Acqua Bottega offers a network of marine services such as maintenance, installations, and repairs on all types of water vessels, particularly Gondolas.

Situated on the corner of two key canals in Venice, Acqua Bottega presents a spacious open plan design that is modern yet fitting to the Venetian setting.

The building's primary circulation space divides the structure into public and private space while providing a coherent directional flow.

The application of natural lighting is endorsed through the ample use of fixed windows that wrap the corner skin of the building.
