25 Biographical Details

26  
27 Susan Banki is a Lecturer in Human Rights at the University of Sydney. Her most recent publication  
28 was "Refugees as Educators: The Potential for Positive Impact on Educational Systems," in Margaret  
29 Vickers and Florence McCarthy, eds., *Achieving Equity in Education for Refugee and Immigrant*  
30 *Students*. Sydney: Information Age Publishing. In 2012 she was the recipient of the Faculty of Arts  
31 and Social Sciences Excellence in Teaching (Design and Practice) Award.

32 Elisabeth Valiente-Riedl is a Lecturer in Human Rights at the University of Sydney, teaching into an  
33 interdisciplinary postgraduate program: the Master of Human Rights and Democratisation (Asia  
34 Pacific). Her recent book, *Is Fair Trade Fair?* (London: Palgrave Macmillan), was published in 2013.

35 Paul Duffill is a part-time Lecturer and researcher at the Centre for Peace and Conflict Studies at the  
36 University of Sydney. He has been involved in teaching postgraduate-level human rights and  
37 peacebuilding simulations since 2009 and has been working in adult education and inter-cultural  
38 communication for the last nine years.

39  
40  
41 Summary

42 This article describes a five-pointed approach to teaching human rights at the tertiary level. This  
43 approach points to the need for human rights education that: 1) offers abilities and capacities that  
44 complement legal approaches; 2) provides students with the tools to grasp the root causes of  
45 violations; 3) incorporates learning on local, national, regional, and international levels; 4) includes  
46 significant collaborative opportunities; and 5) offers students the chance to put into practice the skills  
47 they have learned. The article critically examines and problematises this approach through a case-  
48 study examination of a 'role-based simulation' module trialled in a postgraduate human rights course  
49 at the University of Sydney, the *Human Rights Simulation*. The substantive and pedagogical  
50 challenges that have emerged are discussed, drawing on the insights from teaching the Simulation and  
51 the substance of student feedback.

## Introduction

Tertiary education has a double task: introducing students to the prevailing knowledge in a given field, and, with the exception of more theoretical degrees, such as in philosophy, equipping students with skills that are directly transferrable to the workplace. Despite this need for practice-oriented curriculum and teaching, many tertiary programs struggle to design teaching strategies that establish deep connections between theory and practice. The challenge of applying classroom concepts, theory and ~~conscious~~ knowledge to 'realistic' contexts of interest to students outside of formal learning environments can be referred to as the *knowing-doing gap*, a concept that originally stems from corporate leadership training (Pfeffer and Sutton, 2000).

The *knowing-doing gap* is particularly worrisome in tertiary programs with a vocational element, a class of applied programs to which human rights courses invariably belong. Despite the imperative this sets for practice-oriented teaching, tertiary human rights educators are often influenced by a different set of pressures, including publishing articles that have been called "tenure pieces" disconnected from [human rights] practice' (anonymous respondent in Mariner, 2011). Assessments, too, pose a challenge: there is a prevalent reliance on written exams, essays and class presentations as the basis for assessment rather than the hands-on, interactive practice of skills that human rights students would require for pursuing human rights advocacy (McElwee et al., 2009). Thus, it seems that students commonly lack the experience to understand how to operationalise a campaign for human rights. While tertiary study can offer an excellent introduction to the 'why' of human rights, courses may be less effective in answering the practical 'how'. As a result, students feel that they are not equipped to step into professional roles when they leave the classroom. In the postgraduate context, this has been referred to as an 'imposter complex' (Bucciari et al., 2011: 20).

This article describes the development of a Human Rights Simulation module at the University of Sydney (herein the 'Simulation') that aims to correct this imbalance. The Simulation is not the only practice-oriented teaching tool currently on offer in tertiary human rights curricula, and indeed, not the only Simulation. However, it is underpinned by a pedagogy that may inform key principles and

1  
2  
3  
4  
5  
6  
7 practical improvements for the design and delivery of practice-oriented tertiary human rights  
8 curriculum in other institutions. This article describes a five-pointed [pedagogical](#) approach to teaching  
9 human rights at the tertiary level, emphasising: an interdisciplinary understanding of human rights;  
10 the importance of tracing causality in addressing human rights violations; the multi-spatial dimensions  
11 of human rights violations and responses; the importance of collaboration between activists; and the  
12 need for inclusive and practice- and production-oriented pedagogy. The article critically examines and  
13 problematises this approach through a case-study examination of a ‘role-based simulation’ module  
14 trialled in a postgraduate human rights course at the University of Sydney. Here, the substantive and  
15 pedagogical challenges that have emerged are discussed, drawing on the insights from teaching the  
16 Simulation and the substance of student feedback. While the Simulation has been trialled in a  
17 postgraduate program, it could also be delivered and further developed in undergraduate human rights  
18 teaching.

