology design, data mining and analysis, and knowledge management and open source software.

Requirements for completion

A major in Information Systems requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)18 credit points of 2000-level core units
(iii)18 credit points of 3000-level core units, including 1 interdisciplinary project unit

A minor in Information Systems is available and articulates to this major.

First year

Core: INFO1110 and INFO1113.

Second year

Core: ISYS2120, ISYS2110, ISYS2160.

Third year

Core: ISYS3401, ISYS3402, ISYS3400.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Information Systems: completion of 24 credit points of project work and 24 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Information Systems will be able to:

1. Develop a good understanding of the broader socio-technical systems in which the computer and communications systems are embedded.
2. Carry out detailed information requirements analyses to elicit system requirements
3. Develop the skills to design and implement information systems
4. Have a thorough understanding of the challenges in implementing information systems
5. Have the skills and capabilities to plan and manage information systems projects
6. Acquire the ability to work effectively in teams and to communicate with the diverse stakeholders
7. Have sound knowledge of, and the skills to apply, a range of system development methods
8. Be equipped with applied research skills, which will enable them to undertake a wide range of investigations
9. Learn how to acquire the relevant data and to analyse the data to arrive at valid inferences.

Information Systems

INFORMATION SYSTEMS

Advanced coursework and projects will be available in 2020 for students who complete this major.

Information Systems major

A major in Information Systems requires 48 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 18 credit points of 2000-level core units (iii) 18 credit points of 3000-level core units, including 1 interdisciplinary project unit

Information Systems minor

A minor in Information Systems requires 36 credit points from this table including:(i) 12 credit points of 1000-level core units(ii) 18 credit points of 2000-level core units(iii) 6 credit points of 3000-level selective unit

Units of study

The units of study are listed below.

1000-level units of study

Core

INFO1110
Introduction to Programming

Credit points: 6 **Session:** Intensive July, Semester 1, Semester 2 **Classes:** lectures, laboratories, seminars **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is an essential starting point for software developers, IT consultants, and computer scientists to build their understanding of principle computer operation. Students will obtain knowledge and skills with procedural programming. Crucial concepts include defining data types, control flow, iteration, functions, recursion, the model of addressable memory. Students will be able to reinterpret a general problem into a computer problem, and use their understanding of the computer model to develop source code. This unit trains students with software development process, including skills of testing and debugging. It is a prerequisite for more advanced programming languages, systems programming, computer security and high performance computing.

INFO1113
Object-Oriented Programming

Credit points: 6 **Session:** Semester 1, Semester 2 **Classes:** lectures, laboratories, seminars **Prerequisites:** INFO1110 **Prohibitions:** INFO1103 OR INFO1105 OR INFO1905 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Object-oriented (OO) programming is a technique that arranges code into classes, each encapsulating in one place related data and the operations on that data. Inheritance is used to reuse code from a more general class, in specialised situations. Most modern programming languages provide OO features. Understanding and using these are an essential skill to software developers in industry. This unit provides the student with the concepts and individual programming skills in OO programming, starting from their previous mastery of procedural programming.

2000-level units of study

Core

ISYS2120
Data and Information Management

Credit points: 6 **Session:** Semester 2 **Classes:** Lectures, Tutorials, Laboratories, Project Work - own time **Prerequisites:** INFO1113 OR INFO1103 OR INFO1105 OR INFO1905 OR INFO1003 OR INFO1903 OR DECO1012 **Prohibitions:** INFO2120 OR INFO2820 OR COMP5138 **Assumed knowledge:** Programming skills **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The ubiquitous use of information technology leaves us facing a tsunami of data produced by users, IT systems and mobile devices. The proper management of data is hence essential for all applications and for effective decision making within organizations.

This unit of study will introduce the basic concepts of database designs at the conceptual, logical and physical levels. We will place particular emphasis on introducing integrity constraints and the concept of data normalization which prevents data from being corrupted or duplicated in different parts of the database. This in turn helps in the data remaining consistent during its lifetime. Once a database design is in place, the emphasis shifts towards querying the data in order to extract useful information. The unit will introduce the SQL database query languages, which is industry standard. Other topics covered will include the important concept of transaction management, application development with a backend database, and an overview of data warehousing and OLAP.

ISYS2110
Analysis and Design of Web Info Systems

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, tutorials **Prerequisites:** INFO1113 OR INFO1103 OR INFO1105 OR INFO1905 **Prohibitions:** INFO2110 **Assessment:** through semester assessment (40%), final exam (60%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This course discusses the processes, methods, techniques and tools that organisations use to determine how they should conduct their business, with a particular focus on how web-based technologies can most effectively contribute to the way business is organized. The course covers a systematic methodology for analysing a business problem or opportunity, determining what role, if any, web-based technologies can play in addressing the business need, articulating business requirements for the technology solution, specifying alternative approaches to acquiring the technology capabilities needed to address the business requirements, and specifying the requirements for the information systems solution in particular, in-house development, development from third-party providers, or purchased commercial-off-the-shelf (COTS) packages.

ISYS2160
Information Systems in the Internet Age

Credit points: 6 **Session:** Semester 2 **Classes:** lectures, tutorials **Prohibitions:** ISYS2140 **Assumed knowledge:** INFO1003 OR INFO1103 OR INFO1903 OR INFO1113 **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will provide a comprehensive conceptual and practical introduction to information systems (IS) in the Internet era. Key topics covered include: system thinking and system theory, basic concepts of information systems, internet and e-commerce, e-payment and m-commerce, online marketing and social media, information systems for competitive advantage, functional and enterprise systems, business intelligence, information systems development and acquisition, information security, ethics, and privacy

3000-level units of study

Major core

ISYS3401
Information Technology Evaluation

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Tutorials **Prerequisites:** (INFO2110 OR ISYS2110) AND (INFO2120 OR ISYS2120) AND (ISYS2140 OR ISYS2160) **Assessment:** Through semester assessment (35%) and Final Exam (65%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Information Systems (IS) professionals in today's organisations are required to play leadership roles in change and development. Your success in this field will be aided by your being able to carry out research-based investigations using suitable methods and mastery over data collection and analysis to assist in managing projects and in decision making. Practical research skills are some of the most important assets you will need in your career.

This unit of study will cover important concepts and skills in practical research for solving and managing important problems. This will also provide you with the skills to undertake the capstone project in the IS project unit of study offered in Semester 2 or other projects. It will also provide hand-on experience of using Microsoft Excel and other tools to perform some of the quantitative analysis.

ISYS3402
Decision Analytics and Support Systems

Credit points: 6 **Session:** Semester 2 **Classes:** Lectures, Laboratories, Project Work - own time **Prerequisites:** (ISYS2110 OR INFO2110) AND (ISYS2120 OR INFO2120) **Assumed knowledge:** Database Management AND Systems Analysis and Modelling **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

With the rapid increases in the volume and variety of data available, the problem of providing effective support to facilitate good decision making has become more challenging. This unit of study will provide a comprehensive understanding the diverse types of decision and the decision making processes. It will introduce decision modelling and the design and implementation of application systems to support decision making in organisational contexts. It will include a range of business intelligence and analytics solutions based on online analytical processing (OLAP) models and technologies. The unit will also cover a number of modelling approaches (optimization, predictive, descriptive) and their integration in the context of enabling improved, data-driven decision making.

ISYS3400
Information Systems Project

Credit points: 6 **Session:** Semester 2 **Classes:** Project Work - in class, Project Work - own time, Site Visits, Meetings **Prerequisites:** (INFO2110 OR ISYS2110) AND (INFO2120 OR ISYS2120) AND (ISYS2140 OR ISYS2160) **Prohibitions:** INFO3600 or ISYS3207 **Assessment:** Through semester assessment (80%) and Final Exam (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will provide students an opportunity to apply the knowledge and practise the skills acquired in the prerequisite and qualifying units, in the context of a substantial information systems research or development project and to experience in a realistic way many aspects of analysing and solving information systems problems. Since information systems projects are often undertaken by small teams, the experience of working in a team is seen as an important feature of the unit. Students often find it difficult to work effectively with others and will benefit from the opportunity provided by this unit to further develop this skill.

Minor selective

ISYS3401
Information Technology Evaluation

Credit points: 6 **Session:** Semester 1 **Classes:** Lectures, Tutorials **Prerequisites:** (INFO2110 OR ISYS2110) AND (INFO2120 OR ISYS2120) AND (ISYS2140 OR ISYS2160) **Assessment:** Through semester assessment (35%) and Final Exam (65%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Information Systems (IS) professionals in today's organisations are required to play leadership roles in change and development. Your success in this field will be aided by your being able to carry out research-based investigations using suitable methods and mastery over data collection and analysis to assist in managing projects and in decision making. Practical research skills are some of the most important assets you will need in your career.

This unit of study will cover important concepts and skills in practical research for solving and managing important problems. This will also provide you with the skills to undertake the capstone project in the IS project unit of study offered in Semester 2 or other projects. It will also provide hand-on experience of using Microsoft Excel and other tools to perform some of the quantitative analysis.

ISYS3402
Decision Analytics and Support Systems

Credit points: 6 **Session:** Semester 2 **Classes:** Lectures, Laboratories, Project Work - own time **Prerequisites:** (ISYS2110 OR INFO2110) AND (ISYS2120 OR INFO2120) **Assumed knowledge:** Database Management AND Systems Analysis and Modelling **Assessment:** through semester assessment (50%), final exam (50%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

With the rapid increases in the volume and variety of data available, the problem of providing effective support to facilitate good decision making has become more challenging. This unit of study will provide a comprehensive understanding the diverse types of decision and the decision making processes. It will introduce decision modelling and the design and implementation of application systems to support decision making in organisational contexts. It will include a range of business intelligence and analytics solutions based on online analytical processing (OLAP) models and technologies. The unit will also cover a number of modelling approaches (optimization, predictive, descriptive) and their integration in the context of enabling improved, data-driven decision making.

Marine Science

Study in the discipline of Marine Science is offered as an interdisciplinary major. Units of study in this major are available at standard and advanced level.

About the major

The Marine Science major draws together relevant material to create a multi-disciplinary curriculum that provides you with in-depth knowledge in a range of marine science disciplines. The major is explicitly science-based but seeks to provide you with a broader range of capabilities and an interdisciplinary mind-set to service the large and growing demand for coastal and marine experts in a range of fields. You will take both biological and geological marine science units of study but with flexibility to choose your level of exposure within either of those broad disciplines.

Requirements for completion

A major in Marine Science requires 48 credit points, consisting of:

(i)12 credit points of 1000-level selective units
(ii)12 credit points of 2000-level core units
(iii)12 credit points of 3000-level core units
(iv)6 credit points of 3000-level skill units
(v)6 credit points of 3000-level specialisation units

A minor in Marine Science is available and articulates to this major.

First year

In first year you will be need to complete 12 credit points from a selection of bio- or geo-sciences units: BIOL1XX6, BIOL1XX7, GEOS1X01, GEOS1X03

As these units form the basis of your knowledge in second year, you are advised to complete at least one BIOL and one GEOS unit. If you can accommodate it in your schedule you could consider taking both units from your area of emphasis (GEOS or BIOL) as well as one unit from the other area.

Second year

Your second year units provide the knowledge base for your third year units. We have identified one unit from each of the discipline areas that are considered as fundamental and you must take each of these: GEOS2X15 and BIOL2X22

The geology unit introduces you to the physical processes shaping our oceans and coasts, presenting them within the context of climate change. The required biology unit will provide you with the basis in experimental design and analysis which is fundamental to scientific research in either discipline.

Third year

In your third year you are required to take one unit from each of the discipline areas, GEOS3X09 and BIOL3X13 as well as 6 credit points from a selection of: GEOS3X14, BIOL3X08, BIOL3X16 and 6 credit points from a selection of: GEOS3X14, BIOL3X08, BIOL3X16, GEOS3X03, AVBS3009.

This structure ensures you are exposed to core concepts in marine science including coastal and environmental processes as well as marine biology. You also then have a wide variety of other relevant units from which to choose including field classes, GIS techniques, aquaculture and sedimentary geology.

In your third year you must take at least one designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework

The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Marine Science: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Marine Science will be able to:

1. Demonstrate a coherent understanding of marine science by articulating the methods of marine science, and explaining why current marine science knowledge is both contestable and testable through further inquiry.
2. Demonstrate a coherent understanding of marine science by explaining the role and relevance of marine habitats in society.
3. Recognise that marine science knowledge has been acquired by curiosity and creativity, and demonstrate creativity in thinking and problem solving.
4. Recognise and appreciate the significant role of marine habitats and biodiversity in sustaining life on our planet.
5. Recognise the multidisciplinarity of marine science and the complex interlinkages between bio- and geosciences in understanding biophysical processes.
6. Exhibit depth and breadth of “core concepts” that shape and influence marine and coastal environments, including geological and biological physical processes.
7. Exhibit depth and breadth of marine knowledge by demonstrating that these ‘core concepts’ have interdisciplinary connections with other disciplines.
8. Gather, synthesise and critically evaluate information about marine and coastal phenomena from a range of sources.
9. Critically analyse observations of marine biological and geoscience phenomena by creating and developing models and/or proposing and testing hypotheses.
10. Design and conduct field, laboratory based, or virtual experiments.
11. Select and apply practical and/or theoretical techniques.
12. Collect, accurately record, interpret, analyse, and draw conclusions from data.
13. Use state-of-the-art technology such as big data, numerical modelling and geographic information systems to collect, analyse, and visualise data.
14. Effectively synthesise and communicate marine science results using a range of modes (including oral, written, and visual) for a variety of purposes and audiences.
15. Account for their own learning and marine science work by being independent and self-directed learners.
16. Work effectively, responsibly and safely in individual and peer or team contexts.
17. Demonstrate knowledge of the regulatory frameworks and ethical principles relevant to the marine science area, and apply these in practice.

GEOS3014 **GIS in Coastal Management**	6	**P** Either 12 credit points of Intermediate Geoscience units or [(GEOS2115, GEOS2915) and (BIOL2018 or BIOL2918 or BIOL2024 or BIOL2924 or BIOL2028 or BIOL2928)] **N** GEOS3914 or MARS3104	Semester 2

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
GEOS3914 **GIS in Coastal Management (Advanced)**	6	**P** Distinction average in either 12 credit points of Intermediate Geoscience units or [(GEOS2115 or GEOS2915) and (BIOL2018 or BIOL2918 or BIOL2024 or BIOL2924 or BIOL2028 or BIOL2928)]. **N** GEOS3014 or MARS3104 *Note: Department permission required for enrolment* *A distinction average in prior Geography, Geology or Marine Science units of study is normally required for admission. This requirement may be varied and students should consult the unit of study coordinator.*	Semester 2
BIOL3008 **Marine Field Ecology** *This unit of study is not available in 2018*	6	**P** 12 credit points of Intermediate BIOL, or (6 credit points of Intermediate BIOL and (MBLG2072 or MBLG2972)) **N** BIOL3908 or BIOL2028 or BIOL2928 *Note: Department permission required for enrolment* *This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.*	Intensive July
BIOL3908 **Marine Field Ecology (Advanced)** *This unit of study is not available in 2018*	6	**P** Distinction average in either- 12cp Intermediate BIOL, or (6cp Intermediate BIOL and(MBLG2072 or MBLG2972)) **N** BIOL3008 or BIOL2028 or BIOL2928 *Note: Department permission required for enrolment* *This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.*	Intensive July
BIOL3016 **Coral Reef Biology**	6	**P** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3916 or BIOL2020 or BIOL2920 or NTMP3001 *Note: Department permission required for enrolment* *This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.*	Intensive July
BIOL3916 **Coral Reef Biology (Advanced)**	6	**P** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **N** BIOL3016 or BIOL2020 or BIOL2920 or NTMP3001 *Note: Department permission required for enrolment* *This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.*	Intensive July
GEOS3103 **Environmental and Sedimentary Geology**	6	**A** (GEOS1003 or GEOS1903) **P** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **N** GEOS3803	Semester 2
GEOS3803 **Environmental and Sedimentary Geology(Adv)**	6	**A** (GEOS1003 or GEOS1903) **P** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **N** GEOS3103 *Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.*	Semester 2
AVBS3009 to be developed for offering in 2019.			

Marine Science

MARINE SCIENCE

Advanced coursework and projects will be available in 2020 for students who complete this major.

Marine Science major

A major in Marine Science requires 48 credit points from this table including:(i) 12 credit points of 1000-level selective units(ii) 12 credit points of 2000-level core units (iii) 12 credit points of 3000-level core units (iv) 6 credit points of 3000-level skill units(v) 6 credit points of 3000-level specialisation unitsNOTE: BIOL3X08 and BIOL3X16 are offered in alternate years

Marine Science minor

A minor in Marine Science requires 36 credit points from this table including:(i) 12 credit points of 1000-level selective units (ii) 12 credit points of 2000-level core units(iii) 12 credit points of 3000-level core units

Units of study

The units of study are listed below.

1000-level units of study

Selective

BIOL1006
Life and Evolution

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1, Summer Main **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1906 or BIOL1996 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals. By doing this unit of study, you will develop the ability to examine novel biological systems and understand the complex processes that have shaped those systems.

Please see unit outline on LMS

BIOL1906
Life and Evolution (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Charlotte Taylor **Session:** Semester 1 **Classes:** Two lectures per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1996 **Assumed knowledge:** 85 or above in HSC Biology or equivalent. **Assessment:** Practical and communication (40%), during semester exams (20%), summative final exam (40%) **Practical field work:** 11 x 3-hour lab classes, a field excursion **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, proteins) to whole ecosystems in which myriads of species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. This unit explores how new species continue to arise while others go extinct and discusses the role of mutations as the raw material on which selection acts. It explains how information is transferred between generations through DNA, RNA and proteins, transformations which affect all aspects of biological form and function. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. You will participate in inquiry-led practical classes investigating single-celled organisms and the diversity of form and function in plants and animals.

Life and Evolution (Advanced) has the same overall structure as BIOL1006 but material is discussed in greater detail and at a more advanced level. Students enrolled in BIOL1906 participate in a research project with a focus on developing skills in critical evaluation, experimental design, data analysis and communication.

