

CONCEPT DIAGRAM

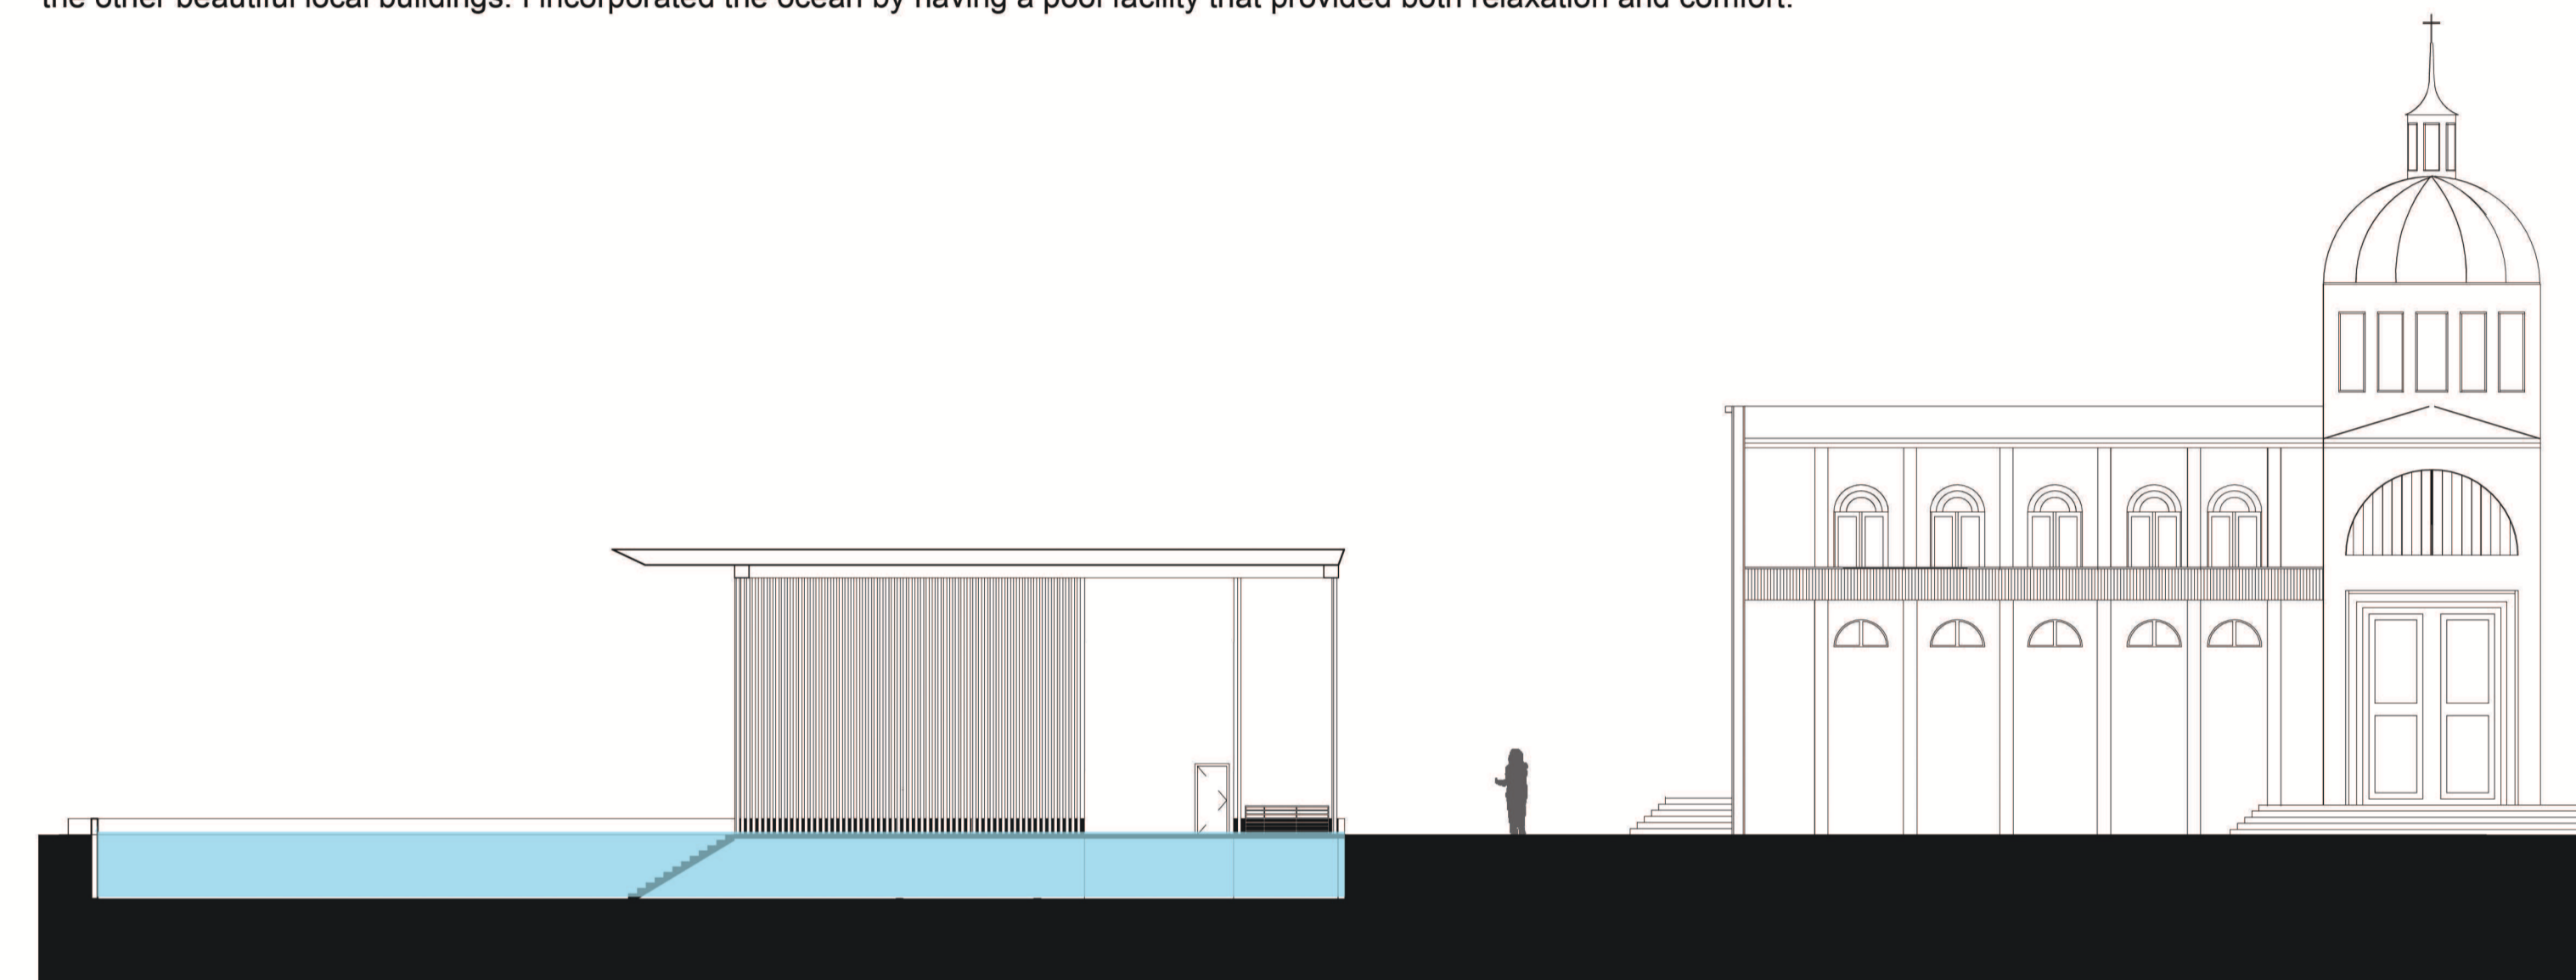

Dubrovnik City is a Croatian city located on the Adriatic Sea. Its characteristics range from great historic buildings to various cultural foods and annual events. One of the main characteristics that I found interesting was the coastal sea fronts that surround most of the city. Therefore I decided to implement this main aspect into my design. I found that if I could relate the site with the surrounding ocean it would not only identify this new space but it would not differentiate much more to the other beautiful local buildings. I incorporated the ocean by having a pool facility that provided both relaxation and comfort.