### 30 **A Five-Pointed Approach to Teaching Human Rights at the Tertiary Level**

31 Five separate elements inform this approach to teaching human rights. These set clear challenges for  
32 the design and delivery of human rights curricula aiming to promote skills relevant to praxis.  
33  
34  
35

36 First, *human rights law is not the same as human rights*. Activists working toward the protection of  
37 human rights already know that laws alone are insufficient to protect against and prevent abuses of  
38 human rights. The development discourse has been particularly quick to pick up on this gap.  
39 ‘Meaningless legalistic’ approaches to development have been critiqued (Uvin, 2007: 602), while the  
40 increasingly wide adoption of rights-based approaches to development acknowledges the importance  
41 of ‘making human rights more operational’ (Gready, 2008: 745). Further, scholarship on the role of  
42 rights as a social construction to package and promote NGO strategies – ‘rights-framed approaches’ –  
43 (Miller, 2010) indicates that the language of rights may have commenced with those who drafted the  
44 laws initially, but is now the purview of those who work in many fields including public relations,  
45 communications, and fundraising. The interdisciplinarity of human rights is clear. Broader reference

57  
58  
59  
60

1  
2  
3  
4  
5  
6  
7 points for understanding human rights include ethical, philosophical, and (as discussed below)  
8 structural/historical perspectives.  
9

10  
11 However, there remains a heavy bias on the discipline of law for those who research and write (and  
12 presumably teach) about human rights at the tertiary level. Of the 25 human rights journals listed in  
13 the Australian Research Council's 2012 ERA journal rankings, 21 are coded as law journals.<sup>1</sup> The  
14 publication and rise of this journal, *The Journal of Human Rights Practice*, demonstrates a challenge  
15 to the assumption that law is the primary means through which we can understand human rights, with  
16 the editors' observation that 'the practical application of rights cannot be properly understood from a  
17 single disciplinary perspective' (Gready and Phillips, 2009: 4). Similarly, the 2012 Special Issue of  
18 *Sociology* devoted to human rights, and the subsequent creation of the Sociology of Rights study  
19 group of the British Sociological Association, support an increasingly interdisciplinary understanding  
20 of human rights.  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30

31 In the practice of teaching, this element points to the need for coursework that goes beyond the  
32 teaching of jurisprudence and legal precedents (Smith, [2013this issue](#)). For example, a study of article  
33 33 of the Refugee Convention may be useful for understanding the principle of *nonrefoulement*<sup>2</sup>, and  
34 an examination of its application in various contexts may inform how the law is interpreted  
35 domestically. So, in January 2011, when the Australian and Afghan governments signed a  
36 Memorandum of Understanding that permitted the involuntary deportation to Afghanistan of asylum  
37 seekers whose claims were rejected, salient questions emerged about the applicability of the principle  
38 of *nonrefoulement* and whether Australia was flouting international law in permitting the return of this  
39 population<sup>3</sup>. But other equally important nonlegal elements were at play that could benefit from close  
40

50 <sup>1</sup> [http://www.arc.gov.au/era/era\\_2012/era\\_journal\\_list.htm](http://www.arc.gov.au/era/era_2012/era_journal_list.htm), retrieved 15 January 2013. The other 4 are coded as  
51 Criminology, Public Health, Anthropology, and Political Science.

52 <sup>2</sup> *Nonrefoulement* stipulates that refugees not be repatriated to countries where "life or freedom would be  
53 threatened on account of ... race, religion, nationality, membership of a particular social group or political  
54 opinion" (United Nations 1951: Article 33.1).

55 <sup>3</sup> For example, <http://castancentre.com/2011/11/15/can-the-australian-government-return-unsuccessful-asylum-seekers-to-afghanistan/> (accessed 10 April 2013).

1  
2  
3  
4  
5  
6  
7 examination and analysis: refugee advocates issued press releases<sup>4</sup>; community workers held public  
8 meetings<sup>5</sup> and members of Afghanistan's ethnic minority population held protests in Canberra to lay  
9 bare the continuing persecution they would suffer if returned.<sup>6</sup> Thus the work of protecting refugees  
10 from being sent back to countries where their lives are in danger requires not only an understanding of  
11 the law, but media work and political mobilisation strategies.  
12  
13  
14

15  
16  
17 Second, *a comprehensive understanding of human rights violations must explore the roots and*  
18 *relationships associated with that violation.* Counter to the literature that measures human rights  
19 outcomes as a manifestation of government policy (for example, Landman, 2004), we view the human  
20 rights system as one encompassing a broader array of dynamics, such as the role in human rights  
21 violations of structural violence (Galtung, 1969; Schirch, 2004: 22-24), ethno-nationalist tensions  
22 (Ignatieff, 2011: 32-33), social/normative influence (Maney, 2000; Risse et al., 1999; Ropp and  
23 Sikkink, 1999; Woods, 2010), and the deployment of historical narratives (Minow, 1998: 144-45). In  
24 the context of tertiary human rights education, this element suggests a need to understand the  
25 relationships that undergird the discourses and actions of human rights violators, human rights  
26 protectors, and human rights victims. Several have offered methods for depicting these relationships  
27 in ways that are conceptually and practically clear, utilising approaches that map (often graphically)  
28 the social and political dynamics of a situation (Fisher et al., 2000; Francis, 2002; Johnson and  
29 Pearson, 2009). These mapping approaches demonstrate the importance of systematic considerations  
30 of social, ethno-cultural and other contextual factors in the analysis of, prevention and response to  
31 human rights violations.