Please see unit outline on LMS

BIOL1996
Life and Evolution (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Mark de Bruyn **Session:** Semester 1 **Classes:** Lectures as per BIOL1906; one 3-hour practical per week **Prohibitions:** BIOL1001 or BIOL1911 or BIOL1991 or BIOL1006 or BIOL1906 or BIOL1993 or BIOL1998 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), practical reports (25%), seminar presentation (15%), lab note book (5%), prelaboratory quizzes (5%) **Practical field work:** null **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Biology is an immensely diverse science. Biologists study life at all levels, from the fundamental building blocks (genes, and proteins) to whole ecosystems in which myriad species interact. Evolution is the unifying concept that runs through the life sciences, from the origin and diversification of life to understanding behaviour, to dealing with disease. Evolution through natural selection is the framework in biology in which specific details make sense. Science builds and organises knowledge of life and evolution in the form of testable hypotheses. The practical work syllabus for BIOL1996 is different from that of BIOL1906 (Advanced) and consists of a special project-based laboratory.

Bromham, L 2015, An Introduction to Molecular Evolution and Phylogenetics, Oxford University Press.

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed**

knowledge: HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

GEOS1001
Earth, Environment and Society

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1901 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This is the gateway unit of study for Human Geography, Physical Geography, Environmental Studies and Geology. Its objective is to introduce the big questions relating to the origins and current state of the planet: climate change, environment, landscape formation, and the growth of the human population. During the semester you will be introduced to knowledge, theories and debates about how the world's physical and human systems operate. The first module investigates the evolution of the planet through geological time, with a focus on major Earth systems such as plate tectonics and mantle convection and their interaction with the atmosphere, hydrosphere, biosphere and human civilisations. The second module presents Earth as an evolving and dynamic planet, investigating global environmental change, addressing climate variability and human impacts on the natural environment and the rate at which these changes occur and how they have the potential to dramatically affect the way we live. Finally, the third module, focuses on human-induced challenges to Earth's future. This part of the unit critically analyses the relationships between people and their environments, with central consideration to debates on population change, resource use and the policy contexts of climate change mitigation and adaptation.

GEOS1003
Introduction to Geology

Credit points: 6 **Teacher/Coordinator:** A/Prof Tom Hubble **Session:** Semester 2, Summer Main **Classes:** Two 1 hour lectures and one 3 hour practical per week **Prohibitions:** GEOS1903 or GEOL1002 or GEOL1902 or GEOL1501 **Assessment:** One 2 hour exam, quizzes, tests, practical reports, field report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this unit of study is to examine the chemical and physical processes involved in mineral formation, the interior of the Earth, surface features, sedimentary environments, volcanoes, and metamorphism. Lectures and laboratory sessions on mountain building processes and the formation of mineral deposits will lead to an understanding of the forces controlling the geology of our planet. Processes such as weathering, erosion and nature of sedimentary environments are related to the origin of the Australian landscape. In addition to laboratory classes there is a one-day excursion to the western Blue Mountains and Lithgow to examine geological objects in their setting.

Textbooks

The recommended text is is Christiansen, E. H., and Hamblin, W. K. (2015). Dynamic earth: An introduction to physical geology. Burlington, MA: Jones and Bartlett Learning.

GEOS1901

Earth, Environment and Society Advanced

Credit points: 6 **Teacher/Coordinator:** Prof Bill Pritchard, Dr Sabin Zahirovic, Dr Eleanor Bruce, A/Prof Tom Bishop **Session:** Semester 1 **Classes:** One 2 hour lecture and one 2 hour practical per week. **Prohibitions:** GEOS1001 or GEOG1001 or GEOG1002 or GEOL1001 or GEOL1002 or GEOL1902 or ENSY1001 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** Exam (40%), 2000 word essay (25%), practical reports (15%), presentation (20%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Advanced students will complete the same core lecture material as for GEOS1001, but will be required to carry out more challenging practical assignments.

GEOS1903

Introduction to Geology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Tom Hubble **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour practical per week, field classes. **Prohibitions:** GEOS1003 or GEOL1002 or GEOL1902 **Assumed knowledge:** (ATAR 90 or above) or equivalent **Assessment:** One 2 hour exam, tests, quizzes, practical reports, field report (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit has the same objectives as GEOS1003 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their ATAR or UAI and/or their university performance at the time of enrolment. Students that elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. This unit may be taken as part of the BSc (Advanced).

2000-level units of study

Core

GEOS2115

Oceans, Coasts and Climate Change

Credit points: 6 **Teacher/Coordinator:** Prof Dietmar Müller, A/Prof Jody Webster, A.Prof Ana Vila-Concejo **Session:** Intensive July, Semester 1 **Classes:** Twenty-five 1 hour lectures, three 1 hour workshops, eight 2 hour practical classes. **Prerequisites:** 24 credit points from Junior Units of Study **Prohibitions:** GEOS2915 or MARS2006 **Assumed knowledge:** GEOG1001 or GEOL1001 or GEOL1002 or GEOS1003 or GEOS1903 or ENVI1002 or GEOL1902 or GEOL1501 **Assessment:** Lab reports (60%), one 2-hour exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study introduces core concepts about how the formation of ocean basins and their influence on climate govern the development of coasts and continental margins. These concepts provide a framework for understanding the geographic variation of coasts, continental shelves and sediment accumulations in the deep ocean. Ocean-basin evolution is explained in terms of movements within the Earth's interior and how these movements determine the geometry of ocean basins, and their alpine counterparts, which interact with the global circulation of the ocean and atmosphere. This interaction plays a key role in marine sedimentation and controls the environmental conditions responsible for the development of coral reefs and other ecosystems. The Unit of Study systematically outlines how these factors have played out to produce, by gradual change, the coasts we see today, as well as the less familiar deposits hidden beneath the sea and coastal lands. The Unit thereby outlines how knowledge of responses to climate change in the past allow us to predict environmental responses to accelerated climate change occurring now and in the future due to the industrial greenhouse effect, but places these responses into perspective against the geological record. Overall therefore, the Unit aims to provide familiarity with fundamental phenomena central to the study of marine geoscience and environmental impacts, introduced through process-oriented explanations. The Unit of Study is structured around GIS-based practical sessions and problem-based project work, for which lectures provide the theoretical background.

GEOS2915

Oceans, Coasts and Climate Change (Adv)

Credit points: 6 **Teacher/Coordinator:** Prof Dietmar Muller **Session:** Semester 1 **Classes:** Twenty-five 1 hour lectures, three 1 hour workshops, eight 2 hour practical classes. **Prerequisites:** Distinction average in 48 credit points from Junior units of study. **Prohibitions:** GEOS2115 or MARS2006 **Assumed knowledge:** GEOG1001 or GEOL1001 or GEOL1002 or GEOS1003 or GEOS1903 or ENVI1002 or GEOL1902 or GEOL1501 **Assessment:** Lab reports (60%), one 2 hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit has the same objectives as GEOS2115 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance to date. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives.

Online reading materials are provided via Fisher Library.

BIOL2022

Biology Experimental Design and Analysis

Credit points: 6 **Teacher/Coordinator:** A/Prof Clare McArthur **Session:** Semester 2 **Classes:** Two lectures per week and one 3-hour practical per week. **Prerequisites:** 6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5) **Prohibitions:** BIOL2922 or BIOL3006 or BIOL3906 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** Practical reports/presentations (60%), one 2-hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides foundational skills essential for doing research in biology and for critically judging the research of others. We consider how biology is practiced as a quantitative, experimental and theoretical science. We focus on the underlying principles and practical skills you need to explore questions and test hypotheses, particularly where background variation (error) is inherently high. In so doing, the unit provides you with an understanding of how biological research is designed, analysed and interpreted using statistics. Lectures focus on sound experimental and statistical principles, using examples in ecology and other fields of biology to demonstrate concepts. In the practical sessions, you will design and perform, analyse (using appropriate statistical tools) and interpret your own experiments to answer research questions in topics relevant to your particular interest. This unit of study provides a suitable foundation for senior biology units of study.

Recommended: Field, A. 2013. Discovering statistics using SPSS. 4th Ed. SAGE Publications, London.

BIOL2922

Biol Experimental Design and Analysis Adv

Credit points: 6 **Teacher/Coordinator:** A/Prof Clare McArthur **Session:** Semester 2 **Classes:** Two lectures per week and one 3-hour practical per week. **Prerequisites:** [An annual average mark of at least 70 in the previous year] and [6cp from (BIOL1XXX or MBLG1XXX or ENVX1001 or ENVX1002 or DATA1001 or MATH1XX5)] **Prohibitions:** BIOL2022 or BIOL3006 or BIOL3906 **Assumed knowledge:** BIOL1XXX or MBLG1XXX **Assessment:** Practical reports/presentations (60%), one 2-hour exam (40%). **Mode of delivery:** Normal (lecture/lab/tutorial) day

The content of BIOL2922 will be based on BIOL2022 but qualified students will participate in alternative components at a more advanced level. The content and nature of these components may vary from year to year.

Textbooks

Required: Ruxton, G. and Colegrave, N. 2016. Experimental design for the life sciences. 4th Ed. Oxford
University Press
Recommended: Quinn, G. P. and Keough, 2002. Experimental Design and Data Analysis for Biologists.1st Ed. Cambridge University Press, Cambridge.

3000-level units of study

Major and minor core

GEOS3009
Coastal Environments and Processes

Credit points: 6 **Teacher/Coordinator:** A/Prof Jody Webster, A/Prof Ana Vila-Concejo, Dr Tristan Salles **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 3 hour practical per week; weekend excursion. **Prerequisites:** (6 credit points of Intermediate Geoscience units) and (6 further credit points of Intermediate Geoscience or 6 credit points of Physics or Mathematics or Information Technology or Engineering units) or ((MARS2005 or MARS2905) and (MARS2006 or MARS2906)) **Prohibitions:** GEOS3909 or MARS3003 or MARS3105 **Assessment:** One 2 hour exam, research reports and an online quiz (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of this course is to introduce students to a variety of Coastal Environments and the major processes which control the morphodynamic evolution of these systems. The course offers a unique opportunity of learning the full spectrum of marine sedimentary environments from siliciclastic, temperate, highly urbanised and impacted estuarine ecosytems to carbonate, tropical, pristine and undeveloped/protected coastal and continental margin environments. The course is divided in three sections: Section A covers the basic morphodynamics and processes impacting carbonate-dominated coastal and continental margin environments. The focus is on carbonate reefal and margin systems and their geologic and biologic responses to past, present and future environmental changes; Section B covers the basic morphodynamics of temperate and tropical coasts, including beach morphodynamics and basic knowledge on waves and currents; Section C consolidates all concepts learnt in the previous sections by applying them to numerical modelling.

There is a compulsory weekend fieldtrip to the NSW coast to study beach morphodynamics and fieldwork techniques. Depending on the year, there may be a voluntary fieldtrip to a coral reef environment, for example, The University of Sydney One Tree Island Research Station.

Textbooks

List of selected readings provided online.

GEOS3909
Coastal Environments and Processes (Adv)

Credit points: 6 **Teacher/Coordinator:** A/Prof Jody Webster **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 3 hour practical per week; weekend excursion **Prerequisites:** Distinction average in (6 credit points of Intermediate Geoscience units) and (6 further credit points of Intermediate Geoscience or 6 credit points of Physics, Mathematics, Information Technology or Engineering units) or ((MARS2005 or MARS2905) and (MARS2006 or MARS2906)) **Prohibitions:** GEOS3009 or MARS3003 or MARS3105 **Assessment:** One 2 hour exam, research reports and an online quiz (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: A distinction average in prior Geography or Geology units is normally required for admission. This requirement may be varied and students should consult the unit of study coordinator.

Advanced students will complete the same core lecture material as for GEOS3009 but will carry out more challenging projects, practicals, assignments and tutorials.

BIOL3013
Marine Biology

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Semester 2 **Classes:** Two 1-hour lectures and one 4-hour practical per week. **Prerequisites:** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3913 **Assessment:** Practical reports, data exercises and exams (100%). **Practical field work:** Combination of field, lab and computer based practical activities **Mode of delivery:** Normal (lecture/lab/tutorial) day

We will examine in detail processes that are important for the establishment and maintenance of marine communities. Lectures will expose students to the key ideas, researchers and methodologies within selected fields of marine biology. Laboratory sessions and field excursions will complement the lectures by providing students with hands-on experience with the organisms and the processes that affect them. Students will develop critical analysis and scientific writing skills while examining the current literature.

BIOL3913
Marine Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Semester 2 **Classes:** See BIOL3013. **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3013 **Assessment:** Practical reports, data exercises and exams (100%). **Practical field work:** Combination of field, lab and computer-based practical activities **Mode of delivery:** Normal (lecture/lab/tutorial) day

Qualified students will participate in alternative components of the BIOL3013 Marine Biology unit. The content and nature of these components may vary from year to year but generally involves an individual or group project, conducted with unit instructors, which takes the place of one of the practical-based assessments..

Skill units

GEOS3014
GIS in Coastal Management

Credit points: 6 **Teacher/Coordinator:** Dr Eleanor Bruce **Session:** Semester 2 **Classes:** 2x1 hour lectures and 1x3h practical/week **Prerequisites:** Either 12 credit points of Intermediate Geoscience units or [(GEOS2115, GEOS2915) and (BIOL2018 or BIOL2918 or BIOL2024 or BIOL2924 or BIOL2028 or BIOL2928)] **Prohibitions:** GEOS3914 or MARS3104 **Assessment:** One 2 hour exam, two project reports, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Coastal Management is about how scientific knowledge is used to support policy formulation and planning decisions in coastal environments. The course links coastal science to policy and practice in management of estuaries, beaches and the coastal ocean. The principles are exemplified through specific issues, such as coastal erosion, pollution, and impacts of climate-change. The issues are dealt with in terms of how things work in nature, and how the issues are handled through administrative mechanisms. These mechanisms involve planning strategies like Marine Protected Areas and setback limits on civil development in the coastal zone. The coastal environments and processes that are more relevant to coastal management including: rocky coasts; beaches, barriers and dunes; and coral reefs will also be introduced. At a practical level, the link between science and coastal management is given substance through development and use of 'decision-support models'. These models involve geocomputing methods that entail application of simulation models, remotely sensed information, and Geographic Information Systems (GIS). The course therefore includes both principles and experience in use of these methods to address coastal-management issues. (It thus also involves extensive use of computers.) Although the focus is on the coast, the principles and methods have broader relevance to environmental management in particular, and to problem-solving in general. That is, the course has vocational relevance in examining how science can be exploited to the benefit of society and nature conservation.

GEOS3914
GIS in Coastal Management (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Eleanor Bruce **Session:** Semester 2 **Classes:** Two hours of lectures, one 3 hour practical per week comprising one 1 hour practical demonstration and one 2 hour practical **Prerequisites:** Distinction average in either 12 credit points of Intermediate Geoscience units or [(GEOS2115 or GEOS2915) and (BIOL2018 or BIOL2918 or BIOL2024 or BIOL2924 or BIOL2028 or BIOL2928)]. **Prohibitions:** GEOS3014 or MARS3104 **Assessment:** One 2 hour exam, project work, two practical-based project reports, fortnightly progress quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: A distinction average in prior Geography, Geology or Marine Science units of study is normally required for admission. This requirement may be varied and students should consult the unit of study coordinator.

Advanced students will complete the same core lecture material as for GEOS3014 but will carry out more challenging projects, practicals, assignments and tutorials.

BIOL3008
Marine Field Ecology

Credit points: 6 **Teacher/Coordinator:** A/Prof Ross Coleman **Session:** Intensive July **Classes:** Intensive 8-day field course held in the pre-semester break. **Prerequisites:** 12 credit points of Intermediate BIOL, or (6 credit points of Intermediate BIOL and (MBLG2072 or MBLG2972)) **Prohibitions:** BIOL3908 or BIOL2028 or BIOL2928 **Assessment:** Discussion groups, research project proposal, biodiversity survey report, data analysis and checking, research project report (100%). **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.

This field course provides a practical introduction to the experimental analysis of marine populations and assemblages. Students gain experience using a range of intertidal sampling techniques and develop a detailed understanding of the logical requirements necessary for manipulative ecological field experiments. No particular mathematical or statistical skills are required for this subject. Group experimental research projects in the field are the focus of the unit during the day, with lectures and discussion groups about the analysis of experimental data and current issues in experimental marine ecology occurring in the evening.

Textbooks

No textbook is prescribed but Coastal Marine Ecology of Temperate Australia. Eds. Underwood, A.J. & Chapman, M.G. 1995. University of New South Wales Press, provides useful background reading.

BIOL3908
Marine Field Ecology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Ross Coleman. **Session:** Intensive July **Classes:** One 8-day field course held in the pre-semester break, plus four 1-hour tutorials during semester 2. **Prerequisites:** Distinction average in either- 12cp Intermediate BIOL, or (6cp Intermediate BIOL and(MBLG2072 or MBLG2972)) **Prohibitions:** BIOL3008 or BIOL2028 or BIOL2928 **Assessment:** Discussion groups, research project proposal, biodiversity report, data analysis and checking, research project report (100%). **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit cannot be combined with more than one other BIOL field unit during the degree. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any senior BIOL units of study may also be considered. The unit is only available in ODD years (2015, 2017?) but students may apply for entry into an alternative Intermediate field unit in EVEN years.

This unit has the same objectives as Marine Field Ecology BIOL3008, and is suitable for students wishing to pursue certain aspects of marine field ecology in a greater depth. Entry is restricted and selection is made from applicants on the basis of past performance. Students taking this unit of study will be expected to take part in a number of additional tutorials after the field course on advanced aspects of experimental design and analysis and will be expected to incorporate these advanced skills into their analyses and project reports. This unit may be taken as part of the BSc(Advanced).

Textbooks

As for BIOL 3008.

BIOL3016
Coral Reef Biology

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Intensive July **Classes:** Fieldwork 80 hours block mode (during July) **Prerequisites:** [12cp of BIOL2XXX] OR [6cp from BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3916 or BIOL2020 or BIOL2920 or NTMP3001 **Assessment:** Participation in field work, essay, project report and an exam (100%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.

Coral Reef Biology is an intensive unit held at a research station on the Great Barrier Reef. The unit focuses on the dominant taxa in coral reef environments and the linkages between them. Emphasis is placed on the biological adaptations for life in tropical waters and the ecological, oceanographic and physiological processes involved. Aspects covered include: processes influencing the distribution of coral reefs, symbiosis, reef connectivity, lagoon systems, nutrient cycling and the impacts of climate change and other anthropogenic pressures on the world's corals reefs.

