

**THE EPIDEMIOLOGY OF OSTEOPOROSIS
IN THE FRAIL INSTITUTIONALIZED ELDERLY**

BY

JANE ZOCHLING

BMedSci, MBBS, MMed (Clin Epi), FRACP

**A THESIS IN SATISFACTION OF THE REQUIREMENT FOR THE
DEGREE OF DOCTOR OF PHILOSOPHY (MEDICINE)**

**INSTITUTE OF BONE AND JOINT RESEARCH
DEPARTMENT OF RHEUMATOLOGY
FACULTY OF MEDICINE, THE UNIVERSITY OF SYDNEY**

DECEMBER 2003

STATEMENT OF ORIGINALITY

I declare that this submission is my own work. To the best of my knowledge and belief it contains no material previously published or written by another person. No part of this thesis has been used to obtain any other degree.

Jane Zochling

ACKNOWLEDGEMENTS

This thesis would not have been possible without the support, guidance and encouragement of my two supervisors, Professor Philip Sambrook and Associate Professor Lyn March. Prof. Sambrook's assistance with content, concepts and timeliness has been invaluable, and A/Prof. March's optimism and lateral thinking have kept the project moving forward. Thank you to you both.

Thanks also go to Dr Tuan Nguyen for his unequalled expertise in statistical methods, and Dr. Markus Seibel for his time and resources for vitamin D analysis. Mrs Jennifer Schwarz and Dr Charles Chen have worked tirelessly in data collection and collation, and made my task so much easier in so many ways. My appreciation also extends to the staff of the Rheumatology Department at the Royal North Shore Hospital in Sydney, who have supported me through my doctorate studies with their tolerance and friendship.

I am grateful for the financial support of the National Health and Medical Research Council and the Royal North Shore Hospital (Lincoln Scholarship). Finally but by no means less importantly, I would like to extend my thanks and love to my family and friends who kept me going with 'Is it finished yet?', always believing that one day the answer would be 'Yes'.

ABSTRACT

As our population ages, the proportion of frail elderly people requiring assisted accommodation in aged care facilities is increasing. This population is at high risk of falls and fractures, which bring significant morbidity and mortality. The prevalence of osteoporosis also increases with age, but there have been few studies of bone density in residents of hostels and nursing homes. This thesis looked at the prevalence of osteoporosis and falls in elderly people in residential care, to define the size of the problem and identify risk factors for low bone density and falling, with particular reference to vitamin D levels.

Two thousand and five men and women aged between 65 and 104 years were enrolled in the Falls and Fracture Risk in the Elderly Epidemiology (FREE) study between 1999 and 2003. The key findings from analysis of this population were firstly, that quantitative ultrasound (QUS) measures were higher in men than women independent of age, and that in men there was no significant decline in either BUA or VOS, but in women BUA declined by over 3% per decade and VOS by 1% per decade. Both ultrasound machines used in the study were shown to be reliable, with precision unaffected by advanced age. QUS was found to be sensitive to longitudinal change even in this frail elderly cohort.

Vitamin D deficiency was found in the majority of elderly aged care facility residents but supplementation conferred higher serum 25-OH-vitamin D levels. Vitamin D levels were not shown to be related to BUA, VOS or the risk of falling in this

population. Serum parathyroid hormone might be important in determining future falls risk.

In summary, the results of this thesis give an important insight into the prevalence of osteoporosis and falls in the frail elderly, and how these might be predicted. Future study of prospective fracture rates in this group will then be able to assess relative risk factors for osteoporotic fracture, and identify those individuals who might benefit from directed fracture prevention strategies.

TABLE OF CONTENTS

CHAPTER 1: INTRODUCTION AND BACKGROUND.....	1
1.1 Introduction.....	2
1.2 Assessment of Bone.....	3
1.2.1 Quantitative Assessment.....	3
1.2.1.1 <i>Dual-Energy X-ray Absorptiometry (DEXA)</i>	3
1.2.1.2 <i>Quantitative Ultrasound (QUS)</i>	5
1.2.1.3 <i>Quantitative computed tomography (QCT)</i>	10
1.2.2 Biochemical markers.....	10
1.3 Bone changes with Age and Gender.....	14
1.3.1 Bone in childhood.....	14
1.3.2 Age-related changes in bone.....	15
1.3.3 Anatomy and bone strength.....	17
1.3.4 Bone turnover.....	20
1.3.5 Associations with BMD.....	20
1.3.6 Fractures.....	21
1.4 Falls in the Elderly.....	25
1.5 Fractures in the Elderly.....	33
CHAPTER 2: STUDY DESIGN AND DESCRIPTION OF	
ELDERLY POPULATION.....	36
2.1 Aims.....	37
2.2 Study Design.....	38
2.3 Measurements.....	40
2.4 Follow Up.....	46

2.5	Population Characteristics.....	48
2.6	Discussion.....	55

CHAPTER 3: VARIANCE OF QUANTITATIVE

**ULTRASOUND MEASUREMENT IN THE FRAIL
INSTITUTIONALIZED ELDERLY.....58**

3.1	Introduction.....	59
3.2	Methods.....	60
3.2.1	Measurements.....	60
3.2.2	Statistical methods.....	61
3.3	Results.....	64
3.3.1	Demographics.....	64
3.3.2	Reproducibility.....	65
3.3.3	Concordance between CUBA and QUS-2.....	69
3.3.4	Longitudinal measurements.....	71
3.4	Discussion.....	74