37  
38  
39  
40  
41  
42  
43  
44

45 Third, *the human rights regime is a multi-spatial system.* What we mean by this is that human rights  
46 violations and their responses occur on multiple spatial levels: local, national, regional, and  
47  
48  
49

50

57  
58  
59  
60

1  
2  
3  
4  
5  
6 international. Much of the ‘beyond borders’ literature implicitly takes this into account, starting with  
7  
8 Keck and Sikkink’s oft-quoted work (1998) explaining local activists’ efforts to ‘boomerang’ their  
9  
10 causes, to more recent conceptualisations that argue that the deterritorialisation of transnational  
11  
12 politics has further accentuated the power of mobile actors, such as migrants and transnational  
13  
14 agencies (Lyons and Mandaville, 2010). Indeed, the practice of integrating grassroots realities with  
15  
16 national, regional and international structures and organisations is acknowledged as a critical element  
17  
18 to support sustainable social inclusion, social equity and nonviolent relationships between and within  
19  
20 communities (Fisher et al., 2000; Francis, 2002; Lederach, 1999). The ‘fair trade’ marketing strategy  
21  
22 is an example of a multi-spatial advocacy response to perceived inequities in the global free trade  
23  
24 architecture<sup>7</sup>. Here, northern NGOs – specifically ‘Fairtrade’<sup>8</sup> labelling organisations – have worked  
25  
26 to target northern corporations and consumers as a means to improve the livelihoods of marginalised  
27  
28 producers in developing countries (see Valiente-Riedl 2013, pp. 50-51). An international Fairtrade  
29  
30 labelling system, connecting consumer markets in the global north with production origins in the  
31  
32 global south, effectively builds not only a multi-spatial advocacy strategy in a geographic sense,  
33  
34 spanning local producers, export networks, global south and north governments, and consumers in the  
35  
36 global north, but also qualitatively moves between political, economic and social imperatives.

37  
38 This has important implications for tertiary human rights education: a comprehensive examination of  
39  
40 human rights abuses and responses must incorporate a knowledge of local, national, regional and  
41  
42 international dynamics. In the above example of ‘Fairtrade,’ NGOs have worked to operate within but  
43  
44 also challenge the rules of the global marketplace, and to engage and partner with consumers and  
45  
46 corporations, in an effort to improve the terms of trade for marginalised producers and workers (see  
47  
48 Valiente-Riedl, 2013, pp. 50-51).

49  
50 Fourth, *no actor is an island*. Social movement theorists have long acknowledged the need to create  
51  
52 attributional processes that help mobilisers (human rights and otherwise) to identify the targets of

53  
54 <sup>7</sup> For a comprehensive history of the fair trade movement, see Reynolds, Murray and Wilkinson (2007).

5  
6  
7 their mobilisation (i.e., those whose behaviour they want to change), known as boundary framing  
8 (Gamson, 1995; Hunt et al., 1994; Silver, 1997). More recently, however, scholars have recognised  
9 that boundary framing also occurs *within* movements, and that a critical element of activists' work is  
10 identifying other actors whose goals and messages are both aligned with *and* different from their own  
11 (Wiktorowicz, 2004). This points to the need to understand – both theoretically and practically – the  
12 utility and challenges of collaboration among actors. In terms of teaching, boundary framing comes  
13 alive as a concept when students are furnished with concrete examples that challenge them to  
14 collaborate even when strategies and goals are not 100% aligned. For example, activists promoting  
15 Palestinian rights possess a wide range of opinions on strategic goals and associated tactics, and these  
16 can act as a wedge issue within the movement. As an illustration, the Boycott, Divestment and  
17 Sanctions (BDS) campaign, which calls for a general boycott of economic, sporting, academic and  
18 cultural relations with Israel, has prompted debate among advocates. Some argue that the BDS should  
19 only target individuals and organisations that operate within Palestinian-claimed territory<sup>9</sup>; many  
20 others seek to apply pressure more broadly. Exercises that encourage students to identify and debate  
21 these tactical differences allow for a deeper understanding of the challenges and opportunities for  
22 collaboration.

40  
41  
42  
43  
44  
45  
46  
47  
48

49  
50 Fifth, much of the pedagogical literature demonstrates that the presentation of *knowledge alone is not*  
51 *enough. Practice and production are essential.* This is the crux of the knowing-doing gap. Practice  
52 involves activities that break down skills into easier steps, removed from distracting or intimidating  
53 high pressure situations. Production, on the other hand, creates realistic situations in the learning  
54 environment where students are free to experiment with the application of their knowledge (Cook,  
55 2001; Harmer, 1991; Rivers, 1981).  
56  
57  
58  
59

---

<sup>9</sup> For example see: interview with Norman Finkelstein, 9 February 9 2012, at <http://vimeo.com/36854424> (accessed 7 April 2013); interview with Noam Chomsky, 2 September 2010, at <http://www.youtube.com/watch?v=H5hY-gfV0M> (accessed 7 April, 2013); statement by Michael Lerner in the interview: *Building a Jewish and Democratic State: A Conversation with Peter Beinart*, at <http://www.tikkun.org/nextgen/building-a-jewish-and-democratic-state-a-conversation-with-peter-beinart> (accessed 7 April, 2013).