BIOL3916
Coral Reef Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** A/Prof Will Figueira **Session:** Intensive July **Classes:** Fieldwork 80 hours block mode (during July) **Prerequisites:** An average mark of 75 or above in [12cp of BIOL2XXX] OR [6cp of BIOL2XXX and (MBLG2X72 or GEGE2X01 or GENE2002)] **Prohibitions:** BIOL3016 or BIOL2020 or BIOL2920 or NTMP3001 **Assessment:** Participation in field work, essay, project report and exam (100%) **Mode of delivery:** Block mode

Note: Department permission required for enrolment. Note: This unit requires School permission to enrol; please see the School of Life and Environmental Sciences website for details on how to apply. Entry into the unit is based on placement availability and selection is competitive based on academic performance in the pre-requisite units of study. Academic performance in any Senior BIOL units of study may also be considered.

This unit has the same objectives as BIOL3016, Coral Reef Biology, and is suitable for students who wish to pursue certain aspects of tropical marine biology in greater depth, with a focus on the GBR. Entry is restricted, and selection is made from the applicants on the basis of their previous performance. Students taking this unit of study will pursue individual projects in consultation with, and under the guidance of, the course coordinator. The aim is to design a project relating to the particular interests of the student. The nature of these projects will vary from year to year. This unit of study may be taken as part of the BSc (Advanced) program.

Specialisation units

GEOS3014
GIS in Coastal Management

Credit points: 6 **Teacher/Coordinator:** Dr Eleanor Bruce **Session:** Semester 2 **Classes:** 2x1 hour lectures and 1x3h practical/week **Prerequisites:** Either 12 credit points of Intermediate Geoscience units or [(GEOS2115, GEOS2915) and (BIOL2018 or BIOL2918 or BIOL2024 or BIOL2924 or BIOL2028 or BIOL2928)] **Prohibitions:** GEOS3914 or MARS3104 **Assessment:** One 2 hour exam, two project reports, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Coastal Management is about how scientific knowledge is used to support policy formulation and planning decisions in coastal environments. The course links coastal science to policy and practice in management of estuaries, beaches and the coastal ocean. The principles are exemplified through specific issues, such as coastal erosion, pollution, and impacts of climate-change. The issues are dealt with in terms of how things work in nature, and how the issues are handled through administrative mechanisms. These mechanisms involve planning strategies like Marine Protected Areas and setback limits on civil development in the coastal zone. The coastal environments and processes that are more relevant to coastal management including: rocky coasts; beaches, barriers and dunes; and coral reefs will also be introduced. At a practical level, the link between science and coastal management is given substance through development and use of 'decision-support models'. These models involve geocomputing methods that entail application of simulation models, remotely sensed information, and Geographic Information Systems (GIS). The course therefore includes both principles and experience in use of these methods to address coastal-management issues. (It thus also involves extensive use of computers.) Although the focus is on the coast, the principles and methods have broader relevance to environmental management in particular, and to problem-solving in general. That is, the course has vocational relevance in examining how science can be exploited to the benefit of society and nature conservation.

GEOS3103
Environmental and Sedimentary Geology

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny (Coordinator), Dr. Adriana Dutkiewicz **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour tutorial/practical class per week **Prerequisites:** (GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924) **Prohibitions:** GEOS3803 **Assumed knowledge:** (GEOS1003 or GEOS1903) **Assessment:** One 2 hour exam, practical reports and quizes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Sediments and sedimentary rocks cover most of the Earth's surface, record much of the Earth's geological and climatic history and host important resources such as petroleum, coal, water and mineral ores. The aim of this unit is to provide students with the skills required to examine, describe and interpret sediments and sedimentary rocks for a variety of different purposes. Specific foci of the unit will be the identification of the recent or ancient environment in which sedimentary materials were deposited, the environmental controls which produce sedimentary structures, and the processes that control the production, movement and storage of sediment bodies. On completion of this unit students will be familiar with the natural processes that produce and modify sediments across a range of environments at the Earth's surface, including fluvial, aeolian, lacustrine, marginal marine and deep marine environments. The various controls on the sedimentary record such as climate and sea-level change, as well as diagenesis and geochemical cycles will also be discussed. Practical exercises will require students to examine global datasets, and determine the properties and significance of sediments and sedimentary rocks. The course is relevant to students interested in petroleum or mineral exploration, environmental and engineering geology as well as marine geoscience.

Textbooks

Course notes will be available from the Copy Centre and an appropriate set of reference texts will be placed on special reserve in the library.

GEOS3803
Environmental and Sedimentary Geology(Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Dan Penny (Coordinator), Dr. Adriana Dutkiewicz **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 3 hour tutorial/practical class per week. **Prerequisites:** A mark of 75 or above in [(GEOS2114 or GEOS2914) and (GEOS2124 or GEOS2924)] **Prohibitions:** GEOS3103 **Assumed knowledge:** (GEOS1003 or GEOS1903) **Assessment:** One 2 hour exam, practical, field reports and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have a credit average for all Geoscience units may enrol in this unit with the permission of the Head of School.

This unit has the same objectives as GEOS3103 and is suitable for students who wish to pursue aspects of the subject in greater depth. Entry is restricted and selection is made from the applicants on the basis of their performance at the time of enrolment. Students who elect to take this unit will participate in alternatives to some aspects of the standard unit and will be required to pursue independent work to meet unit objectives. Specific details for this unit of study will be announced in meetings with students in week 1 of semester.

Textbooks

Course notes will be available from the Copy Centre and appropriate set of reference texts will be placed on special reserve in the library.

AVBS3009 to be developed for offering in 2019.

Mathematical Sciences

The School of Mathematics and Statistics is situated in the Faculty of Science. Units of study in this program are available at standard and advanced level.

About the program

Mathematics and Statistics is an extremely diverse discipline (or even set of disciplines) that has common ideas and themes that develop and become clear to high achieving students as they progress in their studies. Generally speaking, a deep understanding of the common ideas and their application in both theoretical and practical spheres comes as a result of high-level syntheses rather than low-level foundational learning.

We want to give our very best students the opportunity to attain this level of learning through a program which enables them to engage across the breadth of the subject and to develop depth in one or more subdisciplines. This program will form an outstanding foundation for honours at 4000-level in Pure Mathematics, Applied Mathematics or Statistics.

Requirements for completion

A program in Mathematical Sciences requires 60 credit points, consisting of:

(i)A 48 credit point major in either Financial Mathematics and Statistics, Mathematics or Statistics, and:

- For students with a major in Mathematics, 6 credit points of 2000-level selective units and 6 credit points of 3000-level selective mathematics or statistics units in addition to those counted towards the major.
- For students with a major in Financial Mathematics and Statistics or Statistics, 12 credit points of 2000-level selective mathematics or statistics units in addition to those counted towards the major.

First year

MATH1021/1921/1931, MATH1023/1923/1933 and MATH1002/1902, and 3 credit points from a selection of: MATH1004/1904 or MATH1005/1905. If you are taking a Science degree you must take either MATH1005/1905 or the combination DATA1001 and MATH1004/1904.

The first year units provide a strong foundation for further learning and a broad introduction to the Mathematical Sciences and will equip you for all of the majors, Mathematics, Financial Mathematics and Statistics, and Statistics, that are offered in this program. MATH1021/1921/1931 and MATH1023/1923/1933 extend your knowledge of calculus and introduce you to calculus of several variables and mathematical modelling with differential equations. MATH1002/1902 introduces you to linear algebra, including matrices and their applications. MATH1005/1905 introduces you to working with data and MATH1004/1904 is a unit on discrete mathematics, which is the mathematics of counting and arrangement.

All first year MATH units are 3 credit point units.

Second year

Based on major choice, students complete 6 or 12 credit points, in addition to those counted towards the major, from a selection of: MATH20212921, MATH20222922, MATH20232923, MATH2068/2988, MATH2069/2969, MATH2070/2970, STAT2011/2911, STAT2912, DATA2002. For further information about each major, please look at the handbook page for that major.

The program aims to give you a broad foundational knowledge at 2000 level that will equip you for study of one or more majors in third year.

Third year

Students completing a Mathematics major complete 6 credit points from a wide selection of mathematics or statistics units in addition to those counted towards the major. Students completing a Statistics major, or a Financial Mathematics and Statistics major will take all four 3000-level units listed in their major.

For further information about each major, please look at the Table A handbook page for that major.

In your third year you must take at least one designated project unit as well as a range of other specialist units for the major that you have chosen.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Students who complete a major in Statistics are able to go on to honours in Statistics. Students who complete a major in Mathematics are able to go on to honours in Applied Mathematics or Pure Mathematics. Students who complete a major in Financial Mathematics and Statistics are able to go on to honours in Applied Mathematics or Statistics. Students must satisfy honours admission requirements.

Requirements for Honours for all areas of Mathematical Sciences: completion of 24 credit points of project work and 24 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Mathematical Sciences will be able to show:

1. Ability to construct logical, clearly presented and justified arguments incorporating deductive reasoning
2. Knowledge of the principles and concepts of a broad range of fundamental areas in mathematics and statistics
3. Ability to formulate and model practical and abstract problems in mathematical or statistical terms using a variety of methods
4. Ability to apply mathematical principles, concepts, techniques and technology to solve practical and abstract problems and interpret results critically
5. Understanding of the breadth of the discipline, its role in other fields and the way that other fields contribute to development in Mathematical Sciences
6. Appropriate interpretation of information communicated in statistical or mathematical form
7. Appropriate presentation of information, reason and conclusions in a variety of modes to diverse audiences (expert and non-expert).

MATHEMATICAL SCIENCES			
Mathematical Sciences program			
The Mathematical Sciences program is available only to students enrolled in the Dalyell stream.			
A program in Mathematical Sciences requires 60 credit points including: (i) A 48 credit point major in either Financial Mathematics and Statistics, Mathematics or Statistics, and: (a) For students with a major in Mathematics, 6 credit points of 2000-level selective units and 6 credit points of 3000-level selective mathematics or statistics units in addition to those counted towards the major. (b) For students with a major in Financial Mathematics and Statistics or Statistics, 12 credit points of 2000-level selective mathematics or statistics units in addition to those counted towards the major.			
Units of study			
The units of study are listed below.			
2000-level units of study			
Selective			
MATH2021 **Vector Calculus and Differential Equations**	6	**P** (MATH1X21 or MATH1931 or MATH1X01 or MATH1906) and (MATH1XX2) and (MATH1X23 or MATH1933 or MATH1X03 or MATH1907) **N** MATH2921 or MATH2065 or MATH2965 or MATH2061 or MATH2961 or MATH2067	Semester 1
MATH2921 **Vector Calculus and Differential Eqs (Adv)**	6	**P** [(MATH1921 or MATH1931 or MATH1901 or MATH1906) or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH1902 or (a mark of 65 or above in MATH1002)] and [(MATH1923 or MATH1933 or MATH1903 or MATH1907) or (a mark of 65 or above in MATH1023 or MATH1003)] **N** MATH2021 or MATH2065 or MATH2965 or MATH2061 or MATH2961 or MATH2067	Semester 1
MATH2022 **Linear and Abstract Algebra**	6	**P** MATH1XX2 **N** MATH2922 or MATH2968 or MATH2061 or MATH2961	Semester 1
MATH2922 **Linear and Abstract Algebra (Advanced)**	6	**P** MATH1902 or (a mark of 65 or above in MATH1002) **N** MATH2022 or MATH2968 or MATH2061 or MATH2961	Semester 1
MATH2023 **Analysis**	6	**P** (MATH1X21 or MATH1931 or MATH1X01 or MATH1906) and (MATH1X23 or MATH1933 or MATH1X03 or MATH1907) and (MATH1XX2) **N** MATH2923 or MATH3068 or MATH2962	Semester 2
MATH2923 **Analysis (Advanced)**	6	**P** [(MATH1921 or MATH1931 or MATH1901 or MATH1906) or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH1902 or (a mark of 65 or above in MATH1002)] and [(MATH1923 or MATH1933 or MATH1903 or MATH1907) or (a mark of 65 or above in MATH1023 or MATH1003)] **N** MATH2023 or MATH2962 or MATH3068	Semester 2
MATH2068 **Number Theory and Cryptography**	6	**A** MATH1014 or MATH1002 or MATH1902 **P** 6 credit points of Junior Mathematics units **N** MATH2988 or MATH3009 or MATH3024	Semester 2
MATH2988 **Number Theory and Cryptography Advanced**	6	**P** [MATH19X1 or MATH1906 or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH19X3 or MATH1907 or (a mark of 65 or above in MATH1023 or MATH1003)] and [MATH1902 or (a mark of 65 or above in MATH1002)] **N** MATH2068	Semester 2
MATH2069 **Discrete Mathematics and Graph Theory**	6	**P** 6 credit points of Junior Mathematics units **N** MATH2011 or MATH2009 or MATH2969	Semester 1
MATH2969 **Discrete Mathematics and Graph Theory Adv**	6	**P** 9 credit points of Junior Mathematics (advanced level or Credit at the normal level) **N** MATH2011 or MATH2009 or MATH2069	Semester 1
MATH2070 **Optimisation and Financial Mathematics**	6	**A** MATH1X23 or MATH1933 or MATH1X03 or MATH1907 **P** (MATH1X21 or MATH1011 or MATH1931 or MATH1X01 or MATH1906) and (MATH1014 or MATH1X02) **N** MATH2010 or MATH2033 or MATH2933 or MATH2970 or ECMT3510 *Students may enrol in both MATH2070 and MATH3075 in the same semester*	Semester 2

MATH3978 **PDEs and Waves (Advanced)**	6	**A** [MATH2X61 and MATH2X65] or [MATH2X21 and MATH2X22] **P** Credit average or greater in 12 credit points of Intermediate Mathematics **N** MATH3078 or MATH3018 or MATH3921	Semester 2
MATH3X20, MATH3X10, MATH3X70, MATH3979, MATH3X11, MATH3X21, MATH3X22, MATH3X23, MATH3X24, MATH3X25, MATH3X26, MATH3X27, MATH3X28, MATH3X29, MATH3X12, MATH3X13, MATH3X14, MATH3X15, MATH3X16, MATH3X17, MATH3X18, MATH3X19, STAT3021, STAT3X22, STAT3X23, STAT3024 to be developed for offering in 2019.			

Mathematics

MATHEMATICAL SCIENCES

Mathematical Sciences program

The Mathematical Sciences program is available only to students enrolled in the Dalyell stream.A program in Mathematical Sciences requires 60 credit points including:(i) A 48 credit point major in either Financial Mathematics and Statistics, Mathematics or Statistics, and: (a) For students with a major in Mathematics, 6 credit points of 2000-level selective units and 6 credit points of 3000-level selective mathematics or statistics units in addition to those counted towards the major.(b) For students with a major in Financial Mathematics and Statistics or Statistics, 12 credit points of 2000-level selective mathematics or statistics units in addition to those counted towards the major.

Units of study

The units of study are listed below.

2000-level units of study

Selective

MATH2021
Vector Calculus and Differential Equations

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial; and 1x1-hr practice class per week **Prerequisites:** (MATH1X21 or MATH1931 or MATH1X01 or MATH1906) and (MATH1XX2) and (MATH1X23 or MATH1933 or MATH1X03 or MATH1907) **Prohibitions:** MATH2921 or MATH2065 or MATH2965 or MATH2061 or MATH2961 or MATH2067 **Assessment:** assessment for this unit consists of quizzes, assignments, and a final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit opens with topics from vector calculus, including vector-valued functions (parametrised curves and surfaces; vector fields; div, grad and curl; gradient fields and potential functions), line integrals (arc length; work; path-independent integrals and conservative fields; flux across a curve), iterated integrals (double and triple integrals, polar, cylindrical and spherical coordinates; areas, volumes and mass; Green's Theorem), flux integrals (flow through a surface; flux integrals through a surface defined by a function of two variables, through cylinders, spheres and other parametrised surfaces), Gauss' and Stokes' theorems.The unit then moves to topics in solution techniques for ordinary and partial differential equations (ODEs and PDEs) with applications. It provides a basic grounding in these techniques to enable students to build on the concepts in their subsequent courses. The main topics are: second order ODEs (including inhomogeneous equations), higher order ODEs and systems of first order equations, solution methods (variation of parameters, undetermined coefficients) the Laplace and Fourier Transform, an introduction to PDEs, and first methods of solutions (including separation of variables, and Fourier Series).

Textbooks
As set out in the Intermediate Mathematics Handbook

MATH2921
Vector Calculus and Differential Eqs (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial; and 1x1-hr practice class per week **Prerequisites:** [(MATH1921 or MATH1931 or MATH1901 or MATH1906) or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH1902 or (a mark of 65 or above in MATH1002)] and [(MATH1923 or MATH1933 or MATH1903 or MATH1907) or (a mark of 65 or above in MATH1023 or MATH1003)] **Prohibitions:** MATH2021 or MATH2065 or MATH2965 or MATH2061 or MATH2961 or MATH2067 **Assessment:** assessment for this unit consists of quizzes, assignments, and a final exam. **Mode of delivery:** Normal (lecture/lab/tutorial) day

This is the advanced version of MATH2021, with more emphasis on the underlying concepts and mathematical rigour.The vector calculus component of the course will include: parametrised curves and surfaces, vector fields, div, grad and curl, gradient fields and potential functions, lagrange multipliers line integrals, arc length, work, path-independent integrals, and conservative fields, flux across a curve, double and triple integrals, change of variable formulas, polar, cylindrical and spherical coordinates, areas, volumes and mass, flux integrals, and Green's Gauss' and Stokes' theorems.The Differential Equations half of the course will focus on ordinary and partial differential equations (ODEs and PDEs) with applications with more complexity and depth. The main topics are: second order ODEs (including inhomogeneous equations), series solutions near a regular point, higher order ODEs and systems of first order equations, matrix equations and solutions, solution methods (variation of parameters, undetermined coefficients) the Laplace and Fourier Transform, elementary Sturm-Liouville theory, an introduction to PDEs, and first methods of solutions (including separation of variables, and Fourier Series). The unit then moves to topics in solution techniques for ordinary and partial differential equations (ODEs and PDEs) with applications. It provides a more thorough grounding in these techniques to enable students to build on the concepts in their subsequent courses. The main topics are: second order ODEs (including inhomogeneous equations), higher order ODEs and systems of first order equations, solution methods (variation of parameters, undetermined coefficients) the Laplace and Fourier Transform, an introduction to PDEs, and first methods of solutions (including separation of variables, and Fourier Series).

MATH2022
Linear and Abstract Algebra

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial; and 1x1-hr practice class per week **Prerequisites:** MATH1XX2 **Prohibitions:** MATH2922 or MATH2968 or MATH2061 or MATH2961 **Assessment:** quizzes, assignments and final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Linear and abstract algebra is one of the cornerstones of mathematics and it is at the heart of many applications of mathematics and statistics in the sciences and engineering. This unit investigates and explores properties of linear functions, developing general principles relating to the solution sets of homogeneous and inhomogeneous linear equations, including differential equations. Linear independence is introduced as a way of understanding and solving linear systems of arbitrary dimension. Linear operators on real spaces are investigated, paying particular attention to the geometrical significance of eigenvalues and eigenvectors, extending ideas from first year linear algebra. To better understand symmetry, matrix and permutation groups are introduced and used to motivate the study of abstract group theory.

As set out in the Intermediate Mathematics Handbook

MATH2922
Linear and Abstract Algebra (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial; and 1x1-hr practice class per week **Prerequisites:** MATH1902 or (a mark of 65 or above in MATH1002) **Prohibitions:** MATH2022 or MATH2968 or MATH2061 or MATH2961 **Assessment:** quizzes, assignments and final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Linear and abstract algebra is one of the cornerstones of mathematics and it is at the heart of many applications of mathematics and statistics in the sciences and engineering. This unit is an advanced version of MATH2022, with more emphasis on the underlying concepts and on mathematical rigour. This unit investigates and explores properties of vector spaces, matrices and linear transformations, developing general principles relating to the solution sets of homogeneous and inhomogeneous linear equations, including differential equations. Linear independence is introduced as a way of understanding and solving linear systems of arbitrary dimension. Linear operators on real spaces are investigated, paying particular attention to the geometrical significance of eigenvalues and eigenvectors, extending ideas from first year linear algebra. To better understand symmetry, matrix and permutation groups are introduced and used to motivate the study of abstract group theory. The unit culminates in studying inner spaces, quadratic forms and normal forms of matrices together with their applications to problems both in mathematics and in the sciences and engineering.

MATH2023
Analysis

Credit points: 6 **Session:** Semester 2 **Classes:** lecture 3hrs/week; practice class 1hr/week; tutorial 1hr/week **Prerequisites:** (MATH1X21 or MATH1931 or MATH1X01 or MATH1906) and (MATH1X23 or MATH1933 or MATH1X03 or MATH1907) and (MATH1XX2) **Prohibitions:** MATH2923 or MATH3068 or MATH2962 **Assessment:** assessment for this unit consists of quizzes, an assignment, and a final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Analysis grew out of calculus, which leads to the study of limits of functions, sequences and series. It is one of the fundamental topics underlying much of mathematics including differential equations, dynamical systems, differential geometry, topology and Fourier analysis. This unit introduces the field of mathematical analysis both with a careful theoretical framework as well as selected applications. It shows the utility of abstract concepts and teaches an understanding and construction of proofs in mathematics. This unit will be useful to students of mathematics, science and engineering and in particular to future school mathematics teachers, because we shall explain why common practices in the use of calculus are correct, and understanding this is important for correct applications and explanations. The unit starts with the foundations of calculus and the real numbers system. It goes on to study the limiting behaviour of sequences and series of real and complex numbers. This leads naturally to the study of functions defined as limits and to the notion of uniform convergence. Returning to the beginnings of calculus and power series expansions leads to complex variable theory: elementary functions of complex variable, the Cauchy integral theorem, Cauchy integral formula, residues and related topics with applications to real integrals.

MATH2068
Number Theory and Cryptography

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** 6 credit points of Junior Mathematics units **Prohibitions:** MATH2988 or MATH3009 or MATH3024 **Assumed knowledge:** MATH1014 or MATH1002 or MATH1902 **Assessment:** 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Cryptography is the branch of mathematics that provides the techniques for confidential exchange of information sent via possibly insecure channels. This unit introduces the tools from elementary number theory that are needed to understand the mathematics underlying the most commonly used modern public key cryptosystems. Topics include the Euclidean Algorithm, Fermat's Little Theorem, the Chinese Remainder Theorem, Möbius Inversion, the RSA Cryptosystem, the Elgamal Cryptosystem and the Diffie-Hellman Protocol. Issues of computational complexity are also discussed.

MATH2988
Number Theory and Cryptography Advanced

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** [MATH19X1 or MATH1906 or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH19X3 or MATH1907 or (a mark of 65 or above in MATH1023 or MATH1003)] and [MATH1902 or (a mark of 65 or above in MATH1002)] **Prohibitions:** MATH2068 **Assessment:** One 2 hr exam, homework assignments (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study is an advanced version of MATH2068, sharing the same lectures but with more advanced topics introduced in the tutorials and computer laboratory sessions.

MATH2069
Discrete Mathematics and Graph Theory

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour practice class per week. **Prerequisites:** 6 credit points of Junior Mathematics units **Prohibitions:** MATH2011 or MATH2009 or MATH2969 **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit introduces students to several related areas of discrete mathematics, which serve their interests for further study in pure and applied mathematics, computer science and engineering. Topics to be covered in the first part of the unit include recursion and induction, generating functions and recurrences, combinatorics. Topics covered in the second part of the unit include Eulerian and Hamiltonian graphs, the theory of trees (used in the study of data structures), planar graphs, the study of chromatic polynomials (important in scheduling problems).

MATH2969
Discrete Mathematics and Graph Theory Adv

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour practice class per week. **Prerequisites:** 9 credit points of Junior Mathematics (advanced level or Credit at the normal level) **Prohibitions:** MATH2011 or MATH2009 or MATH2069 **Assessment:** One 2-hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit will cover the same material as MATH2069 with some extensions and additional topics.

MATH2070
Optimisation and Financial Mathematics

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** (MATH1X21 or MATH1011 or MATH1931 or MATH1X01 or MATH1906) and (MATH1014 or MATH1X02) **Prohibitions:** MATH2010 or MATH2033 or MATH2933 or MATH2970 or ECMT3510 **Assumed knowledge:** MATH1X23 or MATH1933 or MATH1X03 or MATH1907 **Assessment:** One 2 hour exam, assignments, quiz, project (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students may enrol in both MATH2070 and MATH3075 in the same semester

Problems in industry and commerce often involve maximising profits or minimising costs subject to constraints arising from resource limitations. The first part of this unit looks at programming problems and their solution using the simplex algorithm; nonlinear optimisation and the Kuhn Tucker conditions.

The second part of the unit deals with utility theory and modern portfolio theory. Topics covered include: pricing under the principles of expected return and expected utility; mean-variance Markowitz portfolio theory, the Capital Asset Pricing Model, log-optimal portfolios and the Kelly criterion; dynamical programming. Some understanding of probability theory including distributions and expectations is required in this part.

Theory developed in lectures will be complemented by computer laboratory sessions using MATLAB. Minimal computing experience will be required.

MATH2970
Optimisation and Financial Mathematics Adv

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week (lectures given in common with MATH2070). **Prerequisites:** [MATH19X1 or MATH1906 or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH1902 or (a mark of 65 or above in MATH1002)] **Prohibitions:** MATH2010 or MATH2033 or MATH2933 or MATH2070 or ECMT3510 **Assumed knowledge:** MATH19X3 or MATH1907 or a mark of 65 or above in MATH1003 or MATH1023 **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students may enrol in both MATH2970 and MATH3975 in the same semester

The content of this unit of study parallels that of MATH2070, but students enrolled at Advanced level will undertake more advanced problem solving and assessment tasks, and some additional topics may be included.

STAT2011
Probability and Estimation Theory

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory week. **Prerequisites:** (MATH1X21 or MATH1931 or MATH1X01 or MATH1906 or MATH1011) and (MATH1XX5 or STAT1021 or ECMT1010 or BUSS1020) **Prohibitions:** STAT2901 or STAT2001 or STAT2911 **Assessment:** One 2 hour exam, assignments and/or quizzes, and computer practical reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides an introduction to univariate techniques in data analysis and the most common statistical distributions that are used to model patterns of variability. Common discrete random models like the binomial, Poisson and geometric, continuous models including the normal and exponential will be studied along with elementary regression models. The method of moments and maximum likelihood techniques for fitting statistical distributions to data will be explored. The unit will have weekly computer classes where candidates will learn to use a statistical computing package to perform simulations and carry out computer intensive estimation techniques like the bootstrap method.

STAT2911
Probability and Statistical Models (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** [MATH19X3 or MATH1907 or (a mark of 65 in MATH1023 or MATH1003)] and [MATH1905 or MATH1904 or (a mark of 65 in MATH1005 or ECMT1010 or BUSS1020)] **Prohibitions:** STAT2001 or STAT2901 or STAT2011 **Assessment:** One 2 hour exam, assignments and/or quizzes, and computer practical reports (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is essentially an advanced version of STAT2011, with an emphasis on the mathematical techniques used to manipulate random variables and probability models. Common distributions including the Poisson, normal, beta and gamma families as well as the bivariate normal are introduced. Moment generating functions and convolution methods are used to understand the behaviour of sums of random variables. The method of moments and maximum likelihood techniques for fitting statistical distributions to data will be explored. The notions of conditional expectation and prediction will be covered as will be distributions related to the normal: chi^2, t and F. The unit will have weekly computer classes where candidates will learn to use a statistical computing package to perform simulations and carry out computer intensive estimation techniques like the bootstrap method.

STAT2912
Statistical Tests (Advanced)

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** MATH1905 or Credit in MATH1005 or Credit in ECMT1010 or Credit in BUSS1020 **Prohibitions:** STAT2012 or STAT2004 or DATA2002 **Assumed knowledge:** STAT2911 **Assessment:** One 2-hour exam, assignments and/or quizzes, computer practical reports and one computer practical exam (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is essentially an advanced version of STAT2012 with an emphasis on both methods and the mathematical derivation of these methods: Tests of hypotheses and confidence intervals, including t-tests, analysis of variance, regression - least squares and robust methods, power of tests, non-parametric methods, non-parametric smoothing, tests for count data, goodness of fit, contingency tables. Graphical methods and diagnostic methods are used throughout with all analyses discussed in the context of computation with real data using an interactive statistical package.

DATA2002
Data Analytics: Learning from Data

Credit points: 6 **Teacher/Coordinator:** Jean Yang **Session:** Semester 2 **Classes:** lecture 3 hrs/week; computer tutorial 2 hr/week **Prerequisites:** [DATA1001 or ENVX1001 or ENVX1002] or [MATH10X5 and MATH1115] or [MATH10X5 and STAT2011] or [MATH1905 and MATH1XXX (except MATH1XX5)] or [BUSS1020 or ECMT1010 or STAT1021] **Prohibitions:** STAT2012 or STAT2912 **Assumed knowledge:** (Basic Linear Algebra and some coding) or QBUS1040 **Assessment:** written assignment, presentation, exams **Mode of delivery:** Normal (lecture/lab/tutorial) day

Technological advances in science, business, engineering has given rise to a proliferation of data from all aspects of our life. Understanding the information presented in these data is critical as it enables informed decision making into many areas including market intelligence and science. DATA2002 is an intermediate course in statistics and data sciences, focusing on learning data analytic skills for a wide range of problems and data. How should the Australian government measure and report employment and unemployment? Can we tell the difference between decaffeinated and regular coffee ? In this course, you will learn how to ingest, combine and summarise data from a variety of data models which are typically encountered in data science projects as well as reinforcing their programming skills through experience with statistical programming language. You will also be exposed to the concept of statistical machine learning and develop the skill to analyze various types of data in order to answer a scientific question. From this unit, you will develop knowledge and skills that will enable you to embrace data analytic challenges stemming from everyday problems.

3000-level units of study

Selective

MATH3061
Geometry and Topology

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3001 or MATH3006 **Assessment:** One 2 hour exam, tutorial tests, assignments (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of the unit is to expand visual/geometric ways of thinking. The geometry section is concerned mainly with transformations of the Euclidean plane (that is, bijections from the plane to itself), with a focus on the study of isometries (proving the classification theorem for transformations which preserve distances between points), symmetries (including the classification of frieze groups) and affine transformations (transformations which map lines to lines). The basic approach is via vectors and matrices, emphasising the interplay between geometry and linear algebra. The study of affine transformations is then extended to the study of collineations in the real projective plane, including collineations which map conics to conics. The topology section considers graphs, surfaces and knots from a combinatorial point of view. Key ideas such as homeomorphism, subdivision, cutting and pasting and the Euler invariant are introduced first for graphs (1-dimensional objects) and then for triangulated surfaces (2-dimensional objects). Topics include the classification of surfaces, map colouring, decomposition of knots and knot invariants.

MATH3063
Nonlinear ODEs with Applications

Credit points: 6 **Teacher/Coordinator:** Prof Leon Poladian **Session:** Semester 1 **Classes:** Three lectures, one tutorial per week **Prerequisites:** 12 credit points of Intermediate mathematics **Prohibitions:** MATH3003 or MATH3923 or MATH3020 or MATH3920 or MATH3963 **Assumed knowledge:** MATH2061 or [MATH2X21 and MATH2X22] **Assessment:** Class tests, Assignments, Final examination **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study is an introduction to the theory of systems of ordinary differential equations. Such systems model many types of phenomena in engineering, biology and the physical sciences. The emphasis will not be on finding explicit solutions, but instead on the qualitative features of these systems, such as stability, instability and oscillatory behaviour. The aim is to develop a good geometrical intuition into the behaviour of solutions to such systems. Some background in linear algebra, and familiarity with concepts such as limits and continuity, will be assumed. The applications in this unit will be drawn from predator-prey systems, transmission of diseases, chemical reactions, beating of the heart and other equations and systems from mathematical biology.

MATH3066
Algebra and Logic

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** 6 credit points of Intermediate Mathematics **Prohibitions:** MATH3062 or MATH3065 **Assessment:** One 2 hour exam (60%), two assignments (15% each), peer review of each assignment (5% each). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study unifies and extends mathematical ideas and techniques that most participants will have met in their first and second years, and will be of general interest to all students of pure and applied mathematics. It combines algebra and logic to present and answer a number of related questions of fundamental importance in the development of mathematics, from ancient to modern times. Classical and novel arithmetics are introduced, unified and described abstractly using field and ring axioms and the language of field extensions. Applications are presented, in particular the unsolvability of the celebrated classical construction problems of the Greeks. Quotient rings are introduced, culminating in a construction of the real numbers, by factoring out rings of Cauchy sequences of rationals by the ideal of null sequences. Axiomatics are placed in the context of reasoning within first order logic and set theory. The Propositional and Predicate Calculi are studied as model axiomatic systems in their own right, including sketches of proofs of consistency and completeness. The final part of the course introduces precise notions of computability and decidability, through abstract Turing machines, culminating in the unsolvability of the Halting Problem and the undecidability of First Order Logic.

MATH3076
Mathematical Computing

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour laboratory per week. **Prerequisites:** 12 credit points of MATH2XXX and 6 credit points from (MATH1021 or MATH1001 or MATH1023 or MATH1003 or MATH19X1 or MATH19X3 or MATH1906 or MATH1907) **Prohibitions:** MATH3976 or MATH3016 or MATH3916 **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides an introduction to Fortran 95/2003 programming and numerical methods. Topics covered include computer arithmetic and computational errors, systems of linear equations, interpolation and approximation, solution of nonlinear equations, quadrature, initial value problems for ordinary differential equations and boundary value problems.

MATH3078
PDEs and Waves

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3018 or MATH3921 or MATH3978 **Assumed knowledge:** [MATH2X61 and MATH2X65] or [MATH2X21 and MATH2X22] **Assessment:** One 2 hour exam, assignments, quizzes (100%). To pass MATH3078/3978, students must achieve satisfactory performance in the in-semester assessment component. **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study introduces Sturm-Liouville eigenvalue problems and their role in finding solutions to boundary value problems. Analytical solutions of linear PDEs are found using separation of variables and integral transform methods. Three of the most important equations of mathematical physics - the wave equation, the diffusion (heat) equation and Laplace's equation - are treated, together with a range of applications. There is particular emphasis on wave phenomena, with an introduction to the theory of sound waves and water waves.

To pass MATH3078, students must achieve satisfactory performance in the in-semester assessment component in order to pass the unit of study.

MATH3961
Metric Spaces (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics units **Prohibitions:** MATH3001 or MATH3901 **Assumed knowledge:** MATH2923 or MATH2962 **Assessment:** 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Topology, developed at the end of the 19th Century to investigate the subtle interaction of analysis and geometry, is now one of the basic disciplines of mathematics. A working knowledge of the language and concepts of topology is essential in fields as diverse as algebraic number theory and non-linear analysis. This unit develops the basic ideas of topology using the example of metric spaces to illustrate and motivate the general theory. Topics covered include: Metric spaces, convergence, completeness and the contraction mapping theorem; Metric topology, open and closed subsets; Topological spaces, subspaces, product spaces; Continuous mappings and homeomorphisms; Compact spaces; Connected spaces; Hausdorff spaces and normal spaces, Applications include the implicit function theorem, chaotic dynamical systems and an introduction to Hilbert spaces and abstract Fourier series.

MATH3962
Rings, Fields and Galois Theory (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3062 or

MATH3902 or MATH3002 **Assumed knowledge:** MATH2922 or MATH2961 **Assessment:** One 2 hour exam, homework assignments (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students are advised to take MATH2968 before attempting this unit.

This unit of study investigates the modern mathematical theory that was originally developed for the purpose of studying polynomial equations. The philosophy is that it should be possible to factorize any polynomial into a product of linear factors by working over a "large enough" field (such as the field of all complex numbers). Viewed like this, the problem of solving polynomial equations leads naturally to the problem of understanding extensions of fields. This in turn leads into the area of mathematics known as Galois theory.

The basic theoretical tool needed for this program is the concept of a ring, which generalizes the concept of a field. The course begins with examples of rings, and associated concepts such as subrings, ring homomorphisms, ideals and quotient rings. These tools are then applied to study quotient rings of polynomial rings. The final part of the course deals with the basics of Galois theory, which gives a way of understanding field extensions.

MATH3963
Nonlinear ODEs with Applications (Adv)

Credit points: 6 **Teacher/Coordinator:** Dr Robert Marangell **Session:** Semester 1 **Classes:** Three lectures, one tutorial per week **Prerequisites:** 12 credit points of Intermediate mathematics **Prohibitions:** MATH3003 or MATH3923 or MATH3020 or MATH3920 or MATH3063 **Assumed knowledge:** (MATH2961 or [MATH2921 and MATH2922]) and (MATH2962 or MATH2923) **Assessment:** Class tests, Assignments, Final examination **Mode of delivery:** Normal (lecture/lab/tutorial) day

The theory of ordinary differential equations is a classical topic going back to Newton and Leibniz. It comprises a vast number of ideas and methods of different nature. The theory has many applications and stimulates new developments in almost all areas of mathematics. The emphasis is on qualitative analysis including phase-plane methods, bifurcation theory and the study of limit cycles. The more theoretical part includes existence and uniqueness theorems, linearisation, and analysis of asymptotic behaviour. The applications in this unit will be drawn from predator-prey systems, population models, chemical reactions, and other equations and systems from mathematical biology.