1  
2  
3  
4  
5  
6  
7 The importance of attending to the knowing-doing gap is further supported by andragogical (adult  
8 learning) literature that focuses on the specific ways that adults learn, and the educational processes  
9 that engender positive learning outcomes for these populations (Chan, 2010: 27-28; Cretchley and  
10 Castle, 2001; Knowles et al., 2005: 64-69; for the various contexts where this has been applied, see  
11 also Savicevic, 1991). The Simulation, which will be examined in the following section, features a  
12 range of activities (including group collaboration, interviewing, and engaging and lobbying  
13 stakeholders) that are based on principles of andragogic practice. Differences between adults and  
14 children in motivation, experience, and desire for real-life contexts in the classroom, for example,  
15 suggest that an andragogical approach emphasises practice and production over simply presenting  
16 knowledge. Here, simulation-based activities and assessments, by providing experiential activities  
17 mirroring 'real situations', are well-placed to provide multiple opportunities for students to practice  
18 their newly acquired skills by integrating them with their existing experience and knowledge.  
19  
20  
21  
22  
23  
24  
25  
26

27  
28 The implications ~~here-of the value of simulations are-is~~ evident: effective human rights educators  
29 ought to adopt a critical and conscious approach to their own teaching methods and incorporate an  
30 advancement of practical skills training. The question is: how?  
31  
32  
33  
34  
35  
36

37 We believe that role-based simulations offer an important tool for practice-oriented learning. The  
38 effectiveness of simulation activities in tertiary learning is well established (Dorn, 1989; Kolb &  
39 Kolb, 2005; Lederman, 1992), as is the relevance of their application to social justice training as noted  
40 by practitioners working in the field (for example see Deck, 2010; Lederach, 1995). Law schools hold  
41 moot courts, strategic studies programs simulate conflict situations, and Harvard University's  
42 Program on Negotiation teaches students the mechanisms of mediation and negotiation through  
43 simulated events (Kaufman & Duncan, 1992; Kunselman & Johnson, 2004; Watkins, 2007). It is

6  
7 worth noting here that internships often offer the same building of skills. However, they rarely  
8 function on multiple spatial levels, a component that is key to this approach.<sup>10</sup>  
9

### 10 11 **Case Study: The University of Sydney Role-Based Human Rights Simulation**

12  
13  
14  
15 The Human Rights Simulation module<sup>11</sup> aims to address all of the elements outlined above, in an  
16 effort to bridge the ‘knowing-doing’ gap, which often applies to human rights pedagogy. In this  
17 section, we note the practicalities of the Simulation, the skills it develops, and its current form.  
18  
19

20  
21  
22 The Simulation is an adaptable teaching tool, applicable to various human rights contexts, in which a  
23 *skeletal structure* comprised of several components is overlaid with the factual content of a *specific*  
24 human rights situation – the ‘scenario.’ The skeletal structure includes a number of core exercises,  
25 whose activities are described below. To flesh out the skeletal structure, one might overlay scenario  
26 content about child rights in Bangladesh, for example, or gay rights in Uganda. Clearly, adapting the  
27 Simulation to a new scenario requires specialised knowledge of the human rights situation chosen; the  
28 skeletal structure furnishes the educator with a process to collect and apply information specific to  
29 each human rights context. One colleague at the Australia National University is currently adapting  
30 the module for use on anti-discrimination in Australia.  
31  
32

33  
34  
35 The current Simulation as it is run at the University of Sydney uses a scenario based on real events  
36 that have taken place in West Papua, Indonesia, where human rights violations of the indigenous  
37 population (torture, extra-judicial killings, dispossession of land) are embedded in a variety of  
38 substantive issues: a struggle for independence/autonomy, ethnic/racial/religious conflict, control of  
39  
40  
41  
42  
43  
44  
45  
46  
47

48  
49 <sup>10</sup> One notable exception is the multi-dimensional internships offered by our colleagues at the Centre for  
50 Refugee Research (CRR) at the University of New South Wales, where students deeply engage on both local  
51 and international levels.

52 <sup>11</sup> The Simulation is the core assessable activity in a human rights module coordinated by Dr Susan Banki. Dr  
53 Banki conceptualised, designed, developed and authored all of the material for the Human Rights Simulation  
54 Module, and ran the first three semesters of the Simulation in their entirety. In the fourth semester, Paul Duffill  
55 provided assistance with assessments and logistics. Both Dr. Valiente-Riedl and Paul Duffill supported the  
56 theoretical underpinnings of the Simulation.  
57  
58  
59

2  
3  
4  
5  
6  
7 natural resources, intense militarisation, environmental degradation, and external business interests  
8 (Elmslie and Webb-Gannon, 2011; Kirksey, 2012; Ondawame, 2006).  
9

10  
11 A comprehensive step-by-step description of the module and related resources is outside the scope of  
12 this paper, but a brief explanation of the Simulation's current structural form follows. The Simulation  
13 has changed slightly each semester in response to student feedback and university temporal and  
14 spatial requirements, such as room and hour allocation. Currently, the Simulation occupies  
15 approximately one-third of a semester's in-class lecture/tutorial time, constituting about 12 hours of  
16 in-class teaching time. Most recently it was run over the course of four weeks: during two consecutive  
17 three-hour timeslots spaced one week apart, and then on one day for six hours straight two weeks  
18 later. The Simulation activities thus ran entirely during student class time, although assessments  
19 required essential group work among students outside of class time in preparation to respond to the  
20 Simulation's activities. The Simulation's exercises, described below, can be spaced out in such a way  
21 that it can be adapted to other universities' structural requirements. A brief explanation of its key  
22 activities follows.