MATH3968
Differential Geometry (Advanced)

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** A mark of 65 or above in MATH2961 or MATH2921 **Prohibitions:** MATH3903 **Assumed knowledge:** At least 6 credit points of Intermediate Advanced Mathematics or Senior Advanced Mathematics units **Assessment:** One 2 hour exam and 2 assignments (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit is an introduction to Differential Geometry, one of the core pillars of modern mathematics. Using ideas from calculus of several variables, we develop the mathematical theory of geometrical objects such as curves, surfaces and their higher-dimensional analogues. Differential geometry also plays an important part in both classical and modern theoretical physics. The course aims to develop geometrical ideas such as curvature in the context of curves and surfaces in space, leading to the famous Gauss-Bonnet formula relating the curvature and topology of a surface.

MATH3969
Measure Theory and Fourier Analysis (Adv)

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorials per week. **Prerequisites:** Credit average or greater in 12 credit points Intermediate Mathematics **Prohibitions:** MATH3909 **Assumed knowledge:** At least 6 credit points of (Intermediate Advanced Mathematics or Senior Advanced Mathematics units) **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Measure theory is the study of such fundamental ideas as length, area, volume, arc length and surface area. It is the basis for the integration theory used in advanced mathematics since it was developed by Henri Lebesgue in about 1900. Moreover, it is the basis for modern probability theory. The course starts by setting up measure theory and integration, establishing important results such as Fubini's Theorem and the Dominated Convergence Theorem which allow us to manipulate integrals. This is then applied to Fourier Analysis, and results such as the Inversion Formula and Plancherel's Theorem are derived. The Radon-Nikodyn Theorem provides a representation of measures in terms of a density. Probability theory is then discussed with topics including distributions and conditional expectation.

MATH3974
Fluid Dynamics (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3914 **Assumed knowledge:** [MATH2961 and MATH2965] or [MATH2921 and MATH2922] **Assessment:** One 2 hour exam (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides an introduction to fluid dynamics, starting with a description of the governing equations and the simplifications gained by using stream functions or potentials. It develops elementary theorems and tools, including Bernoulli's equation, the role of vorticity, the vorticity equation, Kelvin's circulation theorem, Helmholtz's theorem, and an introduction to the use of tensors. Topics covered include viscous flows, lubrication theory, boundary layers, potential theory, and complex variable methods for 2-D airfoils. The unit concludes with an introduction to hydrodynamic stability theory and the transition to turbulent flow.

MATH3976
Mathematical Computing (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** 12 credit points of MATH2XXX and [6 credit points from (MATH1923 or MATH1903 or MATH1933 or MATH1907), or a mark of 65 or above in (MATH1023 or MATH1003)] **Prohibitions:** MATH3076 or MATH3016 or MATH3916 **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

See entry for MATH3076 Mathematical Computing.

MATH3977
Lagrangian and Hamiltonian Dynamics (Adv)

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics **Prohibitions:** MATH2904 or MATH2004 or MATH3917 **Assessment:** One 2 hour exam and assignments and/or quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides a comprehensive treatment of dynamical systems using the mathematically sophisticated framework of Lagrange and Hamilton. This formulation of classical mechanics generalizes elegantly to modern theories of relativity and quantum mechanics. The unit develops dynamical theory from the Principle of Least Action using the calculus of variations. Emphasis is placed on the relation between the symmetry and invariance properties of the Lagrangian and Hamiltonian functions and conservation laws. Coordinate and canonical transformations are introduced to make apparently complicated dynamical problems appear very simple. The unit will also explore connections between geometry and different physical theories beyond classical mechanics.

Students will be expected to solve fully dynamical systems of some complexity including planetary motion and to investigate stability using perturbation analysis. Hamilton-Jacobi theory will be used to elegantly solve problems ranging from geodesics (shortest path between two points) on curved surfaces to relativistic motion in the vicinity of black holes.

This unit is a useful preparation for units in dynamical systems and chaos, and complements units in differential equations, quantum theory and general relativity.

MATH3978
PDEs and Waves (Advanced)

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3078 or

MATH3018 or MATH3921 **Assumed knowledge:** [MATH2X61 and MATH2X65] or [MATH2X21 and MATH2X22] **Assessment:** One 2 hour exam, assignments, quizzes (100%). To pass MATH3078 or MATH3978, students must achieve satisfactory performance in the in-semester assessment component. **Mode of delivery:** Normal (lecture/lab/tutorial) day

As for MATH3078 PDEs and Waves but with more advanced problem solving and assessment tasks. Some additional topics may be included.

MATH3X20, MATH3X10, MATH3X70, MATH3979, MATH3X11, MATH3X21, MATH3X22, MATH3X23, MATH3X24, MATH3X25, MATH3X26, MATH3X27, MATH3X28, MATH3X29, MATH3X12, MATH3X13, MATH3X14, MATH3X15, MATH3X16, MATH3X17, MATH3X18, MATH3X19, STAT3021, STAT3X22, STAT3X23, STAT3024 to be developed for offering in 2019.

Mathematics

The School of Mathematics and Statistics is situated in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the major

Mathematics is powerful, beautiful and diverse. It is a language, a tool for analysis and prediction, and a way of thinking about the world. At 1000- and 2000-level, this major equips students with the foundational ideas of mathematics: abstract algebra, vector calculus and calculus of several variables, as well as formal proof and analysis.

At 3000-level and beyond, you will have a choice from a wide range of electives in both pure and applied areas of mathematics, including number theory, dynamical systems, geometry, topology and mathematical computing. The range of units available has been designed to cater for you - whether you intend to become a professional mathematician or to follow other interests with a highly sought-after set of mathematical skills.

All units in the mathematics major at 1000- and 2000-level are offered at Advanced level (with a 9 in the second place in the number in the unit code) as well as at standard level.

Requirements for completion

A major in Mathematics requires 48 credit points, consisting of:

(i)12 credit points of 1000-level units as follows: 6 credit points of calculus units; 3 credit points of linear algebra units; and 3 credit points of statistics or discrete mathematics units
(ii)12 credit points of 2000-level core units
(iii)6 credit points of 2000-level selective units
(iv)6 credit points of 3000-level interdisciplinary project units
(v)12 credit points of 3000-level selective units

A minor in Mathematics is available and articulates to this major.

First year

MATH1021/1921/1931, MATH1023/1923/1933 and MATH1002/1902, and 3 credit points from a selection of: MATH1004/1904 or MATH1005/1905. If you are taking a Science degree you must take either MATH1005/1905 or the combination DATA1001 and MATH1004/1904.

The first year units provide a strong foundation for further learning and a broad introduction to the Mathematical Sciences. MATH1021/1921/1931 and MATH1023/1923/1933 extend your knowledge of calculus and introduce you to calculus of several variables and mathematical modelling with differential equations. MATH1002/1902 introduces you to linear algebra, including matrices and their applications. MATH1005/1905 introduces you to working with data and MATH1004/1904 is a unit on discrete mathematics, which is the mathematics of counting and arrangement.

All first year MATH units are 3 credit point units.

Second year

MATH2021/2921 and MATH2022/2922 and 6 credit points from a selection of: MATH2023/2923 and MATH2068/2988.

Second year units in the Mathematics major give you core knowledge and skills which will be a solid and flexible foundation for a wide range of options in third year and beyond. MATH2021/2921 introduces you to vector calculus, a key theory in many areas of application and extends your knowledge of differential equations. MATH2022/2922 extends your understanding of linear algebra and introduces you to topics in abstract algebra such as group theory. MATH2023/2923 opens the world of Analysis to you. Analysis is the deep theoretical foundation of calculus, and sequences and series, for example. MATH2068/2988 introduces you to number theory and cryptography which underlies digital security systems. If you are unsure which selective to choose, MATH2023/2923 gives you the most options in third year. Alternatively, if you have space for an elective, you can choose to do both MATH2023/2923 and MATH2068/2088.

Third year

A 3000-level project unit and 12 credit points from a selection of MATH3XXX units.

In your third year you must take the designated project unit. This is only offered at standard level. For your other units you have a very wide choice which allows you to specialise in an area that interests you or to explore Mathematics more widely.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Students who complete a major in Mathematics may go on to honours in either Applied Mathematics or Pure Mathematics, depending on their interests and the units that they have chosen in their third year. Students must satisfy honours admission requirements. Both Applied Mathematics and Pure Mathematics honours require 24 credit points of coursework and 24 credit points of project work.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Mathematics will be able to show:

1. Ability to construct logical, clearly presented and justified arguments incorporating deductive reasoning
2. Knowledge of the principles and concepts of a broad range of fundamental areas in mathematics
3. Ability to formulate and model practical and abstract problems in mathematical terms using a variety of methods
4. Ability to apply mathematical principles, concepts, techniques and technology to solve practical and abstract problems and interpret results critically
5. Understanding of the breadth of the discipline, its role in other fields and the way that other fields contribute to development in Mathematics
6. Appropriate interpretation of information communicated in mathematical form
7. Appropriate presentation of information, reason and conclusions in a variety of modes to diverse audiences (expert and non-expert).

MATH3076 **Mathematical Computing**	6	**P** 12 credit points of MATH2XXX and 6 credit points from (MATH1021 or MATH1001 or MATH1023 or MATH1003 or MATH19X1 or MATH19X3 or MATH1906 or MATH1907) **N** MATH3976 or MATH3016 or MATH3916	Semester 1
MATH3078 **PDEs and Waves**	6	**A** [MATH2X61 and MATH2X65] or [MATH2X21 and MATH2X22] **P** 12 credit points of Intermediate Mathematics **N** MATH3018 or MATH3921 or MATH3978	Semester 2
MATH3961 **Metric Spaces (Advanced)**	6	**A** MATH2923 or MATH2962 **P** Credit average or greater in 12 credit points of Intermediate Mathematics units **N** MATH3001 or MATH3901	Semester 1
MATH3962 **Rings, Fields and Galois Theory (Adv)**	6	**A** MATH2922 or MATH2961 **P** Credit average or greater in 12 credit points of Intermediate Mathematics **N** MATH3062 or MATH3902 or MATH3002 *Students are advised to take MATH2968 before attempting this unit.*	Semester 1

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
MATH3969 **Measure Theory and Fourier Analysis (Adv)**	6	**A** At least 6 credit points of (Intermediate Advanced Mathematics or Senior Advanced Mathematics units) **P** Credit average or greater in 12 credit points Intermediate Mathematics **N** MATH3909	Semester 2
MATH3974 **Fluid Dynamics (Advanced)**	6	**A** [MATH2961 and MATH2965] or [MATH2921 and MATH2922] **P** Credit average or greater in 12 credit points of Intermediate Mathematics **N** MATH3914	Semester 1
MATH3976 **Mathematical Computing (Advanced)**	6	**P** 12 credit points of MATH2XXX and [6 credit points from (MATH1923 or MATH1903 or MATH1933 or MATH1907), or a mark of 65 or above in (MATH1023 or MATH1003)] **N** MATH3076 or MATH3016 or MATH3916	Semester 1
MATH3977 **Lagrangian and Hamiltonian Dynamics (Adv)**	6	**P** Credit average or greater in 12 credit points of Intermediate Mathematics **N** MATH2904 or MATH2004 or MATH3917	Semester 2
MATH3978 **PDEs and Waves (Advanced)**	6	**A** [MATH2X61 and MATH2X65] or [MATH2X21 and MATH2X22] **P** Credit average or greater in 12 credit points of Intermediate Mathematics **N** MATH3078 or MATH3018 or MATH3921	Semester 2
MATH3X70, MATH3979, MATH3X11, MATH3X21, MATH3X22, MATH3X23, MATH3X24, MATH3X25, MATH3X26, MATH3X27, MATH3X28, MATH3X29, MATH3X12, MATH3X13, MATH3X14, MATH3X15, MATH3X16, MATH3X17, MATH3X18, MATH3X19 to be developed for offering in 2019.			

Mathematics

MATHEMATICS

Advanced coursework and projects will be available in 2020 for students who complete this major.

Mathematics major

A major in Mathematics requires 48 credit points from this table including:(i) 12 credit points of 1000-level units as follows: 6 credit points of calculus units; 3 credit points of linear algebra units; and 3 credit points of statistics or discrete mathematics units(ii) 12 credit points of 2000-level core units(iii) 6 credit points of 2000-level selective units (iv) 6 credit points of 3000-level interdisciplinary project units (v) 12 credit points of 3000-level selective units

Mathematics minor

A minor in Mathematics requires 36 credit points from this table including:(i) 12 credit points of 1000-level units as follows: 6 credit points of calculus units; 3 credit points of linear algebra units; and 3 credit points of statistics or discrete mathematics units(ii) 12 credit points of 2000-level core units(iii) 6 credit points of 2000-level selective units(iv) 6 credit points of 3000-level selective or interdisciplinary project units

Units of study

The units of study are listed below.

1000-level units of study

Calculus units

MATH1021
Calculus Of One Variable

Credit points: 3 **Session:** Semester 1 **Classes:** 2x1-hr lectures; 1x1-hr tutorial per week **Prohibitions:** MATH1011 or MATH1901 or MATH1906 or MATH1111 or ENVX1001 or MATH1001 or MATH1921 or MATH1931 **Assumed knowledge:** HSC Mathematics Extension 1. Students who have not completed HSC Extension 1 Mathematics (or equivalent) are strongly advised to take the Extension 1 Mathematics Bridging Course (offered in February). **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Calculus is a discipline of mathematics that finds profound applications in science, engineering, and economics. This unit investigates differential calculus and integral calculus of one variable and the diverse applications of this theory. Emphasis is given both to the theoretical and foundational aspects of the subject, as well as developing the valuable skill of applying the mathematical theory to solve practical problems. Topics covered in this unit of study include complex numbers, functions of a single variable, limits and continuity, differentiation, optimisation, Taylor polynomials, Taylor's Theorem, Taylor series, Riemann sums, and Riemann integrals.

Textbooks
As set out in the Junior Mathematics Handbook.

MATH1921
Calculus Of One Variable (Advanced)

Credit points: 3 **Session:** Semester 1 **Classes:** 2x1-hr lectures; and 1x1-hr tutorial per week **Prohibitions:** MATH1001 or MATH1011 or MATH1906 or MATH1111 or ENVX1001 or MATH1901 or MATH1021 or MATH1931 **Assumed knowledge:** (HSC Mathematics Extension 2) OR (Band E4 in HSC Mathematics Extension 1) or equivalent. **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Calculus is a discipline of mathematics that finds profound applications in science, engineering, and economics. This unit investigates differential calculus and integral calculus of one variable and the diverse applications of this theory. Emphasis is given both to the theoretical and foundational aspects of the subject, as well as developing the valuable skill of applying the mathematical theory to solve practical problems. Topics covered in this unit of study include complex numbers, functions of a single variable, limits and continuity, differentiation, optimisation, Taylor polynomials, Taylor's Theorem, Taylor series, Riemann sums, and Riemann integrals. Additional theoretical topics included in this advanced unit include the Intermediate Value Theorem, Rolle's Theorem, and the Mean Value Theorem.

MATH1931
Calculus Of One Variable (SSP)

Credit points: 3 **Session:** Semester 1 **Classes:** 2x1-hr lectures; 1x1-hr seminar; and 1x1-hr tutorial per week **Prohibitions:** MATH1001 or MATH1011 or MATH1901 or MATH1111 or ENVX1001 or MATH1906 or MATH1021 or MATH1921 **Assumed knowledge:** Band E4 in HSC Mathematics Extension 2 or equivalent. **Assessment:** exam, quizzes, assignments, seminar participation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: Enrolment is by invitation only.

The Mathematics Special Studies Program is for students with exceptional mathematical aptitude, and requires outstanding performance in past mathematical studies. Students will cover the material of MATH1921 Calculus of One Variable (Adv), and attend a weekly seminar covering special topics on available elsewhere in the Mathematics and Statistics program.

MATH1023
Multivariable Calculus and Modelling

Credit points: 3 **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x1-hr tutorial per week **Prohibitions:** MATH1013 or MATH1903 or MATH1907 or MATH1003 or MATH1923 or MATH1933 **Assumed knowledge:** HSC Mathematics Extension 1. Students who have not completed HSC Extension 1 Mathematics (or equivalent) are strongly advised to take the Extension 1 Mathematics Bridging Course (offered in February). **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Calculus is a discipline of mathematics that finds profound applications in science, engineering, and economics. This unit investigates multivariable differential calculus and modelling. Emphasis is given both to the theoretical and foundational aspects of the subject, as well as developing the valuable skill of applying the mathematical theory to solve practical problems. Topics covered in this unit of study include mathematical modelling, first order differential equations, second order differential equations, systems of linear equations, visualisation in 2 and 3 dimensions, partial derivatives, directional derivatives, the gradient vector, and optimisation for functions of more than one variable.

Textbooks
As set out in the Junior Mathematics Handbook

MATH1923
Multivariable Calculus and Modelling (Adv)

Credit points: 3 **Session:** Semester 2 **Classes:** 2x1-hr lectures; and 1x1-hr tutorial per week **Prohibitions:** MATH1003 or MATH1013 or MATH1907 or MATH1903 or MATH1023 or MATH1933 **Assumed knowledge:** (HSC

Mathematics Extension 2) OR (Band E4 in HSC Mathematics Extension 1) or equivalent. **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Calculus is a discipline of mathematics that finds profound applications in science, engineering, and economics. This unit investigates multivariable differential calculus and modelling. Emphasis is given both to the theoretical and foundational aspects of the subject, as well as developing the valuable skill of applying the mathematical theory to solve practical problems. Topics covered in this unit of study include mathematical modelling, first order differential equations, second order differential equations, systems of linear equations, visualisation in 2 and 3 dimensions, partial derivatives, directional derivatives, the gradient vector, and optimisation for functions of more than one variable. Additional topics covered in this advanced unit of study include the use of diagonalisation of matrices to study systems of linear equation and optimisation problems, limits of functions of two or more variables, and the derivative of a function of two or more variables.

MATH1933
Multivariable Calculus and Modelling (SSP)

Credit points: 3 **Session:** Semester 2 **Classes:** 2x1-hr lectures; 1x1-hr seminar; and 1x1-hr tutorial per week **Prohibitions:** MATH1003 or MATH1903 or MATH1013 or MATH1907 or MATH1023 or MATH1923 **Assumed knowledge:** Band E4 in HSC Mathematics Extension 2 or equivalent. **Assessment:** exam, quizzes, assignments, seminar participation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment. Note: Enrolment is by invitation only.

The Mathematics Special Studies Program is for students with exceptional mathematical aptitude, and requires outstanding performance in past mathematical studies. Students will cover the material of MATH1923 Multivariable Calculus and Modelling (Adv), and attend a weekly seminar covering special topics on available elsewhere in the Mathematics and Statistics program.

Linear algebra units

MATH1002
Linear Algebra

Credit points: 3 **Session:** Semester 1, Summer Main **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1012 or MATH1014 or MATH1902 **Assumed knowledge:** HSC Mathematics or MATH1111. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

MATH1002 is designed to provide a thorough preparation for further study in mathematics and statistics. It is a core unit of study providing three of the twelve credit points required by the Faculty of Science as well as a Junior level requirement in the Faculty of Engineering.

This unit of study introduces vectors and vector algebra, linear algebra including solutions of linear systems, matrices, determinants, eigenvalues and eigenvectors.

Textbooks

As set out in the Junior Mathematics Handbook

MATH1902
Linear Algebra (Advanced)

Credit points: 3 **Session:** Semester 1 **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1002 or MATH1012 or MATH1014 **Assumed knowledge:** (HSC Mathematics Extension 2) OR (90 or above in HSC Mathematics Extension 1) or equivalent **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit is designed to provide a thorough preparation for further study in mathematics and statistics. It is a core unit of study providing three of the twelve credit points required by the Faculty of Science as well as a Junior level requirement in the Faculty of Engineering. It parallels the normal unit MATH1002 but goes more deeply into the subject matter and requires more mathematical sophistication.

Textbooks

As set out in the Junior Mathematics Handbook

Discrete mathematics units

MATH1004
Discrete Mathematics

Credit points: 3 **Session:** Semester 2, Summer Main **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1904 or MATH1064 or MATH2011 **Assumed knowledge:** HSC Mathematics or MATH1111. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

MATH1004 is designed to provide a thorough preparation for further study in Mathematics.

This unit provides an introduction to fundamental aspects of discrete mathematics, which deals with 'things that come in chunks that can be counted'. It focuses on the enumeration of a set of numbers, viz. Catalan numbers. Topics include sets and functions, counting principles, discrete probability, Boolean expressions, mathematical induction, linear recurrence relations, graphs and trees.

Textbooks

As set out in the Junior Mathematics Handbook

MATH1904
Discrete Mathematics (Advanced)

Credit points: 3 **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1004 or MATH1064 or MATH2011 **Assumed knowledge:** HSC Mathematics Extension 1. Students who have not completed HSC Extension 1 Mathematics (or equivalent) are strongly advised to take the Extension 1 Mathematics Bridging Course (offered in February). **Assessment:** exam, quizzes, assignments **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit is designed to provide a thorough preparation for further study in mathematics. It parallels the normal unit MATH1004 but goes more deeply into the subject matter and requires more mathematical sophistication.

Textbooks

As set out in the Junior Mathematics Handbook

Statistics units

MATH1005
Statistical Thinking with Data

Credit points: 3 **Session:** Semester 2, Summer Main, Winter Main **Classes:** Lectures 2 hrs/week; Practical 1 hr/week **Prohibitions:** MATH1015 or MATH1905 or STAT1021 or STAT1022 or ECMT1010 or ENVX1001 or ENVX1002 or BUSS1020 **Assumed knowledge:** HSC Mathematics. Students who have not completed HSC Mathematics (or equivalent) are strongly advised to take the Mathematics Bridging Course (offered in February). **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

In a data-rich world, global citizens need to problem solve with data, and evidence based decision-making is essential is every field of research and work.

This unit equips you with the foundational statistical thinking to become a critical consumer of data. You will learn to think analytically about data and to evaluate the validity and accuracy of any conclusions drawn. Focusing on statistical literacy, the unit covers foundational statistical concepts, including the design of experiments, exploratory data analysis, sampling and tests of significance.

Textbooks

Freedman, Pisani and Purves, Statistics, Norton, 2007

MATH1905
Statistical Thinking with Data (Advanced)

Credit points: 3 **Session:** Semester 2 **Classes:** Two 1 hour lectures and one 1 hour tutorial per week. **Prohibitions:** MATH1005 or MATH1015 or STAT1021 or STAT1022 or ECMT1010 or ENVX1001 or ENVX1002 or BUSS1020

Assumed knowledge: (HSC Mathematics Extension 2) OR (90 or above in HSC Mathematics Extension 1) or equivalent **Assessment:** One 1.5 hour examination, assignments and quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

This unit is designed to provide a thorough preparation for further study in mathematics and statistics. It is a core unit of study providing three of the twelve credit points required by the Faculty of Science as well as a Junior level requirement in the Faculty of Engineering. This Advanced level unit of study parallels the normal unit MATH1005 but goes more deeply into the subject matter and requires more mathematical sophistication.

Textbooks

2000-level units of study

Core

MATH2021
Vector Calculus and Differential Equations

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial; and 1x1-hr practice class per week **Prerequisites:** (MATH1X21 or MATH1931 or MATH1X01 or MATH1906) and (MATH1XX2) and (MATH1X23 or MATH1933 or MATH1X03 or MATH1907) **Prohibitions:** MATH2921 or MATH2065 or MATH2965 or MATH2061 or MATH2961 or MATH2067 **Assessment:** assessment for this unit consists of quizzes, assignments, and a final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit opens with topics from vector calculus, including vector-valued functions (parametrised curves and surfaces; vector fields; div, grad and curl; gradient fields and potential functions), line integrals (arc length; work; path-independent integrals and conservative fields; flux across a curve), iterated integrals (double and triple integrals, polar, cylindrical and spherical coordinates; areas, volumes and mass; Green's Theorem), flux integrals (flow through a surface; flux integrals through a surface defined by a function of two variables, through cylinders, spheres and other parametrised surfaces), Gauss' and Stokes' theorems. The unit then moves to topics in solution techniques for ordinary and partial differential equations (ODEs and PDEs) with applications. It provides a basic grounding in these techniques to enable students to build on the concepts in their subsequent courses. The main topics are: second order ODEs (including inhomogeneous equations), higher order ODEs and systems of first order equations, solution methods (variation of parameters, undetermined coefficients) the Laplace and Fourier Transform, an introduction to PDEs, and first methods of solutions (including separation of variables, and Fourier Series).

Textbooks

As set out in the Intermediate Mathematics Handbook

MATH2921
Vector Calculus and Differential Eqs (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial; and 1x1-hr practice class per week **Prerequisites:** [(MATH1921 or MATH1931 or MATH1901 or MATH1906) or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH1902 or (a mark of 65 or above in MATH1002)] and [(MATH1923 or MATH1933 or MATH1903 or MATH1907) or (a mark of 65 or above in MATH1023 or MATH1003)] **Prohibitions:** MATH2021 or MATH2065 or MATH2965 or MATH2061 or MATH2961 or MATH2067 **Assessment:** assessment for this unit consists of quizzes, assignments, and a final exam. **Mode of delivery:** Normal (lecture/lab/tutorial) day

This is the advanced version of MATH2021, with more emphasis on the underlying concepts and mathematical rigour. The vector calculus component of the course will include: parametrised curves and surfaces, vector fields, div, grad and curl, gradient fields and potential functions, lagrange multipliers line integrals, arc length, work, path-independent integrals, and conservative fields, flux across a curve, double and triple integrals, change of variable formulas, polar, cylindrical and spherical coordinates, areas, volumes and mass, flux integrals, and Green's Gauss' and Stokes' theorems. The Differential Equations half of the course will focus on ordinary and partial differential equations (ODEs and PDEs) with applications with more complexity and depth. The main topics are: second order ODEs (including inhomogeneous equations), series solutions near a regular point, higher order ODEs and systems of first order equations, matrix equations and solutions, solution methods (variation of parameters, undetermined coefficients) the Laplace and Fourier Transform, elementary Sturm-Liouville theory, an introduction to PDEs, and first methods of solutions (including separation of variables, and Fourier Series). The unit then moves to topics in solution techniques for ordinary and partial differential equations (ODEs and PDEs) with applications. It provides a more thorough grounding in these techniques to enable students to build on the concepts in their subsequent courses. The main topics are: second order ODEs (including inhomogeneous equations), higher order ODEs and systems of first order equations, solution methods (variation of parameters, undetermined coefficients) the Laplace and Fourier Transform, an introduction to PDEs, and first methods of solutions (including separation of variables, and Fourier Series).

As set out in the Intermediate Mathematics Handbook

MATH2022
Linear and Abstract Algebra

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial; and 1x1-hr practice class per week **Prerequisites:** MATH1XX2 **Prohibitions:** MATH2922 or MATH2968 or MATH2061 or MATH2961 **Assessment:** quizzes, assignments and final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Linear and abstract algebra is one of the cornerstones of mathematics and it is at the heart of many applications of mathematics and statistics in the sciences and engineering. This unit investigates and explores properties of linear functions, developing general principles relating to the solution sets of homogeneous and inhomogeneous linear equations, including differential equations. Linear independence is introduced as a way of understanding and solving linear systems of arbitrary dimension. Linear operators on real spaces are investigated, paying particular attention to the geometrical significance of eigenvalues and eigenvectors, extending ideas from first year linear algebra. To better understand symmetry, matrix and permutation groups are introduced and used to motivate the study of abstract group theory.

Textbooks

As set out in the Intermediate Mathematics Handbook

MATH2922
Linear and Abstract Algebra (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial; and 1x1-hr practice class per week **Prerequisites:** MATH1902 or (a mark of 65 or above in MATH1002) **Prohibitions:** MATH2022 or MATH2968 or MATH2061 or MATH2961 **Assessment:** quizzes, assignments and final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Linear and abstract algebra is one of the cornerstones of mathematics and it is at the heart of many applications of mathematics and statistics in the sciences and engineering. This unit is an advanced version of MATH2022, with more emphasis on the underlying concepts and on mathematical rigour. This unit investigates and explores properties of vector spaces, matrices and linear transformations, developing general principles relating to the solution sets of homogeneous and inhomogeneous linear equations, including differential equations. Linear independence is introduced as a way of understanding and solving linear systems of arbitrary dimension. Linear operators on real spaces are investigated, paying particular attention to the geometrical significance of eigenvalues and eigenvectors, extending ideas from first year linear algebra. To better understand symmetry, matrix and permutation groups are introduced and used to motivate the study of abstract group theory. The unit culminates in studying inner spaces, quadratic forms and normal forms of matrices together with their applications to problems both in mathematics and in the sciences and engineering.

Selective

MATH2023
Analysis

Credit points: 6 **Session:** Semester 2 **Classes:** lecture 3hrs/week; practice class 1hr/week; tutorial 1hr/week **Prerequisites:** (MATH1X21 or MATH1931 or MATH1X01 or MATH1906) and (MATH1X23 or MATH1933 or MATH1X03 or MATH1907) and (MATH1XX2) **Prohibitions:** MATH2923 or MATH3068 or MATH2962 **Assessment:** assessment for this unit consists of quizzes, an assignment, and a final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Analysis grew out of calculus, which leads to the study of limits of functions, sequences and series. It is one of the fundamental topics underlying much of mathematics including differential equations, dynamical systems, differential geometry, topology and Fourier analysis. This unit introduces the field of mathematical analysis both with a careful theoretical framework as well as selected applications. It shows the utility of abstract concepts and teaches an understanding and construction of proofs in mathematics. This unit will be useful to students of mathematics, science and engineering and in particular to future school mathematics teachers, because we shall explain why common practices in the use of calculus are correct, and understanding this is important for correct applications and explanations. The unit starts with the foundations of calculus and the real numbers system. It goes on to study the limiting behaviour of sequences and series of real and complex numbers. This leads naturally to the study of functions defined as limits and to the notion of uniform convergence. Returning to the beginnings of calculus and power series expansions leads to complex variable theory: elementary functions of complex variable, the Cauchy integral theorem, Cauchy integral formula, residues and related topics with applications to real integrals.

Textbooks
As set out in the Intermediate Mathematics Handbook

MATH2923
Analysis (Advanced)

Credit points: 6 **Session:** Semester 2 **Classes:** lecture 3hrs/week; practice class 1hr/week; tutorial 1hr/week **Prerequisites:** [(MATH1921 or MATH1931 or MATH1901 or MATH1906) or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH1902 or (a mark of 65 or above in MATH1002)] and [(MATH1923 or MATH1933 or MATH1903 or MATH1907) or (a mark of 65 or above in MATH1023 or MATH1003)] **Prohibitions:** MATH2023 or MATH2962 or MATH3068 **Assessment:** assessment for this unit consists of quizzes, an assignment, and a final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Analysis grew out of calculus, which leads to the study of limits of functions, sequences and series. It is one of the fundamental topics underlying much of mathematics including differential equations, dynamical systems, differential geometry, topology and Fourier analysis. This advanced unit introduces the field of mathematical analysis both with a careful theoretical frame- work as well as selected applications. It shows the utility of abstract concepts and teaches an understanding and construction of proofs in mathematics. This unit will be useful to students with more mathematical maturity who study mathematics, science, or engineering. The unit starts with the foundations of calculus and the real numbers system, with more emphasis on the topology. It goes on to study the limiting behaviour of sequences and series of real and complex numbers. This leads naturally to the study of functions defined as limits and to the notion of uniform con- vergence. Returning to the beginnings of calculus and power series expansions leads to complex variable theory: elementary functions of complex variable, the Cauchy integral theorem, Cauchy integral formula, residues and related topics with applications to real integrals.

As set out in the Intermediate Mathematics Handbook

MATH2068
Number Theory and Cryptography

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** 6 credit points of Junior Mathematics units **Prohibitions:** MATH2988 or MATH3009 or MATH3024 **Assumed knowledge:** MATH1014 or MATH1002 or MATH1902 **Assessment:** 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Cryptography is the branch of mathematics that provides the techniques for confidential exchange of information sent via possibly insecure channels. This unit introduces the tools from elementary number theory that are needed to understand the mathematics underlying the most commonly used modern public key cryptosystems. Topics include the Euclidean Algorithm, Fermat's Little Theorem, the Chinese Remainder Theorem, Möbius Inversion, the RSA Cryptosystem, the Elgamal Cryptosystem and the Diffie-Hellman Protocol. Issues of computational complexity are also discussed.

MATH2988
Number Theory and Cryptography Advanced

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures, one 1 hour tutorial and one 1 hour computer laboratory per week. **Prerequisites:** [MATH19X1 or MATH1906 or (a mark of 65 or above in MATH1021 or MATH1001)] and [MATH19X3 or MATH1907 or (a mark of 65 or above in MATH1023 or MATH1003)] and [MATH1902 or (a mark of 65 or above in MATH1002)] **Prohibitions:** MATH2068 **Assessment:** One 2 hr exam, homework assignments (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study is an advanced version of MATH2068, sharing the same lectures but with more advanced topics introduced in the tutorials and computer laboratory sessions.

3000-level units of study

Interdisciplinary project units

MATH3X20 and MATH3X10 to be developed for offering in 2019.

Selective

MATH3061
Geometry and Topology

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3001 or MATH3006 **Assessment:** One 2 hour exam, tutorial tests, assignments (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

The aim of the unit is to expand visual/geometric ways of thinking. The geometry section is concerned mainly with transformations of the Euclidean plane (that is, bijections from the plane to itself), with a focus on the study of isometries (proving the classification theorem for transformations which preserve distances between points), symmetries (including the classification of frieze groups) and affine transformations (transformations which map lines to lines). The basic approach is via vectors and matrices, emphasising the interplay between geometry and linear algebra. The study of affine transformations is then extended to the study of collineations in the real projective plane, including collineations which map conics to conics. The topology section considers graphs, surfaces and knots from a combinatorial point of view. Key ideas such as homeomorphism, subdivision, cutting and pasting and the Euler invariant are introduced first for graphs (1-dimensional objects) and then for triangulated surfaces (2-dimensional objects). Topics include the classification of surfaces, map colouring, decomposition of knots and knot invariants.

MATH3063
Nonlinear ODEs with Applications

Credit points: 6 **Teacher/Coordinator:** Prof Leon Poladian **Session:** Semester 1 **Classes:** Three lectures, one tutorial per week **Prerequisites:** 12 credit points of Intermediate mathematics **Prohibitions:** MATH3003 or MATH3923 or MATH3020 or MATH3920 or MATH3963 **Assumed knowledge:** MATH2061 or [MATH2X21 and MATH2X22] **Assessment:** Class tests, Assignments, Final examination **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study is an introduction to the theory of systems of ordinary differential equations. Such systems model many types of phenomena in engineering, biology and the physical sciences. The emphasis will not be on finding explicit solutions, but instead on the qualitative features of these systems, such as stability, instability and oscillatory behaviour. The aim is to develop a good geometrical intuition into the behaviour of solutions to such systems. Some background in linear algebra, and familiarity with concepts such as limits and continuity, will be assumed. The applications in this unit will be drawn from predator-prey systems, transmission of diseases, chemical reactions, beating of the heart and other equations and systems from mathematical biology.

MATH3066
Algebra and Logic

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** 6 credit points of Intermediate Mathematics **Prohibitions:** MATH3062 or MATH3065 **Assessment:** One 2 hour exam (60%), two assignments (15% each), peer review of each assignment (5% each). **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study unifies and extends mathematical ideas and techniques that most participants will have met in their first and second years, and will be of general interest to all students of pure and applied mathematics. It combines algebra and logic to present and answer a number of related questions of fundamental importance in the development of mathematics, from ancient to modern times. Classical and novel arithmetics are introduced, unified and described abstractly using field and ring axioms and the language of field extensions. Applications are presented, in particular the unsolvability of the celebrated classical construction problems of the Greeks. Quotient rings are introduced, culminating in a construction of the real numbers, by factoring out rings of Cauchy sequences of rationals by the ideal of null sequences. Axiomatics are placed in the context of reasoning within first order logic and set theory.