### 33 34 35 *Introduction to the Specific Human Rights Scenario*

36 In order to ensure that students develop an in-depth knowledge of the actors and dynamics of the  
37 specific human rights violation (in this case, the situation in West Papua), materials are developed that  
38 include key readings, a structured lecture (often with a guest speaker), and useful links for further  
39 reading. This first segment is offered in a traditional presentation manner, with a focus on element  
40 two of the [Simulation schemapedagogical approach](#) by problematising the underlying roots and  
41 dynamics of violations.  
42  
43  
44  
45  
46  
47

### 48 49 *Mapping Exercise*

50 Students are asked to graphically depict the personal, political, and economic relationships that inform  
51 one particular instance of violation. This exercise draws on the work of Johnson and Pearson (2009)  
52 and is best carried out by utilising an actual current situation related to the scenario in question. For  
53  
54  
55

1  
2  
3  
4  
5  
6  
7 example, for the West Papua scenario, students are presented with the news of a recent shooting of a  
8  
9 Papuan university student by police forces, and asked to map the relevant actors that lie at the  
10  
11 intersection of the violation and its possible preventers, starting with local actors (friends, family, and  
12  
13 community) and moving concentrically to more distant relationships, such as NGOs, government  
14  
15 agencies, and international actors. Students are asked to brainstorm initial ‘interventions’ that work to  
16  
17 capitalise on given relationships to produce protection or prevention outcomes. For example, having  
18  
19 identified the (often unexplored) relationships between religious institutions and police forces,  
20  
21 students may suggest an intervention that uses interfaith dialogue to bring victims and perpetrators  
22  
23 together. Students then present their maps to one another to reinforce shared learning.

24  
25 The mapping exercise serves several [pedagogical](#) functions, one of which is to develop an in-depth  
26  
27 understanding of the relevant actors. Through boundary framing, students identify the most important  
28  
29 mobilisers (i.e., those organisations working to protect human rights). Then students are divided into  
30  
31 groups and assigned to these organisations, which may be local, national, regional or international in  
32  
33 nature. While the organisations may not have goals that are entirely aligned, all pursue some form of  
34  
35 advocacy on behalf of the scenario’s victims.<sup>12</sup> For the remainder of the Simulation, students remain  
36  
37 in these groups and are expected to model the aims and activities of their assigned organisation  
38  
39 through role-based activities. Groups are divided carefully, trying to achieve a mix of stronger and  
40  
41 weaker students, and students for whom English is and is not their first language. This mapping  
42  
43 specifically addresses two elements of the approach: element two, which asks students to consider the  
44  
45 roots, relationships and broader context associated with a particular human rights violation and  
46  
47 element three, which asks students to examine human rights as a multi-spatial system.

#### 48 *Budget Exercise*

49  
50  
51  
52  
53 <sup>12</sup> In many role playing situations, participants are placed in adversarial roles, i.e., the ‘good guys’ and ‘bad  
54  
55 guys.’ In fact, the original inception of this Simulation did just that. However, it became clear that students were  
56  
57 seduced by the dramatic opportunity of playing the role of villain and failed to learn the necessary skills of  
58  
59 collaboration. As such, the Simulation was modified to its present form.

1  
2  
3  
4  
5  
6  
7 After discussing and agreeing upon their organisation's goals and objectives (based on factual profiles  
8 of the organisation) each group is given a budget in order to determine the tactical strategies that they  
9 will prioritise. The budget of each organisation is different, as is the cost of certain tactics. For  
10 example, the cost of conducting an interview with a witness to a human rights violation is less  
11 expensive for a local community-based group than for an international organisation, even though the  
12 international organisation has a far larger budget. This exercise reinforces the importance of  
13 theoretical work on resource mobilisation (Bob, 2005; Edwards and McCarthy, 2004) and practically  
14 forces students to allocate scarce resources effectively. This activity clearly emphasises that human  
15 rights actors must strategically extend their activities beyond human rights law, as per element one of  
16 [the Simulation schemathe pedagogical approach](#), which requires students to examine human rights  
17 from an interdisciplinary perspective.  
18  
19  
20  
21  
22  
23  
24  
25  
26  
27

#### 28 *Group Collaboration*

29 In a subsequent exercise, students are advised that they can collaborate with other groups, and thus  
30 reduce costs. However, in order to collaborate, groups must answer a series of questions that forces  
31 the groups to consider how to align, or when it is not possible to align, objectives, strategies,  
32 constructed messages, and/or the selection of spokespersons. That is, the exercise teaches students to  
33 operationalise the tactics that they have previously selected. For example, in determining whether or  
34 not groups will collaborate on writing an editorial, the groups must ascertain if they can agree on a  
35 central message, a call for action, and which publication(s) to target. The advantages and challenges  
36 of collaboration, which element four of [the simulation schemathe pedagogical approach](#) asks students  
37 to problematise, are thus placed in stark relief.  
38  
39  
40  
41  
42  
43  
44  
45  
46