The Propositional and Predicate Calculi are studied as model axiomatic systems in their own right, including sketches of proofs of consistency and completeness. The final part of the course introduces precise notions of computability and decidability, through abstract Turing machines, culminating in the unsolvability of the Halting Problem and the undecidability of First Order Logic.

MATH3076
Mathematical Computing

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour laboratory per week. **Prerequisites:** 12 credit points of MATH2XXX and 6 credit points from (MATH1021 or MATH1001 or MATH1023 or MATH1003 or MATH19X1 or MATH19X3 or MATH1906 or MATH1907) **Prohibitions:** MATH3976 or MATH3016 or MATH3916 **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides an introduction to Fortran 95/2003 programming and numerical methods. Topics covered include computer arithmetic and computational errors, systems of linear equations, interpolation and approximation, solution of nonlinear equations, quadrature, initial value problems for ordinary differential equations and boundary value problems.

MATH3078
PDEs and Waves

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3018 or MATH3921 or MATH3978 **Assumed knowledge:** [MATH2X61 and MATH2X65] or [MATH2X21 and MATH2X22] **Assessment:** One 2 hour exam, assignments, quizzes (100%). To pass MATH3078/3978, students must achieve satisfactory performance in the in-semester assessment component. **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study introduces Sturm-Liouville eigenvalue problems and their role in finding solutions to boundary value problems. Analytical solutions of linear PDEs are found using separation of variables and integral transform methods. Three of the most important equations of mathematical physics - the wave equation, the diffusion (heat) equation and Laplace's equation - are treated, together with a range of applications. There is particular emphasis on wave phenomena, with an introduction to the theory of sound waves and water waves.

To pass MATH3078, students must achieve satisfactory performance in the in-semester assessment component in order to pass the unit of study.

MATH3961
Metric Spaces (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics units **Prohibitions:** MATH3001 or MATH3901 **Assumed knowledge:** MATH2923 or MATH2962 **Assessment:** 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Topology, developed at the end of the 19th Century to investigate the subtle interaction of analysis and geometry, is now one of the basic disciplines of mathematics. A working knowledge of the language and concepts of topology is essential in fields as diverse as algebraic number theory and non-linear analysis. This unit develops the basic ideas of topology using the example of metric spaces to illustrate and motivate the general theory. Topics covered include: Metric spaces, convergence, completeness and the contraction mapping theorem; Metric topology, open and closed subsets; Topological spaces, subspaces, product spaces; Continuous mappings and homeomorphisms; Compact spaces; Connected spaces; Hausdorff spaces and normal spaces, Applications include the implicit function theorem, chaotic dynamical systems and an introduction to Hilbert spaces and abstract Fourier series.

MATH3962
Rings, Fields and Galois Theory (Adv)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3062 or MATH3902 or MATH3002 **Assumed knowledge:** MATH2922 or MATH2961 **Assessment:** One 2 hour exam, homework assignments (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students are advised to take MATH2968 before attempting this unit.

This unit of study investigates the modern mathematical theory that was originally developed for the purpose of studying polynomial equations. The philosophy is that it should be possible to factorize any polynomial into a product of linear factors by working over a "large enough" field (such as the field of all complex numbers). Viewed like this, the problem of solving polynomial equations leads naturally to the problem of understanding extensions of fields. This in turn leads into the area of mathematics known as Galois theory.

The basic theoretical tool needed for this program is the concept of a ring, which generalizes the concept of a field. The course begins with examples of rings, and associated concepts such as subrings, ring homomorphisms, ideals and quotient rings. These tools are then applied to study quotient rings of polynomial rings. The final part of the course deals with the basics of Galois theory, which gives a way of understanding field extensions.

MATH3969
Measure Theory and Fourier Analysis (Adv)

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorials per week. **Prerequisites:** Credit average or greater in 12 credit points Intermediate Mathematics **Prohibitions:** MATH3909 **Assumed knowledge:** At least 6 credit points of (Intermediate Advanced Mathematics or Senior Advanced Mathematics units) **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Measure theory is the study of such fundamental ideas as length, area, volume, arc length and surface area. It is the basis for the integration theory used in advanced mathematics since it was developed by Henri Lebesgue in about 1900. Moreover, it is the basis for modern probability theory. The course starts by setting up measure theory and integration, establishing important results such as Fubini's Theorem and the Dominated Convergence Theorem which allow us to manipulate integrals. This is then applied to Fourier Analysis, and results such as the Inversion Formula and Plancherel's Theorem are derived. The Radon-Nikodyn Theorem provides a representation of measures in terms of a density. Probability theory is then discussed with topics including distributions and conditional expectation.

MATH3974
Fluid Dynamics (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3914 **Assumed knowledge:** [MATH2961 and MATH2965] or [MATH2921 and MATH2922] **Assessment:** One 2 hour exam (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit of study provides an introduction to fluid dynamics, starting with a description of the governing equations and the simplifications gained by using stream functions or potentials. It develops elementary theorems and tools, including Bernoulli's equation, the role of vorticity, the vorticity equation, Kelvin's circulation theorem, Helmholtz's theorem, and an introduction to the use of tensors. Topics covered include viscous flows, lubrication theory, boundary layers, potential theory, and complex variable methods for 2-D airfoils. The unit concludes with an introduction to hydrodynamic stability theory and the transition to turbulent flow.

MATH3976
Mathematical Computing (Advanced)

Credit points: 6 **Session:** Semester 1 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** 12 credit points of MATH2XXX and [6 credit points from (MATH1923 or MATH1903 or MATH1933 or MATH1907), or a mark of 65 or above in (MATH1023 or MATH1003)] **Prohibitions:** MATH3076 or MATH3016 or MATH3916 **Assessment:** One 2 hour exam, assignments, quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

See entry for MATH3076 Mathematical Computing.

MATH3977
Lagrangian and Hamiltonian Dynamics (Adv)

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics **Prohibitions:** MATH2904 or MATH2004 or MATH3917 **Assessment:** One 2 hour exam and assignments and/or quizzes (100%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

This unit provides a comprehensive treatment of dynamical systems using the mathematically sophisticated framework of Lagrange and Hamilton. This formulation of classical mechanics generalizes elegantly to modern theories of relativity and quantum mechanics. The unit develops dynamical theory from the Principle of Least Action using the calculus of variations. Emphasis is placed on the relation between the symmetry and invariance properties of the Lagrangian and Hamiltonian functions and conservation laws. Coordinate and canonical transformations are introduced to make apparently complicated dynamical problems appear very simple. The unit will also explore connections between geometry and different physical theories beyond classical mechanics.

Students will be expected to solve fully dynamical systems of some complexity including planetary motion and to investigate stability using perturbation analysis. Hamilton-Jacobi theory will be used to elegantly solve problems ranging from geodesics (shortest path between two points) on curved surfaces to relativistic motion in the vicinity of black holes.

This unit is a useful preparation for units in dynamical systems and chaos, and complements units in differential equations, quantum theory and general relativity.

MATH3978
PDEs and Waves (Advanced)

Credit points: 6 **Session:** Semester 2 **Classes:** Three 1 hour lectures and one 1 hour tutorial per week. **Prerequisites:** Credit average or greater in 12 credit points of Intermediate Mathematics **Prohibitions:** MATH3078 or MATH3018 or MATH3921 **Assumed knowledge:** [MATH2X61 and MATH2X65] or [MATH2X21 and MATH2X22] **Assessment:** One 2 hour exam, assignments, quizzes (100%). To pass MATH3078 or MATH3978, students must achieve satisfactory performance in the in-semester assessment component. **Mode of delivery:** Normal (lecture/lab/tutorial) day

As for MATH3078 PDEs and Waves but with more advanced problem solving and assessment tasks. Some additional topics may be included.

MATH3X70, MATH3979, MATH3X11, MATH3X21, MATH3X22, MATH3X23, MATH3X24, MATH3X25, MATH3X26, MATH3X27, MATH3X28, MATH3X29, MATH3X12, MATH3X13, MATH3X14, MATH3X15, MATH3X16, MATH3X17, MATH3X18, MATH3X19 to be developed for offering in 2019.

Medical Science

The Medical Science stream and program provide an interdisciplinary program offered across Disciplines in the School of Medical Sciences and Central Clinical School in the Sydney Medical School, as well as the School of Life and Environmental Sciences in the Faculty of Science. Units of study in this major are available at standard and advanced level.

About the stream

The Medical Science stream and program is designed to provide flexible pathways into the myriad of career opportunities in the biomedical sciences.

The medical sciences form the basis for research and development, medicine, dentistry, health sciences, public health, policy and pharmaceutics. They also provide foundational expertise that can be combined with other areas including engineering, information technology, data science, design, commerce and law.

This program capitalises on the diverse nature of the medical sciences by integrating disciplinary depth with multidisciplinary breadth. By providing a strong foundation in physiology, anatomy and biochemistry, alongside other essential medical sciences such as pharmacology, microbiology, pathology, immunobiology and infectious diseases, the program also provides a solid base for prerequisite knowledge for anyone interested in progressing into Medicine and Dentistry.
This program delivers a distinctive and interdisciplinary cohort experience. This starts in first year with human biology and culminates in a 3000-level capstone unit of study that is unique to the program. This capstone allows you to consolidate and demonstrate your knowledge and skills acquired over the three years in an interdisciplinary real world project.

The medical science program is research informed and enquiry-led, leveraging off the world class research and industry strengths of the medical sciences disciplines, Charles Perkins Centre as well as the developments at the Westmead campus. Importantly, the undergraduate degree structure allows students undertaking the Medical Sciences program to take a major in any other area, which provides a foundation in medical sciences that also permits personalized outcomes for students, with the flexibility to couple the program with fields as diverse as information technology, design, philosophy, chemistry, data science and many others.

Requirements for completion

A stream in Medical Science is 72 credit points, consisting of:

(i)6 credit points of 1000-level chemistry units
(ii)6 credit points of 2000-level biochemistry units
(iii)A 60 credit point program in Medical Science

A program in Medical Science requires 60 credit points, consisting of:

(i)A 48 credit point major in Medical Science
(ii)12 credit points of 2000-level program core units

A major in Medical Science requires 48 credit points, consisting of:

(i)12 credit points of 1000-level core units
(ii)12 credit points of 2000-level core units
(iii)6 credit points of 3000-level project and interdisciplinary capstone unit
(iv)18 credit points of 3000-level selective units

First year

Core to Major: BIOL1XX7, MEDS1X01
Core to Stream: CHEM1XX1

Second year

Core to Major: MEDS2004, MEDS2005
Core to Stream: MEDS2003
Core to Program: MEDS2001, MEDS2002

Third year

Core to major: MEDS3001 and 18 credit points from a selection of: AMED3001, AMED3002, AMED3003, AMED3004, ANAT3X07, ANAT3XX4, ANAT3X08, ANAT3X09, BCHM3X71, BCHM3X72, HSTO3003, HSTO3004, IMMU3X11, IMMU3X12, INFD3012, MICR3X11, NEUR3X03, NEUR3X04, NEUR3X05, NEUR3X06, PATH3X11, PATH3X12, PCOL3X11, PCOL3X12, PCOL3X21, PCOL3X22, PHSI3X09, PHSI3X10, PHSI3X11, PHSI3X12, VIRO3X01, VIRO3X02.

To achieve the Medical Science major, alongside the project unit MEDS3001, you can either select from the range of third year units, or choose to do three disciplinary units. This flexibility provides a distinctive opportunity for students seeking a broader exposure to medical sciences.

In your third year you must take MEDS3001 as the designated project unit.

Fourth year

The fourth year is only offered within the combined Bachelor of Science/Bachelor of Advanced Studies course.

Advanced coursework
The Bachelor of Advanced Studies advanced coursework option consists of 48 credit points, which must include a minimum of 24 credit points in a single subject area at 4000-level, including a project unit of study worth at least 12 credit points. Space is provided for 12 credit points towards the second major (if not already completed). 24 credit points of advanced study will be included in the table for 2020.

Honours
Requirements for Honours in the area of Medical Science: completion of 36 credit points of project work and 12 credit points of coursework.

Honours units of study will be available in 2020.

Learning Outcomes

Students who graduate from Medical Science will be able to:

1. Articulate the methods of science and explaining why current scientific knowledge is both contestable and testable by further inquiry.
2. Explain the role and relevance of biomedical science to society including the translation of biomedical science to clinical and medical outcomes.
3. Demonstrate well-developed knowledge in at least one disciplinary area in the biomedical sciences and integrate knowledge in other disciplinary areas contributing to the biomedical sciences.
4. Collect, synthesize, analyze and critically evaluate scientific data and information from a range of sources.
5. Define a biomedical science problem and formulating a hypotheses and plan an investigation.
6. Select and apply practical and/or theoretical techniques or tools in order to conduct an investigation.
7. Demonstrate creative and innovative approaches to scientific problem solving.
8. Communicate observations and experimental findings and their implications through a broad variety of media to diverse audiences
9. Apply tools to become independent self-managing life-wide learners
10. Work effectively, responsibly and safely in individual and collaborative contexts
11. Understand the ethical and regulatory frameworks relevant to biomedical science and practice academic integrity.

Medical Science

Unit of study	Credit points	A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition	Session
MEDICAL SCIENCE			
Medical Science stream			
Advanced coursework and projects will be available in 2020 for students who complete this major.			
The Medical Science stream is 72 credit points, including: (i) 6 credit points of 1000-level chemistry units (ii) 6 credit points of 2000-level biochemistry units (iii) A 60 credit point program in Medical Science			
Medical Science program			
This program is only available to students enrolled in Medical Science stream.			
A program in Medical Science requires 60 credit points from this table including: (i) A 48 credit point major in Medical Science (ii) 12 credit points of 2000-level program core units			
Medical Science major			
This major is only available to students enrolled in Medical Science program.			
A major in Medical Science requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units (ii) 12 credit points of 2000-level major core units (iii) 6 credit points of 3000-level project and interdisciplinary capstone unit (iv) 18 credit points of 3000-level selective units			
Units of study			
The units of study are listed below.			
1000-level units of study			
Chemistry units			
CHEM1011 **Fundamentals of Chemistry 1A**	6	**A** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 *Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1
CHEM1111 **Chemistry 1A**	6	**A** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 *Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2). You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).*	Semester 1 Semester 2 Summer Main
CHEM1911 **Chemistry 1A (Advanced)**	6	**A** 80 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 *Note: Department permission required for enrolment*	Semester 1
CHEM1991 **Chemistry 1A (Special Studies Program)**	6	**A** 90 or above in HSC Chemistry or equivalent **N** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 *Note: Department permission required for enrolment*	Semester 1
Major core			
BIOL1007 **From Molecules to Ecosystems**	6	**A** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **N** BIOL1907 or BIOL1997	Semester 2 Summer Main
BIOL1907 **From Molecules to Ecosystems (Advanced)**	6	**A** 85 or above in HSC Biology or equivalent **N** BIOL1007 or BIOL1997 *Note: Department permission required for enrolment*	Semester 2

BCHM3072 **Human Molecular Cell Biology**	6	**P** [12cp from (BCHM2X71 or BCHM2X72 or BCMB2X01 or BCMB2X02 or MBLG2X71)] OR [BMED2401 and BMED2405 and 6cp from (BCHM2X71 or BCMB2X02 or MBLG2X71)] **N** BCHM3972 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
BCHM3972 **Human Molecular Cell Biology (Advanced)**	6	**P** [An average mark of 75 in 12cp from (BCHM2X71 or BCHM2X72 or BCMB2X01 or BCMB2X02 or MBLG2X71)] OR [BMED2401 and a mark of 75 or above in BMED2405 and a mark of 75 or above in 6cp from (BCHM2X71 or BCMB2X02 or MBLG2X71)] **N** BCHM3072 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
HSTO3003 **Cells and Development: Theory**	6	**A** ANAT2008 or BMED2401) and Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
HSTO3004 **Cells and Development: Practical (Adv)**	6	**A** (ANAT2008 or BMED2401) and Human biology; BIOL1XX8 or BIOL1XX3 or MEDS1X01 **P** An annual average mark of 65 or above in the previous year **C** HSTO3003 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
INFD3012 **Infectious Diseases**	6	**P** BMED2401 and BMED2404 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
MICR3011 **Microbes in Infection**	6	**A** MICR2X21 or MICR2024 or MICR2X31 **P** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and 6cp from MICR2X22] OR [BMED2401 and BMED2404] **N** MICR3911 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
MICR3911 **Microbes in Infection (Advanced)**	6	**A** MICR2X21 or MICR2024 or MICR2X31 **P** [6cp from (BIOL1XX7 or MBLGXXXX or GEGE2X01 or GENE2002) and a mark of 75 or above in MICR2X22] OR [BMED2401 and a mark of 75 or above in BMED2404] **N** MICR3011	Semester 1
NEUR3003 **Cellular and Developmental Neuroscience**	6	**A** Students who have not successfully completed an introductory neuroscience course are advised to familarise themselves with the content in Bear, Connors and Paradiso "Exploring the Brain". **N** NEUR3903 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
NEUR3903 **Cellular and Developmental Neurosci. (Adv)**	6	**A** Students who have not successfully completed an introductory neuroscience course are advised to familarise themselves with the content in Bear, Connors and Paradiso "Exploring the Brain". **P** Annual average mark of 70 or above in the previous year **N** NEUR3003 *Note: Department permission required for enrolment* *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
NEUR3004 **Integrative Neuroscience**	6	**A** Students who have not successfully completed an introductory neuroscience course are advised to familarise themselves with the content in Bear, Connors and Paradiso "Exploring the Brain". **N** NEUR3904 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
NEUR3904 **Integrative Neuroscience (Advanced)**	6	**A** Students who have not successfully completed an introductory neuroscience course are advised to familarise themselves with the content in Bear, Connors and Paradiso "Exploring the Brain". **P** Annual average mark of 70 or above in the previous year **N** NEUR3004 *Note: Department permission required for enrolment* *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
NEUR3005 **Functional Neuroanatomy**	6	**A** [ANAT2010 or ANAT2910 or (BMED2401 and 12 additional credit points of BMED2402, BMED2403, BMED2405, BMED2406) **N** NEUR3001 or NEUR3901 or NEUR3002 or NEUR3902 or NEUR3905 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
NEUR3905 **Functional Neuroanatomy (Advanced)**	6	**A** [ANAT2010 or ANAT2910) or (BMED2401 and 12 additional credit points of BMED240X) **P** Annual average mark of 70 or above in the previous year **N** NEUR3001 or NEUR3901 or NEUR3002 or NEUR3902 or NEUR3005 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
NEUR3006 **Neural Information Processing**	6	**P** PHSI2X05 or (BMED2401 and an additional 12 credit points of BMED240X) **N** NEUR3001 or NEUR3901 or NEUR3002 or NEUR3902 or NEUR3906 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1

Unit of study	*Credit points*	*A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition*	*Session*
NEUR3906 **Neural Information Processing (Advanced)**	6	**P** A mark of 75 or above in [PHSI2X05 or (BMED2401 and an additional 12 credit points of BMED240X)] **N** NEUR3001 or NEUR3901 or NEUR3002 or NEUR3902 or NEUR3006 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
PCOL3011 **Toxicology**	6	**P** PCOL2011 or (BMED2401 and 12 additional credit points of BMED240X) **N** PCOL3911	Semester 1
PCOL3911 **Toxicology (Advanced)**	6	**P** A mark of 70 or above in [PCOL2011 or (BMED2401 and an additional 12 credit points of BMED240X)] **N** PCOL3011	Semester 1
PCOL3012 **Drug Design and Development**	6	**P** [PCOL2011 or (BMED2401 and an additional 12 credit points of BMED240X)] or 12 credit points of BCMB2XXX **N** PCOL3912	Semester 1
PCOL3912 **Drug Design and Development (Advanced)**	6	**P** A mark of 70 or above in [PCOL2011 or (BMED2401 and an additional 12 credit points from BMED240X)] or a mark of 70 or above in 12 credit points of BCMB2XXX **N** PCOL3012	Semester 1
PCOL3021 **Drug Therapy**	6	**P** PCOL2011 or (BMED2401 and 12 additional credit points of BMED240X) **N** PCOL3921	Semester 2
PCOL3921 **Drug Therapy (Advanced)**	6	**P** A mark of 70 or above in [PCOL2011 or (BMED2401 and an additional 12 credit points from BMED240X)] **N** PCOL3021	Semester 2
PCOL3022 **Neuropharmacology**	6	**A** PCOL2011 or (BMED2401 and an additional 12 credit points of BMED240X) **N** PCOL3922	Semester 2
PCOL3922 **Neuropharmacology (Advanced)**	6	**A** PCOL2011 or (BMED2401 and an additional 12 credit points from BMED240X) **P** An annual average mark of 70 or above in the previous year **N** PCOL3022	Semester 2
PHSI3009 **Frontiers in Cellular Physiology**	6	**P** (PHSI2X05 and PHSI2X06) or (BMED2401 and an additional 12 credit points from BMED240X) **N** PHSI3905, PHSI3906, PHSI3005, PHSI3006, PHSI3909 *We strongly recommend that students take both (PHSI3009 or PHSI3909) and (PHSI3010 or PHSI3910) units of study concurrently*	Semester 1
PHSI3909 **Frontiers in Cellular Physiology (Adv)**	6	**P** A mark of 75 or above in {(PHSI2X05 and PHSI2X06) or [12cp from (BMED2402 or BMED2403 or BMED2406)]} **N** PHSI3009, PHSI3005, PHSI3905, PHSI3006, PHSI3906 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
PHSI3010 **Reproduction, Development and Disease**	6	**P** (PHSI2X05 and PHSI2X06) or [12cp from (BCMB2X02, BIOL2X29, GEGE2X01)] or [12cp from (BMED2402, BMED2403, BMED2406)] **N** PHSI3905, PHSI3906, PHSI3005, PHSI3006, PHSI3910 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
PHSI3910 **Reproduction, Development and Disease Adv**	6	**P** A mark of 75 or above in {(PHSI2X05 and PHSI2X06) or [12cp from (BCMB2X02 or BIOL2X29 or GEGE2X01)] or [12cp from (BMED2402 or BMED2403 or BMED2406)]} **N** PHSI3010, PHSI3005, PHSI3905, PHSI3006, PHSI3906 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
PHSI3011 **Frontiers in Whole Body Physiology**	6	**P** (PHSI2X05 and PHSI2X06) or (BMED2401 and BMED2402) **N** PHSI3007, PHSI3008, PHSI3907, PHSI3908, PHSI3911 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
PHSI3911 **Frontiers in Whole Body Physiology (Adv)**	6	**P** A mark of 75 or above in [(PHSI2X05 and PHSI2X06) or (BMED2401 and BMED2402)] **N** PHSI3011, PHSI3007, PHSI3907, PHSI3008, PHSI3908 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
PHSI3012 **Physiology of Disease**	6	**P** (PHSI2X05 and PHSI2X06) or (BMED2401 and BMED2402) **N** PHSI3007, PHSI3008, PHSI3907, PHSI3908, PHSI3912 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
PHSI3912 **Physiology of Disease (Advanced)**	6	**P** A mark of 75 or above in [(PHSI2X05 and PHSI2X06) or (BMED2401 and BMED2402)] **N** PHSI3012, PHSI3007, PHSI3907, PHSI3008, PHSI3908 *BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 2
VIRO3001 **Virology**	6	**A** Fundamental concepts of microorganisms, biomolecules and ecosystems **P** [6cp from (BIOL1XX7 or MBLGXXXX) and 6cp from (BCHM2XXX or BCMB2X01 or BIOL2XXX or GEGE2X01 or GENE2002 or IMMU2101 or MICR2XXX or PCOL2X0X or PHSI2X0X)] OR [BMED2401 and BMED2404] **N** VIRO3901 *Students are strongly advised to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002 or VIRO3902.BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
VIRO3901 **Virology (Advanced)**	6	**A** Fundamental concepts of microorganisms, biomolecules and ecosystems **P** [6cp from (BIOL1XX7 or MBLGXXXX) and a mark of 75 or above in 6cp from (BCHM2XXX or BCMB2X01 or BIOL2XXX or GEGE2X01 or GENE2002 or IMMU2101 or MICR2XXX or PCOL2X0X or PHSI2X0X)] OR [BMED2401 and a mark of 75 or above in BMED2404] **N** VIRO3001 *Students are strongly advised to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002 or VIRO3902.BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.*	Semester 1
VIRO3002 **Medical and Applied Virology**	6	**A** Fundamental concepts of microorganisms and biomolecules **P** [6cp from (BIOL1XX7, MBLGXXXX) and 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR [BMED2401 and BMED2404] **N** VIRO3902 *Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3002.*	Semester 2

Unit of study	*Credit points*	*A: Assumed knowledge P: Prerequisites C: Corequisites N: Prohibition*	*Session*
VIRO3902 **Medical and Applied Virology (Advanced)**	6	**A** Fundamental concepts of microorganisms and biomolecules **P** [6cp from (BIOL1XX7, MBLGXXXX) and a mark of 75 in 6cp from (BCHM2XXX, BCMB2X01, BIOL2XXX, GEGE2X01, GENE2002, IMMU2101, MICR2XXX, PCOL2X0X, PHSI2X0X)] OR (BMED2401 and a mark of 75 in BMED2404) **N** VIRO3002 *Students are strongly encouraged to complete VIRO3001 or VIRO3901 before enrolling in VIRO3902.*	Semester 2
ANAT3X09, IMMU3X11, IMMU3X12, PATH3X11, PATH3X12 to be developed for offering in 2019.			

Medical Science

MEDICAL SCIENCE

Medical Science stream

Advanced coursework and projects will be available in 2020 for students who complete this major.The Medical Science stream is 72 credit points, including:(i) 6 credit points of 1000-level chemistry units(ii) 6 credit points of 2000-level biochemistry units(iii) A 60 credit point program in Medical Science

Medical Science program

This program is only available to students enrolled in Medical Science stream.A program in Medical Science requires 60 credit points from this table including: (i) A 48 credit point major in Medical Science(ii) 12 credit points of 2000-level program core units

Medical Science major

This major is only available to students enrolled in Medical Science program.A major in Medical Science requires 48 credit points from this table including: (i) 12 credit points of 1000-level core units(ii) 12 credit points of 2000-level major core units(iii) 6 credit points of 3000-level project and interdisciplinary capstone unit(iv) 18 credit points of 3000-level selective units

Units of study

The units of study are listed below.

1000-level units of study

Chemistry units

CHEM1011
Fundamentals of Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1111 or CHEM1911 or CHEM1991 **Assumed knowledge:** There is no assumed knowledge of chemistry for this unit of study but students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February). **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed HSC Chemistry (or equivalent) are strongly advised to take the Chemistry Bridging Course (offered in February, and online year-round, see http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will equip you with the fundamental knowledge and skills in chemistry for broad application. You will learn about atomic theory, structure and bonding, equilibrium, processes occurring in solutions, and the functional groups of molecules.You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions.This unit of study is directed toward students whose chemical background is weak (or non-existent). Compared to the mainstream Chemistry 1A, the theory component of this unit begins with more fundamental concepts, and does not cover, or goes into less detail about some topics. Progression to intermediate chemistry from this unit and Fundamentals of Chemistry 1B requires completion of an online supplementary course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1111
Chemistry 1A

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1, Semester 2, Summer Main **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1911 or CHEM1991 **Assumed knowledge:** Students who have not completed HSC Chemistry (or equivalent) and HSC Mathematics (or equivalent) are strongly advised to take the Chemistry and Mathematics Bridging Courses (offered in February) **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Students who have not completed secondary school chemistry are strongly advised to instead complete Fundamentals of Chemistry 1A in the first semester of the calendar year (unless you require 12 credit points of Chemistry and are commencing in semester 2).You should also take the Chemistry Bridging Course in advance (offered in February, and online year-round http://sydney.edu.au/science/chemistry/studying-chemistry/bridging-course.shtml).

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions like how do dyes work, how do we desalinate water, how do we measure the acid content in foods, how do we get the blue in a blueprint, and how do we extract natural products from plants? Through inquiry, observation and measurement, you will understand the 'why' and the 'how' of the natural and physical world and will be able to apply this understanding to real-world problems and solutions.This unit of study is directed toward students with a satisfactory prior knowledge of the HSC chemistry course.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1911
Chemistry 1A (Advanced)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures and 1x1-hr tutorial per week; 1x3-hr practical per week for 9 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1991 **Assumed knowledge:** 80 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, laboratory log book, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for broad application, including further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups of molecules. You will develop experimental design, conduct and analysis skills in chemistry through experiments that ask and answer questions about the chemical nature and processes occurring around you. Through inquiry, observation and measurement, you will better understand natural and physical world and will be able to apply this understanding to real-world problems and solutions. This unit of study is directed toward students with a good secondary performance both overall and in chemistry or science. Students in this category are expected to do this unit rather than Chemistry 1A. Compared to the mainstream Chemistry 1A, the theory component of this unit provides a higher level of academic rigour and makes broader connections between topics.

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

CHEM1991
Chemistry 1A (Special Studies Program)

Credit points: 6 **Teacher/Coordinator:** Dr Toby Hudson **Session:** Semester 1 **Classes:** 3x1-hr lectures; 1x1-hr tutorial per week; 1x3hr practical per week for 12 weeks **Prohibitions:** CHEM1001 or CHEM1101 or CHEM1901 or CHEM1903 or CHEM1109 or CHEM1011 or CHEM1111 or CHEM1911 **Assumed knowledge:** 90 or above in HSC Chemistry or equivalent **Assessment:** quizzes, attendance, presentations, exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Chemistry describes how and why things happen from a molecular perspective. Chemistry underpins all aspects of the natural and physical world, and provides the basis for new technologies and advances in the life, medical and physical sciences, engineering, and industrial processes. This unit of study will further develop your knowledge and skills in chemistry for application to life and medical sciences, engineering, and further study in chemistry. You will learn about nuclear and radiation chemistry, wave theory, atomic orbitals, spectroscopy, bonding, enthalpy and entropy, equilibrium, processes occurring in solutions, and the functional groups in carbon chemistry. You will develop experimental design, conduct and analysis skills in chemistry in small group projects. The laboratory program is designed to extend students who already have chemistry laboratory experience, and particularly caters for students who already show a passion and enthusiasm for research chemistry, as well as aptitude as demonstrated by high school chemistry results. Entry to Chemistry 1A (Special Studies Program) is restricted to a small number of students with an excellent school record in Chemistry, and applications must be made to the School of Chemistry. The practical work syllabus for Chemistry 1A (Special Studies Program) is very different from that for Chemistry 1A and Chemistry 1A (Advanced) and consists of special project-based laboratory exercises. All other unit of study details are the same as those for Chemistry 1A (Advanced).

Textbooks

Recommended textbook: Blackman, Bottle, Schmid, Mocerino and Wille,Chemistry, 3rd Edition, 2015 (John Wiley) ISBN: 978-0-7303-1105-8 (paperback) or 978-0-7303-2492-8 (e-text)

Major core

BIOL1007
From Molecules to Ecosystems

Credit points: 6 **Teacher/Coordinator:** Dr Emma Thompson **Session:** Semester 2, Summer Main **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1907 or BIOL1997 **Assumed knowledge:** HSC Biology. Students who have not completed HSC Biology (or equivalent) are strongly advised to take the Biology Bridging Course (offered in February). **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative final exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . You will participate in inquiry-led practicals that reinforce the concepts in the unit. By doing this unit you will develop knowledge and skills that will enable you to play a role in finding global solutions that will impact our lives.

Textbooks

Please see unit outline on LMS

BIOL1907
From Molecules to Ecosystems (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Pauline Ross **Session:** Semester 2 **Classes:** Two lectures per week and online material and 12 x 3-hour practicals **Prohibitions:** BIOL1007 or BIOL1997 **Assumed knowledge:** 85 or above in HSC Biology or equivalent **Assessment:** Quizzes (10%), communication assessment (40%), skills tests (10%), summative exam (40%) **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and discover how expanding tools have improved our capacity to manage and intervene in ecosystems for our own health and organisms in the environment that surround and support us . This unit of study has the same overall structure as BIOL1007 but material is discussed in greater detail and at a more advanced level. The content and nature of these components may vary from year to year.

Textbooks

Please see unit outline on LMS

BIOL1997
From Molecules to Ecosystems (SSP)

Credit points: 6 **Teacher/Coordinator:** Dr Dale Hancock **Session:** Semester 2 **Classes:** Two lectures per week and online material **Prohibitions:** BIOL1007 or BIOL1907 **Assumed knowledge:** 90 or above in HSC Biology or equivalent **Assessment:** One 2-hour exam (50%), project report which includes written report and presentation (50%) **Practical field work:** As advised and required by the project; approximately 30-36 hours of research project in the laboratory or field **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

Paradigm shifts in biology have changed the emphasis from single biomolecule studies to complex systems of biomolecules, cells and their interrelationships in ecosystems of life. Such an integrated understanding of cells, biomolecules and ecosystems is key to innovations in biology. Life relies on organisation, communication, responsiveness and regulation at every level. Understanding biological mechanisms, improving human health and addressing the impact of human activity are the great challenges of the 21st century. This unit will investigate life at levels ranging from cells, and biomolecule ecosystems, through to complex natural and human ecosystems. You will explore the importance of homeostasis in health and the triggers that lead to disease and death. You will learn the methods of cellular, biomolecular, microbial and ecological investigation that allow us to understand life and intervene in ecosystems to improve health. The same theory will be covered as in the advanced stream but in this Special Studies Unit, the practical component is a research project. The research will be either a synthetic biology project investigating genetically engineered organisms or organismal/ecosystems biology. Students will have the opportunity to develop higher level generic skills in computing, communication, critical analysis, problem solving, data analysis and experimental design.

MEDS1001
Human Biology

Credit points: 6 **Teacher/Coordinator:** Prof Philip Poronnik **Session:** Semester 1 **Classes:** this unit of study will involve between 5-6 hours of face-to-face activities run on the camperdown campus, these contact hours will comprise lectures; six 3-hour practical sessions; six workshops and tutorials **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1901 **Assessment:** Written and oral communication, quiz, practical and workshop reports, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the medical sciences suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology and medical sciences. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in the medical sciences.

MEDS1901
Human Biology (Advanced)

Credit points: 6 **Teacher/Coordinator:** Prof Philip Poronnik **Session:** Semester 1 **Classes:** this unit of study will involve between 5-6 hours of face-to-face activities run on the camperdown campus **Prerequisites:** 85 or above in HSC Biology or equivalent **Prohibitions:** BIOL1003 or BIOL1903 or BIOL1993 or BIOL1008 or BIOL1908 or BIOL1998 or MEDS1001 **Assessment:** Written and oral presentation, quiz, assignment, final exam **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: Department permission required for enrolment.

What will it mean to be human in 2100? How will we be able to control our complex bodily mechanisms to maintain health and fight disease? Advances in the human biology suggest we will age more slowly and new technologies will enhance many bodily structures and functions. This unit of study will explore maintenance of health through nutritional balance, aerobic health, defence mechanisms and human diversity. You will learn key structural features from the subcellular level to the whole organ and body, and learn about essential functional pathways that determine how the body regulates its internal environment and responds to external stimuli and disease. Together we will investigate nutrition, digestion and absorption, cardiovascular and lung function, reproduction, development, epigenetics, and regulation of function through various interventions. You will receive lectures from experts in the field of human biology and medical sciences, supported by practical classes, workshops and on-line resources that leverage off state-of-the-art technologies to develop your practical, critical thinking, communication, collaboration, digital literacy, problem solving, and enquiry-based skills in human biology. This unit of study will provide you with the breadth and depth of knowledge and skills for further studies in majors in medical sciences. The advanced unit has the same overall concepts as the mainstream unit but material is discussed in a manner that offers a greater level of challenge and academic rigour. Students enrolled in the advanced stream will participate in alternative components which may for example include guest lecturers from medical science industries. The nature of these components may vary from year to year.

TBA

MEDS coded units of study are only available to students in the Medical Science stream.

2000-level units of study

Biochemistry units

MEDS2003 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

Program core

MEDS2001 and MEDS2002 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

Major core

MEDS2004 and MEDS2005 to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

3000-level units of study

Project and Interdisciplinary capstone unit

MEDS3001 unit of study to be developed for offering in 2019 (MEDS coded units of study are only available to students in the Medical Science stream).

Selective

AMED3001
Cancer

Credit points: 6 **Teacher/Coordinator:** Assoc Prof Scott Byrne **Session:** Semester 1 **Classes:** interactive face to face activities 4 hrs/week; online 2 hrs/week; individual and/or group work 3-6 hrs/week **Assessment:** in-semester exam, assignments, quiz, presentation **Mode of delivery:** Normal (lecture/lab/tutorial) day

Note: BMedSc degree students: You must have successfully completed BMED2401 and an additional 12cp from BMED240X before enrolling in this unit.