#### 47 *Interviewing Techniques*

48 Each group must prepare for a human rights interview, and then must carry it out. The interviewee  
49 may be a witness, victim, former police officer, government official, or another actor whose presence  
50 is relevant for the exercise. This will depend on the specific scenario. In the Sydney Simulation,  
51 volunteers were recruited from outside the class to play the role of interviewees, furnishing them with  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4  
5  
6  
7 specific information about their profiles. Skills around preparation, ethical interviewing, and  
8 appropriate questions and responses are reviewed beforehand; students are then able to put these skills  
9  
10 into 'practice and production', as required for element five of [the Simulation schemathe pedagogical](#)  
11 [approach](#).  
12  
13

#### 14 15 *Preparing tactics for multi-level stakeholders*

16  
17 Each group is given a series of assignments to respond to the scenario's human rights violation.  
18  
19 Depending on the size of the group and the time allotted, this can ~~include encompass~~ a range of  
20 activities, the skills of which are taught beforehand, generally in tutorials throughout the semester.  
21  
22 These may include: writing an editorial; preparing a briefing paper; creating a media strategy;  
23 producing an advocacy video; organizing and mounting a public protest; holding a press conference;  
24 preparing a shadow or alternative report; and preparing a fact sheet for legislators (at the local,  
25 national, regional and international level). While these activities may involve analysis and  
26 explanations of the law, they engage a range of other tactics as well, enabling students to engage with  
27 human rights from an interdisciplinary perspective, as per element one of the Simulation approach.  
28  
29  
30  
31  
32  
33

#### 34 35 *Participating in simulated lobbying activities at the regional and international level*

36  
37 Post-preparation, students are expected to simulate their participation in regional or international  
38 meetings. The meetings chosen, of course, ought to be relevant to the specific context. For example,  
39 for West Papua, students worked in groups that 'participated' in a simulated international meeting of  
40 the UN Human Rights Council during Indonesia's Universal Periodic Review. At the regional level,  
41 they prepared for and participated in the Second Regional Consultation of the ASEAN  
42 Intergovernmental Commission on Human Rights with Civil Society Organisations. The specificity of  
43 these ~~agencies platforms~~  
44 offered students a key pathway to understand the technical processes  
45 associated with the meetings, their powers and limitations, and a chance to practice 'UN-speak.' This  
46 exercise, including a range of organisations at different levels, addresses the need for students to  
47 understand the human rights regime as a multi-spatial system (element #3).  
48  
49

56  
57  
58  
59  
60

### *Debrief*

Given the intensive nature of these activities, a debrief of the simulated activities provides a necessary means for students to reflect on the challenges they encounter and to draw upon these for future advocacy. Topics of discussion centre around: the adequacy of student preparation; the comprehensiveness of each group's strategic approach; the effective use of scarce resources; the advantages and challenges of collaboration; and reflections on what students would do differently. As such this debrief process integrates and consolidates student learning associated with all five elements in the approach.

### **Challenges and Feedback**

A key source of data on the Simulation that has informed the development of this curriculum over two years has been student feedback. The module has been taught four times, with class sizes ranging from 7 to 63 students. Altogether, 146 students have participated in the Simulation. In four semesters, 83 anonymous pieces of feedback about the Simulation have been collected, from two sources: 1) official University of Sydney Unit of Study Evaluation (USE) surveys; and 2) an unofficial anonymous survey that was set up via Survey Monkey. Both surveys requested information about the human rights course in general; the data we discuss below only concern those comments about the Simulation specifically. A quantitative representation of the student experience of the Simulation was produced by coding qualitative survey data. Where students only made positive comments, these responses were coded as 'positive'; where students only made negative comments, these were coded as 'negative' and; where students made a mix of positive and negative comments, these were coded as 'neutral/both'. Qualitative data were further evaluated to assess two key concerns: a) key challenges for further development of this curriculum and b) the capacity for this Simulation to address the 'knowing-doing' gap in the context of teaching human rights.

Before examining the results it is important to consider the limitations of the survey sample and the data analysed. In the case of the official USE survey, which follows a standardised University format and does not ask questions about the Simulation specifically (rather about the student experience of

1  
2  
3  
4  
5  
6  
7 the unit of study regarding matters such as ‘workload’ and ‘assessment’), only those surveys which  
8 ~~included~~provided qualitative comments about the Simulation itself were ~~included~~used. As a  
9  
10 consequence, the surveys included in this study do not provide a full representation of students that  
11  
12 have participated in the Simulation, and data gathered only allows for a preliminary assessment of  
13  
14 possible trends. In addition, neither evaluation tool specifically assessed the Simulation elements  
15  
16 presented in this paper. ~~Broadly,~~ the survey data examined permits ~~an evaluation~~a pilot evaluation  
17  
18 of ~~the~~ student experience of the Simulation and its capacity to bridge the ‘knowing-doing’ gap.  
19  
20 ~~However,~~ ~~but~~ links to ~~the strength of~~ individual elements in our pedagogical approach cannot be  
21  
22 made, thereby limiting the capacity to evaluate the relevance of component parts of this pedagogy. In  
23  
24 future generations of the Simulation, we intend to design a survey that specifically evaluates the  
25  
26 Simulation’s utility and its ability to address the pedagogical principles upon which the Simulation  
27  
28 has been developed.

29  
30 Of the 83 comments about the Simulation, 36 (43%) were wholly positive, 24 (29%) were wholly  
31  
32 negative, and the remaining 23 (28%) were either neutral or contained both positive and negative  
33  
34 feedback. Table 1 divides this feedback by semester. While only indicative, these data suggest that  
35  
36 student perceptions of the Simulation have improved over time, and that wholly negative feedback has  
37  
38 decreased considerably. Furthermore, the largest class (63 students) expressed by far the most  
39  
40 negative feedback. This may be due to the organisational challenge of managing a larger number of  
41  
42 students and group roles, although few of that semester’s critical comments reflected this complaint  
43  
44 specifically.

45  
46 We view these numbers as encouraging for two reasons. First, as noted below, nearly all the negative  
47  
48 comments concerned logistical and technical issues, which is why we believe negative numbers have  
49  
50 decreased over time as concerns were addressed. Second, we erred on the side of ‘negativity’ when  
51  
52 coding the comments, so that a comment with a positive aspect and constructively negative one was  
53  
54 placed in the ‘neutral/both’ category. For example, several comments noted positive elements of the  
55  
56 Simulation but then suggested that it be a larger percentage of the final grade, such as this comment:

1  
2  
3  
4  
5  
6  
7 'I just LOVE this simulation, since it really is useful "for life" but I think 10% doesn't do the (sic)  
8 justice, given the effort we are putting in' (Semester 2, 2011, Survey Monkey). This was coded in the  
9 'neutral/both' category, rather than in the positive category.  
10

11  
12  
13 A great deal of useful student feedback was also received via unsolicited email, nearly all of it  
14 positive. This information has not been included in the numbers above, as it can be assumed that  
15 students were less likely to offer identifiable negative feedback to their instructors. These comments  
16 nevertheless offer useful qualitative data and thus play an illustrative role. Some of the comments  
17 below come from email feedback.  
18  
19  
20  
21

22  
23  
24 Student feedback can be divided into four general categories. These are comments on: (1) the  
25 **substantive** quality of the Simulation; (2) the **workload** required; (3) the nature of **group work**; and  
26 (4) the **assessment** of the Simulation. The great majority of feedback on the **substantive** quality of the  
27 Simulation was positive, with students noting the specific skills they had learned and/or their vastly  
28 improved knowledge of West Papua. One student appreciated the way that the Simulation focused on  
29 solutions:  
30  
31  
32  
33

34  
35  
36 I really enjoyed the simulation. I felt it solidified all that we had learnt throughout the semester  
37 and asked us to be involved and provide solutions. It really added to my understanding of the  
38 issues (Semester 1, 2011, USE).  
39

40  
41 Another noted greater attention to the Simulation's topic, West Papua:  
42  
43

44  
45 It's been a really interesting learning process and I've thought about the issues involved and  
46 engaged with the topic in a completely different way than I would in preparing an essay. It's  
47 been really interesting through preparing for the Simulation how many of us have been  
48 completely taken by the cause. Even simply looking at the facebook of classmates so many are  
49 posting videos, links to articles and news stories about the Papuan struggles (Semester 2, 2012,  
50 via email).  
51

52 A third detailed the most useful learnings of the Simulation:  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4  
5  
6  
7 The simulation was successful to give us insight into the actual politics of handling human  
8 rights issues, how state sovereignty conflicts with any attempt to practically implement the  
9 universal human rights, the simulation was also helpful for us to learn the group work, and I  
10 think the most interesting activity was the budget allocation (Semester 2, 2012, Survey  
11 Monkey).

12  
13 There were only six negative comments concerning substance. One student noted the ‘sensationalist’  
14 quality of the Simulation (Semester 2, 2011, USE). Another questioned whether the simulated protest  
15 her/his group mounted accurately reflected reality. These are fair comments; asking students to mount  
16 a simulated protest in which all the relevant actors, including press, happen to be present does not  
17 reflect the tedium with which some protests are planned and few people show up. Similarly, because  
18 the Simulation activities necessarily take place over the course of a month during the semester,  
19 campaigns that in reality go on for years are collapsed into a shortened time period. We believe the  
20 Simulation still has value in addressing the knowing-doing gap, despite the collapsed time frame; one  
21 way to correct for this problem is to discuss a more realistic timeline during the debriefing session.  
22  
23  
24  
25  
26  
27  
28  
29

30 Second, students commented on the **significant work and time required** to complete all of the  
31 Simulation’s assessment tasks. Predictably, these comments were mostly negative; 25 comments  
32 referred to the work and time commitment, including ‘the INTENSE volume of work’ (Semester 1,  
33 2011, Survey Monkey) or ‘not enough time’ (Semester 1, 2011, USE). Another noted that ‘strangely’  
34 the Simulation was the best part of the class, ‘although it was highly taxing’ (Semester 2, 2012,  
35 Survey Monkey). Over the course of four semesters, careful attention has been paid to these  
36 comments, adjusting the time at which assignments are due, noting and repeatedly explaining the  
37 deadlines of the various activities, and extending the length of time that students have to prepare.  
38  
39  
40  
41  
42  
43  
44

45 However, it is important to take a balanced approach in responding to comments about workload to  
46 ensure that the pedagogical approach is not compromised, possibly needlessly. This Responding to  
47 comments about workload is a difficult balance to achieve, both because “light” assessments can lack  
48 pedagogical value, and also because complaints vary, and varies considerably from student to student  
49 and class to class.  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4  
5  
6  
7 Third, students commented on the nature of **group work**. Comments along this nature were about  
8 evenly split. For the most part, negative comments about group work were related to assessments,  
9 which we cover below. One student found it a 'headache inducing' experience (Semester 1, 2011,  
10 USE). Another was more neutral, noting group work facilitated 'keep(ing) my temper' (Semester 2,  
11 2011, USE). Other students were positive about group work, such as the student who noted:

12  
13  
14  
15  
16 In the end, (our group) wasn't successful in reaching our goal, and that was really  
17 disappointing. But I guess it was realistic. Anyway I appreciate now how hard it is to work in  
18 groups, and I appreciate the way the simulation made us think about that. We were completely  
19 focussed on fighting the government and didn't spend enough time figuring out what the other  
20 local Papuan groups wanted. Even in (our group), we weren't in full agreement, but it was an  
21 incredible learning experience (Semester 1, 2011, via email).  
22

23 Fourth, the greatest number of comments (28) were concerned, in one way or another, with how the  
24 Simulation was **assessed**. Many complained in the first semester that it was unfair to apportion 40%  
25 of one's grade to a group task. When that was lowered in response to 10% the following semester,  
26 students complained that, given the work that they had to put in, that the percentage should have been  
27 higher. Some students noted that the Simulation allowed them to demonstrate what they had learned,  
28 but a great many ~~others~~ felt their own skills were not well recognised. According to one student, the  
29 Simulation represented a 'great merging of learning, but group-work is never really a good accurate  
30 individual grade' (Semester 2, 2012, USE).  
31  
32  
33  
34  
35  
36  
37  
38

39 Several adjustments have been made over the four semesters to respond to student concerns. Most  
40 recently, a matrix was provided through which students assessed everyone in their group, the  
41 collective of results of which could add to or detract from their final group grade by 10%. Some  
42 students appreciated this approach, but others complained, saying it created a stressful competitive  
43 environment within the group.  
44  
45  
46  
47  
48  
49

50 Assessments continue to be the most challenging part of running the Simulation in an effective  
51 manner. We believe these exercises have pedagogical merit, and four semesters of positive feedback  
52 on learning outcomes demonstrate this, but many of these carefully designed exercises must be done  
53  
54  
55

1  
2  
3  
4  
5  
6  
7 in group situations in order to reflect realistic campaigns. Choosing groups carefully, as noted earlier,  
8 helps to mitigate the strong group/weak group complaint, but in an assessment driven culture, as  
9 tertiary institutions are, it is inevitable that students will be eager to ensure they are judged exactly  
10 based on their own skills. An individual personal reflective paper to cap the Simulation is under  
11 consideration, in which students will be judged on their reflections of the Simulation, in addition to  
12 the skills they demonstrate. This will require more work – for students and for the educators – but it  
13 remains a possibility for the future.  
14  
15  
16  
17  
18

### 19 20 21 **Conclusion: A Leap of Faith?**

22 This paper has suggested five important pedagogical justifications for the inclusion of skills-based  
23 learning at the tertiary level. First, human rights law is not the same thing as human rights. Second, a  
24 comprehensive understanding of human rights violations must explore the roots and relationships  
25 associated with that violation. Third, the human rights regime is a multi-spatial system. Fourth, no  
26 actor is an island. Fifth, knowledge alone is not enough. Practice and production are essential.  
27  
28  
29  
30  
31

32 The design, preparation and execution of the Human Rights Simulation module is a time-intensive  
33 process, requiring that educators commit significant hours to its implementation. Further, it does not  
34 follow a traditional academic path and is therefore open to criticism from students who have come to  
35 expect a certain type of learning and certain types of assessments. For these reasons, continuing  
36 efforts to improve the Simulation represent a leap of faith, because there is not yet sufficient evidence  
37 to argue an explicit causal link between the Simulation and an increase in human rights sector career  
38 opportunities for the students, an assurance for which students clamour. However, we can endeavour  
39 to measure, and indeed have provided preliminary evidence for, the impact of the Simulation on skills  
40 development.

50 Available data on the student experience of the Human Rights Simulation indicates that while  
51 significant challenges remain, students have had a generally positive response to this curriculum and  
52 have made compelling observations of deeper learning through this module. However, to truly test its  
53  
54  
55

merits, further evaluations must be undertaken. Targeted student surveys and focus groups could help to assess the capacity of the Simulation to address the 'knowing-doing gap', specifically, to test the relevance of the individual elements of the five-pointed pedagogy outlined in this article. Longitudinal research monitoring the ability of graduates to apply knowledge and skills gained from the Simulation in their work could also benefit this research project. In addition, interviews with employers may help to trace the relevance of the Simulation curriculum to applied work in the field. In the interim, the design of the Human Rights Simulation curriculum itself provides encouraging evidence that practice or 'practitioner relevant' activities (for example preparing a press release or shadow report) and 'real world' skills (such as budgeting and interviewing) can be incorporated into human rights courses, allowing the dissemination of not only knowledge but importantly, the learning of *craft*.
